three textual recensions: the Occidental, the Alexan-
drian (or Oriental), and the Constantinopolitan (or
Byzantine). The first two he derived from the middle
of the second century, and the third he considered as
a revision of the two, being prior to the latter. His
though subsequently modified. After laying down
his principles of textual criticism, he tried to recon-
struct the text best known in the ancient Church of
both East and West. In 1774 he published the text of
the synoptic Gospels; in 1796–1806, the text of the
New Testament, called "Editio secunda"; in 1827 David Scholz added the first volume of a third edition. Griesbach is not always faithful to his principles, being too much under the sway of the Received Text; moreover, he did not sufficiently utilize the codices most important for his purpose. His text has been followed by Schott, Knapp, Tittmann, Hahn, and Theile.

(2) It suffices to mention the editions of Mace (London, 1729), Harwood (London, 1776), Matthaei (Riga, 1782-1788), Alter (Vienna, 1786), and Scholz (Leipzig, 1830-1836); the last named scholar (a Catholic, and the professor of exegesis in the University of Bonn) reduced Griesbach's first two recensions to one, distinguishing it only from the Constantinopolitan text-form, which he derived from the more correct copies circulating in Asia Minor, Syria, and Greece during the first centuries. Scholz himself had industriously collected manuscripts in the East. The labours of Hug and Eichhorn may also be mentioned briefly. The former substituted his so-called Common Edition, and the latter the uncorrected text of Asia and Africa, for Griesbach's Occidental class. Both Hug and Eichhorn assign the Alexandrian text-form to Hesychius, and the latter to Lucian; finally, Hug assigns to the labours of Origen in his old age a four-fold authority identical with a middle class favoured by Griesbach and Eichhorn. Rinck (1830) divided the Occidental manuscripts into African and Latin, both of which are surpassed in purity by the Oriental.

Lachmann was the last of the "historical" critics who tried to reconstruct a New Testament text independent of the Received. Believing that the autograph text could not be found, he endeavoured to restore the text-form most common in the Oriental Church during the course of the fourth century. He published his small selection in 1833 (Berlin), and his large Latin-Greek text in 1842-50 (Berlin); this latter is accompanied by P. Buttmann's list of authorities for the Greek readings. Though Lachmann's text is preferable to the Received, his apparatus and the use he made of it are hardly satisfactory in the light of our present-day methods.

(4) Among the editors of the New Testament text, Tischendorf deserves a place of honour. During the thirty years which he devoted exclusively to textual studies, he published twenty or twenty-one editions of the Greek Testament; the first of these among their predecessors in one or another of the following recensions: (a) In 1841 (Leipzig) he issued an edition in which he surpassed even Lachmann in his departure from the Received Text; the ancient manuscripts, the early versions, and the citations of the Fathers were regarded as the highest authorities in the selection of his reading. In 1842 Tischendorf published in Paris an edition destined for the French Protestants (Didot), and in the same year and place, at the instance of the Abbé I. M. Jager, another for the French Catholics, which he dedicated to Archbishop Affre. In this he received the Greek readings most in keeping with the Latin Vulgate. (b) The second recension consists of four stereotype editions (12mo, 1842-59) containing the Greek text brought into agreement with the Latin Vulgate. (c) Tischendorf's third recension is represented by his fourth (Lipsiensia secunda, 1849; Winter); by his fifth (1850, Tauchnitz), and his sixth edition (corrected Latin Vulgate and Luther's translation; Leipzig, 1854, Avenarius and Mendelssohn). A separate print of the Greek text of this last edition (1855) constitutes the foundation of the "Neues Testament" edition. In the seventh reprint of the academic edition, as well as in the third of Tauchnitz's stereotype text, the readings were changed according to Tischendorf's fifth recension. (d) The fourth recension is found in Tischendorf's "Editio Septima Critica Maior" (Leipzig, 1856-59; Winter). The work contains valuable prolegomena and a detailed critical apparatus. (e) Tischendorf's fifth recension is found in his "Editio Octava Critica Maior" (Leipzig, 1864-72, Giessecke and Devrient). In his first recension Tischendorf is further removed than Lachmann from the Received Text; in his second he favours the Latin Vulgate; in the third, and still more in the fourth, he returns to the readings of the Received Text. editions. Tischendorf made a new text of the Greek text of the Greek text; but in the fifth he again follows the principles of Lachmann and favours the readings of his first recension rather than those of his third and fourth. Tischendorf will always occupy a high rank among the editors of the Greek text; but he is rather a student of the text than a textual critic. The "Prologomena" to the eighth edition had to be supplied by C. R. Gregory on account of the great editor's untimely death (7 Dec., 1874). Gregory published these "Prologomena" in three instalments (Leipzig, 1884, 1890, 1894), giving the reader a most satisfactory and complete summary of the information necessary or useful for the better understanding of the Greek text and its apparatus.

(5) The discrepancy between the text of Scholz's edition (Leipzig, 1830-36) and the readings of the Origenian documents stimulated Tregelles to an independent study of textual questions mainly thorough in order to resolve the existing uncertainty. The favourable reception of his "Book of Revelation in Greek . . . with a new English Version" published with a "Prospectus of a Critical Edition of the Greek New Testament, now in progress," also encouraged him in the course of studies he had begun. After collating all the more important manuscripts which were to be found in England, he visited the libraries of Rome, Florence, Modena, Venice, Munich, Basle, Paris, Hamburg, Dresden, Wolfenbüttel, and Utrecht for an accurate study of their respective codices. It has been noted that when the results of Tregelles differ from those of Tischendorf, the former are usually correct. He was enabled to publish the Gospels of St. Matthew and St. Mark in 1857; those of St. Luke and St. John in 1861; the Acts and the Catholic Epistles in 1865; the Pauline Epistles in 1869-70. While engaged on the last chapters of the Apocalypse, he had a stroke of apoplexy, so that this part had to be finished by the hand of a friend (1872). Seven years later, Hort and Streane added "Prologomena" to the work of Tregelles. Tischendorf published a reprint of his critical apparatus and an appendix in 1887. The character of the work is well described by its title, "The Greek New Testament, Edited from Ancient Authorities, with Their Various Readings in full, and the Latin Version of Jerome" (London, 1857-79).

(6) The textual labours of Tregelles and Tischendorf were, to a certain extent, overshadowed by the work achieved by the two eminent Cambridge scholars, Brook Foss Westcott and Fenton John Anthony Hort. Like their predecessors, they acknowledged and followed the principles of Lachmann; but they differed from Lachmann as well as from Tischendorf and Tregelles in utilizing and systematizing the genealogical grouping of the ancient readings, thus connecting their labours with the views of Bengel and Griesbach. They distinguished four branches of textual tradition. (a) The Western has a tendency to paraphrase the text and to interpolate it from parallel passages and other sources. It is found mainly in Codex D, the old Latin Version, and partly in Cureton's Syriac manuscript.

(b) The Alexandrian is purer than the Western, but contains changes of a grammatical character. It is found in the oldest manuscripts, except the oldest codices, and in part of it, a number of cursive manuscripts, and the Egyptian versions. (c) The Syrian is a mixture of all the other texts, or at least it contains some of the characteristics of all the others. It is found in the later uncials, and in most of the cursive manuscripts and versions. (d) The neutral text comes nearest to the original text, being almost identical with it. Its
pure form is found nowhere, but the readings of A and some of the oldest uncials, especially of B, give us the nearest approach to it. As to the value of the several classes of readings, Hort believes that most of the Western and Alexandrian, and all the Syriac must be rejected. The farthest approaches to the text before the middle of the third century. All the necessary explanations have been collected in a volume accompanying Westcott and Hort’s “New Testament in the Original Greek” (Cambridge and London, 1881). The volume contains an introduction (324 pages) and an appendix (175 pages). The introduction treats of the necessity of Textual New Testament Criticism (pp. 4–18), of its various methods (19–72), of the application of its principles to the restoration of the New Testament text (73–287), and finally of the character, the aim, and the arrangement of the new edition (288–324). The appendix contains critical comments on difficult passages (pp. 1–140), notes on certain orthographic and grammatical discrepancies between the ancient codices (pp. 141–173), and finally a complete list of the Old Testament passages employed in the New (pp. 174–188). The volume containing the text of Westcott and Hort’s edition was published also separately in the year of the first appearance. In 1885 (1887, etc.) the text appeared separately in a volume of smaller size, and in 1895–96 both volumes of the original work were published anew in their larger form.

(7) Westcott and Hort’s Greek New Testament, though published at a time when a vast number of textual critics, did not meet with unchallenged praise. Among the dissenters were Godet, Wurdliech, Dobschütz, Jülicher, Bousser, and Burgon (The Revision Revised; The Quarterly Review, 1881–82; 2nd ed., London, 1885). Of these, some object to Westcott and Hort’s method, others to their appreciation of Codex B, others to their attitude towards the so-called Western readings, others, finally, uphold the claims of the Received Text. In the third and fourth editions of his “Plain Introduction to the Criticism of the New Testament,” F. H. Scrivener writes against the views of Tischendorf, Trüggles, and Westcott-Hort; he favours the readings of the later manuscripts in the reconstruction of the Greek New Testament text, and advocates the return to a text-form similar to the Received Text. Among his various publications we may notice “The New Testament in the Original Greek, together with the Prolegomena, and the Adopted in the New Testament, London, 1894) and his various collations of texts (Twenty Manuscripts of the Gospels, London, 1883; Collation of Codex Sinaiticus with the Received Text, Cambridge and London, 1893, 1897). Here may be mentioned also “The Greek Testament with a critically revised text, a digest of various readings, marginal references to verbal and idiomatic usage, prolegomena, and a critical and exegetical commentary” edited by Henry Alford, afterwards Dean of Canterbury (London, 1849–1856; sixth edition, 1871). Tischendorf was of opinion that Alford’s revision of the text was not satisfactory. “The New Testament in the Original Greek, with Notes and Introduction” (London, 1866–69; newly edited with index, 1867), by Christopher Wordsworth, Canon of Lambeth, is a mixture of the texts of Griesbach, Lachmann, Tischendorf, and Elsner. Finally, in connection with the Revised Edition, Professor C. Palmer, of Oxford, published “The Greek Testament, with the Readings adopted by the Revisers of the Authorised Version” (Oxford, 1881; Clarendon Press).

(8) Among the chief works dealing with the textual restoration of the Greek New Testament which have appeared in recent years, we must mention the most important of the works of B. Weiss: Part I, Acts, Catholic Epistles, Apocalypse (Leipzig, 1894, Hinrichs); Part II, The Pauline Epistles together with Hebr. (1896); Part III, The Gospels (1900). A manual edition of this text appeared 1902–05, in three volumes; the mistakes of the first issue were corrected as far as possible. Richard Francis Weymouth edited in a handy form “The Resultant Greek Testament” (London, 1886, Elliot Stock; cheap edition, 1892 and 1896; third edition, 1905); in it he gives us the text on which the majority of modern editors, together with the readings of Stephens (1550), Lachmann, Tregelles, Lightfoot, Alford, Weiss, the Bale Edition (1880), Westcott-Hort, and the Revision Committee, with an introduction by J. B. Lightfoot. The editor may not give the reader anything of his own, but he furnishes a text verbal edition which the Bible student can hardly afford to neglect. Dr. E. Nestle has edited a “Novum Testamentum Graece cum apparatus critico” (Stuttgart, 1898, 1899, 1901, 1903, 1904, 1906) based on the four most prominent of the recent texts: Tischendorf, Westcott-Hort, Weymouth, and Weiss. All the variants of the four editions, excepting as to minor details, are noted, so that the reader obtains at a glance the results of the foremost textual criticism on any given text. It would be difficult indeed to contrive a handier and more complete edition of the Greek text than this of Nestle’s, treated with delight and respect, with the original text, with an alternative ending of the Second Gospel, as a “Western non-interpolation”, suggesting that it is an ancient Eastern interpolation of the sacred text. The rules of the new Index sont be employed with precision those classes of Catholics who may read texts like that of Nestle; others must content themselves with one of the following editions: P. A. Graetz edited the Complutensian text (Tübingen, 1821; Füss); L. Van Ess published a combination of the Complutensian and the Erasmian text (Tübingen, 1827; Füss); Jaumann adheres closely to the edition of Tittmann (Munich, 1832; Lindauer); we have already mentioned Tischendorf’s text prepared for Catholic readers under the influence of I. M. Jager (Paris, 1847, 1851, 1859); Reithmayr produced a combination of this latter edition and that of Lachmann (Munich, 1847; Ratisbon, 1851); V. Loeh derived his text, as far as possible, from the Codex Vaticanus (Tübingen, 1862); Tauchnitz published, with the approbation of the proper ecclesiastical authority of Dresden, Theile’s text almost without change, together with the text of the Latin Vulgate; Brandeschi edited the Greek text and the Latin Vulgate of the New Testament in such a way as to bring the former as much as possible into agreement with the latter (Freiburg, 1901, etc.); finally, M. Hetzenauer published his “Novum Testamentum Graece” (Innsbruck, 1904, Wagner), reproducing in separate form the Greek text of his Greek-Latin edition (1890–98). He is more independent of the Latin Vulgate text than many of his predecessors, and he adopts the more important variants in the margin, or in footnotes, or again in an appendix critica.

(10) It must not be imagined that the textual criticism of the New Testament has arrived at a state that can be regarded as final. Without doing injustice to the splendid results attained by the labours of the scholars enumerated in this article, it must be confessed that the condition of the textual criticism of the New Testament is more uncertain to-day than it was twenty years ago. The uncertainty springs mainly from the doubts of our critics as to the real value of the Western readings. It cannot be denied that it is important to state the importance of these Western readings, at least with regard to the Book of Acts, when he considers them as the transcript of the inspired writer's first or rough copy, while he identifies the Eastern with the copy actually sent out to Antioch. Even if stu-
Edmondsbury. See Bury St. Edmonds.

Edmund, Congregatio of Saint, founded in 1843, by Jean-Baptiste Muard, at Pontigny, France, for the work of popular missions. The members were to devote themselves to parochial work, to the education of youth in seminaries and colleges, to the direction of pious associations, and to foreign missions. The mother-house is at Pontigny, but since the expulsion of the religious orders the superior general resides at Hitchens, England. In the United States, the Congregation has two houses: a missionary house and an apostolic school at Swanton, Vermont, for the training of young men who wish to study for the priesthood and the religious life; and a college at Winookski, Vermont, with 12 fathers, 8 scholastics, and 100 pupils.

E. M. SALMON.

Edmund Arrowsmith, Venerable, English martyr, b. in 1855 at Haddock; executed at Lancaster, 23 Aug., 1628. He is of great reputation for the numerous favours, spiritual and temporal, which are won through his holy hands, still preserved as an object of veneration in the church of St. Oswald, Ashton, near the martyr's birthplace. His parents suffered much for their religion, and the future martyr was once, when a child, left shivering in his night-clothes by the pursuivants, who carried his parents off to Lancaster jail. He entered Douai College in 1605, but ill-health compelled him to interrupt his studies; he was, however, ordained priest in 1612. Lancashire was the scene of his missionary labours and he was eminent for his fervent, zeal and ready wit. At a preponderatingly discussion with him and his minister. Regaining his liberty he entered the Society of Jesus in 1623, and made his noviceship on the Mission, retiring to London for a spiritual retreat. He was eventually betrayed by false bretheren, tried at Lancaster in 1628, and was found guilty of high treason for being a Jesuit priest and a seducer in religion. His fellow-prisoner, Father John Southworth, afterwards a martyr, absolved him as he went forth to undergo the usual butchery.

EDMOND.

EDMUND Campion, Blessed, English Jesuit and martyr; he was the son and namesake of a Catholic bookseller, and was b. in London, 25 Jan., 1540; executed at Tyburn, 1 Dec., 1581. A city company sent the promising child to a grammar school and to Christ Church College. When Mary Tudor entered London in state as queen, he was the schoolboy chosen to give the Latin salutatory to her majesty. Sir Thomas White, lord mayor, who had built and endowed St. John's College at Oxford, accepted Campion as one of his first scholars, appointed him junior fellow at seventeen, and, dying, gave him his last messages for his academic family. Campion shone at Oxford in 1560, when he delivered oneoration at the reburial of Amy Robart, and another at the funeral of the founder of his own college; and for twelve years he was to be followed and imitated as no man ever was in an English university except himself and Newman. He took both his degrees, and became a celebrated tutor, and, by 1585, junior proctor. Queen Elizabeth had visited Oxford two years before; she and Dudley, then chancellor, won by Campion's bearing, beauty, and wit, bade him ask for what he would. Sucesses, local responsibilities, and allurements, his natural ease of disposition, the representations, above all, of his friend Bishop Cheynell of Gloucester, blinded Campion in regard to his course as a Catholic: he took the Oath of Supremacy, and deacon's orders according to the new rite. Afterthoughts developing into scruples, scruples into anguish, he broke off his happy Oxford life when his proctorship ended, and betook himself to Ireland, to await the reopening of Dublin University, an ancient papal foundation temporarily extinct. Sir Henry Sidney, the lord deputy, was interested in Campion's future as well as in the revival which, however, fell through. With Philip Sidney, then a boy, Campion was to have a touching interview in 1577.

As too Catholic minded an Anglican, Campion was suspected, and exposed to danger. Hidden in friendly houses, he composed his treatise called "A History of Ireland". Written from an English standpoint it gave much offence to the native Irish, and was severely criticized, in the next century, by Geoffrey Keating in his Irish history of Ireland. Urged to further effort by the zeal of Gregory Martin, he crossed to England in disguise and under an assumed name, reaching BLESSED EDMUND CAMPION.

P. RYAN.
London in time to witness the trial of one of the earliest Oxonian martyrs, Dr. John Storey. Campion now recognized his vocation and hastened to the seminary at Douai. Cecil lamented to Richard Stanhurst the expatriation of "one of the diamonds of England". In Douai Campion remained for the theological course and its lesser degree, but then set out as a barefoot pilgrim to Rome, arriving there just before the death of St. Francis Borgia; "for I meant", as he said at his examination, "to enter into the Society of Jesus, thereof to vow and to be professed". This he accomplished professedly on 18 April (1570); being the first novice received by Mercurianus, the fourth general. As the English province was as yet non-existent, he was allotted to that of Bohemia, entering on his noviceship at Prague and passing his probation year at Brün in Moravia. Returning to Prague, he taught in the college and wrote a couple of sacred dramas; and there he was ordained in 1578. Meanwhile, Dr. Allen was organizing the apostolic work of the English Mission, and rejoiced to secure Fathers Robert Parsons and Edmund Campion as his first Jesuit helpers. In the garden at Brün, Campion had had a vision, in which Our Lady foretold him his martyrdom. Cornelianus hastened to take a scroll for E. M. D. C. P. Campianus Martyr, and to paint a prophetic garland of roses within his cell. Parsons and Campion set out from Rome, had many adventures, and called upon St. Charles Borromeo in Milan, and upon John in Geneva. Campion was met in London; closely clapped, armed, and conducted to the native young convert friend. His office was chiefly to reclaim Catholics who were wavering or temporizing under the pressure of governmental tyranny; but his zeal to win Protestants, his preaching, his whole sanctity and solidly characterized, made a general and profound impression. Himself religious, he fled to the North, where he fell again to writing and produced his famous tract, the "Decem Rationes". He returned to London, only to withdraw again, this time towards Norfolk. A spy, a former steward of the Roper family, one George Eliot, was hot upon his track, and ran him and others down at Lyfords Grange near Wantage in Berkshire on 17 July, 1581.

Amid scenes of violent excitement, Campion was factiously murdered by an alarm of the Tower, before the Dean of St. Paul's and other divines, Campion had been denied opportunity to prepare his defence, and had been severely racked. Thus weakened, he stood through the four long conferences, without chair, table, chairs, and stood undeterred. Philip Howard, Earl of Arundel, who was looking on in the flush of worldly pride, became thereby inspired to return to God's service. The privy council, at its wits' end over so purely spiritual a "traitor", hatched a plot to impeach Campion's loyalty, and called in the hirings Eliot and sundry as accusing him of treason. Westminster Hall, 20 Nov., 1581. Campion, pleading not guilty, was quite unable to hold up his often-wrenching right arm, seeing which, a fellow-prisoner, first kissing it, raised it for him. He made a magnificent defence. But the sentence was death, by hanging, drawing, and quartering: a sentence received by the martyrs with a joyful shout of Haec dies and Te Deum. Campion, with Sherwin and Briant, who were on a separate hurdle, was dragged to Tyburn on 1 December. Passing Newgate arch, he lifted himself as best he could to salute the statue of Our Lady of Pillar, when, to the amazement of the bystanders, he was able to taunt him with his mind concerning the Bull of Pius V excommunicating Elizabeth, he answered only by a prayer for her, "your Queen and my Queen". He was a Catholic Englishman with political opinions which were not Allen's, though he died, as much as St. Ignatius, before the province of the Holy See. The people loudly lamented his fate; and another great harvest of conversions began. A wild, generous-hearted youth, Henry Walspole, standing by, got his white doublet stained with Campion's blood; the incident made him, too, in time, a Jesuit and a martyr.

Historians of all schools are agreed that the charges against Campion were wholesale falsehoods. There was his high intelligence, his beautiful gaiety, his fiery energy, his most chivalrous gentleness. He had renounced all opportunity for a dazzling career in a world of master men. Every tradition of Edmund Campion, every remnant of his written words, and not least his untried noble personality, show that we have nothing less than a man of genius; truly one of the great Elizabethans, but holy as none other of them all. He was beatified by Pope Leo XIII on 9 Dec., 1888. Relics of him are preserved in Rome and Prague, in London, Oxford, Stonyhurst, and Roffington. A not very convincing pendant to the story, and soon after his death for the Gesù in Rome under the supervision of many who had known him. Of this there is a copy in oils at Stonyhurst, and a brilliantly engraved print in Hazart's "4 Kerkyeleke Historie" (Antwerp, 1689), Vol. III (Engelandt, etc.), though not in every copy of that now scarce book.

Campion's Historie of Ireland was first published by Stanhurst in Holinshed, Chronicles (1587), then in Ware's book under the same title (1588), and again the Phoenix Press (Dublin, 1809); Edmund's Campianus Decem Rationes et aliae Opuscula, carefully edited (Antwerp, 1831); this included Orations, Letters, and the Narratio Dvovitii Henri VIII, Regis Angliae, ab Uzore et ab Eclesia, first printed by Harpfield. There is no modern ed. or tr. The standard biography is Simson, Edmund Campian, Jesuit Protonotary of England (London, 1866; reissued, London, 1897). Accounts of Campion's life, labours, and death in English and abroad are in Memoirs of Missionaries Priests; Foley, Records of the English Province of the Society of Jesus, and Stannton, Emulation of England and Europe, Select and Exact (Edinburgh, 1789), article on Campian's "Seditions". Biog. and that in Gifford, Bibl. Diet. Eng. Cath., are based, in phrase, as in fact, upon Simson, op. cit. A much better account is contained in Lives of the English Martyrs, ed. and by Camm (2 vols., London, 1905), II, 366-357. A book by Gollser appears in The English Martyrs of the True Society, 2 vols., London, 1892). For minor points connected with Campion see The Month (August, 1863; September, 1867; January, 1905); and The Irish Ecclesiastical Record, XII, Series III, 1891, pp. 629, 725. Besides a bibliography in Gifford, pp. 385-392, there is a more extensive one in Simson, Append. itself founded on de Bacon, Bibl. des Ecriv. de la c. de J. A small book devoted to him is The Blessed Edmund Campion in the St. Nicholas Series (London, 1868).

L. J. Guiney.

Edmund Rich, Saint, Archbishop of Canterbury, England, b. 20 November, c. 1180, at Abingdon, six miles from Oxford; d. 16 Nov., 1240, at Soissy, France. His early chronology is somewhat uncertain. His parents, Reichard (Reginald) and Isabel Rich, were remarkable for piety. It is said that his mother constantly wore hair-cloth, and attended almost every night at Matins in the abbey church. His father, even during the lifetime of his mother, entered the monastery of Eynsham in Oxfordshire. Edmund had two sisters and at least one brother. The two sisters became nuns. From his earliest years he was taught by his mother to practice acts of penance, such as fasting on Saturdays on bread and water, and wearing a hair shirt. When old enough he was sent to study at Oxford. While there, the Christ Child appeared to him while he was walking
alone in the fields. In memory of what passed between him and Christ on that occasion, he used every night to sign his forehead with the words “Jesus of Nazareth,” a custom he recommended to others. Anxiously to preserve purity of mind and body, Edmund made a vow of chastity and as a pledge of his holy vows he procured two rings; one he placed on the finger of Our Lady’s statue in St. Mary’s, Oxford, the other he himself wore.

About 1195, in company with his brother Richard, he was sent to the schools of Paris. Thenceforward, for several years, his life was spent between Oxford and Paris. He taught with success in both universities. After having devoted himself to the study of theology, Edmund acquired fame as a preacher, and was commissioned to preach the Sixth Crusade in various parts of England. All this time his austerities were very great. Most of the night he spent in prayer, and the little sleep he allowed himself was taken without lying down. Though thus severe to himself, he was gentle and kind towards others, especially to the poor and sick, whom sometimes he personally attended. In 1222 Edmund became treasurer of the Holy Sepulcher. Ten years later he was appointed to the Archbishops of Canterbury by Gregory IX and consecrated 2 April, 1234.

Notwithstanding the gentleness of his disposition, he firmly defended the rights of Church and State against the exactions and usurpations of Henry III. In 1237 Edmund came in his turn. During the twenty years of Henry’s reign, Edmund was always ready to support and defend the rights of his clergy and his Church, as he defended the rights of his country. He had the advantage of the papal legates’ authority to nullify Edmund’s power. Unable to force the king to give over the control of vacant benefices, and determined not to countenance evil and injustice, Edmund saw he could not remain in England. In 1240 he retired to the Cisterian Abbey of Pontigny. Here he lived like a simple religious till the summer heat drove him to Soissey, where he died. Within six years he was canonized by Innocent IV. His body was taken to Pontigny, and numerous miracles have been wrought at his tomb. Notwithstanding the devastation that from time to time has overtaken Pontigny, the body of St. Edmund is still venerated in its abbey church. Important relics of the saint are preserved at Westminster Cathedral; St. Edmund’s College, Ware; Portsmouth Cathedral, and Erdington Abbey.

The ancient proper Mass of St. Edmund, taken from the Sarum Missal, is used in the Diocese of Portsmouth, of which St. Edmund is patron. In September, 1874, 350 English pilgrims visited St. Edmund’s shrine. The community, known as Fathers of St. Edmund, were forced to leave their home at Pontigny by the Associations. The “Spectrum Ecclesiae,” an ascetical treatise, and the “Provincial Constitutions” are the most important of St. Edmund’s writings.

Besides the three ancient lives of St. Edmund by Matthew Paris, Robert Bacon, and Bertrand Rich, there is a fourth one in the “Thesaurus Anecdotorum,” for a complete account of the MSS. records, the reader is referred to Wallace, St. Edmund of Canterbury (London, 1893); 1-18, and to de Paravicini, St. Edmund of Abingdon (London, 1893). See also: Butler, Lives of the Saints, 16th Nov.; Archb. of Canterbury; Land, Tractarian: Ward, St. Edmund Archb. of Canterbury (London, 1883); Archb. of Canterbury in Dict. of Nat. Biol., u. v.

**COLUMBA EDMONDS.**

**EDMUND THE MARTYR, SAINT, King of East Anglia, b. about 840; d. at Hoxne, Suffolk, 20 November, 870.** No other accounts represent St. Edmund as descended from the preceding kings of East Anglia, though, according to later legends, he was born at Nuremberg (Germany), son to an otherwise unknown King Alcind of Saxony. Though only about fifteen years old when crowned in 855, Edmund showed himself a model ruler from the first, anxious to treat all with equal justice, and closing his ears to flatterers and dishonest informers. In his eagerness for prayer he retired for a year to his royal tower at Hadleigh and learned the whole Psalter by heart, in order that he might afterwards recite it regularly. In 870 he bravely repulsed the two Danish chiefs Hinguar and Hubba who had invaded his dominions. They soon returned with overwhelming numbers, and pressed terms upon him which as a Christian he felt bound to refuse. In his desire to avert a fruitless massacre, he disbanded his troops and himself retired towards Framlingham; on the way he fell into the hands of the invaders. Having loaded him with chains, his captors conducted him to Hinguar, whose impious demands he again rejected, declaring his religion dearer to him than his life. His martyrdom took place in 870 at Hoxne in Suffolk. After beating him with cudgels, the Danes tied him to a tree, and cruelly tore his flesh with whips. Throughout these tortures Edmund continued to preach under the tree, until at last, exasperated by his constancy, his enemies began to discharge arrows at him. This cruel sport was continued until his body had the appearance of a porcupine, when Hinguar commanded his head to be struck off. From his first burial-place at Hoxne his relics were removed to other places, and have remained there, since called St. Edmundsbury, where arose the famous abbey of that name. His feast is observed 20 Nov., and he is represented in Christmart with sword and arrow, the instruments of his torture.

**Education.—In General.—In the broadest sense, education includes all those experiences by which intelligence is developed, knowledge acquired, and character formed. In a narrower sense, it is the process by which certain agencies and institutions, the home and the school, for the express purpose of training immature minds. The child is born with latent capacities which must be developed so as to fit him for the activities and duties of life. The meaning of life, the results of its purposes and values are secured by the educative process, which primarily determines the nature of his work. Education aims at an ideal, and this in turn depends on the view that is taken of man and his destiny, of his relations to God, to his fellowmen, and to the physical world. The content of education is furnished by the previous acquisition of mankind in literature, art, and science, in moral, social, and religious principles. The inheritance, however, contains elements that differ greatly in value, both as mental possessions and as means of culture; hence a selection is necessary, and this must be guided largely by the educational ideal. It will also be influenced by the consideration of the educative process. Teaching must be adapted to the needs of the developing mind, and the endeavour to make the adaptation more thorough results in theories and methods which are, or should be, based on the findings of biology, psychology, and physiology.**

The work of education begins normally in the home; but it is, for obvious reasons, continued in institutions where other teachers stand in place of the parents. To secure efficiency it is necessary that each school be properly organized, that the teachers be qualified, and that the subjects of instruction be wisely chosen. Since the school, moreover, is so largely responsible for the intellectual and moral formation of those who
will later, as members of society, be useful or harmful, there is evidently needed some higher direction than that of the individual teacher, in order that the purpose of education may be realized. Both the Church and the State, therefore, have interests to safeguard; each in its own sphere must exercise its authority; education is to strive for the true ideal through the best content and by the soundest methods. It is thus obvious that education at any given time expresses the dominant ideas in philosophy, religion, and science, while, in its practical control, the existing relations between the temporal power and the spiritual must enter into the spiritual atmosphere of society. As, moreover, these ideas and relations have varied considerably in the course of time, it is quite intelligible that a solution of the central educational problems should be sought in history; and it is further beyond question that historical study, in this as in other departments, has a manifold utility. But a mere recital of facts is of little avail unless certain fundamental principles be kept in view, and unless the fact of Christian revelation be given its due importance. It is needful, then, to distinguish the constant elements in education from those that are variable; the former including man’s nature, the arts, as sculpture, the doctrine of God, the latter all those changes in theory, practice, and organization which affect the actual conduct of educational work. It is with the first aspect of the subject that the present article is mainly concerned; and from this standpoint education means as far as that form of social activity which is carried on under the direction of mature minds and by the use of adequate means, the physical, intellectual, and moral powers of the immature human being are so developed as to prepare him for the accomplishment of his life-work here and for the attainment of his eternal destiny. Neither shall he be frozen from the former activities of society, nor be deprived from the beginning. In primitive times the helplessness and needs of the child were so obvious that his elders by a natural impulse gave him a training in the rude arts that enabled him to procure the necessities of life, while they taught him to propagate the hidden power in each object of nature, and handed on to him the tribal customs and traditions. But of education properly so called the savage knows nothing, and much less does he busy himself with theory or plan. Even civilized peoples carry on the work of education for a long time before they begin to reflect upon the meaning and such reflection is guided by philosophical speculation and by established social, religious, and political institutions. Often, too, their theorizing is the work of exceptional minds, and presents a higher ideal than might be inferred from their educational practices. Nevertheless, an account of what was done by the principal peoples of antiquity will prove useful by bringing out the profound modification which Christianity wrought.

Oriental Education.—The invention of writing was of the utmost importance for the development of language and the keeping of records. The earliest texts, chiefly of a religious nature, became the sources of knowledge and the means of education. Such were in China the writings of Confucius, in India the Vedas, in Egypt the Book of the Dead, in Persia the Avesta. The main purpose in having these books studied by youth was aimed at the same ends of thought and conduct, and varying conformity with the past. In this respect Chinese education is typical. The sacred writings contained minute prescriptions for conduct in every circumstance and station of life. These the pupil was obliged to memorize in a purely mechanical fashion. If he understood them it was quite indifferent. He simply stored his memory with a multitude of established forms and phrases, which subsequently he employed in the preparation of essays and in passing the governmental examinations. That he should learn to think for himself was of course out of the question. With such a training, the development of free personality was impossible. In China, the family, with its sacred traditions and its ancestor-worship, was dominant; in Persia, education was controlled by the State; in Egypt by the priesthood; in India by the different castes. Moreover, there was, doubtless, in all the Oriental minds, a feeling of responsibility, personality; but no effort was made to strengthen and give it value. On the contrary, the Hindu philosophy, which regarded knowledge as the means of redemption from the miseries of life, placed that redemption itself in nirvana, the extinction of the individual soul through the absorption into the being of the world. The position of woman was, in general, a degraded one. Though the early training of the child devolved upon the mother, her responsibility brought with it no dignity. But little provision was made for the education of girls; their only vocation was to marry, bear children, and render service to the head of the family.

In view of these facts, it cannot be said that education as the Western world conceives it owes any great debt to the East. It is true that some of the sciences, as mathematics, astronomy, and chronology, and some of the arts, as sculpture, and architectural design and music, as well as to a certain degree of perfection; but the very success of Oriental ability and skill in these lines only emphasizes by contrast the deficiencies of Oriental education. Even in the sphere of morality the same antagonism appears between precept and practice. It cannot and need not everywhere be forgotten that Confucius, evince a high ideal of virtue, while some of the Hindu precepts, such as those of the "Panthatantra," are full of practical wisdom. Yet these facts only make it more difficult to answer the question: Why was the actual living of these people so far removed from the concepts of virtue? Nevertheless, Oriental education has a peculiar significance; it shows quite plainly the consequences of sacrificing the individual to the interests of human institutions, and of reducing education to a machine-like process, the aim of which is to mould all minds upon one unchanging pattern; and it further shows how little can be accomplished for real education by despotic authority, which demands, and is satisfied with, an outward observance of custom and law. (See Davidson, "A History of Education," New York, 1894.)

The Greeks.—If the education of the Oriental peoples was stationary, that of the Greeks exhibited a progressive development which passes from one extreme to another through a variety of movements and reactions, of ideals and practices. What remains constant throughout is the idea that the purpose of education is to train youth for citizenship. This, however, was conceived, and its realization attempted, in different ways by the several City-States. In Sparta, the child, according to the Code of Lycurgus, was the property of the State. From his seventh year onward he received a public training whose one object was to make him a soldier, by developing physical strength, courage, self-control, and obedience to law. It was a hard training in gymnastic exercises, with little attention to the intellectual side and less to the aesthetic; even music and dancing took a military character. Girls were subjected to the same severe discipline, not so much to emphasize the equality of the sexes as to train the sturdy mothers of a warrior race.

The ideal of Athenian education was the completely developed man. Beauty of mind and body, the cultivation of every inborn faculty and energy, harmony between thought and life, decorum, temperance, and regularity, such were the results aimed at at the home and in the school, in social intercourse, and in civic relations. "We are lovers of the beautiful," said Pericles, "yet simple in our tastes, and we cultivate the mind without loss of manliness" (Thucydides, II, 46). The means of culture were music and gymnas-
ties, the former including history, poetry, the drama, oratory, and science, along with music in the narrower sense; while the latter comprised games, athletic exercises, and the training for military duty. That music was no more "accomplishment" and that gymnastics had a higher aim than bodily strength or skill is evident from what Plato tells us in the "Protagoras". The Greeks indeed laid stress on courage, temperance, and obedience to law; and if their theoretical disquisitions could be taken as fair accounts of their actual practice, it would be difficult to find, among the products of human thinking, a more exalted ideal. The essential weakness of their moral education was the failure to provide adequate sanction for the principles they formulated and for the counsels they gave to youth. The practice of religion, whether in public services or in household worship, exerted but little influence upon the formation of character. The Greek deities, after all, were no models for imitation; some of them could scarcely have been objects of reverence, since they were endowed with the weaknesses and passions of men. Religion itself was mechanical and external; it did not touch conscience nor awaken the soul. As to the future life, that of the Greeks believed in the immortality of the soul; but this belief had little or no practical significance. Thus the motive for virtuous action was found, not in respect for Divine law nor in the hope of eternal reward, but simply in the desire to temper in due proportion the elements of human nature for social need and personal advantage. Virtue is not self-repression for the sake of duty, but, as Plato says, "a kind of health and beauty and good habit of the soul"; while vice is "a disease and deforms and sickness of it". The just man "will so regulate his own character as to be on good terms with himself, and to set those three principles [prudence, temperance, and justice] in their due relation to each other and himself and the community, so that he may be truly the ruler of his soul; and thus the just man will have reached the stage we have defined as "the exercise and practice of virtue" (Republic, IV, 443). This conception of virtue as a self-balancing was closely bound up with that idea of personal worth which has already been mentioned as the central element in Greek life and ethics. But the personality that of man for the sake of his humanity, nor even that of the Greek for the sake of his nationality; it was the personality of the free citizen, and from citizenship the artisan and the slave were excluded. The mechanical arts were held in bad repute; and Aristotle declares that "they render the body and soul or intellect of free persons unfit for the exercise and practice of virtue" (Politics, V, 1337). A still more serious limitation, affecting not only their concept of human dignity, but their regard for human life as well, consisted in the exposure of children. This was practiced at Sparta by the public authority, which destroyed the child that was unfit for the service of the State; while at Athens the fate of his offspring was committed to the father and might be decided in accordance with purely personal interests. The mother's position was not much better than it had been in the Orient. "The laws are general; the law is to be absolute, the soul and the body and the whole man are to be free persons unfit for the exercise and practice of virtue" (Euripides, Medea, 406). At best she was a means to an end, the bearing of children and the care of the household; her education consequently was of the least sort. The only exceptions were the heroines who were outside the home circle and who with greater freedom of living combined higher culture than the legitimate wife could hope for. Under such circumstances marriage implied for woman a lowering of personal worth that was in marked contrast with the ideals set up for the education of men.

These ideals, again, underwent a decided change during the fifth century B.C. In one respect at least it was a change for the better; it extended the rights of citizenship. The constitution of Solon was set aside and that of Cleisthenes adopted in its stead (509 B.C.). The democratic spirit of the time, the in-crease in prosperity at home and the widening of foreign relations, afforded new opportunities for individual ability and endeavour. This heightened activity, however, was not put forth in behalf of the common good, but rather for the advancement of personal interests. At the same time morality was deprived of even the outward support it had formerly drawn from religion; philosophy gave way to scepticism; and education, while it became more intellectual, laid emphasis on form rather than on content. The most influential teachers were the Sophists, who supplied the growing demand for instruction in the art of public discussion and offered information on every sort of subject. Developing in practical directions the principle that "man is the measure of all things", they carried individualism to the extreme of subjectivism alike in the sphere of speculative thought and in the political field. The purpose of their teaching was correspondingly modified, and new problems arose. Now that the old standards and basis of morality had been rejected, the main question was to replace them by others in which due allowance would be made on the one hand for individuality and on the other for the conditions under which men lived. "Know thyself" and "Knowledge is virtue", i.e. a knowledge drawn from personal experience, yet possessing universal validity; and the means prescribed by him for obtaining such knowledge was his mateurics, i.e. the art of giving birth to ideas through the method of question and answer, by which he developed the power of thinking. As an intellectual discipline, this scheme had undoubted value; but it left unsolved the chief problem: how is knowledge, even of the highest kind, to be translated into action? Plato offered a twofold solution. In the "Republic", setting out from his general theory that the idea alone is real, and that the good of each thing consists in harmony with the idea whence it originated, he reaches the conclusion that knowledge consists in the perception of this harmony. The aim of education, therefore, is to develop knowledge of the good, and we need not go far, this scheme contains little more promise of practical results than that of Socrates. But Plato adds that society is to be ruled by those who attain to this knowledge, i.e. by the philosophers; the other two classes, soldiers and artisans, are subordinate, yet each individual is assigned to the class for which his abilities fit him, reaches the highest self-development and contributes his share to the social weal. In the "Laws", Plato attempts to revise and combine certain elements of the Spartan and of the Athenian system, but this reactionary scheme met with no success. This problem, finally, was taken up by Aristotle in the "Ethics" and the "Politics". As in his philosophy, so in his educational theory, he departs from Plato's teaching. The goal for the individual as well as for society is happiness; "What we have to aim at is the happiness of each citizen, and happiness consists in a complete activity and practice of virtue" (Politics, IV). More precisely, happiness is "the conscious activity of the highest part of man according to the law of his own excellence, not unaccompanied by adequate, external conditions". Merely to have what goes beyond this is not enough; this knowledge must issue in practice, the goodness of the intellect (knowledge of universal truth) must be combined with goodness of action. The three things which make men good and virtuous—nature, habit, and reason—must be in harmony with one another (for only then do they always agree); men do many things against habit and nature, if reason persuades them that they ought.
We have already determined what natures are likely to be most easily moulded by the hands of the legislator. All else is the work of education; we learn some things by habit and some by instruction" (Politics, Bk. VII). Education, however, must always be adaptable to the peculiar character of the State and the time. "The citizen should be moulded to suit the form of government under which he lives" (ibid., VIII). And again, "It is right that the citizens should possess a capacity for affairs and for war, but still more for the enjoyment of peace or leisure; right that they should be capable of actions as auxiliary, but still more of such as are moral per se. It is with a view to these objects, then, that they should be educated while they are still children, and at all other ages, till they pass beyond the need of education" (ibid., IV). "Neither must we suppose that any one of the citizens belongs to himself, for they all belong to the State, and are each of them a part of the State, and the care of each part is inseparable from the care of the whole" (ibid., VIII).

In the theories of Plato and Aristotle are found the highest reaches of Hellenic thought regarding the purpose and nature of education. Each of them, with thinkers established schools of philosophy, and each has profoundly affected the thought of all subsequent time, yet neither succeeded in providing an education sound and permanent enough to avert the moral and political downfall of the nation. The diffusion of Greek thought and culture throughout the world by conquest and colonization was no remedy for the evils which sprang from an exaggeraded individualism. Once the idea was accepted that each man is his own standard of conduct, neither brilliancy of literary production nor fineness of philosophic speculation could prevent the decay of patriotism and of a virtuous spirit which had never looked higher than the State for its sanction. Aristotle himself, at the close of his "Ethics," points out the radical difficulty: "Now if arguments and theories were able by themselves to make people good, they would, in the words of Theognis, be entitled to receive high and great rewards, and it is with theories that we should have to provide ourselves. But the truth apparently is that, though they are strong enough to encourage and stimulate young men of liberal minds, though they are able to inspire with goodness a character that is naturally noble and sincerely loving, the beautiful, the useful, to convert the mass of men to goodness and beauty of character." No such "conversion" was aimed at by the Sophists. Appealing to the natural tendencies of the individual, they developed a spirit of selfishness which in them broke out in discord, thus opening the way for the conquest of Greece by Roman arms.

The Romans.—In striking contrast with the Greek character, that of the Romans was practical, utilitarian, grave, austere. Their religion was serious, and it permeated their whole life, hallowing all its relations. The family, especially, was far more sacred than in Sparta or Athens, and the position of woman as wife and mother more exalted and influential. Still, as with the Greeks, the power of the father over the life of his child—patris potestas—was absolute, and, in the earlier period at least, the exposure of children was common practice. In fact the Twelve Tables provided for the immediate destruction of deformed offspring and gave the father, during the whole life of his children, the right to imprison, sell, or slay them. Subsequently, however, a check was placed on such practices. The ideal at which the Romans strived was neither harmony nor happiness, but the performance of duty and the maintenance of his rights. Yet this ideal was to be realized through service to the State. Deep as was the family feeling, it was always subordinate to devotion to the public weal. "Parents are dear," said Cicero, "and children and kindred, but all loves are bound up in the love of our common country" (De Officiis, I, 17). Education therefore was essentially a preparation for civic duty. "The children of the Romans are brought up that they may one day be able to be of service to the fatherland, and one must accordingly instruct them in the customs of the institution of the State and the institutions of the State, the fatherland has produced and brought us up that we may devote to its use the finest capacities of our mind, talent, and understanding. Therefore we must learn those arts whereby we may be of greater service to the State; for that I hold to be the highest wisdom and virtue."

These words express, at any rate, the spirit of the early Roman education. The home was the only school, and the parents the only teachers. Of scientific and aesthetic training there was little or none. To learn the Laws of the Twelve Tables, to become familiar with the lives of the men who had made Rome great, and to copy the virtues which he saw in his father were the chief endeavour of the boy and youth. Thus the moral element predominated, and virtues of a practical sort were inculcated: first of all pietas, obedience to parents and to the gods; then prudence, fair play, modesty, firmness, and gravity. These qualities were to be developed, not by abstract or philosophical reasoning, but through the imitation of worthy models and, as far as possible, of living concrete examples. "Vine discimus, "We learn for life," said Seneca; and this phrase sums up the whole purport of Roman education. In the course of Roman schools (ludi) were opened, but they were conducted by private teachers and were supplementary to the home instruction. About the middle of the third century B.C., foreign influences began to make themselves felt. The works of the Greeks were translated into Latin, Greek teachers were introduced, and schools established in which the educational characteristics of the Greeks reappeared. Under the direction of the literatus and the grammaticus education took on a literary character, while in the school of the rhetor the art of oratory was carefully cultivated. The importance which the Romans attached to eloquence is clearly shown by Cicero in his "De Oratore" and by Quintilian in his "Institutes"; to produce the orator became eventually the chief end of education. Quintilian's work, moreover, is the principal contribution to educational theory produced in Rome. The heliconian springs were still there, and gradually one Roman character yielded but slowly to the intellectualism of the Greeks, and when the latter finally triumphed, far-reaching changes had come about in Roman society, government, and life. Whatever the causes of decline—political, economic, or moral—they could not be stayed by the imported refinement of Greek thought and practice. Nevertheless, pagan education as a whole, with its ideals, successes, and failures, has a profound significance. It was the product of the highest human wisdom, speculative and practical, that the world has known. It pursued in the turns that appear most natural to the human mind. It engaged the thought of the greatest philosophers and the action of the wisest legislators. Art, science, and literature were placed at its service, and the mighty influence of the State was exerted in its behalf. In itself, therefore, and in its results, it shows how much and how little human reason can accomplish when it seeks no guidance higher than itself and strives for no purposes other than those which find, or may find, their realization in the present phase of existence.

The Jews.—Among the pre-Christian peoples the Jews occupy a unique position. As the recipients and custodians of Divine revelation, their conceptions of life and morality were far above those of the Gentiles. God manifested Himself to them directly as a Person, a Spirit, and an ethical Being, guiding them by His providence, making known to them His will, and pre-
scribing the minutest details of life and of religious practice. Throughout the Old Testament, God appears as the teacher of His chosen people. He sets before them a standard of righteousness which is none other than Himself: “You shall be holy, because I am the Lord your God” (Lev., xi, 46). Through Moses and the Prophets He gives them His Commandments and the promise of a Messiah to come. But He also placed upon them the duty of instructing their children. “Hear, O Israel, the Lord our God is one Lord. Thou shalt love the Lord thy God with thy whole heart, and with thy whole soul, and with thy whole strength. And these words which I command thee this day shall be in thy heart: and thou shalt tell them to thy children, and thou shalt meditate on them sitting in thy house, and walking in thy journey, sleeping and rising” (Deut., vi, 4–7).

In accordance with this injunction, education, at least in the earlier period, was given chiefly in the home. Jewish family life, indeed, far surpassed that of the Gentiles in the purity of its relations, in the position it secured to woman, and in the care which it bestowed on children, who were regarded as a blessing vouchsafed by God and destined for His service. The training for the coming of God’s Kingdom was a serious duty of the synagogue. Through Moses and the doctors, the instruction of youth, which was committed to the scribes and the doctors, was practised. Schools, as such, came into existence only in the later period, and then the teaching was permeated by religion. Though the Old Testament contains a number of maxims which abounds in maxims and principles which are all the more weighty because they are inspired by Divine wisdom and because they have a practical bearing upon life. God Himself showed the dignity of the teacher’s office when He declared: “They that are learned shall teach them, and they that are instructed shall teach others” (Deut., vi, 7). In the light, however, of a more perfect revelation, it is clear that God’s dealings with Israel had an ultimate purpose which was to be realised “in the fulness of time”. Not only the utterances of the Prophets, but many signal events in the history of the Jews and many of their ritual observances were types of the Messiah; as St. Paul says, “All these things happened to them in figure” (I Cor., x, 11), and “The law was our pedagogue in Christ” (Gal., iii, 24).

As Sasson the Teacher of God, who imparting to them the truth which they presently needed, also prepared the way for the greater truths of the Gospel.

**Christian Education.**—As in many other respects, so for the work of education, the advent of Christianity is the most important epoch in the history of mankind. Not only does the Christian conception of life differ radically from the pagan view, not only does the Christian teaching impart a new sort of knowledge and lay down a new principle of action, but Christianity, moreover, supplies the effectual means of making its ideal actual and of carrying its precepts into practice. Through all vicissitudes of conflict and adjustment, of changing civilizations and varying opinions, in spite even of the shortcomings of its own adherents, Christianity has steadfastly held up before men the life and the lessons of its Divine Founder.

**Jesus the Teacher:**—“God, who, at sundry times and in divers manners, spoke in times past to the fathers by the prophets, last of all, in these days hath spoken to us by His Son” (Heb., i, 1–2). This communication through the God-Man was to reveal the true way of living: “The grace of God that bringeth salvation hath appeared to all men: instructing us, that, denying ungodliness and worldly desires, we should live soberly, and justly, and godly in this world, looking for the blessed hope and coming of the great God and our Saviour Jesus Christ” (Titus, ii, 11, 12). Of Himself and His mission Christ declared, “I am come a light into the world; that whosoever believeth in me, may not remain in darkness” (John, xii, 46); and again, “For this was I born, and for this came I into the world; that I should give testimony to the truth” (John, xviii, 37). The knowledge which He came to impart was no mere intellectual possession or theory: “I am come that they may have life, and may have it more abundantly” (John, x, 10). He taught, therefore, “the authority”. He insisted that His hearers should believe the truths which He taught, even though these might seem to be “hard sayings”. His doctrines, indeed, made no appeal either to pride of intellect or to self-sufficiency or to passion. For the most part, as in the Sermon on the Mount, they were direct expositions opposed to the maxims that had obtained in the pagan world. They were, in the highest sense, supernatural, not only in proposing eternal life as the ultimate goal of man’s existence and action, but also in enjoining the denial of self as the chief requisite for attaining that destiny. Service to the neighbour was insisted upon, but this was to be rendered in the spirit of love, the new commandment which Christ gave (John, xiii, 34). Faithfulness also to civil duty was required, but the sanction which imparted force to such obligations was their relation to the Kingdom of God.

Religion, for Jesus, was the highest of all human aspirations. “Seek ye first the kingdom of God, and His justice, and all these things shall be added unto you” (Matt., vi, 33). The faith of Christ was far removed from the material optimism of the natural tendencies of human thought and desire, could be imparted only by one who embodied in himself all the qualifications of a perfect teacher. The philosophers no doubt might, and did, formulate beautiful theories regarding knowledge and virtue; but Christ alone could say to His disciples: “I am the way, the truth, and the life” (John, xiv, 6). And whatever worth they attached in theory to personality was of far less significance than the actual realisation of the highest ideal in Christ’s own Person. He could thus rightfully appeal to that eminent tendency which is so deeply rooted in man’s nature and from which so much is expected in modern education. The axiom, also, that we learn by doing, and that knowledge gets its full value only when it issues in action, finds its best exemplification in Christ’s dealings with His disciples. He “brought many to see their faith, and He gave evidence of His power over all nature, and therefore of His authority to require faith in His words: “The works themselves which I do give testimony of me, that the Father hath sent me” (John, v, 36). To His disciples, when they hesitated or were slow to realise that the Father abides in Him, He answered: “Otherwise believe for the very works’ sake” (v, 12). What He demanded in turn was no more outward profession of faith or loyalty: “Not every one that saith to me, Lord, Lord, shall enter into the kingdom of heaven; but he that doth the will of My Father” (Matt., vii, 21).

The necessity of manifesting belief through action is constantly pointed out both in the literal teaching of Christ and in His parables. These, again, illustrate His practical wisdom as a teacher. They were drawn from objects and circumstances with which His hearers were familiar. In each instance they were adapted to the manner of thinking suggested by the local surroundings and the customs of the people; and they were often called forth by an incident that seemed unimportant or by a question which was asked now by the following His tireless Master, or the simplest of things—of the vine, the fig-tree, the birds of the air, and the grass of the field—were made to yield lessons of the deepest moral significance. His aim was not to adorn His own discourse, but rather to bring its content into the minds of His hearers more vividly, and to secure for its greater permanence by associating in their thought some supernatural
ural truth with the facts of daily experience. Sensory perception, memory, and imagination were thus formed to develop a mental setting for the great truths of the Kingdom. The same principle found its application in the institution of the sacraments whereby natural phenomena are made the outward signs of inward grace. As St. John Chrysostom aptly says, "Wert thou incorporeal, He would have bestowed on thee incorporeal gifts in their bare reality; but because the soul is bound up with the body, He gives thee intelligible things under sensible forms" (Homilia ix, ad populum Antioch.).

In fact, the whole teaching of Christ is the clearest proof of the principle that education must adapt itself in method and practice to the needs of those who are to be taught. In accordance with this principle He prepared the minds of His followers beforehand for the institution of the Holy Eucharist, for His own death, and for the coming of the Holy Ghost (John, vi, xiv, xv); and He ever reserved certain truths to be made known by the Paraclete: "I have yet many things to say to you: but you cannot bear them now. But when he, the Spirit of truth, is come, he will teach you all things..." (xvi, 12, 13). Thus the success of His work as a teacher is left not to human conjecture or speculation, nor to the theories of philosophical schools, but to the Spirit of God Himself. This of course was best realized by those who were nearest to Him; yet even those of the Jews who were not among the Apostles, but were, like Neode mones, able to judge fairly, confessed His superiority: "We know that thou art come a teacher from God; for no man can do those signs which thou dost, unless God be with him." (John, iii, 2).

The Aim of Christian Education.—Had Christ's mission ended when He quitted the earth, He would still have been a word and work of God; the ideal teacher would have influenced for all time the education of mankind so far as its ultimate aims and basic principles are concerned. But as a matter of fact, He made ample provision for the perpetuation of His work by training a select body of men who for three years were constantly under His direction and were thoroughly imbued with His spirit. To these Apostles, moreover, He gave the command: "Going therefore, teach ye all nations..." (Matt., xxviii, 19, 20). These words are the charter of the Christian Church as a teaching institution. While, however, they are directly to the doctrine of salvation, and therefore to the imparting of religious truth, they nevertheless, or rather by the very nature of that truth and its consequences for life, carry with them the obligation of instilling in certain principles and maintaining certain characteristics which have a decisive bearing on all educational problems.

1. The truth of Christianity is to be made known to all men. It is not confined to any one race or nation or class, nor is it to be the exclusive possession of highly gifted minds. This characteristic of universality is in plain contrast with the highest conceptions of the pagan world. The cultured Greek had only contempt for the barbarian, and the Roman looked upon outside nations as subjects to be governed rather than as people to be taught. But at Athens also and at Rome there was the distinction between freemen and slaves, in consequence of which the latter were excluded from the benefits of education. As against these narrow limitations Christ charged His Apostles to "teach all men"; and St. Paul, in the same spirit, professes himself a debtor to all men, Greeks and barbarians, wise and unwise alike. All in fact, were to be dealt with as children of the same Heavenly Father and heirs of the Kingdom of God. In respect of these supernatural prerogatives, the distinctions which had hitherto prevailed were set aside: Christianity appeared as one vast school with mankind at large for its disciples.

2. The commission given to the Apostles was not to expir with them; it was to remain in force "all days, even to the consummation of the world". Perpetuity, therefore, is an essential feature in the educational work of Christianity. The institutions of paganism were advanced towards a natural phase of development, but they did not contain the element of enduring vitality. In the higher departments of learning, as in philosophy, school had followed school into vigour and into decay. And in education itself, one ideal after another had been put forward only to be discarded. Christianity, on the contrary, while it could never become a rigid system, held up to mankind certain unchangeable truths which should serve as criteria for determining the value of every fundamental theory of life and of education. By insisting, especially, that man's destiny was to be attained, not in any form of temporal service or success, but in union with God, it proposed an ideal which should be valid for all time and amid all the variations of human thought and endeavour. That such changes would inevitably come to pass, Christ, without doubt, foresees. In view of these, a merely human teacher could have provided the stability which devices which, if successful, have attested his foresight, or shrewdness, or knowledge of human nature. But Christ's guarantee to the Apostles is as simple and surer: "Behold I am with you all days". The task of instructing the world in Christian truth was to be impossible but for this permanent abiding of Christ with His appointed teachers. On the other hand, once the force of His promise is realized, the significance of Christianity as a perpetual institution becomes evident: it means that Christ Himself through a visible agency was to continue for all time the work He began during His earthly life as Teacher of the human race.

3. It has already been pointed out that some of the pagan peoples, and notably the Greeks, had attained a very high conception of personality; and it has also been shown that this conception was by no means useless. The teaching of Christianity in this respect is so far superior to any other that if a single element could be designated as fundamental in Christian education it would be the emphasis which it lays on the worth of the individual. In the first place, Christianity had its origin, not in any abstract speculation as to goodness, but in the actual concrete life of a Person who was absolutely perfect. It was not, then, obliged to cast about for the ideal man, or to present a theory as to what that ideal might possibly be: it could and it did point to a realization which far surpassed the most exalted ideas of human wisdom. In Christ first appeared the full dignity of human nature through its elevation to personal union with the Word of God; and in Him, as never before or since, were manifest those traits which furnish the noblest models for imitation.

Christianity, furthermore, elevated human personality by the value it set upon each human soul as created by God and destined for eternal life. The State is no longer the supreme arbiter, nor is service to the public the ultimate standard. These, it is true, within their legitimate sphere have just claims upon the individual. Christianity by no means teaches that such claims can be disregarded or the corresponding duties neglected, but rather that the discharge of all social and civic obligations will be more thorough when subordinated to, and inspired by, fidelity in the duties that man owes to God. While the value of personality is thus enhanced, the sense of responsibility is correspondingly increased. If the requirement of the person is not allowed to culminate in selfishness nor in that extreme individualism which is a threat to social organization.

4. From these principles Christianity drew consequences which were totally at variance with the
thought and practice of paganism. The position of woman was lifted at once to a higher plane; she ceased to be a chattel, or a mere instrument of passion, and became the equal of man, with the same personal worth and the same eternal destiny. Marriage was regarded as an institution entered into through caprice or convention, but an indissoluble bond involving mutual rights and duties. Moreover, it was raised to the dignity of a sacrament, which not only sanctified the marital relation and its purposes, but also conferred the grace needful for the due fulfilment of its obligations. The whole meaning of the family was thus transformed. Parental authority was indeed maintained, but such an exercise of the patria potestas as the destruction or the exposure of children could not have been tolerated once it was realized that the child's personality also is sacred, and that parents are responsible not simply to the State, but also to God, for the proper education of their offspring. Christianity, moreover, laid upon the child the duty of respecting and obeying his parents, not out of servile fear or hard necessity, but through a spirit of reverence and filial love. The ties of home-life were thereby strengthened, and the whole work of education took on a new character because it was consecrated in its very source by religion.

5. In respect of its content Christianity opened up to the human mind wide realms of truth which unaided reason could not possibly have attained, and which, however, are of far greater import than the most learned speculations of pagan thought. Upon those truths, also, which the philosophers had but vaguely discerned, or about which they had remained in doubt, it shed a new light. There could be no further questioning, for the Christian, as to the existence of a personal God, the reality of His providence, the immortality of the soul, the freedom of the will, and the resulting accountability of man to Divine Justice. Above all, the nature of the moral order was set forth in unmistakable terms. Christianity insisted that morality was not mere outward conformity to custom or law, but the inner rectitude of the will, that aesthetic refinement was of far less consequence than purity of heart, and that love of the neighbour as proven in deeds, not personal gain or advantage, was the true norm of human relationships. That such a conception of life, with its emphasis on really spiritual thought and its appeal to the formal ideals unknown to the pagan world, is obvious. But on the other hand it would be wrong to infer that Christianity, in its "otherworldliness", reduces or neglects the values of the present life. What it consistently maintains is, that life here gets its highest value by serving as a preparation for the life to come. The question is not whether one should live now without any regard to the future or look forward to the future with no concern for the present; but rather how one should profit by the opportunities of this life in such wise as to secure the other. The problem, then, is one of establishing ideals, i.e. of determining values according to the standard of man's eternal destiny. When education is defined as "preparation for complete living" (Herbert Spencer), the Christian can take no objection to the words as they stand; but he will insist that no living can be "complete" which leaves out of consideration the ultimate purpose of life, and hence that no education really "prepares" which thirsts that purpose or sets it aside. It is just this completeness—in teaching all men, in harmonizing all truths, in elevating all relationships, and in leading the individual soul back to the Creator—that forms the essential characteristic of Christianity as an educational influence.

The Educational Work of the Church. Next in importance to Christ's personal teaching was the establishment of a teaching body whose mission was identical with His own: "As the Father hath sent me, I also send you" (John, xxi, 21); and "He that heareth you, heareth me" (Luk, x, 16). He was not content with proclaiming once for all the truth of the Gospel, nor did He leave His wider dissemination to individual enthusiasm or initiative; He founded a Church to carry on His work. The spread of His doctrine was thus entrusted, not to books, but to schools of philosophy, nor to the governments of the world, but to an organization that spoke in His name and with His authority. No other body of teachers ever undertook so vast a work, and no other ever accomplished so much for education in the highest sense. Apart from the preaching of the Apostles, the earliest form of Christian instruction that came to the catechumen of (q. v.) in preparation for baptism. Its object was twofold: to impart a knowledge of Christian truth, and to train the candidate in the practice of religion. It was conducted by the bishop and, as the number of catechumens increased, by priests, deacons, and other clerics. Until the third century this mode of instruction was an important adjunct to the Apostolate; but in the fifth and sixth centuries it was gradually replaced by private instruction of the converts, who were then less numerous, and by the training given in other schools to those who had been baptised.

The catechumenal schools, however, gave expression to the spirit which was to animate all subsequent Christian education: they were open to everyone who accepted the Faith, and they united religious instruction with the preparation for the exercise of the sacred arts. Schools, also under the bishop's supervision, prepared young clerics for the priesthood. The courses of study included philosophy and theology, and naturally took on an apologetic character in defense of Christian truth against the attacks of pagan learning. One of the oldest of these schools was at the Lateran in Rome; the most famous was that of Alexandria (see Doctrines, Christian).

In addition to this formal instruction, the Church from the beginning carried on through her worship an educational work embodying the deepest and soundest psychological principles. The ritual at first was of necessity simple; but as the Church was allowed a larger freedom, and her worship passed from the catacomb to the basilica, statelier forms were introduced; yet their essential purpose was the same. The Mass, which has always been the central liturgical function, appeals to the mind through the medium of sense; it combines light and colour and sound, the action of the priest, and the dramatic movement that fills the sanctuary, especially in the more solemn service. Beneath these outward forms lies the inner meaning. The altar itself, in every detail, is full of a symbolism that brings vividly to mind the life and personality of Christ, the work of redemption, and the enduring sacrifice of the Cross. In due proportion, each item of the liturgy conveys a lesson through eye and ear to the highest faculties of the soul. Sense, memory, imagination, and feeling are thus aroused, not simply as aesthetic activities, but as a support of intellect and will which thereupon issue in adoration and thanksgiving for the "mystery of faith". On the other hand, the liturgy has always included in its purpose the participation of the faithful, and hence it prepares the response of the people to the prayers at the altar, the chanting of certain portions of the service, bodily postures and movements in keeping with the various phases of the sacred rite. The faithful are not merely bystanders or onlookers; they are not to maintain a passive, receptive attitude, but rather to give active expression to the religious thought and feeling aroused in them. This is especially evident in the sacramental system. While each of the sacraments is a sign to be perceived, it is also a source of grace to be received; and the reception involves in each case a series of actions which manifest the faith and disposition of the recipient. Moreover, each sacrament is
adapted to some particular need, and the whole system of sacrament, from baptism to extreme unction, builds up the spiritual life by processes of cleansing, strengthening, nourishing, and healing, which parallel the stages and requirements of organic growth.

In a largely, but also, the climax the Church designates the principal events in the life of Christ, brings into Christian worship a variety which affects to some extent both the details of the liturgy itself and the religious feelings which it inspires—from the joy of Christmas to the triumph of Easter and Pentecost. For the true observer, as of Julian the Apostate, the Church was at its prime, as in Advent and Lent, by seasons of preparation. The Old Law with its types foreshadowed the New; the Baptist announced the Messiah; Christ himself prepared his disciples beforehand for the mystery of the Eucharist, for his death, and for the coming of the Holy Ghost. The Church, following the same practice, arranges in the mind of the faithful those thoughts and feelings which form an apperceptive preparation for the central mysteries of faith and their proper observance at appointed times. Along with these greater solemnities come year by year the commemorations of the Church's past, of the austere women who have walked in the footsteps of Christ, laboured for the spread of his kingdom, or even shed their blood for his sake. These are held up as models to be imitated, as realizations more or less perfect of the sublime ideal which is Christ Himself. And associated with the former is the Mother of Christ, the ideal of Christian womanhood, to whom the Son of God was “subject” in the home at Nazareth. Each festival in her honour is at once an exhortation to copy her virtues and an evidence of the high station to which woman was raised by Christ. The liturgy, in its liturgical form, on a large scale of those principles which underlie all real teaching—appeal to the senses, association, apprehension, expression, and imitation. The Church did not begin by theorizing about these, nor did she wait for a psychological analysis to determine their value. Instructed by her Founder, she imitated and incorporated in her liturgy those elements which were best fitted to teach men the truth and lead them to act in conformity with the Gospel. It is none the less significant that modern education is adopting for its own purposes, i.e., the teaching of secular subjects, the psychological principles which the Church from the beginning has put into practice.

While the Church, in her interior life and in the execution of her mission, gave proof of her vitality and of her ability to teach mankind, she necessarily came into contact with influences and practices which were the legacy of paganism. In point of religious belief there was, of course, a clean break between the polytheism of Athens and Rome and the doctrines of Christianity. But philosophy and literature were factors which had to be counted with as well as the educational system, which was still largely under pagan control. Schools had been opened by converts who were imbued with the ideas of Greek philosophy—by Justin at Rome, and Aristides at Athens; while, at Alexandria, Clement and Origen enjoyed the highest repute. These men regarded philosophy as a means of defending faith, and, later, even against the attacks of paganism. Others again, like Tertullian, condemned philosophy outright as something with which the Christian could have nothing to do. In regard to the pagan classics the conflict of opinion was even sharper. Some of the greatest theologians, like St. Tertullian, St. Cyprian, St. Gregory of Nazianz, and St. Gregory of Nyssa, had studied the classics under pagan masters and were therefore in favour of sending Christian youths to non-Christian schools on the ground that literary studies would enable them the better to defend their religion. At the same time these Fathers would not permit a Christian to teach in such schools lest he should be obliged to take part in idolatrous practices. Tertullian (de Iddololatriâ, c. x) insists on the same distinction: the teacher, he says, by reason of his authority, becomes in a way the “catechist of demons”; the pupil, imbued by the lesson of paganism, will not receive instruction, but rejects its false doctrine and holds aloof from the superstitious practices which the teacher can hardly avoid. Such a distinction was naturally the source of difficulties and gave rise to much discussion. The situation was not remedied by the Council of Nicaea forbidding the Christians to teach; though this called forth some protests, it suggested the creation of a Christian literature based on classical models of style, nothing decisive resulted. On the other hand, fear of the corrupting influence of pagan literature had more and more alienated Christians from such studies; and it is not surprising to find among the opponents of the classics such men as St. John Chrysostom, St. Ambrose, St. Jerome, and St. Augustine. Though they had received a thorough classical education, and though they appreciated fully the worth of the pagan authors, their final attitude was adverse to the study of pagan literature. Yet from many controverted points in this subject, it is clear that the Fathers, at a time when the environment of the Church was still pagan, were far more anxious for the purity of faith and morals than for the cultivation of literature. In later ages, as the danger of pagan contamination grew less, classical studies were given up and encouraged by the Church; but their value has more than once been questioned (see Lalanne, Influence des Pères de l'Eglise sur l'éducation publique, Paris, 1850).

Meanwhile the work of education was not neglected. If the Empire gave way before barbarian invasion, the Church found a new field of activity among the vigorous races of the North. To these she brought not only Christianity and civilization, but also the best elements of classical culture. Through her missionaries she became the teacher of Germany and France, of England and Ireland. The task was a difficult one, and its accomplishment was marked by many vicissitudes of temporary failure and hard-won success. At times, indeed, it would seem that the desire for learning had quite disappeared even among those for whom the acquisition of knowledge was a sacred obligation. These drawbacks on the part of ecclesiastical and civil rulers in behalf of a more thorough and systematic education. Thus the salient feature of the Middle Ages is the co-operation of Church and State for the development of schools. Theodoric in Italy, Alfred in England, and Charlemagne in the Frankish Kingdom are illustrious examples of princes who joined their authority with that of bishops and councils to secure adequate instruction for clergy and people. Among churchmen it suffices to mention Chrodegang of Metz, Alcuin, St. Bede, Boethius, and Cassiodorus (see the several articles). As a result of their efforts, education was provided for the clergy in the cathedral schools under the direct supervision of the bishop and for the laity in parochial schools to which all had access. In the curriculum, religion held the first place; other subjects were few and elementary, comprising at best the trivium and quadrivium (see Arts, THE SEVEN LIBERAL). But the significance of this education lies not so much in its content as in the fact that it was the means of arousing a love of learning among peoples that had just emerged from barbarism, and of laying the foundations of Western culture and science. The history of education records no greater achievement for the task was not one of improving or perfecting, but of creating, and had not the Church gone vigorously about her work, modern civilization would have been retarded for centuries. (See SCHOOLS; MIDDLE AGES.)

One of the chief factors in this progress was monas-
ticism (q. v.). The Benedictine monasteries especially were homes of study and depositories of the ancient learning. Not only sympathetic writers, like Montalembert, but those also who are more critical, acknowledge the service which the monks rendered to education. In those restful ages of rude culture, of constant warfare, of perpetual lawlessness and the rule of might, monasticism offered the one opportunity for a life of repose, of contemplation, and of that leisure and relief from the ordinary vulgar but necessary duties of life essential to the student. . . . Thus it happened that the monasteries were the sole schools for teaching; they offered the only professional training; they were the only universities of research; they alone served as publishing houses for the multiplication of books; they were the only libraries for the preservation of learning; they produced the only scholars; they were the sole educational institutions of this period. 11 (Paul Monroe, A Text-Book in the History of Education, New York, 1907, p. 255). In addition to their prescribed studies, the monks were constantly occupied in copying the classic texts. “While the Greek classics owed their safe preservation to the libraries of Christian nations and to the monasteries of the East, it is primarily to the monasteries of the West that we are indebted for the survival of the Latin classics” (Sandy, A History of Classical Scholarship, 2nd ed. Cambridge, 1906, p. 617). The specific work of education was carried on in the monastery school and was in fact, primarily for the novices. In some, however, a schola exterior, or outer school, was added for lay students and for aspirants to the secular priesthood. The course of study included, besides the seven liberal arts, the reading of Latin authors and the music of the Church. Finally, through their animating influence, the monks provided a rich store of information concerning medieval life, which is invaluable to the historian of that period. The chief importance, however, of the monastic schools is found in the fact that they were conducted by an organized body of teachers who had withdrawn from the world and devoted their lives, under the guidance of religion, to literary pursuits and educational work. The same Christianity that had sanctified the family now gave to the profession of teacher a sacredness and a dignity which made teaching itself a noble vocation.

Two other movements form the climax of the Church’s endeavoring the naturalistic thought. The development of Scholasticism (q. v.) meant the revival of Greek philosophy, and in particular of Aristotle; but it also meant that philosophy was now to serve the cause of Christian truth. Men of faith and learning like Albertus Magnus and Thomas Aquinas, far from dreading or scorning the products of Greek thought, sought to make them the rational basis of belief. A synthesis was thus effected between the highest speculation of the pagan world and the teachings of theology. Scholasticism, moreover, was a distinct advance in the work of education; it was an intellectual training in method, in systematic thought, in severe logical reasoning, and in accuracy of statement. But taken as a whole, it furnished a great object-lesson, the purport of which was that, for the keenest intellect, the findings of reason and the truths of Revelation could be united. Having used the metaphysical thinking to sharpen the student’s mind, the Church thereupon presented to him her dogmas without the least fear of contradiction. She thus united in a consistent whole whatever was best in pagan science and culture with the doctrine entrusted to her by Christ. In THE MONASTERIES; SOCIETIES OF RELIGION; ORATORIA. The same synthetic spirit took concrete form in the universities (q. v.). In founding these the popes and the secular rulers co-operated; in university teaching

all the then known branches of science were represented; the student body comprised all classes, laymen and clerics, seculars and religious; and the diploma conferred was an authorization to teach everywhere. The university was thus, in the educational sphere, the highest expression of that completeness which had long characterized the teaching of the Church. It is the spirit of inquiry which animated the medieval university remains, in spite of other modifications, the essential element in the university of modern times. The changes which have since taken place have for the most part resulted in separating those elements which the Church had built into a harmonious whole. As Protestantism by rejecting the principle of authority brought about innumerable divisions in belief, so it led the way to rupture between Church and State in the work of education. The Renaissance in its extreme forms ranked pagan culture above everything else; and the Reformation in its fundamental tenet went beyond the individualism which led to the decline of Greek education. Once the schools were secularized, they fell readily under influences which transformed ideals, systems, and methods. Philosophers and scientists frequently formed new systems of life and its values, thus moved, at first slowly then more rapidly, away from the positive teachings of Christianity. Science in turn cast off its allegiance to philosophy and finally proclaimed itself the only sort of knowledge worth seeking. The most serious practical of these was the withdrawal of mental and religious activity from purely intellectual education—a result which was due in part to religious differences and political changes, but also in large part to erroneous views concerning the nature and need of mental training. Such views again are in general derived from the denial of the existence of the supernatural in man, and its meaning for human life in its relations to God; so that, during three centuries past, the main endeavour outside the Catholic Church has been to establish education on a purely naturalistic basis, whether this be aesthetic culture or scientific knowledge, individual perfection or social service. In its earlier stages Protestantism, which laid so much stress on faith, could not consistently have sanctioned an education from which religious ideals were eliminated. But according to its principles worked out to their legitimate consequences, it became less and less capable of supplanting the naturalistic element. The Catholic Church has thus been obliged to carry on, with little or no help from other Christian bodies, the struggle in behalf of those truths on which Christianity is founded; and her educational work during the modern period may be described in general terms as the steadfast maintenance of the union between the natural and the supernatural.

From a human point of view the Church was under many disadvantages. The loss of the universities, the confiscation of monastic and other ecclesiastical property, and the opposition of various governments seemed to make her task hopeless. Yet these difficulties only served to call forth new manifestations of her vitality. The Council of Trent gave the impulse by decreeing that a more thorough education of the clergy should be secured through the seminaries (q. v.); and urging upon bishops and priests the duty of founding up the parochial schools. Similar measures were adopted by provincial and diocesan synods throughout Europe. Then came the religious orders founded for the express purpose of educating Catholic youth. (See especially InstruRtive of the Brothers of the Christian Education, and the Society of Jesus; Oratorians.) And to these finally must be added the numerous congregations of women who devoted their lives to the Christian training of girls. However different in organization and method, these institutions had for their common purpose the spread of religious truth along with secular knowledge among all classes. Thus
E D U C A T I O N

there arose, by force of circumstances, a distinctly Catholic system of education, including parish schools, academies, colleges, and a certain number of universities which had remained under the control of the Church or were founded anew by the Holy See. It is especially the parochial school that has served in recent times as an essential factor in the work of religion. In some countries, e.g., Canada, it has received support from the Government; in others, as in the United States, it is maintained by voluntary contributions. As Catholics have also to pay their share of taxes for the public school system, there are under a double burden; but this very hardship has only served to place in clearer light their practical loyalty to the principles on which Catholic education is based. In fact, the whole parochial school movement during the nineteenth century forms one of the most remarkable chapters in the history of education. It proves on one side that neither loss of the State's co-operation nor lack of material resources can weaken the determination of the Church to carry on her educational work; and on the other side it shows how faith and devotion on the part of parents, clergy, and teachers can accomplish in the interests of religion what are at stake.

Schools.) As this attitude and this action of Catholics place them in a position which is not always rightly understood, it may be useful to present here a statement of the principles on which the Church has based her course in the past, and to which she adheres unshakably to the present time. When the parents and the education are the subject of so much discussion and the cause of agitation in various directions. The Catholic position may be outlined as follows:

1. Intellectual education must not be separated from moral and religious education. To impart knowledge and to develop mental efficiency without building up moral character is not only contrary to psychological law, which requires that all the faculties should be trained, but is also fatal both to the individual and to society. No amount of intellectual attainment or culture can serve as a substitute for virtue; on the contrary, the most thorough intellectual education becomes, the greater is the need for sound moral training.

2. Religion should be an essential part of education; it should form not merely an adjunct to instruction in other subjects, but the centre about which these are grouped and the spirit by which they are permeated.

The study of nature without any reference to God, or of human ideals with no mention of Jesus Christ, or of human legislation without Divine law is at best a one-sided education. The fact that religious truth finds no place in the curriculum is, of itself, and apart from any open negation of that truth, sufficient to warp the pupil's mind in such a way and to such an extent that he will feel little concern in his school-days or later for religion in any form; and this result is the more likely to ensue when the curriculum is made to include everything that is worth knowing except the one subject which is of chief importance.

3. Sound moral instruction is impossible apart from religious education. The child may be drilled in certain desirable habits, such as neatness, courtesy, and punctuality; he may be imbued with a spirit of obedience, kindness, truthfulness—and none of these should be neglected; but if these duties towards self and neighbour are sacred, the duty towards God is immeasurably more sacred. When it is faithfully performed, it includes and raises to a higher plane the discharge of every other obligation. Training in religion, on the other hand, furnishes the best motives for conduct and the noblest ideals for imitation, while it sets before the mind an adequate sanction in the holiness and justice of God. Religious education, it should be noted, is more than instruction in the dogmas of faith or the precepts of the Divine Law; it is essentially a practical training in the exercises of religion, such as prayer, attendance at Divine worship, and reception of the sacraments. By these means conscience is purified, the will to do right is strengthened, and the mind is fortified to resist those temptations which, especially in the period of adolescence, threaten the greatest danger to the moral life.

4. An education which unites the intellectual, moral, and religious elements is the safest safeguard for the home, since it places on a secure basis the various relations which the family implies. It also ensures the performance of social duties by inculcating a spirit of self-sacrifice, obedience to law, and of Christian love for the fellow-man. The most effectual preparation for citizenship is that schooling in virtue which habituates a man to decide, to act, to oppose a movement or to further it, not with a view to personal gain nor simply in deference to public opinion, but in accordance with the standards of right that are fixed by the law of God. The welfare of the State, therefore, demands that the child be trained in the practice of virtue and religion no less than in the pursuit of knowledge.

5. Far from lessening the need of moral and religious training, the advance in educational methods rather emphasizes that need. Many of the so-called improvements in teaching are of passing importance, and some are at variance with the laws of the mind. Upon their relative worth the Church does not pronounce, nor does she commit herself to any particular method. Provided that the essentials of Catholic education are secured, the Church welcomes whatever the sciences may contribute toward rendering the work of the school more efficient.

6. Catholic parents are bound in conscience to provide for the education of their children, either at home or in schools of the right sort. As the child must be cared for, so, for still graver reasons, must the mental and moral faculties be developed. Parents, therefore, cannot take an attitude of indifference toward this essential duty nor transfer it wholly to others. They are responsible for those earliest impressions which the child receives passively, before he exercises any conscious selective imitation; and as the intellectual powers develop, the parents' example is the lesson that sinks most deeply into the child's mind. They are also obliged to instruct the child, according to his capacity, in the truths of religion, and in the practice of the religious duties, thus co-operating with the work of the Church and the school. The virtues, especially of obedience, self-control, and purity, can nowhere be inculcated so thoroughly as in the home; and without such moral education by the parents, the task of forming upright men and women and worthy citizens is difficult, if not impossible.

That the need of moral and religious education has impressed the minds of non-Catholics also, is evident from the movement inaugurated in 1903 by the Religious Education Association in the United States, which meets annually and publishes its proceedings at Chicago. An international movement of moral training was started in London in 1906, and the report has been edited by Professor Sulder under the title, "Moral Instruction and Training in Schools" (London, 1908).

Education (Chicago, 1902); Duvanloup, De l'éducation (Paris, 1850); De la haute éducation intellectuelle (Paris, 1855-57); Gaume, Catholicisme dans l'éducation (Paris, 1855); Gaume, Lettres sur le paganisme dans l'éducation (Paris, 1852); Kleur- gen, Über die alten und die neuen Schulen (Münster, 1899).

The convention was the largest and most representative gathering of Catholic educators that had up to that date been held in the country. It may be that these meetings is now generally recognized. They give an understanding of the strength and weakness of the Catholic educational position that can be obtained in no other way. A great deal of earnest and serious work is done at them; they foster a spirit of unity and cooperation in all departments of Catholic education; and they inspire the educators with a greater love and devotion to their calling. The whole system of Catholic educational activity has been strengthened, unified and developed by the annual conventions of the association, and more especially was this the result of the meeting in Cincinnati.

As the understanding of the Catholic educational situation, with its difficulties and possibilities, becomes clearer, the work of the association becomes every year more definite and more practical. The slow and gradual growth of the association has given it a form of organization well suited to the development of the work. Catholic educators have a good understanding of the problems they must solve, among which are the problem of secondary education, and the problem of curriculum. Of more importance, even, than the thoroughgoing development of educational interests of Catholic education, and the vindication of the principles on which it is based. The secular system of education is based largely on the theory that man is born for the State and that he derives his rights from the State. The socialist would have the State absorb all authority in the domain of learning and industry, and there are many secular educators who would fain see the monopoly of education lodged in the power of the State. The Catholic system is based on the right of the parent, the right of the child, and a reasonable individualism. The resolutions of the Cincinnati convention insisted on the right of the parent in the matter of education, and the association exists for the purpose of maintaining the right of the parent and the principle of liberty of education. The Catholic Educational Association is an expression of the unity of principle that unites all Catholic educators.

The relations are a president general, several vice-presidents general, a secretary general, treasurer general, and an executive board. The association includes the college, school, and seminary departments. The affairs of the association are managed by the executive board. Each department is represented in this board by its president and two other members elected by the department. Each department regulates its own affairs, and each may organize sections for the more special work in which its members are interested. In the Parish School Department, there is a Superintendent's Section and a Local Bureaus Section. A local meeting for the teachers is organized at every convention through the Parish School Department.

In the constitution the aims of the association are stated as follows: "The object of this association shall be to keep in the minds of the people the necessity of religious instruction and training as the basis of morality and sound education; and to promote the principles and safeguard the interests of Catholic education in all its departments; to advance the general interests of Catholic education, to encourage the spirit of cooperation among Catholic educators, to promote by study, conference, and discussion the thoroughgoing of Catholic educational work in the United States; to help the cause of Catholic education by the publication and circulation of such matter as shall further these ends."

According to the report of the secretary general
there were on 1 July, 1908, three hundred and sixty-four members of the Parish school Department, fifty-two colleges in the College Department, and fourteen seminaries in the Seminary Department. The association publishes an annual report giving all the papers and discussions of the Association and its departments. It also publishes "The Catholic Educational Association Bulletin" quarterly, which contains matters of interest to the members of the association and articles that have an important bearing on Catholic educational work. The association has issued to 1908 five annual reports from the secretaries' office, G. G. Gunness, Ohio. 

FRANCIS W. HOWARD.

Education of the Blind.—Although the education of the blind as a class dates back no farther than the year 1784, historians and statisticians generally admit that the affliction which it tends to relieve was no less prevalent before than it has been since that date. Indeed, so far from having increased, blindness appears to have in a marked degree decreased during the last hundred years.

General Statistics of Blindness.—An exact statement of the number of blind persons in all parts of the inhabited earth is of course impossible. The estimates which publicists have formed upon the basis of census returns, as also those derived from the observation of travellers, give the ratio of blind persons to the whole population in Asia 1 to 500; in Africa 1 to 3,000; in Europe 1 to 1000; and in the United States 1 to 1094 (the figure 1 to 709; Italy, 1 to 1194; Germany, 1 to 1136; European Russia, 1 to 534; Austria, 1 to 1234; Hungary, 1 to 952; Italy, 1 to 1074; Spain, 1 to 855; Denmark, 1 to 1428; Sweden, 1 to 1262; Norway, 1 to 795; Finland, 1 to 899; Belgium, 1 to 1229; Switzerland, 1 to 1325; Bulgaria, 1 to 321). For the other great geographical divisions no data are available for even a fairly satisfactory approximation. (See below Blindness in the United States.) Consistently with the foregoing ratios, and with such conjectures as may be hazarded for America, Australasia, etc., it may be estimated that the number of blind persons now living in all parts of the world is not far short of 2,500,000. A careful study of the figures shows that blindness prevails at its greatest in tropical, and least in temperate, regions; more in the Eastern than in the Western Hemisphere. In the temperate climates of the North the blind are comparatively few; nearer the Arctic Circle, the glittering snows, the alternation from the brilliant nights of the Arctic summer to the prolonged darkness of the winter, and other conditions affect the visual organs unfavourably, while in the torrid zones the glare from desert sands and the intense heat of the sun occasion many diseases, resulting in either total or partial loss of sight.

Blindness in the United States.—In the Western Hemisphere a different ratio seems to obtain. The data, however, for an accurate comparison are wanting, except in the United States (lying between the 24th and 49th parallels of north latitude), where, according to the census of 1900, the ratio of the blind to the entire population is 1 to 1175. In 1890, the ratio was 1 to 1242. The number of blind persons in the United States on the 1st of January, 1900, as returned by the enumerators of the Federal Census Bureau, 1900, was 101,123; by subsequent correspondence with individuals, this number was reduced to 64,763; but the special report on "The Blind and the Deaf" states that this should be considered only as a minimum, being probably about 100,000 and possibly over 100,000. Of the minimum 64,763 reported in the Census, 50.2 per cent were males, 42.8 per cent females; about 13 per cent were under, and about 87 per cent over, twenty years of age. Of the juvenile 13 per cent (8308), those entirely or partially blind before the age of two years numbered 8106.

Causes and Effects.—In a careful study of the causes of blindness Cohn of Breslau estimates that among 1000 blind there are only 220 absolutely unavoidable cases, 119 possibly avoidable, and 529 (or nearly one-third) absolutely avoidable. Blindness may result from accidents, from congenital or hereditary causes, and from disease. Among the most frequent cases of total blindness are: ophthalmia neonatorum, or inflammation of the eyes of the new-born; trachoma, often called "granular lids", and glaucoma, and atrophy of the optic nerve. Blindness from ophthalmia of the new-born is so widespread that, according to Magnus de Blaas, in 1890, blindness in Germany, 10-85 per cent were due to this cause. Among the blind under the age of twenty the proportion is as high as 30 per cent. In the United States, between 6000 and 7000 persons have thus become blind. Thanks to improved sanitary conditions in homes, to more intelligent care on the part of midwives and nurses, and more skilful medical treatment, ophthalmia in certain countries appears as a cause of blindness in only seven per cent of the total number of cases, as against the 41 per cent recorded fifty years ago.

The function of sight can, to a certain extent, be repaired by the use of other senses. The necessity for sight is as much due to it being seen, as to its use, and that attention is aroused, the brain are as capable of reflection and reason as other human beings, while, owing to their condition, they are more frequently forced to close mental application. That blindness does not necessarily render its subjects intellectually inferior, may also be inferred from the number of famous persons who were blind from childhood or early youth. A list of such examples might with little difficulty be produced, long enough and important enough to show how erroneous is the idea that the physical darkness of the blind is necessarily associated with intellectual darkness.

History of Education of the Blind.—That no attempt was made in ancient times to instruct the blind, or in any way to cultivate their intelligences, was mainly due to the prevalent error as to their mental capacities. The same error, generally speaking, produced the same result during the earliest ages of civilization until as late as the end of the eighteenth century. On the other hand, the Church, from the earliest ages, at least made provision for their corporal needs, while here and there attempts were made to teach them various handicrafts. Among the most noted of the hospices for the poor and afflicted which began to appear in all parts of Christendom almost as soon as persecution ceased, was that established in the fourth century by Saint Basil at Cæsarea, where special provision was made for the blind, and guides were supplied for them. In the fifth century, Linnæus, a hermit of Syria, received, in cottages for them, the blind of the surrounding country, whom he taught, among other things, to sing the praises of God. Two centuries later, towards the year 630, a refuge exclusively for the blind, such as was called in the Middle Ages a hypplocomium, was founded at Jerusalem.

In the West, the Church was animated with similar charity. Early in the seventh century, St. Bertrand, Bishop of Le Mans, founded a hospice for the blind at Ponthieu, in the north-west of France. In the eleventh century, William the Conqueror, in expiation of his sins, founded a number of hospices; among them four hospices for the blind and other infirm persons at Cherbourg, Rouen, Bayeux, and Caen respectively. Towards 1260, St. Louis, King of France, established at Paris the Hospice des Quinze-Vingts, where he housed and instructed three hundred blind
person. The inmates of the hospice, after the example of the students and the craftsmen of the day, formed among themselves a distinct brotherhood, to whom the saintly king gave special statutes and privileges. It is noteworthy that, in spite of the changes of government, the ‘Hospice des Quinze-Vingts’ has survived to this day. A similar institution, though less extensive, was established and endowed at Chartres by King John the Good in 1350. Provision was made for 120 blind persons. For various reasons, however, the number of inmates dwindled till, in 1857, according to Dufau, there were but ten. A hospice for the blind is said to have been erected (1305) at Bruges, in Flanders, by Robert de Béthune, in gratitude for the courage displayed by the inhabitants in repelling (1300) an invasion of Philip the Fair. A similar foundation was made at Ghent by Peter Van der Leyen about 1570. Brotherhods of the blind were formed, particularly at Chartres, Caen, Châlons, Meaux, Padua, Memming, Frankfort, and Hull. That the inmates of these institutions received other suitable instruction besides that in the Catechism and in trades there can be no doubt. So desultory, however, were the attempts to give the blind a mode of education, and so inadequate were the means employed, that the problem of their special education remained unsolved. No one had as yet suggested the idea of providing a permanent literature for them. As early as the sixteenth century attempts were made to devise special processes, but these attempts, so far as we know, met with very little success. Among others, Girolamo Cardano (1501-1576), an Italian mathematician, had pointed out a way of teaching the blind to read and write by the sense of touch. They were to trace with a steel bodkin or stylus the outlines of the letters of the alphabet, engraved on metal, until they could distinguish the letters by the sense of touch and reproduce them on paper. Cardano, however, failed to suggest how to write on a straight line with uniformity of space between the lines. In 1575 Rampazetto produced at Rome prints in intaglio from letters carved in wood. His invention was dedicated to St. Charles Borromeo. In 1580, under Philip II, to whom he dedicated his invention, Francesco Lucas, at Madrid, engraved letters in wood for the instruction of the blind; but the letters being sunk in the wood, the outlines could not as readily be followed with the finger-tips. In 1640, Pierre Moreau, a notary at Paris, had movable letters cast for the use of the blind, but for lack of means was unable to follow up his undertaking. In his work, ‘De l’Instruction de l’EAU au FYNZ’, published at Nuremberg in 1651, George Hardinger describes how the blind can recognize, and be taught to name and imitate, letters engraved in wax. Padre Francesco Lana-Terzi, the same Italian Jesuit who anticipated by more than a century the system of lip-reading for deaf mutes, also suggested, as an improvement on Cardano’s invention for the blind, a guide consisting of a series of wires and strings arranged in parallel lines at equal distances from one another, to secure straight writing and uniformity of space between the lines. Besides this, Lana-Terzi describes, in his ‘Prodromo’, an invention of his own, by which the blind may be taught to correspond with each other by a secret code. We have looked in vain in works of reference for any description of this cryptographic device. It is so simple that it can be learned in a few hours. Instead of compelling a blind person to learn how to form all the letters of the alphabet, the three methods pointed out by Lana-Terzi demand only a tacit knowledge of the letters, familiarity with their positions in their respective sections, and a little skill: (1) to insert one, two, or three dots within a square or parts of a square or right angles turned in four different directions; or (2) to prefix to either a comma, colon, semicolon, period, or interrogation mark any one of the first four numerals; or (3) merely to form these numerals. The letters of the alphabet with the lines enclosing them, Lana-Terzi suggests, should be in relief rather than in intaglio, raised letters being far more distinguishable to the sense of touch than letters sunk in a plane surface. The following diagrams will make the matter clear.

First (Lana-Terzi) Method.—Suppose the blind correspondent wishes to send the cipher message, Son prigione (I am a prisoner), he will turn to his tablet,

<table>
<thead>
<tr>
<th>A</th>
<th>O</th>
<th>G</th>
<th>U</th>
<th>B</th>
<th>T</th>
</tr>
</thead>
<tbody>
<tr>
<td>F</td>
<td>L</td>
<td>M</td>
<td>N</td>
<td>E</td>
<td>S</td>
</tr>
<tr>
<td>C</td>
<td>H</td>
<td>A</td>
<td>D</td>
<td>D</td>
<td>Z</td>
</tr>
</tbody>
</table>

and ascertain by touch that the letter s is the second of those enclosed within the lines forming the figure. He will trace this figure with a pencil, and, to indicate that it is the second letter in the above figure, he will write, either above, or below, or within it, two dots, thus: The message in full is as follows:

The position of each letter in its own section is indicated by one of the first four numerals according to the order in the section. Thus, the message, Il re è morto (the king is dead), would be written as follows:

<table>
<thead>
<tr>
<th>1:</th>
<th>2:</th>
<th>3:</th>
<th>4:</th>
<th>5:</th>
</tr>
</thead>
<tbody>
<tr>
<td>l</td>
<td>r</td>
<td>e</td>
<td>è</td>
<td>m</td>
</tr>
<tr>
<td>o</td>
<td>r</td>
<td>t</td>
<td>o</td>
<td></td>
</tr>
</tbody>
</table>

Third Method.—Instead of designating by punctuation marks the different sections into which the letters are distributed, they may be indicated by numerals, thus:

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>b</td>
<td>c</td>
<td>d</td>
<td>e</td>
</tr>
<tr>
<td>f</td>
<td>g</td>
<td>h</td>
<td>i</td>
<td>j</td>
</tr>
<tr>
<td>k</td>
<td>l</td>
<td>m</td>
<td>n</td>
<td>o</td>
</tr>
<tr>
<td>p</td>
<td>q</td>
<td>r</td>
<td>s</td>
<td>t</td>
</tr>
<tr>
<td>u</td>
<td>v</td>
<td>w</td>
<td>x</td>
<td>y</td>
</tr>
<tr>
<td>z</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

By this method the blind person would have to learn how to form only the first five numerals. Thus the above message, Il re è morto, according to this method, would be written as follows:

<table>
<thead>
<tr>
<th>1-3 2-3 4-4 1-2 3-3</th>
<th>1-4 4-4 2-5 4+4</th>
</tr>
</thead>
<tbody>
<tr>
<td>l</td>
<td>r</td>
</tr>
<tr>
<td>o</td>
<td>r</td>
</tr>
</tbody>
</table>

To enable the correspondent to make out for himself the answer to his message or communication, Lana-Terzi proposes the following plan: Let each of the correspondents have a table or long strip of wood...
on which are engraved or embossed the letters of the alphabet arranged in serial order at equal distances from each other, as in the diagram here given.

Suppose now that a person who is not blind should wish to send to his blind friend this message: "Il nemico di trama vivace (the enemy is trying to ensnare you)." Let him take a piece of thread or twine, apply the end of it to the extreme point of the tablet, extend the thread over the space from a to the first letter i of the message and make a knot at that point; for the second letter, apply this first knot to point a, extend the thread over the space from a to the letter l, make, as before, a knot at that point, and so on for the rest of the letters. It will readily be understood how the blind person, to whom the roll of knotted thread or twine is sent, can make out the communication by applying the various thread lengths over the distances indicated by the knots, and thus discover each letter of a word. The blind correspondent, in his turn, can easily send by this same method whatever communication he wishes.

A few years after the publication of Lana-Terzi's "Prodromo," Jacques Bernoulli, being at Geneva in 1766, taught Elizabeth Waldkirch to read by a method not unlike that of Cardano. The young lady made such progress that after four years she was able to correspond with her friends in German, French, and Latin, all of which she spoke fluently at the age of fifteen. She knew almost all the Bible by heart, was familiar with philosophy, and was an accomplished musician.

About the year 1711 the first known attempt was made to construct a tactile ciphering-tablet or apparatus by which all the operations of arithmetic might be performed and recorded. This was the work of Nicholas Sauderson, who became blind when one year old. So distinguished was this blind mathematician that he was appointed Lucasian Professor of Mathematics in the University of Cambridge. The Abbé Claude-François Deschamps (1715-91), in his treatise on the education of the deaf and dumb, is said to have also sketched the outlines of the art of teaching the blind to read and write. Diderot in his "Lettre sur les Aveugles," which appeared in 1768, and for which he was condemned to prison, mentions his interview with Lenôtre, better known as "The Blind Man of Paisaux." Among other remarkable things related to him is the teaching of his son, though not blind, to read by means of raised letters. Between 1772 and 1784 we read of the earliest attempt to make maps in relief for the blind. This invention is ascribed to R. Weissenburg, of Mannheim, who was partially blind at five years of age, and totally at fifteen. Whether any of the credit is due to Weissenburg's teacher, Christian Nissen, cannot be ascertained. Though Diderot was among the first to call special attention to the condition and wants of the blind, and to make them generally known through his famous letter, yet neither he, nor Leibniz, nor Reid, nor Condillac, nor any of the Encyclopedia went beyond abstract psychological speculation. None of them proposed any measure of practical utility or relief nor devised any plans for the instruction and training of sightless persons.

The modern era in the history of education of the blind opened in 1784—nearly three centuries after the death of Cardano—by apparently individual attempts of Cardano and others—when Valentin Hauy (1743-1822) invented and himself to do for the blind what the Abbé de l'Epée had done for deaf mute babies. It was in June, 1784, that Hauy met, in one of the churches of Paris, a young mendicant named Lesueur, who had been blind from his birth. Having already spent many years in studying the theory, Hauy took this young waif to be the subject of his first practical essays in teaching the blind. Lesueur was promised a regular daily allowance in place of the
contemporary education of the blind.—general aspects.—in nearly all the countries referred to in the foregoing table, most of the schools for the blind maintain three distinct departments: a literary department, a department of music, and an industrial department. the rank of these institutions varies according as more or less prominence is given to literature and music as compared with industrial or manual training. in the leading schools the literary department embraces kindergarten, primary, secondary, and, in a few instances, collegiate education; the department of music embraces primary, secondary, and collegiate education; while the industrial department embraces the teaching of handicrafts, varying in kind according to age, sex, and country. the courses of study in the literary department are generally the same as those pursued in the public high schools of the respective countries. the work in the department of music varies from instruction in the mere elements of music to thoroughly organized courses of study and highly specialized instruction in the science and art of music. in the industrial department the chief trades are: in the department, piano-making, the making of baskets, mats, matting, brooms, and mattresses, chair-caning, hammock-work, and upholstery; in the female department, basket-making, knitting, hand- and machine-sewing, crocheting, fancy work of various kinds.

the rudimental stages of education, there was a tendency in almost all the schools for the blind to make the industrial department the most prominent feature. the lack of books, of adequate educational appliances, and of definite methods, the comparative ease in teaching some one or other of the simpler trades, the want of technical experience on the part of instructors, the dependence upon manual occupations and mechanical arts for self-support, the readiness to be swayed by the utilitarian principle of training the blind for the active duties and occupations opening the way to self-maintenance and independence—these and other similar considerations were strong arguments in favour of industrial training, to the neglect and detriment of the prime and essential work of education. of late years, however, a marked change has been wrought in the ideals pursued in the education of the blind. owing to the increase of general intelligence on the one hand, and the value of manual labour, on the other hand, educators of the blind have come to realize that it is not technical skill, or ability to work successfully at one or more of the usual trades, but only a broad and liberal scheme of education that will release the blind from the bondage of dependence, uplift them as a class, and raise them to a level of usefulness and independence. in consequence of the extensive employment of machinery in almost every department of human activity, there has sprung up among educators of the blind a growing conviction that the only field in which the sightless can hope in the future to compete successfully with the seeing is a field of thought where the intellect can have free play and where blindness will be no hindrance to advancement and success. the blind need, therefore, at least as good an education as the seeing and no lighter strokes, no collegiate education, no special education, but simply education in the spirit of favour and charity than as of strict obligation. in the united states the education of the blind rests on a different basis. as modern methods of instruction have proved the possibility of imparting to the normal blind child practically the same education as to other children, it is generally acknowledged that the blind, as a class, have an equal right with the seeing to share in all the educational benefits which are provided for every child in the commonwealth; and since this education cannot for obvious reasons be given them in the common schools, special provision should be made for their education in institutions private or public.

systems of embossed print.—three centuries and a half elapsed after the invention of printing before any attempt to make printing available for the blind as a class was successful. whatever information and instruction may have been drawn by the ingenious inventor from special processes devised before his day, the credit of having first made reading by finger-touch possible must be accorded to valentin haüy (see above). the first book embossed by haüy for the use of the blind was, according to guadet, his "esquisse sur l'éducation des aveugles" (1786). this book was translated into german by michel, and into english, in 1795, by the blind poet blacklock. the style of type adopted by haüy was the french script, resembling the legal manuscripts of the time. the capital and small letters were respectively fourteen and seven and a half millimeters in height. the book consisted of 111 pages, printed on one side only, two pages being gummed together back to back, to preserve the relief. the pages were embossed from metal type by the blind children of haüy's school under the direction of clousier, the court printer. while this invention won considerable notice, he himself had little use for his achievements compared to those of the abbé de l'épée, modestly protested, "i only fit spectacles, while he bestows a soul." from 1806, the time of haüy's departure for st. petersburg, to 1814, when line-print was superseded by point-print, the type used at the institution des jeunes aveugles at paris varied between the french script, the italic, and roman capitals.

embossed printing in england.—printing for the blind had been used in france for forty-three years, in austria for eighteen, in prussia for twenty-six, before it was used in england; haüy's system of printing, it is claimed, was introduced into england by sir charles lowther, to whom it was suggested by a copy of one of the books printed at the institution des jeunes aveugles, and purchased for him by his mother, he being himself blind. in 1826, james gall, of edinburgh, who had seen and used haüy's book, was shown some of the paris institution, set himself to improve the alphabet, by making it more perceptible to the touch. in 1827 he printed a small book in an angular modification of the common english alphabet. it is said to have been the first english book printed for the blind in england, and naturally great interest was excited when it was found that the blind could read it easily with their finger-tips. between 1828 and 1838 no fewer than 20 styles of embossed printing were brought out in great britain. of these, however, only six obtained recognition: those of haüy, gall, fry-alston, lucas, prece, and moon. haüy's script was adopted by sir charles lowther in his publication, in 1834, of the gospel of st. matthew. though gall modified the common characters of the alphabet to make them more easily distinguishable by touch, he did not believe that absurdity was necessary ever to be universally adopted, maintaining that these books should be legible to both blind and seeing. besides two or three booklets previously embossed, gall printed, in 1832, the gospel of st. john. the fry-alston system of embossed printing is the plain upper-case roman without serifs or strokes, and was devised for the blind by the fry and adopted by alston at the glasgow institution for the blind, of which he was principal. in 1832 the scottish society of arts offered a gold medal for the best system to produce cheapness and tangibility in connexion with an alphabet suited alike to the fingers of the blind and to the eyes of the seeing. nineteen
different alphabets, seventeen of which were of a purely arbitrary character, were submitted to the society between 9 January, 1832, and 24 October, 1833. After much deliberation and a series of rigid tests, the medal was awarded (after Dr. Fry's death) to Alston, 31 May, 1837. From the award made to Dr. Fry's alphabet, the Scottish Society of Arts evidently shared the idea of Haüy and of other advocates of the Roman letter that in the education of the blind everything should be done to establish a bond of vital unity between them and the seeming and to lessen the isolation which arbitrary systems of alphabet would only increase. As Alston's type was rather small and not very legible, his system did not stand the test of time. Lucas invented a stenographic system formed of arbitrary characters and of numerous contractions. In this system the Gospel of St. John and the Acts of the Apostles were printed in 1837 and 1838 respectively. Frere devised a phonetic system which he himself describes as a "scientific representation of speech". It consists of 34 characters indicating each of the simple sounds in speech. Frere was the first to introduce (1839) the "return lines", in which the reading is alternately from left to right and from right to left, and the letters themselves are reversed in the same way; the reading of the letters is from right to left. He also devised an ingenious system of embossing from stereotype plates; which in determining was, at the time, the greatest improvement in embossing since the days of Haüy. The larger part of the Old and portions of the New Testament were printed in Frere's system. Dr. Moon of Brighton, whose system is used more than any other by the adult blind, at least in England, devised, towards 1845, an alphabet formed of more or less arbitrary characters, which either resemble or suggest a resemblance to the Roman letters which they represent. He also adopted, with a number of slight alterations, Frere's "return lines" and his method of stereotyping. The first book in Moon's system appeared in 1847. The printing of the Bible was begun in 1848 and completed in 1858. Moon's books, though easy to read owing to their large type, are very bulky and expensive; 50 volumes are required for the Protestant edition of the Bible, which omits a number of books contained in the Catholic edition. The chief defects of the Moon system are that it is a movable system and that it lacks a musical notation. It is useful chiefly for adults whose finger-touch has been dulled by age or manual labour.

**Embosed Printing in Continental Europe.**—Between 1809, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-Presse, and Punktirte Typendruck (the needle, line, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. For a long time after the introduction of the Braille system into Germany, line-print was retained, even where Braille was adopted. It was not until 1876 that interest began to be aroused in regard to uniformity of embossed printing, in consequence, no doubt, of the movement inaugurated in England by the British and Foreign Blind Association in favour of Braille.

**Embosed Printing in the United States.**—From 1832, when the first school for the blind was opened in the United States, to 1860, when Dr. Pollack introduced Braille in the Missouri school (there being then as many as twenty-one institutions for the blind in this country), two systems of printing were in vogue. The first was that of Dr. Howe, the head of the Boston school for the blind, and the second that of Mr. Friedlander, the principal of the Philadelphia school. Dr. Howe's system was the angular lower case Roman and Mr. Friedlander's system the Roman capitals of the Fry-Alston type. In 1853 Dr. Howe published several books in the Boston letter; Mr. Friedlander's Roman capital was not adopted in Philadelphia until 1857. From an educational as well as from an eco-

**Six Principal Systems of Embossed Type**

By 1859, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-Presse, and Punktirte Typendruck (the needle, line, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. For a long time after the introduction of the Braille system into Germany, line-print was retained, even where Braille was adopted. It was not until 1876 that interest began to be aroused in regard to uniformity of embossed printing, in consequence, no doubt, of the movement inaugurated in England by the British and Foreign Blind Association in favour of Braille.

**Embosed Printing in Continental Europe.**—Between 1809, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-Presse, and Punktirte Typendruck (the needle, line, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. For a long time after the introduction of the Braille system into Germany, line-print was retained, even where Braille was adopted. It was not until 1876 that interest began to be aroused in regard to uniformity of embossed printing, in consequence, no doubt, of the movement inaugurated in England by the British and Foreign Blind Association in favour of Braille.

**Embosed Printing in the United States.**—From 1832, when the first school for the blind was opened in the United States, to 1860, when Dr. Pollack introduced Braille in the Missouri school (there being then as many as twenty-one institutions for the blind in this country), two systems of printing were in vogue. The first was that of Dr. Howe, the head of the Boston school for the blind, and the second that of Mr. Friedlander, the principal of the Philadelphia school. Dr. Howe's system was the angular lower case Roman and Mr. Friedlander's system the Roman capitals of the Fry-Alston type. In 1853 Dr. Howe published several books in the Boston letter; Mr. Friedlander's Roman capital was not adopted in Philadelphia until 1857. From an educational as well as from an eco-

By 1859, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-Presse, and Punktirte Typendruck (the needle, line, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. ggested a combination of points arranged in a rectangle—twelve points in two vertical columns of six each. The most conspicuous, though not most radical, defect was the large and unwieldy size of the signs, which could not be covered with the finger. Another drawback was the great waste of space. As the "cell", or rectangle, was of fixed size, if a letter was represented by a point in one corner, all the rest of the space was left blank. This was observed by Braille, who reduced Barbière's rectangle one-half; thus he limited the number of the points to six instead of twelve. The six points in Braille are arranged in two vertical rows of three each. By the omission of one or more of the points sixty-three distinct signs are formed, to represent the entire alphabet, accents, Arabic numerals, marks of punctuation, word- and part-word signs, as well as some of the braille and musical notation. Of these sixty-three characters, ten are called fundamental signs, and form the basis of all the rest by the addition of one point in some part or other of the "cell" either to the fundamental signs or to the series formed from them. The chief advantages of the Braille system are: (1) its simplicity and easy acquisition; (2) its "tangibility", or efficiency in impressing the sense of touch, enabling the blind not only to read but also to write; (3) its adaptability to both the writing and printing of a system of musical notation.

In spite, however, of its evident advantages, many years went by before the new system obtained recognition, even in countries where, for lack of "tangibility" in the existing systems, the use of books in the class-room had been almost unknown. It is quite possible that the slowness and reluctance in the adoption of Braille was due to the fact that institutions for the blind had been so widely separated in dates of origin and in locality that the need of unity of action and community of interest was but slowly realized. In many cases prejudice, petty jealousy, and obstinate attachment to theories long since proved false, yielded attitude towards improved methods, which has often stood in the way of true and uniform progress in the education of the blind. From the day when the system was finally adopted in the schools of France, England, Germany, the United States, and other countries, the Braille has undergone various modifications; hence a variety of Braille systems, which have caused even greater confusion than the diversity of the earlier Roman styles of embossed literature. As late as 22 April, 1902, in an address made at the conference held at Westminster on matters relating to the blind, Mr. William H. Illingworth, head-master of the Royal Blind Asylum and School, West Craigmillar, Edinburgh, spoke as follows regarding the diversity of Braille alphabets and the desirability of a uniform system: "Out of a chaos, born of conflicting opinions and petty jealousies, combined with an almost incredible amount of apathy, indifference and indecision such as exists in the Braille world, it would be impossible by any means short of a miracle to create or to formulate such a scheme..." We hear often and are treated to examples of 'English as she is spoke', but I venture to think that for variety and specimens of the grotesque, this pales into insignificance before 'Braille as she is wrote'. Though the time may be quite ripe for a serious attempt being made to improve the existing state of matters, it will require years of patient thought and interchange of opinion, absolute singleness of purpose and charitable, sympathetic self-abnegation to devise a perfectly uniform and practical system, and make the Braille—if that system be the best system—as perfect and simple as possible and as worthy to be the tangible exponent of the most powerful and universally spoken language of modern times.'

New York Point (see cut).—The claim to being, in the words of the writer quoted above, a system "as perfect and simple as possible and as worthy to be the tangible exponent" of the English language can justly be made for the punctographic system known as New York Point, or the Wait system, unquestionably the most perfect form which the idea suggested by Barbier and rescued from oblivion by Louis Braille has as yet attained. This system is a genuine American product, the outcome of years of patient thought, of indefatigable labour, and of absolute singleness of purpose. To Mr. William B. Wait, for upwards of forty-three years at the head of the leading institution for the blind in the United States, is due the credit of the originalisation, development, construction, and application of the literary, musical, and mathematical codes of the New York Point System. The genesis of this new punctographic system is the result of a desire on the part of Mr. Wait to improve the Braille by remodelling it, on principles of compactness and economy of time and space. Careful study, however, of the structure and application of Braille led to the conclusion...
that the vertical position of Braille signs, allotting a fixed and unvarying space to all signs alike, was defective in more than one important respect. Owing to its limited number of only sixty-three possible signs, it was inadequate to the requirements of music, if not to those of literature and mathematics and it was also found to be much more bulky, and hence more costly, than the Boston-Line, which, in the absence of any other system, was then taken as a standard. To remedy these structural defects, by increasing the number of signs, and reducing the bulk and cost of books, to the lowest possible minimum, only one course was left open. A different mode of sign structure was devised, employing two points instead of three vertically and extending the base forms to three, four, or five points horizontally. By this method the new sign-structure of New York Point yields 120 single, and 20 compound, signs against the 63 single signs to which the Braille is limited, and thus answers all the requirements of literature, music, and mathematics. Besides, even apart from the application of the principle of recurrence in the structure of the New York Point—a principle that was not applied in the original Braille—all the advantages of simplicity, economy, of time, and in writing, as well as of cost, are on the side of the New York Point system, as has been demonstrated by the most rigid tests. Thus, in printing a font of 520 letters in each system on a perfectly uniform scale, the letter-, word-, and line-space being the same in each system, any page composed of the New York Point (where the alphabet is the only used, and the contractions or punctuation marks) requires 51.75 per cent more space than the New York Point. The space required by punctuation marks in Braille is 20 per cent greater than in the New York Point. The excess of labour in the writing of Braille is twenty-seven per cent greater than in New York Point. In the writing of punctuation marks there is a slight excess of labour on the side of New York Point. However, the use of punctuation marks does not materially affect the question, as they form only about 1/4 of the whole bulk of composition. Another advantage of the New York Point over Braille is its having true capitals. In Braille the practice is to place before words requiring capitals a sign identical with the period, and to begin the word with the usual small letter. This requires two full "cells" or sixty per cent more area than the New York Point, which is four points wide. Although up to the sixth or seventh century no distinction was made in Europe, and none is made to this day in the Oriental alphabets, between capitals and small letters (the latter, in fact, were evolved from the former), yet, for those who are over-exacting regarding "good use," the advantage of possessing true capitals, instead of shorn ones, is not inconsiderable. Furthermore, the gliding of the finger over the points signs in but one direction, the lateral, is, on physiological grounds, an important advantage which the New York Point has over the Braille system, where the finger moves first in the longitudinal and then in the lateral direction.

Methods of Writing.—The invention of the New York Point marked an epoch in the history of the education of the blind; yet, had facilities not been supplied for writing and printing it, the new system would have failed to make its mark as an educational force. Fortunately, however, such appliances were provided by Mr. Wm. Wait in 1894, and consist of a desk-tablet, a pocket-tablet, the kleidograph for paper writing, and the stereograph for embossing the metal plates used in printing. The kleidograph and stereograph have been used in facing the entire mass of the blind. The former, designed for the purpose of writing literature, music, and mathematics in tactile form, is invaluable for speed and efficiency, and for the reason that what is written by it can at once be read by the blind writer without removing or reversing the paper, as must be done when the tablet is used. At least eighty per cent of the time required for writing music is saved, and sixty per cent for literary work. The stereograph is a development from the kleidograph, designed to emboss both sides of sine or brass printing plates ready for use. The composer can prepare twice or thrice as much matter in a given time as by the movable type; besides, the matter comes from the composer's hands stereotyped and ready for the press. The cost of the complete plate is reduced by more than one-half. The further application of the process, and of printing on both sides of the sheet at one impression from the plates embossed by Mr. Wait's stereograph, will reduce the cost of books still further, and effect a saving, in metal, in paper, and in binding, of nearly 50 per cent.

The many appliances devised since the days of Valentin Haüy, particularly in France, England, and Germany, to enable the blind to write, may be grouped under three classes. First, the "hand-guides" are designed merely to help the blind to write in straight lines and at equal distances. For correspondence with the seeing, an ordinary pen, or, more generally, a lead pencil is used, and the letters are written from left to right. For correspondence with the blind the ordinary letters have to be formed with a blunt stylus from right to left and reversed on paper which is underlaid with some soft material, as felt or blotting-paper, to bring out the writing on the reverse side of the page and reading from left to right. Valentin Haüy devised a simple method of pencil-writing by placing the paper upon a frame in the inferior of which were stretched parallel cords of catgut; between these cords it was an easy matter to write in straight lines and to make the letters of uniform size. Another ingenious way of producing tactile writing was, at the suggestion and request of Haüy, devised by Adet and Hassenfratz in 1783. It was to trace the letters in a bold hand with a glutinous ink, over which sand was spread, so as to form, when it adhered to the letters, a rough sort of relief, or "tangible" writing. Various other fluids were devised for embossed writing, by Challan and Rousseau in 1821, by C. L. Müller in 1823, by Freissiauf in 1836, by Riesmer in 1867, and finally by the Abbé Vitali of Milan, in 1893. The use of these various coloured fluids produces a writing which is once "tangible" to the blind and visible to the seeing.

Among the more elaborate appliances for writing in straight, parallel, equidistant lines, may be mentioned the tablets of Généresse (1807) and of Bruno, the typograph of Passard, Dr. Nond's skograph, Dr. Wuczchowsky's amaurograph, Count de Beaumont's stylograph, Wedgewood's noetograph, and the writing-frames of the Elliot brothers, of Thumsfield, Dooley, and Levitte. The second class of apparatus are those designed not only to enable the blind to write in straight lines and to make the letters of uniform size, but also to mechanically assist the blind in the formation of the letters and in tracing them at the same distance from each other. These appliances may be divided into line-cell and point-cell frames, according as the ordinary line-letter alphabet or the point system is used in writing. Of the line-cell frames or tablets, the best known are those devised by the Rev. Joseph Engelmann of Linz (1825), James Gall of Edinburgh, Mercier-Capette, Hebold, Dr. Llorens of Barcelona, by C. E. Guldberg of Copen- hagen (1858), Galumberti of Milan, Martuscelli of Naples, Moon of Brighton, England, Kempe of Grave, Wedgewood, Lamb, Ballu, Bedii, Passerini, Lambert, Belgium, and Mlle Mulot of Angers, France. Mlle Mulot's stylographic frame enables the blind to correspond not only with the sighted, but also with the seeing just as readily and satisfactorily. Of the numerous print-cell writing-frames or tablets de-
signed for writing Braille, the best known are those of Louis Braille, Ballu, Laas-d’Aguen, Kruger, Kull, Pablasek, Signora della Casa, T. R. Armitage; and for writing New York Point, Mr. Wait’s desk and pocket-board already mentioned. Essentially, all point-cell tables are made up of a board bearing a movable metal plate indented with pins and having connected with it, and over it, a metal guide with two rows of either oblong or square holes. The paper is placed between the pitted plate and the metal guide. The writing is done with a blunt awl or bodkin, which forces the paper into the holes and makes the pin indented by which the respective letters. When the paper is taken out and turned over, the writing which was from right to left appears in relief and is read from left to right. The metal guide has from four to five rows of openings, allowing for the writing of four or five lines; when these are written the guide is shifted downwards and held fast to the frame by two little pins, when four or five more lines are written, and the operation is repeated until the end of the page is reached. The third class of apparatus are those designed for increased speed in writing, not by hand, however, but by mechanical means. Among the principal writing machines for the ordinary line-letter alphabet, are those of Braille-Foucault (1842), Thurber (1847), Hughes of Manchester (1850), Larivière of Nancy, Saintard (1847), Hirzel of Lausanne, Oehlerwein of Weimar, Marchesi, Colard Viennot, Gastaldon of Turin, Ballu (1861), the Hammer of Simplex, Yost, Blickensderfer, Coligraph. Without any doubt, the most rapid and most satisfactory way for the blind to correspond with the seeing is by means of typewriters. All methods of writing, however, which are not tangible to the fingers are liable to the objection that the written matter cannot be readily corrected by the blind writer. Of machines constructed for embossing Braille and New York Point, those chiefly in use in the United States are Hall’s writer, for Braille, and Wait’s kleiglyph, for New York Point. In France, England, and Germany, a number of Braille machines have been designed on the lines of Hall’s Braille-writer.

Geography.—The blind are fond of the study of geography, and with proper teaching are as capable of forming correct geographical notions as the seeing. Most of the detailed teaching of geography, however, must be from raised maps. In the elementary course, maps made by pupils themselves are used, the outlines by means of pins and string are very helpful. The first maps used by the blind were on embroidered cloth or canvas, the needle-work representing the land and the plain cloth the water; boundaries were marked by coarse corded stitches, and towns and cities by points made with the same coarse material. Various attempts were subsequently made to construct relief maps on paper or cardboard, the boundary lines, river courses, lakes, bays, positions of towns and cities, etc., being represented in a variety of ways. The best thus far made are the wooden dissected maps, in which the divisions of a country are represented by a movable section, bodies of water by a depression in the wood, hills and mountains by a slight elevation, towns and cities by brass-headed nails. When all the movable sections are fitted together they form a complete map. The principal objection to the dissected maps is that they are very expensive and better suited to individuals than to class teaching.

The Teaching of Arithmetic.—Records are not wanting to show that, from the very beginning, arithmetic and other branches of mathematics held an important place in education provided for the blind. It was soon observed that the blind displayed great fondness for arithmetical calculations. While mental arithmetic was particularly encouraged, it became evident that in the more advanced branches of the science, the blind needed special apparatus, and various appliances were devised to meet this want. Among the earliest attempts to construct a tangible device for the more abstruse calculations of arithmetic and algebra is that of the great mathematician, Nicholas Saunderson. Since his day a great many different ciphering boards, or tablets, have been constructed. One of the best is Taylor’s octagonal board with square pins and octagonal holes. On one end of the pin one of the edges is raised into a prominent ridge, and on the other end there is a similar ridge divided in the middle by a deep notch. The holes in the board are star-shaped, with eight points. The pin can be placed in eight different positions, and on reversing it, with the notched end uppermost, in eight more; this gives ten signs for the Arabic numerals and six for the ordinary algebraic signs. For pure algebra another pin is needed, differing from that used in arithmetic. This gives sixteen additional signs, which are quite sufficient. It is essential for a good arithmetic board that the same pin should represent every character; otherwise it is lost in selecting the required character and in distributing the type at the end of each operation. In the United States a board is used with square holes, and two rows of type are required to give even the Arabic numbers.

Music.—Since the days of Hauxy, music has always been considered as one of the most potent factors in the education of the blind, offering them advantages which they can derive from no other source. Though a fair percentage of the blind attain to a high degree of musical skill, and find for themselves positions of responsibility and importance, yet, contrary to the general belief, no larger proportion of persons with exceptional musical talent is found among the blind than in any other class. The conclusions that the blind are taught music by ear is erroneous; it arises partly from the assumption that those who are sightless must of course possess an abnormally acute sense of hearing, and partly from the fact that so many persons are unaware that a tactile musical notation exists. Since 1784 there have, in fact, been almost as many such systems as systems of embossed reading. Besides the common musical notation in relief, used by Valentin Hauxy, by W. Taylor of York, and Alston of Glasgow, special systems were devised by Frere, Lues, and Moon in England; by Guadet, Rousseau, and the Abbé Goupil, in France; by Klein, Krämer, Oehlerwein, and Warschauer, in Germany; by Petzel in Austria; by D. Pedro Llorens in Spain; and by M. Mahony in the United States. In most of these systems the common letters in relief were used to express the notes and their values, the octaves, flat, sharp, and time signs, etc. All of the above systems, however, with the exception of the common musical notation in relief, have long since been entirely superseded by the Braille and the New York Point systems of musical notation. Soon after Louis Braille had devised the literal code he adapted his punctographic system to musical notation. An outline of the New York Point musical notation was first presented in 1872, and the first edition of the notation was printed in the same year. In 1875 it received the unanimous approbation of the American Association of Instructors of the Blind, and it was adopted a few years later.
in most of the institutions for the blind in the United States. As to the comparative merits of the two systems, it is claimed that the Braille notation is inferior in completeness and clearness of expression. The notation of music requires not less than 140 signs. The New York system, excluding disabling infinitives, yields 120 single and 20 compound signs, while the Braille system admits of but 63 single signs and requires a uniform space for each. Ambiguity is the consequence of this inadequate number of signs, the same sign being made to represent two different things of the same species, as, for example, a whole note and a sixteenth, a half-note and a thirty-second.

Industrial Training.—From the very beginning of systematic education of the blind down to the last decade, industrial training has always occupied a decidedly prominent place in the curriculum. Too often, particularly in the earlier days, the essential work of education was subordinated to conditions created and demands made by the industries. Instead of being used as a means of education, the teaching of trades was made the chief aim and end. The success of certain pupils in careers from which they seemed necessarily excluded naturally gave rise to somewhat extravagant hopes of the possibilities of industrial education. Hence, perhaps, arose the prevalent notion and expectation that schools for the blind should graduate young men and women so equipped that each and all would be self-supporting and able to earn as much, or nearly as much, as persons of equal natural ability with the sense of sight. The fact, however, is that only a small proportion of the blind in Europe and America are wholly self-supporting. According to the United States Census of 1900, of 62,456 blind persons, ten years of age and upwards, only 12,506, or about 20 per cent, were reported as regularly engaged in remunerative occupations. The percentage of the general population so employed was upwards of 50. As most institutions for the blind, particularly in the United States, are open to all blind children of average intelligence, the heterogeneous character of the membership of such schools must lower the standard of efficiency. Another factor which has too often been lost sight of is that blindness is a disabling infirmity, more difficult and more difficult with only four senses than with five; it would, therefore, be unreasonable to expect better results of the schools for the blind than are expected of the public schools for normal children, in which schools neither trades nor music are taught. The teaching of skilled trades, it must also be remembered, properly belongs to a stage of education later than the primary, and it should not be allowed to trespass upon the legitimate work of the schools. As soon as adults are admitted to the school with minors, the industrial feature tends to become dominant and unavoidably impairs an element of commercialism to the school. Both adults and younger pupils become disposed to lay more stress on shop work than on mental exercises and discipline. In consequence, the finished pupils lack those general qualifications which are necessary to begin business in the trades they have learned, and still more to successfully compete against sight and machinery. The long, trying, and costly experience of the leading schools in the United States has, moreover, proved that the teaching of trades or industries during the school period confers no lasting good upon the pupils and is void of even such results as the sense of self-reliance to become self-supporting which, it was believed, were being promoted. For these reasons the industrial experiment is gradually being abandoned in order to save the institutions for that strictly educational work for which they were established. If trades, then, are to be taught the blind, and industry to be fostered on by them, the technical training should, as in the case of seeing pupils, be taken up only after the completion of the primary or secondary course of studies and in a location altogether removed from the school proper.

Manual Training.—Instead of the teaching of the ordinary trades, which, owing to the radical change in industrial conditions, can no longer be carried on by the blind at a financial profit, a system of regular and thorough training of the hands, the senses, and the muscles has been generally introduced in the leading American institutions for the blind. To various forms of solid work, of work in clay, paper, and cardboard, as well as sewing, cooking, weaving, basketry, simple wood-carving, etc., are the processes of manual training most commonly employed in the general education of the blind.

Physical Training.—Educators of both blind and seeing pupils are in entire accord as to the great importance of physical training. The blind, for obvious reasons, are peculiarly in need of healthful, systematic exercise. Observation and statistics show that their health and strength are far below the normal standard. Hence, before there is any hope of obtaining satisfactory educational results, all physical and physiological defects, such as deformities in the muscular system, unsightly movements, natural timidity, awkwardness in walking, etc., must be corrected as far as possible. In view of these facts, physical training forms an integral part of the regular curriculum of the schools for the blind.

Libraries for the Blind.—It is almost impossible for those who enjoy the use of sight to realize what a boon reading is for those who live in perpetual darkness. Outside of their early education, for those who have been blessed with it, there is nothing in the life of the blind so stimulating, so broadening, and so comforting as good books. In no country have more efforts been made to supply the blind with books and to solve the problem of their circulation than in the United States. In no country has such a liberal government provision been made for the education of the blind through the
publication of books as was made by the United States Government, when by an act of Congress (3 March, 1879) the sum of $250,000 was set apart as a perpetual fund, the interest of which ($10,000) is expended each year in printing and distributing suitable books among the institutions for the blind in the United States. Mainly as a result of this provision, the number of volumes distributed among the thirty-nine school libraries amounts, according to the Annual Report of the Department of the Interior for 1902, to 105,804 volumes, an average of 2,713 volumes per school. In November, 1879, it was said that far greater individual co-operation and a more general interest displayed in furthering the extension of libraries for the blind than in the United States. Thus the "Association Valentin Haüy" of Paris had, in 1902, on its list of voluntary writers of books for the blind the names of 1150 persons who embossed in Braille and donated in that year to the "Bibliothèque Braille" for its fourty-nine travelling libraries, 1,633 volumes. In the same year the British and Foreign Blind Association of London was indebted to 574 generous persons who gave valuable time in writing Braille books for the blind.

Catholic Literature for the Blind in the United States.—Before 1900, with the exception of a small catechism and Cardinal Gibbons' "Faith of Our Fathers", there were no Catholic books for the blind to be had in this country. To supply this long-felt want, which, with the Catholic schools, is one of the factors in the Catholic literature of the United States Catholic literature embossed in the Vatican City was sent to New York Point, from a list of a few devoted ladies, who helped to raise the necessary funds, a printing plant was equipped and has been in operation ever since. The society was incorporated in March, 1904, under the name of "The Xavier Free Publication Society for the Blind of the City of New York". Although from its inception the society has been dependent for the maintenance of its work upon donations and annual subscriptions, still, with the encouragement and blessing of the Catholic hierarchy, the deep appreciation and gratitude of thousands of Catholic blind throughout the country, and the generous help of its benefactors, it has been enabled to pursue its beneficent object for the moral and intellectual elevation of the blind. Since its foundation, thousands of volumes of Catholic literature, embracing ascetical, Biblical, biographical, doctrinal, and historical works, as well as works of general literature, of fiction, and of poetry, have been placed in upwards of thirty-seven state, city, or institute libraries for general and free circulation among the blind. The publications of the society are also circulated throughout the country from its own central library. "The Catholic Transcript for the Blind", a monthly magazine, published by the Xavier Free Publication Society for the blind since 1900, is so far (1900) the only Catholic periodical embossed in the English language.

Catholic Literature in England.—It is only within the last few years that, through the initiative of the Rev. Michael Fear, who taught Braille to most of the writers, upwards of four hundred books have been hand-typed by voluntary workers and placed at the disposal of the Catholic Truth Society of London for circulation among the Catholic blind in Great Britain. This work would not have been undertaken had it been impossible to get Catholic books at the great English libraries for the blind.

The Blind-Deaf.—According to the special reports of the United States Census Office for 1900, of the 64,763 persons reported as blind, 2,772, or nearly 4% per 1000, were found to be deaf. The age of occurrence of these two defects cannot be stated exactly, except for those blind and deaf from birth, of whom there are 76. Between birth and five years of age are 64; between five and nine, 54; between ten and fourteen, 37; between fifteen and nineteen, 24. That the public, and even professional educators, entertain incorrect ideas with regard to the blind and deaf has been shown by Mr. William Wade in his interesting monograph, "The Blind-Deaf!" For this excellent publication, and still more for his widespread and munificent charity to the blind-deaf, and particularly to the deaf and dumb and blind of this country, Mr. Wade should receive the highest possible praise in the hearts of this doubly afflicted class. The knowledge by the public that the education of the blind-deaf is by no means the difficult task commonly believed, and the further knowledge of the number of those who have been educated and of their advanced position in mental attainments, will do much, if it is contended by the author of the monograph, to advance the interests and the happiness of the blind-deaf. "In the early education of the blind-deaf", we are told by Dora Donald, "there are three distinct periods. In the first the pupil receives impressions from the material world. The mind of the blind-deaf child differs from that of a normal child; given the same opportunity, it will develop in the same way. Whilst the normal child discovers the world through the five senses, the world must be brought to the blind-deaf child and imparted by the teacher through the sense of touch. During the second period the child must give utterance to his conceptions. This may be done either through the sign language, the manual alphabet of the deaf, or through one of the systems of printed print for the blind, if articulated speech cannot be taught the child. The third and by far the most important period of his training is that of procuring mental images from the printed page. If the child has been thoroughly trained in the habit of personal investigation, if he has been taught to express freely the results of such investigation by means of the manual alphabet and to record them in print, he will eventually be able to reverse the process and to build about him an imaginary existence that will cause the printed page to teem with life and to glow with the charm of actual existence. At this stage of the child's education, he may enter either a school for the deaf, a school for the blind, or the common school throughout the country. Armed with the necessary apparatus and accompanied by a teacher who will faithfully translate all that he might obtain through sight and hearing, he may be taught by the same methods used for normal children, ever keeping in mind this one point of difference—touch must take the place of sight and hearing; the manual alphabet or embossed page being substituted for speech."
need exists, it must include, moreover, the awakening for the first time into activity and usefulness of some faculty which, but for the awakening, might remain forever dormant. As regards intellectual development, the deaf individual is the most handicapped of them all. The term "deaf and dumb", so frequently applied to that class of individuals who neither hear nor speak, is becoming obsolete among the educators of the deaf, as it implies a radical defect in both the auditory and the vocal organism. Persons who are born deaf, or who lose their hearing at a very early age, are unable to speak, although their vocal organs may be in perfect condition. They become dumb because, being deprived of hearing, they are unable to imitate the sounds which constitute speech. To correct the error involved in the term dumb, it is customary to speak of human beings who do not hear and speak as deaf-mutes, a term which implies that they are silent, but not necessarily incapable of speaking. Brute animals that are deaf, are deaf and dumb; the little child, before it has learned to speak, is mute, but not dumb. There are found individuals who can hear, but cannot speak. To such may be applied the term dumb, inasmuch as they are either deaf or mute, either because they are unable to hear, or because they are unable to speak and are lacking in intelligence. Such children are generally found to be more or less idiotic. On account of the great progress made, especially during the last century, in the education of deaf-mutes, by which a large percentage are taught, the term mutism is also omitted when speaking of matters pertaining to that class formerly designated as "deaf and dumb". Institutions for them are named preferably "Schools for the Deaf" and in the literature of the subject they are spoken of simply as the "deaf", e.g., "The Annals of the Deaf", etc. Here it is well to remark that there is a strong and growing objection among the deaf and their educators to calling their institutions asylums - a term which classifies them with unfortunate needing relief and protection, like the insane. In fact, Webster, under the word "Asylum", classes the deaf and dumb with the insane. Efforts are consequently being made to place such institutions under the control of educational rather than of charity boards.

History.—That there were deaf persons in the remote past is evident from the fact that the causes of deafness, such as disease, were as prevalent then as now. Therefore the Christian Era, their condition was not deplorable. By many they were considered as under the curse of heaven; they were called monsters and even put to death as soon as their deafness was satisfactorily ascertained. Lucretius voices the received opinion that they could not be educated:

"To instruct the deaf, no art can ever reach,
No care improve them, and no wisdom teach.
Greeks and Roman poets and philosophers classified them with defectives, and the Justinian Code abridged their civil rights. In the family they were considered a disgrace, or were looked upon as a useless burden and kept in isolation. It is a bright page in the Old Testament which narrates the kindness of our Divine Lord, who, doing good to all, did not forget the deaf and dumb. After His example, the Church has extended its charity to this afflicted class, and has led the others following up for them other charitable thought in place of the hearing faculty. The statement met with in literature connected with the education of the deaf, that the real history of deaf-mute instruction must be considered as dating from the Reformation, is the old fallacy of post hoc ergo propter hoc. The fact is, that not a few of the more famous educators of the deaf received their first lessons from those who preceded the Reformation or were not influenced by its errors, but undertook the instruction of deaf-mutes for the sole purpose of imparting religious instruction. No Catholic theologian maintained that the adult deaf and dumb from birth are beyond the pale of salvation, because "Faith cometh by hearing" (Rom., x. 17). The assertion is often made, without references being given, that St. Augustine held such an opinion. Although the great doctor may have held the opinion of his time, that the deaf could not be educated, he certainly did not exclude the possibility of salvation any more than he excluded pagans to whom the Gospel had not yet been preached.

That the deaf are very much handicapped, even in our time, as regards religious instruction, so necessary for the preservation of faith and morals, must be admitted. Many deaf children born of Catholic parents have lost the Faith, owing to a lack of Catholic educational facilities. Moreover, they are deprived of the usual Sunday instructions and sermons. There are in the United States few priests engaged in ministering to their spiritual welfare, and such as have taken up this apostolate are not at leisure to devote their whole energy to the work. On the other hand, Protestant ministers travel through the length and breadth of the land and in their monthly itineraries assemble the deaf for religious services. There can be no doubt that from the dawn of Christianity the deaf enlisted the sympathy and support of many Christian apologists and missionaries who, by various ingenious devices, at the occasion, taught them the essential truths of faith; but history has left meagre records of their good work. According to Venerable Bede, St. John of Beverley (721?) caused a deaf and dumb youth to speak, he removed a stone over his mouth and wrote it on himself, in his "De Loquela per gestum digitorum", describes a manual alphabet. Rudolph Agricola, the distinguished humanist (1443-1485), states that he saw a deaf and dumb man who was able to converse with others by writing (De inventione dialectica, iii, 10). Ponce de Leon (1520-1594), a Spanish Benedictine monk, undertook the education of several deaf-mutes, as is related in the accounts of his work discovered among the archives at Oña. He relates that he taught pupils who were deaf and dumb from birth to speak, to read, to write, and to keep accounts, to repeat prayers and to confess orally. He first taught his pupils to write the names of objects and then to articulate. A contemporary writer, Francesco Valles, says that Ponce de Leon's method proved that, although we learn first to speak and then to write, the reverse order answers the same purpose for the deaf. In 1620 he was made a cardinal and a doctor of the Church, and undertook the instruction of the deaf and dumb by the principle announced by Girolamo Cardano (1501-1576), a friend of St. Charles Borromeo, that "writing is associated with speech, and speech with thought, but written characters may be connected together without the intervention of sounds. The deaf can hear by reading and speak by writing." About fifty years later, Juan Pablo Bonet, a Spanish priest, published a treatise entitled, "Reducion de las Letras y Arte para Enseñar a hablar Los Mudos" (Madrid, 1620). He made use of a manual alphabet, invented a system of visual signs representing to the sight of words, of which he gives a description of the position of the vocal organs in the pronunciation of each letter. His work contains many valuable suggestions useful to modern teachers of articulation and lip-reading.

Francis de Sales, having on his missionary journeys met a deaf-mute, took him into his service and succeeded in establishing communication with him by signs, and prepared him for confession and Holy Communion. The celebrated Jesuit naturalist and physician, Juan Terzi (1631-1687), in his "Prodromo dell Arte Maestra", considers the education of the deaf, according to him, the first thing in teaching them to perceive the dispositions of the organs of speech in the formation of sounds, and then imitating them; and recognizing speech in others by lip-reading. To that end they should first utter each sound separately, read it on the lips of another, then join them in words;
next they should be taught the meaning of these words by being shown the objects signified, and gradually be made acquainted with the meaning of those which relate to the functions of the senses, the arts, the understanding and the will” (Arnold). Lorenza Hervas y Panduro (1738–1800), a celebrated Spanish philologist and missionary in America, took an active interest in the education of the deaf in Rome and published a learned work in two volumes entitled “Escuela Española de Sordo-mudos, o Arte Para Enseñarle a Escribir y Hablar el Idioma Español” (Madrid, 1795). The work consisted of six distinct lessons: the deaf in the political, physical, philosophical, and theological aspects of the subject and the linguistic questions it gives rise to; the second is a history of their education up to that time, which is the first complete account written; the third explains the practical method of teaching idiomatic language by writing; the fourth that of teaching speech; and the fifth is on the instruction of the deaf in metaphorical ideas and in moral and religious knowledge” (Arnold).

Among other writers in the interest of the education of the deaf and dumb must be mentioned John Bulwer of Leiden (d. 1660) who in his work “De Institutione Sordidorum” recommends writing, signs, and, on occasion, lip-reading as the helpful instruments in the education of the deaf; William Holder (1616–1698), and his contemporary, John Wallis (1616–1703); George Dalgarne (1626–1687), of Aberdeen, Scotland, who published, in Latin, “Signorum” and “Simulacrum Dei” (1680) “Didascalica” (or “Deaf and Dumb Man’s Tutor”), and devised a double-handed alphabet; Baron Von Helmont (1618–1699); John Conrad Amman (1669–1724), a native of Schaffhausen, Switzerland, who published (1700) “Disertatio de Loquela,” in which are described his methods by which the deaf and dumb from birth may acquire speech.

Although Germany cannot claim originality in the field of the education of the deaf and dumb, several works published in other countries were translated into German, and their teachings put in practice. Among the earliest to take up this work were Kerger (1704), Raphel (1673–1740), Lasius (1775), and Arnoldi (1777). The first public institution for the deaf in Germany was established by Samuel Heinicke (1729–1790), the great advocate of the oral method of instruction, which has generally been followed in Germany for the deaf. To Friedrich Martin (1805–1874), regarded as one of the greatest teachers of the German deaf, is due that which is distinctively called the “German System”, which has found an able critic in J. Heidsieck, of the Breslau Institution for the Deaf, in a work entitled “Das System der Drei Sprachen der Sprache,” Jacob Rodrigue Pereire (1715–1750), a Portuguese Jew, gave an exhibition of his skill in teaching the deaf before the Academy of Science in Paris. His efforts were confined to a privileged few, and, from this circumstance, as well as keeping his methods secret, his work, unlike de l’Epée’s, had no lasting effect upon the deaf as a class” (Arnold). Abbé Deschamps, of Orleans, devoted his life and fortune to the education of the deaf-mutes and, in his instructions, relied chiefly on reading and writing together with speech and lip-reading.

In the middle of the eighteenth century, it was believed that speech was indispensable to thought. The practical utility of pantomime had not been fully shown before the days of Abbé Charles-Michel de l’Épée (1712–1789), the father of the sign-language and founder of the first school for the deaf. The description of the two preceding sections gives the reader a means of judging of the instruction given in the schools of that period. The first report, and certainly the most striking fact, is the extraordinary zeal with which the instruction was followed by the deaf-mutes themselves. They were taught to speak, and the result was that they could communicate with each other in pantomime and make use of certain natural gestures indicative of objects, their quality and action, he came upon the idea of using a sign-language as the means of instruction. Since words are conventional signs of our ideas, why should not the deaf-mutes use signs to indicate the same objects? He concluded that the natural language of signs, which the deaf-mutes themselves invent, would be of great service in their instruction. He accordingly made himself familiar with the few signs already in use and added others more or less arbitrary. He opened a school for deaf-mutes in Paris, about 1760, which soon won international fame. De l’Épée died in 1789, leaving as his successor the Abbé Sicard, who made important improvements in the system of de l’Épée. At about the same time a school for the deaf was opened by Samuel Heinicke at Dresden, which was attended by Thomas Braidwood, at Edinburgh. The successful results obtained in these schools prompted other cities and countries to establish similar ones under the direction of persons trained by de l’Épée, Heinicke, or their disciples.

In Italy the first school for the deaf was established in 1784 at Rome, by the Abbate Silvestri, a disciple of Abbé de l’Épée. Among other Italian educators must be mentioned Tommaso Pendola (1800–1883) and his brilliant associate, Enrico Marchio; Abbate Balesco and Abbate Giulio Tarra (1832–1889), who acted as president at the Milan International Institution for the deaf in 1880 and saw his most cherished ideas regarding oral teaching practically approved by the resolutions that were adopted, and which hastened the progress of oral teaching, especially in France.

Francis Green, a native of Boston, 1742, whose son was a deaf-mute, was the earliest advocate of deaf-mute education in America. In his “Vox Ocellis Subiecta”, published in London, 1783, he describes the method by which the deaf-mute may be taught to speak. In about 1812, John Braidwood, Jr., a grandson of the founder of the Edinburgh school, attempted to establish a school in Virginia, New York, and Baltimore, but failed. “The immediate effects”, says the “History of American Schools for the Deaf” (I, 10), “was to hinder and delay the opening of the first permanent school; for the members of his family in Great Britain, who controlled the monopoly of deaf-mute instruction in America, placed obstacles in the way of Dr. Gallaudet, when he sought to acquire the art of instruction in the mother country.” An exceptionally large number of deaf-mutes having been found in the State of Connecticut by Dr. M. F. Cogswell, whose daughter was deaf, a corporation of several gentlemen was enlisted for the purpose of establishing a school at Hartford, under the care of Dr. Thomas Hopkins Gallaudet. For the purpose of mastering the art of instructing the deaf, Dr. Gallaudet sailed for England; but the exorbitant and humiliating terms imposed by the Braidwood-Watson family, which held the monopoly of the art, repelled him. Happening to meet Abbé Sicard, who with his pupils was visiting London, he accepted an invitation to visit the school in Paris. Here he received every assistance. The Abbé gave him several hours of instruction every week and general information. He was also allowed Laurent Clerc, one of his pupils and valuable associates, to accompany him on his return to America. In the contract drawn up between Dr. Gallaudet and Laurent Clerc, it is stipulated (article 11): “He [Laurent Clerc] is not to be called upon to teach anything contrary to the Roman Catholic religion”, and in his letter to Bishop Cheve-
318

EDUCATION

rus of Boston, Abbé Sicard writes: "The extreme desire to procure for the unfortunate deaf-mutes of the country in which you dwell, and fulfill so well the mission of the Holy Apostles, the happiness of knowing our holy religion, leads me to a sacrifice which would exceed your powers. I send you the best taught of my pupils, a deaf-mute whom my art has restored to society and religion. He goes fully resolved to live and be faithful to the principles of the Catholic religion which I have taught him." Notwithstanding the kind solicitude of his beloved master, Laurent Clerc, like so many others, he proved of constant religious instruction, in his surroundings weakened in the Faith and apostatized.

The kindness of Abbé Sicard only served to lay the foundation of a Protestant propaganda which, ever since the opening of the Hartford School founded by Dr. Gallaudet, has controlled the education of the deaf in America. This Hartford School, then known as the American Asylum, was opened 15 April, 1817, under the superintendency of the Rev. Dr. Gallaudet, whose two sons, the Rev. T. Gallaudet and E. M. Gallaudet, have been active in the cause of deaf-mute education. The Rev. T. Gallaudet was the founder of the Columbia Institution for the Deaf and Dumb at Washington, D. C., which was opened 13 June, 1857. Later on, in 1864, it developed into a school for the higher education of the deaf under the name of the National Deaf-Mute College. Connected with the college is a normal department of the training of teachers for the deaf.

A course of studies leading up to entrance into the National Deaf-Mute College may be found in the "American Annals of the Deaf" for November, 1907. As regards higher education and normal-school practice, opportunities are also afforded by the Catholic deaf-mute schools in the State of New York.

When the Abbé de l'Épée originated the method of signs, many of his contemporaries, such as the Abbé Deschamps, refused to be associated with the new school, and between him and Samuel Heinicke of Leipzig, the great upholder of the speech method, there was carried on a spirited controversy, which has continued ever since, among the educators of the deaf. Professor E. A. Fay, in the "American Annals of the Deaf", gives the following classification and definition of the methods used in the schools for the deaf:

(1) The Manual Method.—Signs, the manual alphabet, are the chief means of instruction of the pupils, and the principal objects aimed at are mental development, and facility in the comprehension and use of written language. The degree of relative importance given to these three means varies in different schools: but it is a difference only in degree, and the end aimed at is the same in all.

(2) The Manual Alphabet Method.—The manual alphabet method and writing are the chief means used in the instruction of the pupils, and the principal objects aimed at are mental development, and facility in the use and comprehension of written language. Speech and speech-reading are taught to all of the pupils in one of the schools (the Western New York Institution) recorded as following this method.

(3) The Oral Method.—Speech and speech-reading, together with writing, are made the chief means of instilled human strength. I send to the United States the chief in speech and speech-reading in the course of instruction; but they are differences only in degree, and the end aimed at is the same in all.

(4) The Auricular Method.—The hearing of semi-deaf pupils is utilized and developed to the greatest possible extent, and, with or without the aid of artificial appliances, their education is carried on chiefly through the use of speech and hearing, together with writing. The aim of the method is to graduate its pupils as hard-of-hearing people instead of deaf-mutes.

(5) The Combined System.—Speech and speech-reading are regarded as very important, but mental development and the acquisition of language are regarded as still more important. It is believed that, in many cases, mental development and the acquisition of language can be best promoted by the manual or the manual-alphabet method, and so far as circumstances permit, such methods are adapted for each pupil as seems best adapted for his individual case. Speech and speech-reading are taught where the measure of success seems likely to justify the labor expended, and, in most of the schools, some of the pupils are taught wholly or chiefly by the oral method or by the auricular method.

Some educators of the deaf employ the method of visible speech, which is a species of phonic writing symbolizing the movements of the vocal organs in the production of speech. There is also a phonic manual in which the several positions of the hand not only represent sounds, but also the simultaneous representation of the phonetic method, whose several positions of the hand not only represent sounds, but also the simultaneous representation of the phonetic method.

It is beyond the scope of this article to discuss the merits of the various methods in use. A teacher of the deaf cannot lose sight of the fact that in the term deaf or deaf-mute, there are included at least four subclasses, namely, the semi-deaf, who have lost their hearing after they had acquired more or less perfectly the use of language; the semi-deaf, who retain some power of hearing, but yet cannot attend with profit for the deaf, the congenitally deaf, possessing some ability to perceive sound; and the totally deaf from birth, who are unable to perceive sound. A teacher of hearing children may take for granted, if the class is properly graded, that all his pupils are on the same plane; but a teacher of the deaf, whose pupils may be only four in number, may have before him, even in the lowest grade, as many different kinds of deaf children as there are pupils in the class. These he must instruct and educate. Considering that the deaf child is very much handicapped, and that the period of its school-days are limited, it is reasonable to suppose that a good teacher will take advantage of every latent power possessed by the child for educational development. In a word, the teacher will suit the method to the child and not endeavour to adapt the child to the method. It would certainly be a mistake to use the purely oral method for all deaf-mutes without discrimination and without considering the capacity, eyesight, etc. of the pupil.
Europe and more than sixty in America dealing with questions concerning the deaf. The oldest among the latter, “The American Annals of the Deaf”, edited by Dr. Fay, is eclectic in its character and as such is the organ of the combined system of instruction. For the diffusion of this oral method there was founded, in 1899, at Philadelphia, a special periodical, “The American Association Review”, published by the “American Association to Promote the Teaching of Speech to the Deaf”. Among the efficient agencies for the promotion of educational work for the deaf must be numbered the meetings, congresses, and conferences of superintendents and teachers of the deaf, and of the deaf themselves. The oldest organization of the kind is the “Convention of American Instructors of the Deaf”, which met for the first time in New York in 1850, and for the sixteenth time in 1901, at the Le Couteux, St. Mary’s Institution for the Improved Instruction of Deaf Mutes, Buffalo, as the guests of the Sisters of St. Joseph.

There are also annual meetings of the “Association to Promote the Teaching of Speech to the Deaf”; meetings of principals and of the Department of Special Education of the National Association of American Teachers. At the invitation of the Right Rev. Daniel Fay, Rector, of the Catholic University of America, all persons interested in the education of Catholic deaf-mutes met in July, 1907, at Milwaukee, simultaneously with the Catholic Educational Association, and organized the Catholic Deaf-Mute Conference. The conference is a powerful factor in carrying on the work of the Deaf-Mute Conference. The deaf themselves, also, at stated times, hold State and national conventions. Such meetings are carried on in the sign language, which, because visible to a large audience, is best adapted for public addresses, sermons, etc. Whenever at these meetings the deaf touch upon educational topics, they take occasion to manifest their strong protest against pure oralism in the schools, and their unequivocal adherence to the sign-language and the combined system of education. In the United States deaf-mutes are entitled to a share in the school fund, and special boarding and day schools are provided for them. Most of the institutions are controlled by trustees appointed by the State. The term of instruction is from seven to twelve years.

Actual Conditions—According to the subjoined statistics, compiled from the “American Annals of the Deaf” for 1907, there are 60 public State schools, 60 public day-schools, and 17 denominational and private schools, making in all 139 schools for the deaf in the United States, having an attendance of 11,648 pupils—6317 boys and 5331 girls—1552 instructors—471 men and 1081 women. Out of the total number of 139 schools for the deaf, there are 13 Catholic schools with the following enrollment: St. Joseph’s School for the Deaf, Oakland, California, 29; St. John’s School for the Deaf, Chicago, Illinois, 72; Institute of the Holy Rosary, Chinea, Louisiana, 37; St. Francis Xavier’s School, Baltimore, Maryland, 35; Boston School for the Deaf, Randolph, Massachusetts, 93; Mater Boni Consilii School, St. Louis, Missouri, 13; and the two Catholic schools in which the oral method there was taught, Kansas City, 20; Notre Dame School, Cincinnati, Ohio, 12; St. John’s Institute, St. Francis, Wisconsin, 71; St. Joseph’s School, 3, New York City, 417; Le Couteux, St. Mary’s School, Buffalo, New York, 176-making in all 1002 deaf pupils in Catholic schools. It will be noted that in the four Catholic schools for the deaf in the State of New York, which has a deaf population of about 10,000, there are 593 children cared for; and that, in nine schools scattered throughout the remaining portion of the United States, where there is a deaf population eight times as great as that of the State of New York, only 409 are provided for. If all the States were as generous as New York in caring for its deaf children, there should be, if adequate facilities were provided, 4744 children in Catholic schools for the deaf outside of the State of New York.

With the exception of the New York institutions for the deaf, the other Catholic institutions are almost entirely dependent upon the charity of the community. Pupils of all denominations are admitted, the only requirements for admission being a sound mind and good morals. Good work has been done by these devoted sisters for Church and State, and their graduates are respected and self-supporting citizens; but, as they carry on their schools with little support from without, the number of pupils is necessarily small. The pupils are for the most part girls, and, because there is no male community in the United States, as there is in Canada and Europe, to take charge of the deaf-mute boys, these are obliged, with very few exceptions, to attend State or public day-schools.

The celebrated school for the deaf at Cabra, near Dublin, Ireland, has two departments. The St. Joseph’s School for boys is under the care of Christian Brothers, and the St. Mary’s School for girls is in charge of Dominican nuns. It was established in the year 1846 by Archbishop Murray. The chief patrons of the institution are the archbishops and bishops of Ireland, the president of the management being the Archbishop of Dublin. Without government grant, the school has attained a foremost rank among educational institutions for the deaf. According to the report for the year 1900, there were 105 boys and 258 girls under instruction,—260 boys and 258 girls. Industrial training suited to the age and capacity of the children, and so necessary for the deaf, forms an important part in the educational system of the school.

The institutions for the deaf in the United States, during the last decades, have a marked number of day-schools. This is due to the strong influence of the defenders of the oral method, who, for their purpose, consider such schools superior to boarding-schools. The conscientious duty of Catholic parents to withdraw their afflicted children from State boarding-schools that have proved so dangerous to faith, has also influenced the establishment of day-schools. Until boarding-schools are provided, the day-school, notwithstanding its many inconveniences, is preferable for the Catholic deaf-mute child, so that he may not be deprived of religious influence. Until 1870, the schools for the deaf established in the United States were almost entirely boarding-schools.

Deaf-Blind.—There are some individuals who are not only deaf but also blind, and not a few who are deaf, mute, and blind. Wonderful results have been produced in the education of this afflicted class during the last half-century, as is evidenced in the case of Laura Bridgeman, taught by Dr. Howe; Helen A. Keller, educated by Miss Annie Sullivan; Clarence Selby, poet and author, taught by Sister Dosithea of the Le Couteux, St. Mary’s Institution, Buffalo, New York, and Lottie Sullivan, educated by Mrs. G. W. Veditz of the Colorado School, and instructed for her first Holy Communion by the Sisters of St. Joseph in St. Louis. About forty more remarkable cases are known in the United States and Canada (see “American Annals of the Deaf”, June 1900). It is evident that a teacher of this class must be strong in the power of inventing means for the attaining of results, and of utilizing the unimpaired faculties as indirect ways of communication between the imprisoned soul and the outer world. Usually they are taught the manual alphabet, and made to understand that objects have names, and that by these names, recognized in raised print or by spelling on the fingers, objects can be designated. So delicate is their sense of touch that, like Helen Keller, they can, by feeling the movements of the vocal organs in the production of speech, be taught to speak and even to read the speech of others.
MANUAL ALPHABETS.—Venerable Bede (op. cit.) describes finger alphabets. Monks under rigid rules of silence often made use of them. Rosellius, a Florentine monk, in his "Thesaurus Artificiose Memoriae" (1579), figures three one-hand alphabets which, with minor differences, were used by Bonet and Hervas y Panduro. The first alphabet used in teaching spoken and written language to the deaf was the Spanish one-hand alphabet of Rosellius. "The happy thought of this adaptation," says J. C. Gordon, "is attributed to the pious and learned monk, Pedro Ponce de Leon" (1529-1554). The two-handed alphabet, used in Great Britain, was in use centuries ago among the school-boys of Spain, France, and England. Manual alphabets have nothing to do with "signs" or the "sign-language". They constitute a manner of writing language by spelling words on the fingers. As a means of intercourse with the deaf, they are preferable to writing on paper, being more convenient and rapid.

For the sake of promoting the welfare of thousands of deaf persons, it is recommended to hearing persons to master this art, which is easily acquired.

STATISTICS.—According to the United States Special Census Report for 1900, there are in Continental United States 9,277 persons with seriously impaired powers of hearing. Of these 2,772 are blind-deaf, 37,426 are totally and 51,861 partially deaf; 51,371 became deaf under the age of 20 and 37,416 in adult life, 46,915 are males and 42,372 females; 84,361 deaf are white, and 4926 coloured.

There are on an average 1175 deaf to the 1,000,000 population in Continental United States. Considering that there are in this territory probably 15,000, 000 Catholics, it follows that, if conditions and causes are uniform, there are 17,625 Catholic deaf—10,572 under the age of 20 and 7553 adults. Since deaf-mutism is common among the poor, it is probable that the number of Catholic deaf is much larger. The statistics for the schools for the deaf throughout the world may be tabulated as follows:

Reports received from fifty-three State schools in the United States, having an aggregate attendance of 10,124 pupils, show the values of the grounds and buildings to be $13,370,576; expenditure for grounds and buildings, $605,027; expenditure for salaries and other expenses, $2,556,459, making a total expenditure of $3,161,486, or $312 average cost per capita.

Reports from forty-three public day-schools show expenditures for salaries and other expenses to be $96,014 for 788 pupils, or an average cost per capita of $122. Reports from three denominational and private schools show an aggregate expenditure of $20,649 for 135 pupils, that is to say, an average cost per capita
Edward III, King of England (1312-77), eldest son of Edward II and Isabella, daughter of Philip IV of France; b. at Windsor Castle, 13 Nov., 1312; d. at Sheen, 21 June, 1377. He succeeded to the throne in his fifteenth year through the deposition of his father in January, 1327, Edward II being forced to agree to his own deposition, as the son refused to accept the crown without his father's consent. His marriage to Philippa, daughter of the Count of Hainault, took place at York, 21 January, 1328. In person Edward was graceful, strong, and active; he was fond of hunting, hawking, and all knightly pastimes, especially war. Ambition seems the most prominent point in his character, and his life, characterized throughout by selfishness and extravagance, was spoilt in later years by indulgence in a shameful passion. As a king, though he won great renown by his wars, he seems to have cared neither to maintain the royal prerogatives nor to follow any policy which would benefit his people.

For the first four years of his reign all power was in the hands of the queen-mother and Mortimer, and not till their overthrow in November, 1331, can Edward be said to have begun to rule. His first warlike experience was inglorious. In 1327 the Scots, led by Robert Bruce, bent on recovering their independence, invaded the North of England. Edward marched to meet them; but not quick enough to arrive were the Scots that Edward marched from York to Durham without gaining any definite news of their position, and, when he tried to cut them off and force them to fight, was completely outmanoeuvred by them. The "Shameful Peace" of Northampton, made in 1328, by which Scotland's independence was again recognized, was one of the causes which brought about the downfall of Mortimer and Isabella. Edward renewed his struggle with Scotland in 1333, supporting Edward Baliol in an attempt on the Scottish throne. He defeated the Scots under Sir Archibald Douglas at Halidon Hill, and set Baliol on the throne. But the Scots quickly expelled Baliol, and, though Edward restored him, the quarrel with France prevented Edward from continuing the struggle. Further contests with Scotland took place during the Crécy campaign, when David Bruce, after securing his rightful place as king, took advantage of Edward's absence in France to invade England, only to be defeated and captured at Neville's Cross, October, 1346. David remained a prisoner for eleven years, but the Scottish raids continued. In 1355 the Scots took Berwick; Edward retook it in the following year, but, though he ravaged the Lothians in the campaign known as "Burnt Candles," he was unable to bring the Scots to terms. When David was released, in 1357, and found himself unable to pay the stipulated ransom, he agreed to make Edward heir to the Scottish throne. But David died, in 1371, and left Edward in a position which prevented him from prosecuting his claim or interfering with Scotland's independence.

Partly caused by the war with Scotland in 1333 and 1334 was the great war between England and France known as the Hundred Years War. The Scots had been helped by money from Philip VI of France, and Edward's anger at this was increased by the presence of a French exile, Robert of Artois, who did all in his power to stir up enmity between the English and the French kings. Edward and Philip had been rival claimants for the French throne in 1328, and after Philip had been chosen king there was much dispute over the hereditary military command for his French fiefs. Philip, too, was anxious to be king over all France, a claim which involved the annexation of Guienne and Gascony, the parts still held by England. Thus personal and national rivalry combined to cause war. Edward's personal share in the war which lasted from 1338 to 1370 was a distinguished one. The first campaigns, however, were more remarkable for the concessions won by Parliament out of the king's needs than for successes in battle. By the end of 1339 he had agreed not to take a tallage of any kind without the consent of Parliament; and in 1341, to obtain further supplies, he submitted his accounts being audited by a board chosen in Parliament, and promised not to choose ministers without the consent of his council. But, having received the money, Edward shamefully broke his promises, saying that he had "dissembled in order to avoid greater evils." The campaign of 1340 led to Edward's naval victory at Sluys over a fleet of five hundred French ships which attempted to prevent his landing; and this, taken with his victory off Winchelsea, in 1350, over the Spanish fleet, goes some way towards justifying his claim to the sovereignty of the seas.

The next campaign in which Edward took an important part was that of 1346. The Earl of Derby had been appointed to command in Gascony, and in 1346 Edward was about to lend an army to help him, when he was persuaded to attack, instead, the unprotected northern part of France. Landing near Cherbourg, he marched through Normandy, doing as much mischief as he could, and advanced almost to Paris. Then, crossing the Seine, he retreated towards Calais, pursued closely by Philip; and at Crécy, 24 August, he won a complete victory over the French force. Continuing to Calais, he began a lengthy siege which ended in the surrender of the town, August, 1347. Truces frequently signed after this were as frequently broken till open war broke out again in 1355. Edward himself had small part in the warfare which followed till the campaign of 1359-60, when, after trying to take Rouen, he concluded a treaty with the regent of France at Brétigny, 8 May, 1360, by which all the ancient province of Aquitaine with Calais, Guines, and Ponthieu was ceded to him, and he renounced his claim to the French crown and to all French provinces except Brittany. The period between 1347 and 1355 was remarkable for the Black Death, a plague which in
England swept off about half the people. Decrease in population caused increase in labourers' wages. And in 1350 the king attempted to deal with the difficulty by proclaiming that labourers must work for the same wages as before the plague, under penalty fixed by statute. (Chaucer, The Black Death, new ed., London, 1908.)

Ecclesiastically, Edward's reign was marked by some legislation directed against the pope. The difficulties were caused partly by the heavy taxation levied by the pope on the clergy, and partly by the appointment of foreigners to English benefices by the pope; while the irritation of Englishmen at these grievances was increased by the pope's residence at Avignon, under the influence of the French King. In 1351 the Statute of Provisors was passed. The king had, in 1344, complained to the pope against reservations and provisions by which English benefices were given to foreigners, and the rights of patrons were defeated; and this proving ineffectual, the statute now made all who procured papal provisions for benefices liable to fine and imprisonment. But the statute can hardly have benefited patrons, for preferments filled by provisions were declared forfeit to the Crown for that turn. In 1353, by the Statute of Presumption, all subjects of the king were forbidden to plead in a foreign court in matters which the King's Court could decide, and in 1365 the papal courts were expressly included under this.

Urban V in 1366 demanded the annual tribute promised by King John, which was then thirty-three years in arrear; but, on Parliament refusing to pay, nothing more was heard of the claim.

The last years of Edward's reign were a time of failure and disappointment. In France he had lost, by 1374, all possessions but Calais, Bordeaux, and Bayonne; at sea the English were badly beaten by the Spaniards in 1372; the king himself after the death of his wife, in 1369, was completely under the influence of Alice Perrers; the court became more extravagant than before, and ministers were suspected of corruption. The Commons, supported by the Prince of Wales and William of Wykeham, attacked some of these evils in the "Good Parliament" of 1376. Lord Latimer, the king's chamberlain, and Richard Lyon, his financial agent, were impeached and imprisoned; and though Edward sent a message begging Parliament to deal gently with Alice Perrers for the sake of his love and his honour, she was banished from court. But the death of the Black Prince immediately afterwards was a great blow to the Commons. John of Gaunt was able, on Parliament's dismissal, to recall the impeached ministers, and by Edward's wish Alice Perrers returned. The struggle between the anti-ecclesiastical party, led by John of Gaunt, in alliance with John Wyclif, and the clergy, led by William of Wykeham, is so closely connected with Edward personally, except in so far as this and other evils were due to Edward's neglect of the affairs of his kingdom, that it is necessary to give some account of it here.

Discontent and conflicts at home, and failure abroad brought his reign to a close. He died deserted by all except one priest who attended him out of compassion. He was buried in Westminster Abbey.

Thomas Williams.

Edward the Confessor, Saint, King of England, b. in 1005: d. 5 January, 1066. He was the son of Ethelred II and Emma, daughter of Duke Richard of
Edward, being thus half-brother to King Edmund Ironside, Ethelred's son by his first wife, and to King Haraldine, Emma's son by her second marriage with Canute. When hardly ten years old he was sent with his brother Alfred into Normandy to be brought up at the court of the duke his uncle, the Dunes having gained the mastery in England. Though during the best years of his life in exile, the crown having been settled by Canute, with Emma's consent, upon his own offspring by her. Early misfortune thus taught Edward the folly of ambition, and he grew up in innocence, delighting chiefly in assisting at Mass and the church offices, and in association with religious, whilst not disdaining the pleasures of the chase, or recreations suited to his station. Upon Canute's death in 1035 his illegitimate son, Harold, seized the throne, Haraldine being then in Denmark, and Edward and his brother Alfred were persuaded to make an attempt to gain the crown, which resulted in the cruel death of Alfred who had fallen into Harold's hands, whilst Edward was obliged to return to Normandy. On Haraldine's sudden death in 1042, Edward was called by acclamation to the throne at the age of about forty, being welcomed even by Danish settlers owing to his gentle saintly character. His reign was one of almost unbroken peace, the threatened invasion of Canute's son, Sweyn of Norway, being averted by the opportune attack on him of Sweyn of Denmark; and the internal difficulties occasioned by the ambition of Earl Godwine and his son Edward's being sent without bloodshed by Edward's own gentleness and prudence. He undertook no wars except to repel an inroad of the Welsh, and to assist Malcolm III of Scotland against Maelbicht, the usurper of his throne. Being devoid of personal ambition, Edward was the very guardian of his people. He remitted the obnoxious "Danegeld," which had needlessly continued to be levied; and though profuse in alms to the poor and for religious purposes, he made his own royal patrimony suffice without imposing taxes. Thus was the commitment caused by "the good St. Edward's laws," that their enactment were repeatedly demanded by later generations, when they felt themselves oppressed.

Yielding to the entreaty of his nobles, he accepted as his consort the virtuous Editha, Earl Godwin's daughter. Having, however, sworn a vow of chastity, he first required her agreement to live with him as his sister. As he could not leave his kingdom without injury to his people, the making of a pilgrimage to St. Peter's tomb, to which he had bound himself, was commuted by the pope into the rebuilding at Westminster of St. Peter's abbey, the dedication of which took place but a week before his death, and in which he was buried. St. Edward was the first King of England to touch for the "king's evil," many sufferers from which disease were cured by him. He was canonized by Alexander III in 1161. His feast is kept on the 13th of October, his incorrupt body having been solemnly translated on that day in 1163 by St. Thomas of Canterbury in the presence of King Henry II.

G. E. PHILLIPS.

Edward the Martyr, Saint, King of England, son to Edgar the Peaceful, and grandson to St. Edward the Confessor. While delighting Churl, the son of Ethelfred, being on his crown for her own son Ethelred, then aged seven, in which she eventually was successful. Edward's claim, however, was supported by St. Dunstan and the clergy and by most of the nobles; and having been acknowledged by the Witan, he was crowned by St. Dunstan. Though only thirteen, the young King had already given marriage of high sanctity, and during his brief reign of three years and a half won the affection of his people by his many virtues. His stepmother, who still cherished her treacherous designs, continued to whisper about his death. Whilst hunting in Dorsetshire he happened (18 March, 979) to call at Corfe Castle where she lived. There, whilst drinking on horseback a glass of mead offered him at the castle gate, he was stabbed by an assassin in the bowels. He rode away, but soon fell from his beast, and having dragged by the stirrup was flung into a deep morass, where his body was revealed by a pillar of light. He was buried first at Wareham, whence three years later, his body, having been found entire, was translated to Shaftesbury Abbey by St. Dunstan and Earl Alfere of Mercia, who in Edgar's lifetime had been one of his chief opponents. Many miracles are said to have been obtained through his intercession. Elfrida, struck with repentance for her crimes, built the two monasteries of Werwell and Ambrebury, in the first of which she was buried and her days in penance. The violence of St. Edward's end, joined to the fact that the body of a saint had been that of the irreverent, whilst he himself had ever acted as a defender of the Church, obtained for him the title of Martyr, which is given to him in all the old English calendars on 18 March, also in the Roman Martyrology.

G. E. PHILLIPS.

Edwin (EDUN), Saint, the first Christian King of Northumbria, b. about 585, son of Ælla, King of Deira, the southern division of Northumbria; d. 12 October, 633. Upon Ælla's death in 588, the sovereignty over both divisions of Northumbria was usurped by Ethelric of Bernicia, and retained at his death by his son Ethelfrid; Edwin, Ælla's infant son, being compelled until his thirtieth year to wander from one friendly prince to another, in continual danger from Ethelfrid's attempts at his life. This while, he residing with King Redwald of Northumbria, Angell, Ethelfrid repeatedly endeavoured to bribe the latter to destroy him. Finally, however, Redwald's refusal to betray his guest led in 616 to a battle, fought upon the river Idle, in which Ethelred himself was slain, and Edwin was invited to the throne of Northumbria. On the death of his first wife, Edwin, in 625, asked for the hand of Ethelburga, sister to Eadwald, the Christian King of Kent, expressing his own readiness to embrace Christianity, if upon examination he should find it superior to his own religion. Ethelburga was accompanied to Northumbria by her brother, Paulinus, one of St. Augustine's fellow missionaries, who thus became its first apostle. By him Edwin was baptized at York in 627, and thenceforth showed himself most zealous for the conversion of his people. In instance of this, Venerable Bede tells how, at their royal villa of Ye. in Northumberland, the king and queen entertained Paulinus for five weeks, whilst he was occupied from morning to night in instructing and baptizing the crowds that flocked to him. By Edwin's persuasion, moreover, Eorpwald, King of East Anglia, was converted. Edwin's old friend Redwald was also Christian. In token of his authority over the other kings as Bretwalda, Edwin used to have the tufta (a tuft of feathers on a spear, a military ensign of Roman origin) borne publicly before him, and he received tribute from the Welsh princes. Under him the law was so respected, that it became, as the Venerable Bede attests, a proverb that "a woman might travel
through the island with a babe at her breast without fear of insult". St. Edwin was slain on 12 October, 633, in repelling an attack made on him by Penda, the pagan King of Mercia, who, together with the Welsh prince Cadwallon (a Christian only in name), had invaded Penda's dominion, and in conflict with the enemies of the Faith, he was regarded as a martyr and as such was allowed by Gregory XIII to be depicted in the English College church at Rome. His body was conveyed to Whithby. Churches are said to have been dedicated to him at London and at Brive in Somerset.

G. E. PHILLIPS.

Edwy (or EADWIG), King of the English, eldest son of Edmund and St. Aelfgifu, b. about 940; d. 959. Though but fifteen years old at the death of his uncle Edred, he was unanimously chosen king, and was crowned at Kingston in January, 956. Too young, almost, to know his own mind, and surrounded by counsellors who pandered to all that was worst in his nature, his reign was of short duration. Despite the exhortations of St. Dunstan and Archbishop Odo, both of whom fell under his displeasure, he put imposition after imposition upon his subjects. His relatives were removed from court, honest thanes were deprieved of their lands and inheritances, and his grandmother Eadgiva, who, by her piety and dignity, had endeared herself to the entire nation, was deprived of all her possessions.

At length, in 957, the Mercians and Northumbrians, whose course was now followed against Edgar, Edwy's younger brother, withdrew from the court with Archbishop Odo and put himself at the head of the insurgents. Edwy advanced to meet him but was defeated at Gloucester and obliged to flee for his life. Unwilling to prolong a civil war, the men of Kent and Wessex assembled to a general meeting of the thanes from North and South to arrange for peace. It was decided that the country should be divided in half at the Thames, and that each brother should rule over a part. To Edwy was allotted the southern portion, and to Edgar the northern. Taught prudence by his recent victory, Edgar governed his portion from that time forward with commendable justice and moderation, but died, prematurely, in 959.

His relations with St. Dunstan were not the happiest, and constitute the chief interest of Edwy's career. His opposition to the saint dated from the refusal of the latter to countenance his relations with Ethelgiva, by some presumed to be his foster mother, and her daughter. Seeing that he was in disfavour, Dunstan withdrew for a time to his cloister, but the anger of the king, kept alive by Ethelgiva, followed him into that sanctuary. The monks were incited to revolt, the abbey was plundered. Dunstan fled and, though hotly pursued, managed to escape to the Continent, where he remained until after Edwy's death.

Osbern's story of the effect that Edwy engaged in a general persecution of the monks may, however, be safely rejected, as the revolt against him was not concerned with the dispute between the pope and seculars which began only after Edwy's death. On the other hand, Edwy's dislike for Dunstan may have helped to impede the saint's monastic reforms.

Egan, Boetius. Archbishop of Tuam, b. near Tuam, Ireland, 1734; d. near Tuam, 1798. He belonged to a family owning large estates in the County Galway. In the eighteenth century they were reduced in position and means. The penal laws made it difficult for an Irish Catholic to engage in business at home; nor do we know where young Egan received his early education. Neither is it certain at what age he went to France to be trained for the priesthood. This training he received at the College of Bordeaux, founded by Irish exiles and endowed by Anne of Austria, in the seventeenth century. After his ordination he returned to Ireland and laboured in the ministry for some years till, in 1785, he was appointed Bishop of Achonry. Two years later he became Archbishop of Tuam. Acquainted during his whole life in Ireland with the barest toleration of his religion, he joyfully welcomed the Catholic Relief Act of 1778, and hastened to express his gratitude to George III. When Maynooth College was founded in 1795, he was named one of its trustees. One of his last public acts was to sign an address to the Irish viceroy, Lord Camden, condemning the revolutionary associations then in Ireland. In this address George III was called "the best of kings", and the Irish Parliament as "our enlightened legislature". It was strange language to use of such a king and of such a parliament.

BURKE, Catholic Archbishops of Tuam (Dublin, 1882); HEALY, History of Maynooth College (Dublin, 1899).

E. A. D'ALTON.

Egan, Michael, first Bishop of Philadelphia, U. S. A., b. in Ireland, most probably in Galway, in 1701; d. at Philadelphia, 22 July, 1814. Entering the Order of St. Francis he was rapidly advanced to important offices. In his twenty-sixth year he was elected Guardian of St. Isidore's, the house of the Irish Franciscans, at Rome, and held this position for three years, when he was transferred to Ireland. After labouring for several years as a missionary in his native land, he responded to an earnest appeal of the Catholics of Lancaster, Pennsylvania, and went to the United States. Though lacking the constitution demanded by the pastoral duties of that pioneer age, and suffering often from sickness, Father Egan's priestly zeal and eloquence in the pulpit gained universal recognition, and, in April, 1803, he was appointed by Bishop Carroll one of the first bishops of St. Augustine in Philadelphia. On 8 April, 1808, Pope Pius VII erected this city into an episcopal see, with Michael Egan as first bishop. Archbishop Carroll describes him to the Roman authorities as a man of about fifty who seems endowed with all the qualities to discharge with perfection all the functions of the episcopacy except that he lacks robust health, greater experience and a greater degree of firmness in his disposition. He is a learned, modest, humble priest who maintains the spirit of his Order in his whole conduct. Owing to the Napoleonic troubles, the papal Bulls did not reach America until the year 1810. On 28 Oct. Bishop Egan was consecrated by Archbishop Carroll in St. Peter's church, Baltimore. His brief episcopate was embittered and his health shattered by the contumacious behaviour of the lay trustees of St. Mary's church, in which he had chosen for his residence, who were tainted with the irreligious notions of the times, without any legal right, and contrary to the canons of the Church, claimed the privilege of electing and deposing their pastors and of adjusting their salaries. This un-Catholic contention that "the lay owners of the churches and the clergy are their inventors" disturbed the peace, retarded the progress, and threatened the existence of the Catholic religion in Pennsylvania during two episcopates. Bishop Egan's troubles were aggravated by the insubordination of two Irish priests whom he had admitted to the diocese. James Harold and his better-known nephew, William
EGBERT

Egburt, Saint, a Northumbrian monk, born of noble parentage c. 639; d. 729. In his youth he went for the sake of study to Ireland, to a monastery, says the Venerable Bede, "called Rathmelsigi", identified by some with Mellifont in what is now County Louth. There, when in danger of death from pestilence, he prayed for a vision to do penance for his own sins and for things to live always in exile from his own country. In consequence he never returned to England, though he lived to the age of ninety, and always fasted rigorously. Having become a priest, he was filled with zeal for the conversion of the still pagan German tribes related to the Angles, and would himself have become their apostle, if God had not shown him that his real calling was to other work. It was, however, that dispatched to Fiesland St. Wigbert, St. Willibrord, and other saintly missionaries. St. Egbert's own mission was made known to him by a vision, that Melrose, and had seen a disciple of St. Boisil. Appearing to this monk, St. Boisil sent him to tell Egbert that the Lord willed him instead of preaching to the heathen to go to the monasteries of St. Columba, "because their plagues were not going straight", in consequence of their sins, and to pray in the celebration of Easter. Leaving Ireland therefore in 716, Egbert crossed over to Iona, where the last thirteen years of his life were spent. By his sweetness and humility he induced the Iona monks to relinquish their erroneous mode of computation; in 729 they celebrated Easter with the rest of the Church upon 24 April, although their old rule placed it that year upon an earlier day. On the same day, after saying Mass and joining joyfully in their celebration, the aged Egbert died. Though he is now honoured simply as a confessor, it is probable that St. Egbert was a bishop. By Boisil he is expressly called antistes and episcopus, and an Irish account of a synod at Brra names him "Egbert Bishop", whilst the term accordvis used by the Venerable Bede, is sometimes applied by him to bishops.

Egburt, Archbishop of Trier, d. 8 or 9 December, 933. He belonged to the family of the Counts of Holland. His parents, Count Theodoric I and Countess Hildegarde, sent him to be educated in the Abbey of Egmont, located within their dominions. Egbert is first mentioned in history about 899, when he was made bishop of Trier, then under Archbishop Willigis of Mainz. Documents of 976 and 977 record him as holding this office. In 977 he was made Archbishop of Trier, which see was vacant by the death of Theodoric. Here he remained till 993. He sought principally to remove from this great diocese the ravages caused by the Northmen at the end of the ninth century, and to foster the ecclesiastical reforms that had been progressing since the days of Otto I. He completed the restoration, begun by his predecessor, of the Abbey of S. Maria ad Martyres near Trier. Just before he died he built the abbey-church of St. Eucharius (St. Mathias), to which Otto II contributed generously. On this occasion the body of St. Celsius was discovered. The abbey itself was richly endowed and its monastic school flourished again. The collegiate church of St. Patrokli, near the town, being similarly endowed, a regular income for its clergy assured, and a fitting solemnity in Divine worship made possible. Abbot Hetzel of Mettlach was disposed for conduct unworthy of his vows and station. The monastery was reformed, and its school became the effective centre of studious occupation. The sternmaifeld St. Martin's was raised to the dignity of a collegiate church and was correspondingly en-

Egburt (EGBERT or EGBHRYT), frequently though incorrectly called “First King of England”, d. A.D. 839. He styled himself in 828 Reg Anglorum, i.e. “Overlord of East Anglia”, a title used by Offa fifty years before; in 830 he described himself as “King of the West Saxons and Kentishmen”, and in 833 he is “King of the West Saxons”. He came of the royal race descended from Ine of Wessex and, owing to his pretensions to power, was exiled by the joint action of Beorhtwine of Wessex and Offa of Mercia. The date and duration of his exile are unknown, but he returned in 802 and was chosen King of the West Saxons. In 815 he ravaged Cornwall and conquered the West Welsh who dwelt there. They rebelled in 823, when he again defeated them just in time to repel a Mercian invasion, and the battle of Edington he. Shortly afterwards Kent, Surrey, Sussex, and Essex accepted him as king and East Anglia submitted to his overlordship. With the Mercians again broke out, and ended in Egburt driving out Wiglaf and receiving the submission of that kingdom. In 829 he attacked Northumbria, but the Northumbrians met him at Dere and recognized him as overlord.

Thus for the first time he had united the whole English race under one overlordship, in this way substantially justifying the title King of England, though the idea of territorial kingship had not at that time come into being. Nor was he actually king of all the subject tribes, for the under-kings still ruled, though they were under him as Bretwalda. He was the true Wignaff to the throne of Mercia and made his own son Ethelwulf King of the Kentishmen. In his own Kingdom of Wessex he developed the shire system, carefully regulating the relations of the ealdorman and the bishop to the shire. He also organized the Pur, or militia. His ecclesiastical policies were very favourable to the Church, and at the Council of Kingston, in 838, he gave the archbishop assurances of friendship and certain privileges which considerably strengthened the primatial see. In 831 he forced the North Welsh (the people of Wales) to accept his overlordship, but three years later he had to defend his realm from Scandinavian pirates who were invading Sheppey. He beat them off, but they returned in 835 and defeated him at Charmouth in Dorsetshire. In 837 he again had to meet a great fleet of Northmen, who on this occasion were helped by an invasion of the Irish. He, however, won a great victory over the allies at Hengestdu, on the borders of Cornwall, after which he remained at peace till his death.

The chronology of the Anglo-Saxon Chronicle is often too, and sometimes three, years out with regard to the events of his reign. His coins, although specimens from nineteen different mints are known, bear his name and the title Rex, the additions Saxon, “M”, or “A” denoting Wessex, Mercia, and East Anglia respectively.

EDWIN BURTON.

Egbert, Bishop Egan died worn out by his struggles to maintain his episcopal authority.

Egburt, Archbishop of Trier, d. 8 or 9 December, 933. He belonged to the family of the Counts of Holland. His parents, Count Theodoric I and Countess Hildegarde, sent him to be educated in the Abbey of Egmont, located within their dominions. Egbert is first mentioned in history about 899, when he was made bishop of Trier, then under Archbishop Willigis of Mainz. Documents of 976 and 977 record him as holding this office. In 977 he was made Archbishop of Trier, which see was vacant by the death of Theodoric. Here he remained till 993. He sought principally to remove from this great diocese the ravages caused by the Northmen at the end of the ninth century, and to foster the ecclesiastical reforms that had been progressing since the days of Otto I. He completed the restoration, begun by his predecessor, of the Abbey of S. Maria ad Martyres near Trier. Just before he died he built the abbey-church of St. Eucharius (St. Mathias), to which Otto II contributed generously. On this occasion the body of St. Celsius was discovered. The abbey itself was richly endowed and its monastic school flourished again. The collegiate church of St. Patrokli, near the town, being similarly endowed, a regular income for its clergy assured, and a fitting solemnity in Divine worship made possible. Abbot Hetzel of Mettlach was disposed for conduct unworthy of his vows and station. The monastery was reformed, and its school became the effective centre of studious occupation. The sternmaifeld St. Martin's was raised to the dignity of a collegiate church and was correspondingly en-
dowed. From all these regenerated centres, likewise from the Abbeys of Echternach and St. Maximin, that needed no reformation, a beneficent, spiritual, and intellectual influence radiated in all directions through the diocese.

The intimate friend of Otto II, and with Willigis of Mainz exerted a wholesome influence over the emperor, whom he accompanied on his journey to Italy in 983. After Otto's death he stood at first for a time at the court of the emperor, but soon went over to Otto III and his mother Theophano. Other evidence of the religious renewal and the awakening of the Diocese of York is found in the admirable works of ecclesiastical art inspired by Egbert and executed mostly in Trier itself. Among these are several valuable manuscripts: the famous "Codex Egberti", a book of Gospels written at Reichenau and richly adorned with miniatures, now preserved in the library of Trier; the "Psalterium Egberti", written in 981 and now in the chapter library of Cividale (Italy), to which it was donated by St. Elizabeth of Thuringia (also called the "Codex Gertrudianus"), after the Russian Grand Duchess Gertrude, who became its possessor in 1085; the "Codex Epistularum", which contains also the letters of the Gospels and is kept in the cathedral library; likewise several Sacramentaries, transcripts from the "Letter Book" (Registrum) of St. Gregory the Great (596-604), etc. The arts of the goldsmith and of the worker in enamel were particularly well cultivated at Trier. A collection of specimens still extant are: a portable altar, at Limburg the golden case or cover with richly adorned head of the so-called St. Peter's Staff, once a part of the relics of the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, built for the cathedral of Trier.

Egbert, Archbishop of York, England, son of Eata, brother of the Northumbrian King Eadbald and cousin of King Cæolwulf, to whom the Venerable Bede dedicated his history; date of birth unknown; d. 19 November, 766. He received his early education in a monastery, and then went to Rome with his brother Egred, where he was ordained a deacon. Egred died in Rome and Egbert immediately returned to Northumbria. On the resignation of the Bishopric of York by Wilfrid II in 732, King Cæolwulf appointed Egbert his successor. Shortly after his accession Bede wrote a letter to him to urge him to give so much time to study and prayer, to ordain more priests for the administration of the sacraments, and to translate the Gospel and the Lord's Prayer into the Saxon tongue. He also urged him to strive to obtain the subdivision of many of the dioceses of the North in order that episcopal visitsations might be more frequent. He called his attention to many disorders that were prevalent and particularly urged him to secure the pallium for himself. Acting upon this advice Egbert obtained the pallium from Gregory III at Rome in 735, and thus became the second Archbishop of York, the first since Paulinus had been lost to Kent more than a century before. During all those years no one had sought for the restoration of that lost dignity, and this neglect was afterwards used as a strong argument in favour of the precedence of Canterbury, when the well-known controversy arose between the two sees. The restoration of the pallium to Egbert increased his power and authority over the Northern bishops, who thus became his suffragans; and his power was still more strengthened in 788 when his brother Eadbald succeeded to the throne of Northumbria.

Egbert was thus placed in a position which enabled him to carry out many reforms, and in the performance of these he proved himself a strict disciplinarian; but though stern when correction and rebuke were justly deserved, he was remarkable for his sweetness and gentleness. His talent, combined with his piety and energy and always refers to him in terms of the deepest affection. "He is said to have been the first prelate who possessed a mint at York. He paid much attention to the services and music of his church, introducing the observance of the Hours. He was also a benefactor to the fabric of the minster, bestowing upon his cathedral the choice work of the jeweller and the goldsmith, and giving to it figured curtains of silk of foreign workmanship. He was, in all probability, the first introducer of the parochial system into the North." (Fasti Ebor.). One of his greatest works, perhaps, was the foundation of the famous minster at York and its celebrated library. The renown of its masters and scholars soon spread through every Christian country, and noble youths from all parts flocked to York to be taught by the great archbishop. He himself taught divinity, whilst his assistant Albert, who was afterwards consecrated bishop, excelled in grammar and in the arts and sciences. The fact that the illustrious Alcuin was Egbert's pupil, sheds no little lustre on this famous school.

The archbishop's daily work has been thus described by Alcuin himself: "As soon as he was at leisure in the morning, he sent for the Fabulamortua, and having sat on his couch taught them successively till noon, at which time he retired to his private chapel and celebrated Mass. After dinner, at which he ate sparingly, he amused himself with hearing his pupils discuss literary questions in his presence. In the evening he retired with them to the cloister, and then calling them in order, he gave his blessing to each as they knelt in succession at the feet" (Mabillon, Acta SS. Ord. S. B., ad an. 815). Towards the end of his life he left the care of the school to Albert and Alcuin, giving himself more time and opportunity to prepare for his end in peace and joy. In this life of retirement and prayer he was joined by his brother King Eadbald, who voluntarily resigned his throne to enter the monastery in 757. Egbert died before his brother, having ruled over the Diocese of York nearly thirty-four years. He was buried in the porch of his cathedral, and his body was interred near him, in the crypt of the cathedral. His best-known work is the "De Jure Sacerdotali", a collection of canonical regulations. Extracts from it made in the eleventh century, under the title of "Excerptiones et dictatvum et canonicum patrum" (Mansi, XII, 413 sq.), were long current as a work of Egbert. Among the writings which have given a "Pontificale", or series of official offices for the use of a bishop; a "Dialogus Ecclesiae Institutionis"; a "Confessionale"; and a "Pententinale", both of which were written in the vernacular as well as in Latin. The "Pententinale", an important liturgical text which has been published by the Surtees Society, and his other works may be found in the second volume of Thorpe's "Ancient Laws and Institutes of England". In its present shape the "Pententinale Egberti" (P. L., LXXXIX, 411 sqq.) contains but little from the hand of Egbert, and is a ninth-century Frankish compilation, put together mostly by the Chorister and the "Dialogus Ecclesiae Institutionis" (Mansi, XII, 482-88) is said not to be from Egbert in its present form (see YORK; PENTENTIAL BOOKS; LIBER PONTIFICIALIS).

Egfrid (also known as Ecgfrid, Ecgfrith, Egfrith), King of Northumbria, b. 650; d. 685. He ascended the Northumbrian throne at Oswy’s death in 670, and after defeating the Picts who had sought to impose upon his youth by asserting their independence, turned his attention to Wulphere, King of Mercia, and broke, for a time, the power of the southern kingdom. In 679 new trouble with Mercia arose, and in the course of the subsequent struggle Aelfwīn, Egfrid’s brother, was slain. Through the intervention of Theodore, Archbishop of Canterbury, peace was at last restored and in lieu of vengeance Egfrid was prevailed upon to accept the legal wergeld (fine) for his brother’s death.

Egfrid now consolidated his kingdom by diplomacy, annexation, and treaty, bringing Cumberland, Galloway, and North Lancashire under Northumbrian influence in the desire for conquest, however, had entered his veins, and in 684 he dispatched an expedition into Ireland. The invasion was unsuccessful, but nevertheless was productive of much damage and bitterness to a hospitable, friendly people who had conferred numerous benefits on the Angles and who found violence where they expected gratitude. Disregarding the advice of his counsellors, Egfrid led an expedition against the Picts the next year, and, being decoyed into the mountains, was trapped and slain. He was buried by the victors in the cemetery on the island of Iona, and his brother succeeded to the Northumbrian throne.

Eglofstein, Frederick W. von, b. at Aldorf, near Nuremberg, Bavaria, 18 May, 1824; d. in New York, 1885. He served in the Prussian army in his early manhood and then emigrated to the United States. Von Eglofstein has been called “The Father of Half-tone Engraving” in the United States, for the reason that he was the first one to employ ruled glass screens, together with photography, to produce engravings. In 1861 he engaged Samuel Sartain, a steel engraver, to rule with wavy lines numbering 250 to the inch glass plates covered with an opaque varnish, and he was engaged in perfecting his experiments in this direction when he entered the United States. Von Eglofstein’s method of engraving made in 1866 is given in Inland Printer (Chicago, Oct., 1894), 38; Anthony’s Photographic Bulletin (New York, 1896–97), 1, 201.

Egmont, Lamoral, Count of. See Aggstein, half-tone engraving in United States.

Egmont, Lamoral, Count of, Prince of Gavre, b. at the Château de La Hamaide, in Hainault, 15 Nov., 1522; beheaded at Brussels, 5 June, 1568. He was a descendant of one of the oldest families of the Low Countries; his paternal castle, near the Abbey of the same name, was on the coast of the North Sea, about three miles west of Alkmaar, Holland. In 1538 he went to Spain with his elder brother, Charles, and both took part in the expedition to Algers in 1541, in which Charles was injured. Charles died the following year. Lamoral succeeded to the title and estates, which, beside those of Holland, comprised the principality of Gavre, seven or eight baronies, and a number of seigniories. When, in 1544, he married Sabina, Duchess of Bavaria and Count Palatine of the Rhine, the emperor and the King of the Romans assisted at his wedding. Egmont distinguished himself in various campaigns during the reign of Charles V, who, when he was only twenty-six years of age, invested him with the Order of the Golden Fleece, and appointed him to several confidential missions such as sending him to England to seek the hand of Queen Mary for Philip II. His principal titles to military glory are two battles which he won against the French: the battle of St-Quentin, which was fought through his vehement persuasion (1557), and that of Gravelines, the honour of which is due to him exclusively. As a reward for his services he was nominated by Philip II, in 1559, stadtholder of the province of Flanders, and a member of the Council of State for the Low Countries.

But these honours did not satisfy Egmont. Though handsome, brave, rich, generous, and popular, still he viewed with jealousy the prominence given Cardinal Granvella, who was in the confidence of the king. He entered a blank-note of protest against the proceedings of this minister and clamoured for his removal, going so far as to refuse to sit in the Council of State if Granvella were allowed to remain. His hatred of the king’s favourite led him into the plots of William of Orange against the Spanish Government. Later, when religious troubles broke out in Flanders, it was evident...
that he did not rise to the occasion; he granted the
sectarians concessions emphatically disapproved of
by the king and assumed a quite equivocal attitude in
the matter of the iconoclasts. It is true that he al-
leged, in excuse, that there were no troops at his disposal
and that he was a decoy rendered powerless. On the
other hand, he refused to take part in the plots against
the Government, and when the Duke of Alva arrived
in the Netherlands, he would not follow the Prince
of Orange into exile, saying that his was a clear conscien-
tial attitude cost him his life. With the Count of
Hornen, he was arrested by the orders of the duke and
denounced (or death), despite the promise of
the Golden Fleece. Both were declared guilty
of high treason by the Conseil des Troubles, a court
established by the Duke of Alva, and which was his
service instrument. The two friends were beheaded
amid universal grief. Egmont met his death with digni-
ty and Christian resignation; he protested to the
last moment his devotion to his religion and his king,
and to the latter's compassion recommended his wife,
who, through the confiscation of his property, was left
peniless with the care of eleven children. Egmont
had been imprudent, but was guilty of no crime. His
death was then no more a popular accusation than the
principal grievances of the Low Countries against the Spanish Government.

ger, général du Comte d'Egmont en Bullets de la Commission royale d'Histoire (1851); Juste, Le comte d'Egmont et le comte de Hornes (Brussels, 1862); Prescott, History of Philip II (1855-56).

GODEFROID KURTH.

Egoism (Lat. ego, I, self), the designation given to
those ethical systems which hold self-love to be the
sole end of all action and the determinant of moral
conduct. In a broad and popular sense the term
could be called egotistical which makes any good of
the ego the end and motive of action. The name,
however, has been appropriated by usage to those
systems which make happiness, pleasure, or personal
advantage the sole end of conduct. In one form
and with various modifications, the principle
pervades the theories of the Cyrenian, Epicurean,
Utilitarian, and Evolutionary Schools; and, slightly
disguised, it lurks at the bottom of all altruistic
philosophy. Its typical expression is to be found in Hobbes
and Mandeville, while Jeremy Bentham, combining it
with the other cognate principle, that pleasure and pain
are the only good and evil, formulates it in its full
character as egoistic hedonism. Two of Bentham's
statements, when taken together, set forth concisely
the essence of the doctrine. "Pleasure is itself a good, nay,
setting aside immortality from pain, the only good.
Pain is itself an evil, and indeed without exception,
the only evil, or else the words good and evil, have no
meaning." (Principles of Morals and Legislation,
chap. ix.) "The search after motives is one of the
prominent causes of man's bewilderment in the in-
vestigation of the question of motives. But any system
pursuit in which every moment employed is a moment
wasted. All motives are absolutely good, no man has
ever had, can, or could have a motive different from
the pursuit of pleasure or shunning of pain." (Deon-
tology, vol. I, p. 126.) The undisputed fact that men
do experience sentiments of benevolence and perform
disinterested actions offers an obvious difficulty to
the egoist. Hobbes seeks to evade it by resolving altru-
istic impulses into personal hopes and fears. Later
hedonists, recurring to the principle of the association
of ideas, contend that virtue, which at first is pursued
as an end in itself, becomes a means to the pleasure it brings, through a confusion of means and end, to be pursued for its own sake. Innumerable analyses have shown that pleasure and pain are not measurable, and still less
commeasurable. The scheme devised by Bentham
for estimating the quantity of different pleasures by
considering their various dimensions—intensity, dura-
tion, nearness, certainty, purity (freedom from pain),
fruitfulness—is commonly regarded as a piece of
absurdity. This fundamental postulate of egoistic
hedonism, therefore, false. But a closer examination of
the system shows that the principal vice lies in its primary
principle that self-interest is the only motive of human action.
This doctrine reduces all virtue to mere selfish calculation,
and outrages the liveliest moral feelings by resolving
the highest and noblest impulses into a base
pursuit of personal pleasure. To say that man is
irresponsible of acting from motives other than self-interest
is to degrade human nature. Mankind at large understands very clearly that self-interest is one
thing and virtue quite another; that self-sacrifice and
heroic devotion do exist, and are not vice and immor-
ality; that a worthy action challenges our approbation in
proportion to the disinterestedness of the agent. Let
it become known that the hero of what we at first
considered a brilliant act of self-sacrifice had after all no
other motive than to obtain some advantage for himself,
and immediately he appears a vulgar mercenary." As
Lecky says: "No Epicurean can aver before a popular audience that the
was the pursuit of his own happiness without an out-
burst of indignation and contempt, no man could
conscientiously make this—which according to the
selfish theory is the only rational and indeed possible
motive of action—the deliberate object of all his
undertakings without his character be branded as
repulsive and degraded." (European Morals, vol. I,
p. 35.) Besides, if the egoistic impulse is made the
sole and unqualified motive of action, it is idle to
speak of obligation and duty. Nor can the hedonist,
consistently with his theory, claim that he safeguards
the moral pre-eminence of self, which is a proper
doctrine derivable from it to be the highest form of
pleasure. For if one kind of conduct yields this
pleasure, while another does not, then evidently
there must be some essential difference, unaccounted for in
the egoistic and hedonistic systems. In one form or
other, good conduct, in virtue of which they produce con-
trary results of happiness and pain for the agent. But
moral judgments are not resolvable into estimates of
self-interest; and if we commit ourselves to classifying
conduct purely by the advantages, in terms of the
pleasure received from doing, we shall be
forced to appraise as virtuous actions which the
reasonable judgment of men condemn as immortal;
while, on the other hand, we shall be compelled to brand as
wrong acts of self-sacrifice such as, in all life and litera-
ture, challenge the highest honour and reverence.
"At the bottom of the errors of egoistic hedonism
there lies a truth which this system misinterprets and
perverts. However complete and disinterested we
may be, we can never strip ourselves of self. The
constitution of his nature compels man to seek his
good, however he may err in the deliberate choice that
he makes among the various goods that solicit his
efforts. The end constituted for him by God is to
reach that highest good which consists in realizing
the moral perfection of his nature. This good is to be
sought for its own sake chiefly, and in its train follows
happiness as, if the expression may be permitted, an
automatic consequence. Hence in pursuing the
moral good, I am implicitly pursuing my own hap-
iness. This self-realization is not egotism; for egoism
makes itself the centre, the beginning and the end of
action. On the other hand, the virtuous man sub-
ordinates himself to the moral good, which in the
last analysis is identified with God. In this sense, as
Aristotle points out, the true and virtuous man may be
said to love self-lover. "For he gives to himself what is most
honourable, and the greatest goods, and gratifies
the authoritative part of himself, and obeys it in every-
thing. Therefore, he must be a self-lover, after a dif-

EGOISM
328
different manner from the person who is reproached for it, and differing in as great a degree as living in obedience to reason differs from living in obedience to passion, and as desiring the honourable differs from desiring what seems to be advantageous." (NICH. ETHICS, Bk. IX, ch. viii, § 8) When I say that duty must be fulfilled exclusively for duty's sake, with disregard of all considerations of happiness or welfare, I mean the fact that by annexing happiness as a concomitant of the good the Creator evidently intends that we may legitimately aim at our own happiness; provided we do not invert the order, by which makes happiness subordinate to the good. Duty is not the be-all and the end-all. It is a means to reach our supreme end and good.

S. MILL.

EGWEN, SAINT, third Bishop of Worcester; date of birth unknown; d. (according to Mabillon) 20 December, 720, though his death may have occurred three years earlier. His fame as founder of the great Abbey of Evesham is no doubt tended to the growth of legends which, though mainly founded on facts, render it difficult to determine the exact details with the precision which this late-borne history implies. It appears that either in 692 or a little later, upon the death of Offa, second Bishop of Worcester, Egwen, a prince of the Mercian blood royal, who had retired from the world and sought the seclusion of religious life, was invited by the people to assume the vacant see. The biographers say that king, clergy, and commonalty all united in demanding his elevation; but the popularity which forced on him this reluctant assumption of the episcopal functions was soon wrecked by his apostolic zeal in their discharge.

The Anglo-Saxon population of the then young diocese had had less than a century in which to become habituated to the restraints of Christian morality; they as yet hardly appreciated the sanctity of Christian marriage, and the struggle of the English Benedictines for the chastity of the priesthood had only fairly begun. At the same time large sections of England were more or less permanently occupied by pagans closely allied in blood to the Anglo-Saxon Christians. Egwen displayed undaunted zeal in his efforts to evangelize the heathen and to enforce ecclesiastical discipline. He himself, however, was not content with his own flock created a bitter resentment which, as King Etheldred was his friend, could only find vent in accusations addressed to his ecclesiastical superiors. Egwen undertook a pilgrimage to seek vindication from the Roman Pontiff himself. According to a legend, he prepared for his journey by locking shackles on his feet, and throwing the key into the River Avon. While he prayed before the tomb of the Apostles, at Rome, one of his servants brought him this very key—found in the maw of a fish that had just been caught in the Tiber. Egwen then released himself from his fetters, and straightway obtained from the pope an authoritative release from the load of obloquy which his enemies had striven to fasten upon him.

It was after Egwen's triumphant return from this pilgrimage that the shepherd Eoves came to him with the tale of a miraculous vision by which the Blessed Virgin commanded him to found an abbey. The place which Egwen had been shown would be dedicated to her. Egwen himself went to the spot pointed out by the shepherd (Eoves han, or "dwelling") and to him also we are told the same vision was vouchsafed. King Etheldred granted him the land thereabouts upon which the famous abbey was founded. As to the precise date of the foundation, although the monastic tradition of later generations set it in 714, recent research points to some year previous to 709. At any rate it was most probably in 709 that Egwen made his second pilgrimage to Rome, this time in the company of Cœned, the successor of Etheldred, and Offa, King of the East Saxons. When Pope Constantine granted him the extraordinary privileges by which the Abbey of Evesham was distinguished. One of the last important acts of his episcopate was his participation in the first great Council of Clavesho.

Egypt.—This subject will be treated under the following main divisions: I. General Description; II. Ancient Egyptian History; III. Ancient Egyptian Religion; IV. Literary Monuments of Ancient Egypt; V. The Coptic Church; VI. Coptic Literature; VII. Coptic-Arabic Literature.

General Description.—The ancient geographical name Upper Egypt properly applies only to the rather narrow valley of the Nile from the Mediterranean, 31°35'N. latitude, to the First Cataract, at Assuan (Syene), 24°5'30"N. latitude, a stretch of about 680 miles by rail. However, from remote antiquity, as now, Egypt held sway over the greater part of Nubia, reaching its northern boundary, the Gebel Barkal, 18°30' N. latitude, which, under the eighteenth dynasty, was the southernmost city of the empire—another stretch of about 590 miles by rail. Distances by water are somewhat greater owing to the winding course of the river. From Napata the Nile continues for a few hundred yards in width and at not a few points, especially near the Cataract, the river is broken by a cataract, where its waters rush between barren or less or more diminutive islands, the most famous of which is the island of Philae above and Elephantine in front of Assuan. The cataract, however, has lost much of its grandeur since the building of the great dam which now regulates the supply for the irrigation of the country in time of low water. From Assuan to Edfu (about 48 miles) the banks are so high that even in the annual inundation they are above the level of high water, and consequently remain barren. Near Edfu the valley widens out and becomes wider and rougher in the neighboring district of Assiut. At Luxor (part of Thebes) it again narrows for a few miles, but after that it maintains a respectable breadth, averaging between twelve and fifteen miles. At Assuan begin the two high ranges of the Libyan and Arabian deserts, between which the valley extends. The range to the left is somewhat farther from the river, so that most of the towns are built on the western bank.

Near Girgeh (Abydos) begins the Bahr-Yusef, Joseph's Canal. It was formerly a branch of the Nile; it runs parallel to the main stream at a distance of from 5 to 6 miles along the left bank, and empties...
into the Fayûm (nome of Arsinoë). One hundred and ten miles above Memphis the Libyan mountains bend to the north-west, and then, facing north-east, they draw nearer again to the Nile, thus surrounding a large extent of territory, which of old was known as Ta-Šhe, or Lakeland, from the great inland lake frequently mentioned and described by the Greek travellers and geographers under the name of Lake Marrít. It is still called Fayûm, from the Coptic pjiom, “the sea.” This lake once occupied almost the entire basin of the Fayûm, but within the historical period its circumference does not seem to have exceeded 140 miles. It lay 73 feet above the sea level, Lake Borolos (Lacus Buto or Paralus) east and Lake Edkû west of the Rosetta mouth (Ostium Bolbitinum), and Lake Marrít (Mareotis Lacus) south of the narrow strip of land on which Alexandria stands. Between Lake Menzaleh and the Red Sea, on a line running first south and then south-south-east, are Lake Balah, Lake Timsíh, and the Bitter Lakes (Lacus Amari), now traversed by the Suez Canal. Wâdi Tumilât connects Lake Timsíh with the Delta across the Arabian Desert, and forms the natural entrance to Egypt from the Asiatic side. West of the Delta, in a depression of the Libyan Desert, lies the Wâdi Natrûn (Valla Nitria), famous in early Christian times, under the

and was very deep, as shown by its last vestige, the Birket-el-Karûn, which lies 144 feet below the same level (Baedeker, op. cit., p. 156 sq.).

A little before reaching Cairo, the Nile flows along the rocky and sandy plateau upon which the three best-known pyramids stand. There, too, the two ranges of Arabian and Libyan mountains, which above this point run for many miles close to the river, turn sharply aside in the direction of the north-east and north-west, thus forming a triangle with the Mediterranean shore. The immense alluvial plain thus encompassed was called by the Greeks the Delta, owing to its likeness to the fourth letter of their alphabet (Δ).

As soon as the river enters this plain its waters divide into several streams which separately wind their way to the sea and make it a garden of incredible fertility. In ancient times there were seven of these branches, five natural and two artificial. Only two are now of importance for navigation, the Damietta (Tanaitis) and the Rosetta branches, both named from the towns near which they discharge into the sea. It is to be remarked that, as a natural result of the incessant struggle between sea and land, the outline of the Delta is even now somewhat indefinite, and was probably much more so in the remote past. The shore is always partly covered with lagoons which move from one place to another. The most extensive of these are now, from east to west, Lake Menzaleh between the ancient Ostium Phænitium and Ostium Pelusiacum, name of Desert of Scete, for its Coptic monasteries, four of which exist to this day.

Geology.—The low Nubian table-land through which the Nile meanders consists of a red sandstone, belonging to the upper cretaceous formation. It has furnished the Egyptians with an excellent building stone which they have exploited from remote antiquity, especially at Gebel Silsileh (Silisils), 26 miles south of Edfu, where the sandstone beds, in sharp contrast with their former low level, rise in steep banks overhanging the river, thus offering unusual facilities for quarrying and transporting the stone. Near Edfu the sandstone is replaced by the nummulitic limestones (Eocene) of the Tertiary period, which form the bulk of the Libyan Desert and of a considerable portion of the Arabian Desert as well. The Libyan Desert is a level, or almost level, table-land, averaging 1000 feet above the sea. On the east it is fringed with craggy cliffs overhanging the valley, while its outward border, running aslant to the north-west, offers here and there deep bays in which lie the oases of Khârgeh and Dâkhlieh (Great Oasis), Farârâh (Tringthoos Oasis), and Siweh (Jupiter Ammon). The oasis of Bahriyeh (Small Oasis), north-east of Farârâh, lies, on the contrary, in a depression entirely surrounded by the higher plateau. The Fayûm, in fact, is nothing but such an oasis on a larger scale. The plateau itself is waterless and practically without vegetation. Its strata are gently inclined to the
north-west, so that the highest level is in the south, near Luxor, where the oldest (lower Eocene) strata appear, and valleys (Bibân-el-Molâk) take the place of the cliffs, undoubtedly for the same reason as in the Arabian Desert (see below).

The Nile the limestone formation originally presented much the same appearance as in the Libyan counterpart. This appearance, however, was changed by a high (6000 to 7000 feet) range of crystalline rocks (granite, gneiss, dolomite, porphyry, etc.) which sprang up along the Red Sea, lifting and tilting both the limestone formation and the sandstone beds (which lie farther north on the eastern than on the western side of the river), thus creating numerous deeply eroded valleys. Some of these run north and south, and more of them slope down to the Nile. The Wâdi Hamamât (the Rehenu Valley of the Egyptians) runs almost straight across the desert from Keft (Coptos) on the Nile in the direction of Koseir (Leucos Limén of the Greeks) on the Red Sea. In spite of this the Arabian Desert still preserves its general appearance of a table-land. The open plains, of course, are almost devoid of vegetation, but numerous plants can be seen in the valleys, and they thicken in the sheltered ravines among the hills where springs occur. Near Assuan a spur of the eruptive range just mentioned runs in a western direction to the Nile, extending clear across the bed of the river and thus occasioning the so-called first cataract.

The origin of the present Valley of the Nile, in Egypt proper, dates from the Pliocene times, when it first appeared as a fiord into which the water of the Mediterranean Sea flowed at least as far as Eneh (Huenopolis) and perhaps even as far as Esneh (in the older Miocene times, the valley did not exist at all, the Arabian and Libyan Deserts forming first a continuous table-land). Intimately connected with the formation of the valley are the sands and loams occurring to the south of the pyramids of Gizeh, as is shown by numerous Pliocene fossils they contain (Baedeker, Egypt, p. 1). The silicified wood which abounds in the district of Moghra, west of Wâdi Natrun (see above), belongs to the Miocene times, as do also the marine limestones of the Plateau of Cyrenaica, north of the Oasis of Siwa, on the eastern edge of the Arabian Desert and on the shore of the Gulf of Suez. The so-called petrified forests near Cairo consist of stems of trees silicified by the sand, and which have escaped the silexiferous debris buried forth amid the network of lagoons existing in these parts in Oligocene times. Those forest trees are still more common in the Fayûm, where innumerable bones of extinct terrestrial and marine mammals and reptiles have been found in sands of the same geological age (Baedeker, loc. cit.).

Deposits of alabaster are to be found in the neighbourhood of El ‘Amarna, where the alabaster quarries of Hetnub were worked by the Egyptians from the time of the Fourth Dynasty. The cultivated plains of the Delta and the Nile valley consist of recent alluvial deposits, ranging from fine sand to the finest silt laid down by the water of the annual inundation. Under these lie coarser yellowish sands and gravels of Pleistocene age, which here and there reach the surface in the Delta as islands of sandy waste among the rich cultivated land of the surrounding country (Baedeker, Egypt, p. xlix). Gold-bearing quartz and iron ore are plentiful in the eruptive range of the eastern desert both in Nubia and in Egypt, and gold mines were exploited there by the pharaohs. No workings of iron ore have been found (Bredas, ‘History of the Ancient Egypt’), 122, 142, 129.

Flora and Agriculture.—Since the remoted antiquity Egypt has been famous for its fertility. The black soil, really a gift of the Nile, annually enriched by a fresh layer of silt, requires but little care in tilling and ploughing. Hence the primitive character of the agricultural implements—the plough, in particular, which is precisely the same now as it was 5000 years ago, a pole to which is fastened a piece of wood bent inward at an acute angle and shod, at least in later periods, with a three-pronged piece of iron. There is no trace of large forests similar to our own having ever covered the valley proper of the Nile in quaternary times, much less the Libyan and Arabian Deserts; the Delta still has, and may have had in the past, large groves of palm trees. So far as we can judge from the paintings of the early tombs, the whole cultivable land was laid out in fields, orchards, or gardens. The fields gave rich crops of wheat, barley, melon (Sorghum vulgare), flax, lentil peas, and beans. The orchards were stocked with trees which, as a rule, were planted as much for the shade they afforded as for their refreshing fruit. There were palms of two species: the ordinary date-palm and the palm-plum, the latter growing in Upper Egypt only. Oranges and lemons were peculiar to Lower Egypt, white cucumbers, tamarisks, aecias of various kinds, the vine, the pomegranate, and the olive were common; oleanders, roses, carnations, and geraniums were, as they still are, the principal decorative plants. In the kitchen gardens grew leeks, cabbages, cucumbers, melons, garlic, which the Israelites seem to have regretted no less than the excellent fish (Num., xi, 5) and the fat fleshed fish (Ex., xvi, 3) of the land of bondage. Reeds of various kinds grew abundantly in the marshes in Lower Egypt especially; the most important were, the papyrus; its stalks were used as a material for various purposes. The reeds were of various kinds and were used lengthwise. Two layers of such slices were disposed at right angles on one another and fastened with a sort of glue under some pressure, and the sheet of paper was ready for use as soon as it dried. When written upon, the sheet was rolled up with the writing inside, and the title of contents was then added on the back end of it. In ancient Egypt the tuft of papyrus was the coat of arms or symbol of the Northern Kingdom. This reed, so common in Egypt up to the first centuries of our era, has now completely disappeared from that country, very likely on account of the high tax which the Roman emperors imposed on its cultivation. It exists still, however, on the upper course of the Nile, and, according to Bruce, the Abyssinians still make boats of its stalks. Among the many other aquatic plants must be mentioned the lotus, a water-lily, of which two species, the Castalia Scirra (Nymphaea cornuta), with blue flowers, and the Castalia mystica (Nymphaea lotus), with white blossoms, are often found figured on Egyptian monuments, particularly on columns. The flower of the lotus was the emblem of Upper Egypt, as the tuft of papyrus was of Lower Egypt.

The inundation of the Nile is of the utmost importance to Egypt; it is no exaggeration to say that but for its annual recurrence the rich valley would soon become a desert similar to those of Libya and Arabia. The overflow is due principally to the torrents of rain that fell almost uninterrupted in the rainy Abyssinia in the four months of summer and swell the Blue Nile (Astatus), which discharges into the Nile proper, or White Nile, at Khartum. The rise of the Nile begins in Egypt a few days before the summer solstice, that is between the 16th or 26th of June; but the rise begins until fully two months later. It reaches its maximum height about the autumnal equinox when it begins gradually to subside until the vernal equinox, so that the whole process of inundation lasts about nine months. The maximum height of the water varies in different places, decreasing as the area covered by the inundation increases. The mean differ-
ence between the highest and lowest stages of the river is 21 feet at Khartium, 20 feet at Wadi Halfa, 23 feet at Assuan, 22 feet at Assiut, and 22 feet at Minieh. Below the last-named point controlling works now prevent the normal rise of the river. (Baedeker, Egypt, p. xx.) At Cairo today the pool is in the case of the river 10 feet. Some twenty-five years ago it used to be 25 feet at Cairo, 21 feet at Rosetta. When stated generally the height of the inundation must be understood as the height of the kilometre on the island of Rödsah, near Cairo (close by the ancient Babylon). Formerly a rise of 15 to 20 feet was common. It is now 10 inches (21 to 25 feet is common, 27 and above too much. For seven years, A. H. 157–161 (A. D. 1065–1072) the inundation prevailed altogether. The long duration of the overflow is due to the fact that it is controlled by artificial means without which it would undoubtedly prove as detrimental as it is beneficial. The only part left to nature is the process of infiltration which is due to the pressure of the water on the banks and is favoured by the porous nature of the soil, also by the fact that the subsoil, like the surface of the valley, gently slopes down to the mountains. It is only when this natural process is completed that the river is ready to overflow its banks, and then begins man's work. The sluices of the canals are opened, and the waters are led first to the higher level lands nearer the banks, then to the lower lands, for in its general configuration the soil to be submerged, as the subsoil is constantly concave, as in the case of our own marshes and the Delta. This work is done by earthen dykes across the canals and the fields; the dykes are removed when the preceding tract has been sufficiently irrigated. The reverse is done when the river begins to fall, and the waters are kept in the remaining part of the valley as much as possible above the level of the river, and they are let out slowly, so as to secure irrigation for the lower water-months, March to June. This process, however, is not always possible, either because the inundation is insufficient or because the canals and sluices are not kept in good condition. The fall hence (later in the season) they have to raise the water from the river, the canals, or the numerous wells fed by natural infiltration, so as to water their fields.

Two machines chiefly are used for this purpose: the sákhyel and the shiddif. The sákhyel consists of two wheels working at right angles to one another. The perpendicular wheel carries an endless chain to which are attached leather, wooden, or clay buckets. As the wheel turns the buckets are dipped in the water and filled, when they are lifted and emptied into a channel which conveys the water to the fields. These machines are worked by asses or buffaloes in Egypt, and by camels in Nubia. The shiddif is a roughly made pair of gigantic scissors in which the trays are replaced by a bucket at one end and a stone on the other, the stone being a little more than the weight of the bucket when filled. A man stands on the bank and, pulling on the rope which is attached to the latter, then letting go, the weight of the stone lifts the bucket out, when it can be emptied into the proper channel. In the Lower Delta, where the level of the water in the canals remains nearly the same, they use a wooden wheel called tábálá, which raises the water by means of numerous compartments in the hollow fellows. Such methods, however, while absorbing all the energies of the population for most of the year, are far from exhausting the irrigation power supplied by the Nile during inundation. Nine-twelfths of the annual outstanding water is contributed during this maximum rise. It allows one crop only for the irrigated lands, and leaves many districts desert-like for lack of water. The pharaohs of the twelfth dynasty, it seems, tried partly to obviate these defects by using the natural lake of the Fayûm as a reservoir where the surplus of the inundation waters were stored during their highest rise, which allowed them to double the volume of the river below the Fayûm during the three months of low Nile. The immense waterworks necessitated by this undertaking, at the point where the lake was most commonly visited by foreigners, gave the impression that the lake itself was an artificial excavation, as reported by classic geographers and travellers.

This great enterprise was not resumed until the close of the last period, when a series of gigantic works ending in the Nile was planned by the Egyptian Government; these, however, have been completed. The Barrage du Nil (about twelve miles below Cairo) was completed in 1890. It extends across the Rosetta and Damietta branches and two of the principal canals of the Delta, thus ensuring constant navigation on the Rosetta branch and preventing irrigation through much farther in the Nile. The dam of Assiut, constructed 1898–1902, regulates the amount of water in the Ibrâhîmîî Canal and thus ensures the irrigation of the provinces of Assiut, Minieh, Beni-Suef (10 miles east of Heracleopolis Magna), and, through Bahr-Yass, of the Fayûm. Finally the dam of Assiut, also completed in 1902, below the island of Phîlêtê, maintains such a supply of water in the canals of Lower and Middle Egypt that upwards of 500,000 acres have been added to the area of cultivable land in the summer. This dam, the largest structure of the kind in the world, rises 130 feet above the foundation, and dams up the water of the Nile to a height of 83 feet, thus forming a lake of 234,000,000,000 gallons. Its length is 2150 yards; its width 98 feet at the bottom, and 23 feet at the top. The Egyptian Government has lately decided to raise the height of the dam to 125 feet, which will bring the reservoir's capacity and will afford irrigation for about 930,000 acres of land now lying waste in Upper Egypt (Baedeker, Egypt, p. 365). In addition to these gigantic waterworks, the number and capacity of the canals have been considerably increased, thus allowing the inundation through much farther up the Nile. The average level of high waters is lower than that used to be—25 feet at Assiûn instead of 40, although for the region below Minieh this change is also to be explained by the manipulation of the controlling waterworks (Baedeker, Egypt, p. xiv).

II. Ancient Egyptian History.—Chronology.—The ancient Egyptians practically had only one kind of year: a vague year consisting of 12 months, each of 30 days, and 5 supplementary days which were intercalated between the 30th day of the last month of the year just elapsed and the first day of the first month of the following year. Technically, those five days did not belong to the year; the Egyptians always said "the year and the five days to be added to the three months" and those five days were sacred to Osiris, Horus, Set, Isis, and Nephthys. They were days of bad omen. The year was divided into three periods, or seasons, for four months each: the inundation (Egyptian Echet, or Echet), the sowing-time (Prosiet), and the harvest
SOMA.]

In ancient times months had no special names, they were simply designated by ordinal numbers in each season, as "the first month of the inundation" and so on. Each month (as also the decades and years) however, had a patron one of the deities whose feast occurred during that month, and the patrons, it seems, varied according to time and locality. At a rather late period the names of those patrons passed over to the months themselves, hence the names transmitted to us by the classical writers (see table below). Each month was divided into three decades (the Egyptians do not seem to have ever used, or even known, the week of seven days); each day into 24 hours, 12 hours of actual day time and 12 hours of actual night time. The hours of day and night, consequently, were not always of the same length. The sixth hour of night corresponded to midnight, and the sixth hour of day to noon. There were further subdivisions of time, but their relation to the hour is unknown. The day most likely began with the first day-time hour; some, however, think it began with the first hour of night.

The year began with the first day of Thoth (Inundation I) which, of course, was supposed to coincide with the first rise of the river. The first of Thoth was also supposed to coincide with the day of the heliacal rising of Sirius, which was called New Year's Day and celebrated as such each year with a great festival. Long before Sirius, her star, was believed to bring with the inundation a promise of plenty for the new year; this takes us back into the first centuries of the fifth millennium, when the summer solstice, which precedes by a few days only the inundation, actually coincided with the heliacal rising of Sirius. We know, however, of the classical writers that the latter phenomenon occurred on the 19th or 20th of July (according to the Julian Calendar), which points to Memphis as the home of the Egyptian Calendar. The Egyptians, however, must have perceived in course of time (if they had not foreseen it) that their calendar of 365 days would not, as they evidently believed at first, bring back the seasons every year at their respective natural times. Their year being about one-fourth of a day shorter than the Sirius year, on the fourth anniversary of its adoption, it had retroceded a whole day on the heliacal rising of Sirius; 460 years later its precession was only one day, the calendar indicated the opening of the inundation time in fact the harvest was only beginning; and so on until, after 1461 revolutions of the civil year and 1460 only of Sirius, the first of Thoth fell again on the same day as the heliacal rising of that star. This period of 1460 Sirius years (1461 Egyptian years) was designated later the name of SOthic period from SOthis, a Greek form of Sopdet, the Egyptian name of Sirius. Long before the end of the first Sothic period it was found necessary to consider the first of Thoth as a New Year's Day also, the civil New Year's Day. As early as the Fourth Dynasty we find the two New Year's Days recorded side by side in the tombs.

To the common people, who, as usual, were guided by the appearances, the calendar was steady while Sirius and the natural seasons were moving around it. Cirrus's New Year seem to be all they knew or ever cared to know of the Sirius year—was a movable feast, the date of which was to be announced every year. The fact that they estimated its precession on the calendar at six hours exactly, which was not correct except in 3231 b. c. (see Egyptian Church, 1. 232-234), shows that the date was not obtained from astronomical observation, but in a mechanical way on the supposition that every four years it would fall one day later, this rule having been ascertained astronomically once for all, and considered as correct (E. Meyer, op. cit., p. 10).

The cycle of the Sothic periods has been established in different ways by various scholars, with slight variations in the years of beginning of the several periods (see Ginzel, "Handbuch der mathematischen und technischen Chronologie", 187 sqq.). According to E. Meyer (op. cit., p. 11) this began:

19 July, A. D. 140-141
19 July, 1321-20 b. c.
19 July, 2781-80 b. c.
19 July, 4241-40 b. c.

These dates have been adopted by Bredin in his chronology (Ancient Records of Egypt, I, sec. 44), which we shall follow in the arrangement of the Egyptian dynasties (see below).

We have no evidence of the Egyptians having ever become aware of the difference between the Sirius year and the solar year, which accounts for the shifting of the summer solstice and, consequently, of the beginning of the inundation from 25 July, in 4256 b. c. to 21 June, in 139 a. d. (see Ginzel, op. cit., 190). This divergence, however, was too slow, and amounted to so little, even in the course of several centuries, that the Egyptian astronomers might well have overlooked, or at least ignored, it with regard to the calendar. It is still more remarkable that, after noting the retrocession of their vague year, they should not have tried to even it up with the Sirius year. But the astronomers were also priests and, as such, custodians of the religious side of the calendar, which in their eyes was the more important. The simple insertion of an intercalary day would have been sufficient when the two years agreed, but that happened rarely; and the need of a reform was not felt by the contemporary generation. When that need was most acute, as in the middle of a Sothic period, the intercalation was not enough; the reform, to be satisfactory, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not be done without passing over several months and days (cf. the Gregorian Reform), and consequently almost as many feasts or popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing political-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomen day every four years. This fixed year, known as the Canopic or Tantonic year, began on 28 October 228 a. d. (Julian), the first attempt, the second of so many attempts, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not be done without passing over several months and days (cf. the Gregorian Reform), and consequently almost as many feasts or popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing political-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomen day every four years. This fixed year, known as the Canopic or Tantonic year, began on 28 October 228 a. d. (Julian), the first attempt, the second of so many attempts, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not be done without passing over several months and days (cf. the Gregorian Reform), and consequently almost as many feasts or popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing political-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomen day every four years.
The Egyptian Sothic period, the first year of which fell on 19 July, 4241 B.C., when the summer solstice was on 25 July, and the inundation on 28 July. At the beginning of the preceding period, 19 July, 2781 B.C., the summer solstice had already retreated to 13 July, so that the inundation (16 July) preceded the heliacal rising of Sirius, while at the beginning of the following period, 19 July, 5701 B.C., the summer solstice was due only on 6 August, and the inundation on 9 August, or 21 days after the heliacal rising of Sirius (cf. Ginzel, op. cit., 190; E. Meyer, op. cit., 14 sqq.). The date 2781, as a possible date of the inauguration of the Egyptian Calendar, is also excluded by the fact that the intercalary days (proving the use of the shifting year of 360 plus 5 days) are mentioned in the so-called Pyramid Texts, which are far older than the Fifth and Sixth Dynasties, although they occur for the first time on the monuments of these dynasties (E. Meyer, op. cit., 40; Breasted, "Ancient Records of Egypt," I, 30). The date of the heliacal rising of Sirius varies according to the latitude from which it is observed. The fact that most of the classical writers and the Egyptian documents fix that date at 19 July shows that the Egyptians observed it from the 30th degree of N. latitude, which points to one of the ancient cities of the Southern Delta as the home of the Egyptian year, probably Memphis or Heliopolis (E. Meyer, op. cit., 41; Ginzel, op. cit., I, 186; Breasted, op. cit., I, sec. 45).

The following table exhibits the seasons and the 12 months of the Egyptian year with their Greek names (still in use with slight changes of orthography in the Coptic Calendar) and their respective dates of beginning according to the Julian Calendar, when I Thoth fell on the day of the heliacal rising of Sirius, i.e. at the opening of the Sothic period:

Although the Egyptians kept track of the Sirius year, in so far as its beginning was the official New Year's day, they do not seem to have made use of it for chronological purposes. The same must be said of other methods of reckoning the year which may have been in use among some classes of the population, as, for instance, the natural year based on the recurrence of the natural seasons. It is not uncommonly taken for granted or advanced that the Egyptian vernal year of 365 days was preceded by a round year of 360 days, and that the former was obtained by adding 5 days to the latter. Arguments in favour of that view are few and not convincing. A year of 360 days neither lunar nor solar is hardly imaginable (cf. Ginzel, op. cit., 69; E. Meyer, op. cit., 10). It is more likely that, even before the arrangement of 360 days, the Egyptian year took its period of 365 days, which had become lunisolar and increased to 365 days, either as a fixed number for every year by means of intercalary days distributed over the whole year (as in the Julian year), or as an average number in a series of years by process of embolism (as for instance in the Hebrew year). Finally it was decided to adopt the former, the far simpler and more rational arrangement of 12 even months followed by 5 intercalary days; the distribution of the days was changed, not their number. This recoin of the calendar found expression at a very early period, if not at the time when it took place, in the following table preserved by Plutarch (De Iside et Osiride, xii), but undoubtedly very ancient, as we may judge from the fact that the divinities mentioned in it belonged to the earliest stages of the Egyptian Pantheon. Rhea (Egyptian Nūt) having had secret intercourse with Kronos (Geb), Hēlios (Sun), cast a spell upon her husband that she might be buried in a coffin for a period of 5 years only during any month of any year. But Hermes (Thoth), who loved her, played dice with the Moon and won from her the 73d part (not 60th as Maspéro, "Histoire ancienne," p. 87; nor 70th as E. Meyer, op. cit., p. 9; nor 72d, as Ginzel, op. cit., p. 171) of her properties (literally lights, etc.), which were divided 40 (the remaining 360 days). During these five days Nūt brought forth her children (Osiris, Horus, Set, Isis, and Nephthys).

The ancient Egyptians never had eras in the usual sense of the word, i.e., epochs from which all successive years are counted regardless of political or other changes in the life of the nation. Instead of eras, during the first five dynasties, they used to name each civil year from some great political or religious event (a usage which had its parallel in Babylonia), as "the Year of the Smiling of the Troglydotes," "the Year of the Conquest of Nubia," "the Year of the Defeat of the Lover Egypt," "the Year of the Worship of Horus," or from some fiscal process recurring periodically, as "the Year of [or after] the Second Occurrence of the Census of all Cattle, Gold," etc. which was often abbreviated to "the Year of the Second Occurrence of the Census," or, still more briefly, "the Year of the Second Occurrence." The census having become annual, each year of any given reign came to be identified as the year of the first (or whatever might be the proper ordinal) census of that reign, a new series thus beginning with each reign. From the Eleventh Dynasty on, the years were always numbered from the first of the current reign, and the second year of the reign was supposed to begin with the first day of Thoth next following the date of the king's accession, no matter how recent that date might be. The absence of eras in ancient Egypt is all the more remarkable as there were several periods which could easily have been utilized for that purpose, the Sothic period especially. (On other epochs—Phoeni, Apis, etc.—mentioned by the classical writers, but not yet found on Egyptian monuments, as also on the so-called Great and Small Years and the supposed Nubiti Era, see Ginzel, op. cit., I, sec. 38 and 45.)

In later times several eras were created or adopted in Egypt, the principal of which was the Era of Alexandria. Its epoch, or starting-point, has been conventionally fixed at 30 (or 31) August of the first year of Augustus (Julian, 30 B.C.), although, as we have seen, it did not acquire its full Imperial status until 26, or even 23, B.C., so that its first years were ordinary Egyptian vernal years (for further details see Ginzel, op. cit., I, pp. 224-28). The Philippic, or Macedonian, Era (more generally known as the Era of Alexander) was introduced into Egypt in the third century B.C.
after the death of Alexander the Great (323 B.C.). Up to Ptolemy Philadelphus (283–47 B.C.), Egyptian monuments were dated according to the old Egyptian system, but after that time the Macedonian dates are generally found together with the Egyptian. Macedonian dating was gradually superseded by the Egyptian, the fixed eras, yet it is found, sporadically at least, as late as the second century after Christ (Ginzel, op. cit., I, p. 232). The Philippi Era begins on I Thoth, 425 (12 Nov., 324 B.C., Julian style) of the Era of Nabonassar; like the latter it is based on a vague year on the same pattern, men’s names included, of the old Egyptian year. The Era of Nabonassar begins at noon, 26 February, 747 B.C. (Julian style). It is the basis of the famous Canon of Ptolemy. It was used in Egypt especially for astronomical purposes, and it met with great favour with the chronographers on account of the certainty of its starting-point and its well established accuracy. The reduction of Nabonassar’s years into the corresponding usual Christian reckoning is rather complicated and requires the use of special tables (see Ginzel, op. cit., I, p. 143 sqq.). Only a very small portion of the colossal mass of inscriptions, papyri, etc., so far discovered, in Egypt, has any bearing on, or can be of any assistance in, chronological questions. The astronomical knowledge of the ancient Egyptians does not seem to have gone very far, and, as every one knows, accurate astronomical observations rightly recorded in connection with historical events within the limits of astron-omical chronology of ancient times. It is remarkable that the Egyptian Claudius Ptolemy (second century after Christ) took from the Babylonians and the Greeks all the observations of eclipses he ever used and started his calendar (see above) with Babylonian, not with Egyptian, data. Evidently what he had was not recordings of observations made in Egypt. Yet, for religious reasons, the Egyptians noted the occurrences of the heliacal risings of Sirius on the various dates of their movable calendar. A few have reached us, and have been of no small assistance in astronomically determining, within four years at least, some of the most important epochs of Egyptian history. The Egyptians also recorded the coincidence of new moons with the days of their calendar. Such data in themselves have no chronological value, as the phases of the moon return to the same positions on the calendar every nineteen years; however, in the presence of such data, they can help us to determine more precisely the chronology of some events (Breasted, op. cit., I, sec. 46). Moreover, ancient Egypt has bequeathed to us a number of monuments of a more or less chronological character: (1) The calendars of religious feasts (Cal-endars of Dendera (Thyatira), Edfu, Eneh, all three of which belong to the late period, Calendar of Papyrus Salleri IV) are especially interesting because they illustrate the nature of the Egyptian year (see Ginzel, op. cit., p. 200 sqq.). (2) The lists of selected royal names comprise the so-called Tables of Sakkara, Nineteenth Dynasty, forty-seven names beginning with the sixth of the First Dynasty; Karnak (part of Thebes), Eighteenth Dynasty, sixty-six names, unfortunately not chronologically arranged; Abydos, Nineteenth Dynasty, seventy-six names beginning with Menes. (3) The Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. Unfortunately, the first of these last two monuments is broken into many fragments and other- wise mutilated, while the second is but a fragment of a list of monarchs, but the former, although known as the Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. Unfortunately, the first of these last two monuments is broken into many fragments and other- wise mutilated, while the second is but a fragment of a list of monarchs, but the former, although known as the Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. 398-378 B. C. Twenty-ninth Dynasty
378-341 B. C. Thirtieth Dynasty

Dates marked with an asterisk in the above table are astronomically computed and correct within three years, while the date 525 is attested by the Canon of Ptolemy. Several dates besides, within the period of the Eighteenth Dynasty and the initial date of Shebatik, second king of the Twenty-fifth Dynasty, are also astronomically determined, or African—three of the double-dagger (†) indicates that the numerical difference between the two following dates is the minimum of duration allowed by the monuments for the corresponding dynasties. The double-dagger (‡) on the contrary, indicates the maximum of duration. This is the case only for the period from the Thirteenth to the Seventeenth Dynasties. What this period may lose some day will be the gain of the nine following dynasties, but the extreme dates, 1788 and 663, will not be affected. The duration of 295 years for the Ninth and Tenth Dynasties, indicated by the two extreme dates 2145-2100, is an estimate, in round numbers, based on an average of 16 years for each of their 15 kings. The uncertainty which attends to that period affects the dates of all the preceding dynasties, which, consequently, may some day have to be shifted as much as a century either way.

Günzel, Handbuch der mathematischen und technischen Chronologie I, Zeitrechnung der Babyloniern, Ägyptern, Moham- medanen, Perser, etc. (Leipzig, 1809—ep. 5, 254 sq.), contains a complete bibliography of Egyptian chronology—Lehnmann, Zwei Hauptprobleme der altorientalischen Chronologie (Berlin, 1898); Meyer, Ägyptische Chronologie (publication of the Berlin Acad., 1901); Nebraü, Die Chronologie der Geschichte Israels, Ägyptens, Babyloniens und Assyriens (Leipzig, 1899); also chapters in a bibliography of ancient bibliography, especially in Breasted, Ancient Records, and Petrie, Illustrated History of Egypt.

Ethnology.—Scholars are at variance as to the origin of the Egyptians. Some, chiefly philologists, suppose that the Egyptians of historical times had come from Western Asia either directly, through the Thamusi of Suez, or, as most will have it, through the Straits of Bab-el-Mandeb and Ethiopia. Others, principally naturalists, think they came from, or at least through, Libya, while others still place the original home of the Egyptians in Central Africa. The first hypothesis is now the most commonly received. Anatomical and statistical investigations tend to make it plausible: the fact, for instance, that wheat and barley, which have been found in the most ancient tombs dating from before the First Dynasty, are originally indigenous to Asia, as well as linen, wine, and the produce of other cultivated plants which are represented among the funeral offerings in the tombs of the earliest dynasties. And the same can be said of the two sacred trees of the Egyptian pantheon, the sycamore and the person. Finally, the fact that the ancestor of the domesticated Egyptian ass had its home in the wildernesses south of Egypt would show that the Asiatic invaders or settlers came through Ethiopia. This theory tallies with the Biblical narrative, Gen. x, 6, which makes the ancestor of the Egyptians, under the ethnic name of Misraim, the brother of Cush the Ethiopian of Phht (e.g. Paimut, the Penti of the Latins), and Canaan, all three of whom certainly had their original homes in Asia. What seems more certain is that the Egyptians of historical times belong to the same stock as the Libyans and other races, some of which were absorbed, while others were totally or partly driven away by them. Five at least of these are given in the Bible (Gen. x, 14) under ethnic names of some sort: Ludim (according to Maspéro, "Histoire Ancienne des peuples de l'orient", Paris, 1908, p. 16, the Rotu or Romitu of the hieroglyphics, i.e. the Egyptians proper), Ludim (the Libyans), Naphtihim (the inhabitants of Not-Pith, or Memphite), Patroum (the inhabitants of the To-red, i.e. Upper Egypt), Amamum (the Anu, who, in prehistoric times, founded On of the North, or Heliopolis, and On of the South, or Hermontis).

Predynastic History.—At all events, in the predynastic times, when the twilight of the day begins, dawn on Egypt, various races which at different periods had settled in Egypt, had been blended under the moulding influence of the climate of their new home, and turned into a new race, well characterized and easily distinguishable from any other race, Asiatic, Euro- pean, or Libyean. The head is rather large, the forehead square and rather low, the nose short and flat, the lips thick, but not turned up, the mouth rather large, with an undefinable expression of instinctive sadness. This type perpetuated itself through thirty or forty centuries of revolutions, invasions, or pacific immigrations and survives to this day in the peasant class, the fellaheen, who form the bulk of the population and the sinews of the national strength. All agree that, even before the Egyptian race had attained that remarkable degree of ethnological permanence, Egypt, from a merely pastoral region, had become an agricultural country, as a result of the immigration of Asiatic tribes, for, before the dawn of historical times, they had learned to grow wheat and barley, using the plough in their cultivation. Next came the political organization of the country. It was subdivided into a number of small independent States, which became the nuclei of the harmonious group, each of its own laws and religion. In course of time some of these States were merged in one another until they formed two large principalities, the Northern Kingdom (To-Mehri) and the Southern Kingdom (To-Res), an arrangement which must have lasted some time, for when the final degree of centralization was
reached, and the two countries united under one rule, the king took the title of "Lord of Both Lands", or "King of Upper and Lower Egypt" (never "King of Kemit" or "Kemetic", i.e., of Egypt), and often wore a double crown consisting of the white crown of the South and the red crown of the North (the modern Kib, a few miles north of Edfu) was the capital of the Southern Kingdom; the vulture-goddess, Nekhabet, was its protecting deity. But at both capitals the hawk-god, Horus, was worshipped as the distinctive patron-deity of both kings. That ancient population of Egypt, referred to in later texts as the "Horus-worshippers", have recently emerged from the mythical obscurity to which their kings had been relegated before the days of Manetho, who knows them as the "timmers", i.e., the deified ancestors. The Palermo Stone has revealed to us the names of six or seven dynasties of the Northern Kingdom; and in the Upper Egypt, thousands of sepulchres (none of the kings, unfortunately) have recently been excavated. The bodies, unembalmed, lie side by side, in what is called the "embryonic" posture, surrounded by pottery or stone jars, where remains of food, drink, and ointment can still be discerned. Such legendary elements, flushed out of the tombs, and clay models of various objects which the deceased might need in the life hereafter—are especially, to cross the waters that surround the Elysian Fields. From those early times, date, as to the essentials of concept and expression, the Pyramid Texts alluded to in a later section of this volume. The whole is documented in Chronology, that the institution of the calendar dates from predynastic times (4241 B.C.), and that its original home was in the Northern Kingdom, probably at Memphis or at On (Heliopolis). The computations necessary for this calendar show clearly that we must trace to predynastic times the hieroglyphic system of writing which we find fully developed in the royal tombs of the first two dynasties (Breasted, "Ancient History of the Egyptians", pp. 35–39).

**Dynastic History.**—Since Manetho of Sebennytus (3rd century B.C.) has been custodian of the hieroglyphic series of kings who ruled over ancient Egypt, from the beginning of history until the conquest of Alexander the Great, in thirty dynasties, each of which corresponds, or as a rule, seems to correspond, to a break in the succession of legitimate rulers, resulting from internal dissensions or military reverses, the latter almost invariably leading to an invasion and, eventually, the establishment of a foreign dynasty. Manetho's claim, that his history was compiled from lists of royal ancestry and original documents, is fairly borne out by the monuments—the so-called Tables (royal lists) of Saqqara, ABYDOS, KARNAK, and especially the famous, but much mutilated, Turin Papyrus and Palermo Stone, as well as annals of individual kings recorded on the walls of temples, tombs, etc.

These thirty dynasties are very unevenly known to us; of a good many we know next to nothing. This is like the case for the Seventh and Eighth dynasties (Memphites), the Ninth and Tenth (Heracleopolites), the Eleventh (Theban—contemporary with the Tenth), the Thirteenth (Theban) and the Fourteenth (Xoite—in part simultaneous), the Fifteenth, and Eighteenth (Hyksos and Dynasty (Theban—partly contemporary with the Sixteenth). Other dynasties are known to us by their monuments, especially their tombs, which are often extremely rich in information as to the institutions, arts, manners, and customs of Egypt during the lifetime of the occupants, but almost totally devoid of historical evidence proper. Such is the case, for instance, for the first five dynasties, of which all we can say is that they must have ruled successively over the whole land of Egypt and that their kings must have been conquerors as well as builders. We know little or nothing of the peoples they battled with, nor can we detect the political or the military elements of the rise and fall of the several dynasties. Evidently, in some cases the lack of information on some periods, which must have been very momentous ones in the political life of ancient Egypt, should be attributed to the disappearance of monuments of an historical character, or to the fact that such monuments have not yet been discovered; it is very likely, however, that in many cases no historical evidence was ever handed down to posterity. In Egypt, as in Assyria and Babylonia, it was not customary for kings to place their defeats on record, nor did the chieftain or the soldier of fortune who after a period of internal dissensions succeeded in establishing himself as the founder of a new dynasty, care to take posteriority into his confidence as to his origin and previous political career. Manetho, who, as a rule, does not seem to have been much better informed than we are, resorts often, strongly tinged with legendary elements, to compare kings with those which have since been discovered in the keeping of the priests and belonged, very likely, to the same stock as most of those related by Herodotus on matters that could not fall under his personal observation. Such traditions, until confirmed by the monuments, or at any rate purified of their legendary elements, flatly are not to be taken as evidence, and must of course be kept in abeyance. For the present the royal names are almost all that we can regard as certain for several of the dynasties. Such is the case for the first two dynasties, which until about A.D. 1888 were considered by most scholars as entirely mythical. Their tombs were discovered at Umm-El-Ga'ab, near Abydos, in the territory of the ancient Thys (Thinis), and the names of Menes, Zer, Usaphis, and Miebs have already been found. A good many other kings of Manetho's list cannot be identified with the owners of the tombs discovered, owing to the fact that, while Manetho gives only the proper names of the kings, the monuments contained, as a rule, nothing but their Horus names (Maspero, "Histoire Ancienne", 56 sq.). Monuments of these kings have been discovered in Upper Egypt and at Thebes that they must have ruled over the whole land of Egypt. The various articles found in these early royal tombs point to a high degree of civilization by no means inferior to that of the immediately following dynasties. Religion in general, and the funerary ritual in particular, were already fixed, and the hieroglyphic system of writing had reached its last stage of alphabetic development (Maspero, loc. cit.; Breasted, "History of Ancient Egyptians", 49 sq.).

The history of Egypt can be divided into two large periods, the first of which comprises the first seventeen and the second the other thirteen dynasties. In current literature Dynasties Three to Eleven are often variously referred to as the Old Kingdom (ancien empire), Dynasties Twelve to Seventeen as the Middle Kingdom (moyen empire), Dynasties Eighteen to Twenty as the Empire (nouvel empire). The simpler division which we propose here seems to us more rational.

**First Period:** First to Seventeenth Dynasty. — During this period Egypt and the Asiatic empires never, so far as we know, came into contact, except possibly in a pacific manner and the Seventeenth Dynasty (Theban—partly contemporary with the Sixteenth). Other dynasties are known to us by their monuments, especially their tombs, which are often extremely rich in information as to the institutions, arts, manners, and customs of Egypt during the lifetime of the occupants, but almost totally devoid of historical evidence proper.
who for centuries contended with Babylonia and Chaldea for supremacy in Western Asia. On their side the kings of Egypt had to secure their own borders (principally the southern) against the neighbouring tribes, a necessity which led them, after many centuries of warfare, to the conquest of Nubia. As early as the reign of Pepi I (Sixth Dynasty) Nubia had been brought under control so far as to receive Egyptian colonies. Under the kings of the Eleventh Dynasty, chiefly under Userkaf, the Nubian, the conquest was achieved, and the valley of the Upper Nile as far as the Second Cataract was organized into an Egyptian province. The Lybians, also, and the tribes settled between the Nile and the Red Sea had to be repeatedly repelled or conquered. The brief records of such punitive expeditions, which appear on the Palermo Stone, attribute to them dates as early as the first two dynasties. Extensive commercial relations were maintained with the Syrian coast (whither King Smenir, of the Third Dynasty, sent a fleet to procure cedar logs from Mount Lebanon) and with the Upper Nile districts, with Arabia to the south, and with the Somali coast (Punt, Pinmit) to the east. Roads were built for this commerce between Coptos and different points on the Red Sea. The chief of these roads led through Wadi Hammamat (Rohanh or Rehenu Valley), the rich quarries of which were operated by the Egyptians from the time of the Fifth Dynasty; it furnished the niger, or Thebacon, lapis, a hard dark stone which was used for statues and coffins. In Asu proper the pharaohs of that time sought no extension of territory, with the exception of a few points in the Peninsula of Sinai, where, as early as the First Dynasty, but especially since the time of Smenir, they operated mines of copper and turquoise. As a rule on the north-west border they kept on the defensive against the raids of the nomadic tribes established in the Syrian desert and, like the modern bedouins, always ready for plunder. On that side the frontier was protected by a wall across the Wadi Tumilat and a line of forts extending from the Nile to the Red Sea. Occasionally the Egyptians resorted to counter-attacks on the Syrian territory, as in the case of the Amus and Hurshatir under Pepi I, but, the punishment inflicted, they invariably returned to their line of defence.

The seat of government during that first period was several times shifted from one city to another. Menes, before the union of the two kingdoms, very likely resided at Thebes, in his native home of Abyod, in Upper Egypt. Having succeeded in bringing Lower Egypt under his rule, he appropriately selected Memphis for the capital of the new kingdom, as being more central. During the Ninth and Tenth Dynasties, Hermopolis, only a short distance south of Memphis, became the official seat of government, for no special known reason—perhaps simply because the pharaoh of the reigning dynasty had originally been natives and princes of these homes. They were opposed by the princes of Thebes (Eleventh Dynasty) who finally (Twelfth Dynasty) succeeded in overthrowing them and selected their own city as capital.

This radical change had the advantage of bringing Nubia within closer range, and it may have contributed substantially to the conquest of that province; but it weakened the northern border, which was now too far from the centre of political life.

The pharaohs of the Thirteenth Dynasty (most of whom were called Sebek-hotep or Nofer-hotep), without abandoning Thebes, seem to have paid more attention than their predecessors to the cities of the Delta, where—at Tans in particular—they occasionally resided, and it was from Xos (Sakha), a city of Lower Egypt, that the next following (Fourteenth) dynasty arose. It seems that the kings of that dynasty never succeeded in establishing a firm and lasting government. Their rapid succession on the throne and the famous invasion of the Hyksos which Manetho registers at that time, point to internal dissensions and a condition of affairs verging on anarchy.

"At this time there came to us a king Tomyris by name. Under this king, God, why I do not know, sent an adverse wind to us, and against all likelihood from the parts of the East people of ignoble race came unexpectedly, invaded the country and conquered us and without battle." This testimony contains contradictory elements. It is difficult to imagine how an invasion could result in a conquest unless it took place gradually and consequently not "unexpectedly". The most probable interpretation of Manetho's words seems to be: the invaders came in peaceful quest of new homes, and not all in one body, though in comparatively large numbers at a time; that they first settled, with their flocks, in the rich pasture lands of the Delta, then, little by little, adapted themselves to the political life of the country, some succeeding in occupying important situations in the army or in the administration; that finally one of them, favoured by the rivalries of competitors for the vacant throne, seized the reins of government and was recognized as king not only by the men of his own race, but also by quite a considerable party of the natives.

The identity of the Hyksos has been the subject of long discussions. Some, with De Crem, think they were the same as the Hittites, others (Baedeker, "Egypt", p. Ixxix) see in them simple Syrian bedouins. The opinion which seems most probable and best agrees with the tradition preserved by Manetho, identifies them with the large Ummamaitian family once settled in Lower Chaldea, along the Persian Gulf and the Arabian coast. According to Professor Jumeau (op. cit., 194 sqq.) it was the invasion of the lower Euphrates by the Elamites under Kidashakhe (2285 b. c.) that forced this family to migrate to the West in search of a new home. The seafaring tribes settled along the eastern shore of the Mediterranean.
Sea to which they gave their name (Phoenicians, Phœniæs; Egyptians, Pu‘en; Biblical, Phœt). Others settled in the mountainous districts of Palestine (Canaan proper), where they resumed their nomadic life, and gradually developed into an agricultural people. Others, chiefly the Nubians, were probably prevented from taking a northern direction by the powerful and well-organized nation of the Hittites, turned to Egypt, where they settled as explained above. Manetho assigns to them three dynasties, the Fifteenth, Sixteenth, and Seventeenth, of which only the Sixteenth held sway over all Egypt. During the Fifteenth Dynasty the princes of the southern homes, for a time at least, managed to retain a certain independence. They regained it under the Third Hyksos Dynasty, with which they share the honour of being recognized as the Seventeenth Dynasty. The last of them, Ahmosis, after a war of six years, finally succeeded in driving the intruders out of Egypt, pursuing the remnant of their army as far as Sharhuna (perhaps Sharukhen, Jos., xiv, 6) in Southern Syria, where the last battle was fought and won by the Egyptians. From the monuments we know the name of at least four of the Sixteenth kings, three of them having the name of Apophi and one Khian. An alabaster vase bearing the names of the last has been found under a wall of the palace of Cnosos in Crete, and a lion in Bagdad. Their capital seems to have been Avaris on the north-eastern border of the Delta. Some think the names may be conformed to the ancient name of Thebes, in the Babylonian language and script, possibly dates from the period of the Hyksos. Few of the monuments of the Hyksos have been preserved, enough of them, however, to show us that as a rule the shepherd kings conformed to the ancient culture of Egypt, adopting its language, art, religion (cf. however, Maspero, op. cit., 263) and political institutions. But they oppressed their Egyptian subjects, and posterity held their memory in abomination.

It is in the Hyksos period that we must place the arrival of the Israelites in Egypt. The migration of the Terachites from Ur in Chaldea may have coincided with, or at all events was posterior to, that of the Canaanites. Both families found and took root in Egypt, and, by and by, they spread over the Delta and Upper Egypt. Of the two families, the Canaanitic branch, which came in later, and the Semitic branch, which came in first, only the second, under the name of Shepherds, survived. The Semitic branch, being thoroughly Semitic, more quickly assimilated itself to the local population. The Canaanitic branch, more original in tradition, more richly endowed, held its own in the Delta, and, in the course of time, acquired the ancient name of Apophi.

The second period is that of the Great Egyptian Dynasties, from the Eighteenth to the Twentieth, and many would extend it to the Twenty-second. This is that period in which the arts and literature of Egypt attained their highest development. It is in this period that we find the rich material for the study of the Near East in general and of Egypt in particular. The literature of this period is of two kinds: the one, the so-called 'liturgical' literature, consisting of hymns and prayers, and the other, the so-called 'epic' literature, consisting of tales and stories. The former is of great importance for the study of religious and ceremonial usages, while the latter is of great importance for the study of social and political conditions. The most important works of this period are the 'Papyrus of Ani', the 'Papyrus of Amennakhte', and the 'Papyrus of Neferjemet'.

The third period is that of the Greek and Roman Dynasties, from the Twenty-first to the Twenty-seventh. This is the period of the Ptolemies and the Roman emperors. The literature of this period is of great importance for the study of the history of Egypt, and of the Near East in general. The most important works of this period are the 'Papyrus of Turin', the 'Papyrus of Ebers', and the 'Papyrus of Harris'. The latter contains a great deal of information about the medical knowledge of the time, and is one of the most important works of this period.
El 'Amarna), a city which he founded in a like spirit, and he also founded two other cities of the same name, each with a Gen-Aton temple, one in Nubia, at the foot of the Third Cataract (where it was discovered in 1907 by Professor Breasted), and another in Syria, the site of which is still unknown. This reform was violently opposed by the established priesthood, and the land was soon thrown into a state of general confusion verging on anarchy. The temples and cities dedicated to Aton were destroyed and abandoned soon after the royal reformer's death. Harmhab (1350–1315 B.C.), the founder of the Nineteenth Dynasty, was principally engaged in bringing the land out of the confusion into which it had fallen during the last years of the preceding dynasty, and restoring the temples of the ancient gods to their former splendour. Seti I (1313–1292 B.C.) attempted to recover the Asiatic provinces lost by Ramses. Thirteen years later the Hittite king visited Egypt on the occasion of the marriage of his eldest daughter with the pharaoh. Diplomatic union of that kind had already taken place during the preceding dynasty. The treaty was faithfully observed by both parties, at least until the death of Merneptah (1225–1215), the son and successor of Ramses II, when the Hittites seem to have taken part in an invasion of the Delta by the Libyans and various peoples of the northern Mediterranean, their allies.

Neither this, however, nor the disaffection which at the same time was rampant among his Asiatic vassals spurred Merneptah to new conquests. The Hittite war of Ramses II, it seems, had completely exhausted the military enterprise of Egypt. Her armies from that time keep to the defensive. Merneptah was satisfied to bring back Palestine to submission and defeat and drive out the Libyans—among whom the Tefenu tribe was prominent apparently because they were settled on the Egyptian border—and their allies, the Sherden (Sardinians), the Shekeles (Sicilians?), the Ekewesh (Armenians?), and the Lycians. But these were considered great achievements, and the people sang:—

The Kings are overthrown, saying: "Salâm!"
Not one holds up his head among the nine nations of the bow.
Wasted is Tehenu,
The Hittite land is pacified.
Plundered is the Canaan, with every evil,
Carried off is Askalon,
Seized upon is Gezer,
Yenoam is made as a thing not existing,
Israel is desolated, her seed is not.
Palestine has become a [defenceless] widow for Egypt.
All lands are united, they are pacified,
Every one that is turbulent is bound by King Merneptah.

(Breasted, op. cit., 330; "Ancient Records of Egypt", III, 603 sqq.) The situation at home was no brighter, and it became worse under Merneptah's successors, Amennes, Memphites-Istapht, and Seti II, until complete anarchy prevailed. Thrusting aside a host of less daring pretenders, a Syrian named Iris (or Yerson), who held an important position as head of one of the nomes, seized the power and for five years ruled the land in tyranny and violence. Breasted, "Ancient Records of Egypt", IV, § 395. Thus ended the Nineteenth Dynasty.

Of Setnakht (1290–1298 B.C.), the founder of the following dynasty, we know little except that he was a strong man who succeeded in restoring order. His son, Ramses III (1198–1163 B.C.), was confronted by very much the same situation as Merneptah some twenty-five years before, only a great deal more serious. The allies of the Libyans defeated by Merneptah were only the vanguard of a far more dreadful army of invasion. This was now approaching. It was followed at close range by motley hordes of immigrants from the islands and the northern shores of the Mediterranean, the "peoples of the sea", as the Egyptians called them. Besides those already mentioned we find now the Peleset (Philistines) and the Denyens (Danaoi). Some of the invaders were coming by sea, along the coast, others by land. Ramses III showed himself equal to the occasion. Having defeated a first contingent who had already landed in the Delta and joined the Libyans, he sent a strong fleet to check the advance of the main body of the invaders' ships and hastened by land, with his army, to Syria, where he expected to meet the enemy. Both land and naval battles were fought in about the same region, for Ramses, having routed the land forces of the enemy, was in time to co-operate with the Egyptian fleet in defeating that of the invaders. This brilliant campaign stayed the advance of the immigrants who now came straggling along, settling here and there as vassals of
Egypt, in Syria and in Palestine, where, later, one of their tribes, the Peleset, or Philistines, offered a stubborn resistance to the invasion of the Hebrews. On the other hand the great Hittite confederation had been very much weakened, if not entirely disintegrated, as a result of the invasion. Ramses III had to repel another invasion of the Libyans, impelled this time by the Meshwesh (the Maxyes of Herodotus), and shortly after he found it necessary to appear again with his army in Northern Palestine, where rebellion had broken out among some of his vassals. The boundary remained, probably, where it was under the Nineteenth Dynasty, including the whole course of the River Leontes (or Litany) and possibly a small portion of the upper Orontes, excluding Kadesh. Ramses III had no further trouble with his Asiatic vassals.

With the successors of Ramses III, nine weak pharaohs of the same name (Rameses IV–XII), national decay sets in. Egypt entirely loses her prestige abroad, particularly in Asia, where Assyria is expanding under Tiglath-Pileser I; at home everything is confusion. Priests, officials, and mercenaries, whose wealth and prerogatives have been steadily growing at the expense of both pharaoh and his people, now fight among themselves for the controlling political influence, the pharaoh being reduced to a mere puppet. Such a state of disorganization prevails everywhere that, in the necropolis of Thebes, in sight of the temple of Amon, where the high-priest is so powerful, the tombs of the pharaohs are desecrated and plundered by a gang of robbers, and the royal mummies despoiled of all their most costly ornaments.

At some period during the Nineteenth Dynasty the pharaohs had their capital at Tanis (Sîn-el-Hagar) in the Delta. Thebes remaining the religious capital of the empire. There Ramses XII resided when a local noble, Nesubenebed, seized the power (1113 B.C.) and established himself as king over the Delta. The weak pharaoh retired to Thebes, where he was soon overshadowed by Hrihor, the high-priest of Amon, who, when Ramses XII died as ignominiously as he had lived, was finally proclaimed supreme ruler of Egypt by an oracle of Khonsu followed by the approval of Amon. Hrihor’s rule, in fact, may be extended over Lower Egypt, and his independence was not even suspected by Manetho who, after Ramses XII, introduces the Twenty-first Dynasty, with Nesubenebed as its founder. The division between the two countries was to continue, save for short intervals, for about four hundred and fifty years. Thebes, however, rarely during that time enjoyed complete independence, and still more rarely ruled over the whole country. Her relations to the Delta were usually those of a vassal to a suzerain. Her influence was particularly felt in Nubia, whither descendants of Hrihor seem to have retired at an early period, eventually founding an independent kingdom at Napata. Confusion and disorder still prevailed all over the land. To save them from further desecration, the royal mummies had to be concealed in an old, and probably, unused tomb of Amenhotep I, near the temple of Deir el-Bahri, where they remained hidden until they were rifled some three or forty years ago by the Arabs. Most of them are now at the Museum of Cairo. The capital of this dynasty was at Tanis. Its last king, Psibkhenno II, may be the pharaoh mentioned in III Kings, xi, 18; iii, 1; ix, 16 (see below). Assyria was then on the decline and we can best represent to ourselves David and Solomon as at least nominal vassals of Egypt.

Sheshonk (945–924), founder of the Twenty-second Dynasty, was a powerful mercenary prince, or chief of hired troops, of Heracleopolis, where his ancestors, of Libyan origin, had settled early in the Twenty-first Dynasty. In 945 B.C. he proclaimed himself king, establishing his residence at Bubastis, in the Delta. Sheshonk seems to have been an ambitious and energetic ruler. He certainly led a successful campaign in Palestine, perhaps the same mentioned in III Kings, xiv, 25 (cf. II Paralip., xii, 2 sqq.), where it is said that he came to Jerusalem in the fifth year of Reboam, and took away the treasures of the house of the Lord, although Jerusalem is not among the one hundred and fifty-six Palestinian cities recorded in his inscription. In Solomon’s time Sheshonk had given hospitality to Jeroboam (III Kings, xi, 40). According to Professor Breasted (Ancient Egyptians, 362), Sheshonk is also to be identified with the pharaoh who gave his daughter as a wife to Solomon (III Kings, iii, 1) and later on conquered Gezer and turned it over to his daughter, Solomon’s wife, as a dowry (III Kings, ix, 16) while Professor Maspero (Hist. Anc., 416) refers these episodes and that of Hadad (III Kings, xi, 14 sqq.) to Psibkhenno II, the last king of the Twenty-first Dynasty. During the following reigns of this dynasty history records nothing but endless civil wars between the two principalities of Thebes and Heracleopolis, and feuds between the mercenary lords of the Delta. On the other hand, Assyria was more powerful than ever. Shalmaneser defeated, at Barkar on the Orontes, a Syrian
E N G L I S H  S T A N D A R D  E N G L I S H

conditio to which one of Sheshonk's successors—probably Takelot II—had contributed one thousand men (854 b. c.). Under such circumstances Egypt's

influence in Palestine must have dwindled to nothing.

One of the Delta lords, Pedibast, at the death of

Sheshonk, is the founder of the Twenty-first Dynasty, succeeded in establishing a new dynasty, which Maneco places at Tanis, although Pedibast

was of Bubastite origin. But neither he himself nor

his successors could control the situation. Under

his successor, Osorkon III, a dynasty of Saïs, Tefnakhte

undertook to supplant him and the many other dynas-

ties, several of whom were claiming the title and

prerogatives of royalty. He had partly succeeded

when Piankhi, ruler of the independent kingdom of

Napata (see above), overran Egypt as far as the Med-

iterranean, obliging all the pretenders, Osorkon and

Tefnakhte included, to recognize his suzerainty. But

as soon as the invaders had withdrawn, Tefnakhte re-

sumed his designs and was eventually successful in sub-

duing Osorkon, who acknowledged himself his vassal.

(We must refer to this period the King of Egypt

mentioned in IV Kings, xxvii, 4, as inciting Osee of Sa-

mai, and the sweeping claim of Sheshonk to the

title of Pharaoh of Egypt (cf. Ps. 82:9).)

Son Bochoris, however, was regarded as the founder of a new dynasty, his father, probably, having died before

Osorkon. Scarcely had he reigned six years when Shabaka, Piankhi's brother, invaded Egypt in his turn, and so firmly did he intrench himself there that he became the founder of the Twenty-third Dynasty of Egyptian, Dynasty. Unfortunately for him and his

successors, Assyria, having absorbed all the principal

states of Syria and Palestine, and holding the others well under control, was now threatening to invade the territory of Egypt. Shabaka, alive to the danger, formed an alliance with Philistia, Tyre, and Egypt, and

sent to Assyria an army under the command of his nephew Taharka (cf. IV Kings, xix, 9, where Taharka is called King of Ethiopia). The allies were completely defeated, and

Shabaka was beheading Jerusalem, which alone, so far, with Tyre, had resisted him, when, to use the words of the Bible, "in angel of the Lord came, and slew in the camp of the Assyrians a hundred and eighty-five thousand. And when he arose early in the morning, he saw all the bodies of the dead, and Shabaka king of the Assyrians departing out of the land of Egypt into his own land," (IV Kings, xix, 35, 36). But the power of Assyria was not broken for that all, although Taharka, who was now reigning, might have believed it when, twenty-seven years later, he succeeded in repelling Esrat-Hudion, of which repulse he made great display on the pedestal of a statue of his, drawing on the lists left by Ramses II of Asiatic captured cities to swell his own victory. In

670 the Assyrians appeared again, more formidable than ever, defeated Taharka, captured Memphis, and withdrew after having organized at lower Egypt into an Assyrian dependency. Among the princes who hastened to do homage to the King of Assyria the first place is given to Necho of Saïs, a descendant of Tefnakhte through Bochoris. Taharka had fled to the south, where he raised fresh troops, and marched on lower Egypt hoping to recover the lost provinces, but his offer to the two pharaohs, who routed him again and pursued him almost as far as Thebes (668 b. c.). The reigning family of the Delta, who had sided with him, were sent to Nine-

veh in chains. Necho was one of them, but he knew how to ingratiate himself with Assurbanipal, who re-
sulted to his Kingdom to Saïs Turpinus, having succeeded his father Taharka (663 b. c.), undertook in his turn the recovery of lower Egypt, but with no better success. This time Assurbanipal's

army pursued the enemy to Thebes, which was sacked and plundered.

Psamtik, son of Necho, took advantage of the

struggle in which his protector, Assurbanipal, had

now become involved with Babylonia to free himself from the Assyrian allegiance. He succeeded in sup-

pressing practically all of the mercenary lords and

local dynasties, repaired the long-neglected irrigation works, and gave a new impulse to the Twenty-sixth Dynasty, which he introduces, was, as a whole, a period of restoration and great internal prosperity. It was also a period of renascence in art, reli-

gion, and literature, marked by a return to archeic traditions. Industrial art flourished as never before.
The army was rewarded and strengthened with large contingents of Greek mercenaries, the Libyans

having lost their efficiency in becoming Egyptianized. Psamtik does not seem to have made much use of the army, but Necho and his successors could not refrain from interfering with the affairs of Asia. The tempta-

tion was great. During the long reign of Psamtik I

Assyria had been constantly declining. In 609 he was

succeeded by his son Necho, and three years later

Nineveh was finally captured, and Assyria had come to an end forever. Necho thought this a favourable

chance to recover the old Asiatic possessions of Egypt, and marched southward with his army (cf. Ps.

.xxxvii, 20; Jerem., xvi, 7-9). At Magiddo the King of Juda, Josias, who foolishly persisted in disputing his

passage, was routed and mortally wounded (II Para-

lip., xxxv, 22). This incident brought Necho to Jeru-

salem, where he deposed Joahaz, the successor of Josias, and put in his place the Twenty-third Dynasty of

the name of Jehoiakim. As for Joahaz, he took him to

Egypt (II Paralip., xxxvi, 1-4; cf. IV Kings, xxiii,

29-34). Hearing of Necho's conquest, Nabopolassar,

to whom that country had fallen in the division of

Assyria's possessions, sent his son Nebuchadnezzar

(Menechon) to check his advance. Necho was

so completely defeated at Carchemish (605 b. c.) that

he did not dare to make another stand, and retreated to Egypt; 'And the king of Egypt came not again any more out of his own country: for the king of Babylon had taken all that had belonged to the king of Egypt, from the river of Egypt, unto the river Euphrates.' (IV Kings, xxvii, 7). Apries (588-569 b. c.), Necho's

second successor, was not more fortunate in a similar

attempt. Zedekiah had sent to him for assistance

against Nebuchadnezzar (Ezech., xvi, 15), but Apries

either retired without fighting (Jerem., xxxviii, 6) or

was defeated (Josephus, Antiq. XI, 8). And finally

Jerusalem was captured, and her temple destroyed

(587 b. c.). When, however, the remnant of the Jews

fled to Egypt, taking Jeremiah with them, Apries

received them and allowed them to settle in different

cities of the Delta, at Memphis, and in Upper Egypt

(Jer., xl, 17-18; xlv, 1). Such, very likely, was the

origin of the Jewish colony established in the island

of Elephantine "before Cambyses," as related in the

Judeo-Aramaic papyri recently discovered there (see

below, under Twenty-seventh Dynasty). Later, probably after Tyre had finally surrendered to the

Chaldeans (574), Apries successfully commanded a naval expedition against Phoenicia (Map, Hist. anc.,

639; Breasted, Hist. of the Anc. Egypt, 409, places

that expedition in 587 b. c.).

The reverses of Necho and Apries in Asia did not affect the prosperity of Egypt; during the reign of the two pharaohs, any more than did the rivalry of one of his

officials, Amasis, whom Apries had sent to repress a mutiny of the Egyptian native troops, and who was

proclaimed king by them. Apries and Amasis reigned together for some time, and when, a conflict having

broken out between the two, Apries was defeated and slain, Amasis gave him an honorable burial. To

say, Amasis, who had been the champion of the native

element as against the Greeks, now favoured the latter

far more than any of his predecessors. He founded

for them the city of Naukratis, in the Delta, as a home

and market, and they soon made it the most impor-
tant commercial centre of Egypt. The foreign policy of Amasis, as a rule, was one of prudence; his only conquest was Cyprus, over which, since the days of Thotmes III, Egypt had often exercised suzerainty. He made, however, one fatal mistake; he joined the abortive league formed by Persia, King of Persia, against Cyprus, and, although he afterwards carefully avoided crossing the path of the Persian conqueror, the latter’s son, Cambyses, taking the will for the deed, did not fail to resent his past inclinations.

Cambyses invaded Egypt in 525 B.C., shortly after Persia had succeeded Assyria. The pharaoh was put to death under cruel circumstances; the tomb of Amasis was violated, his mummy burnt to ashes, and a Persian governor was appointed. Otherwise Cambyses did all he could to conciliate his Egyptian subjects. He assumed the traditional pharasonic titles and ceremonial, and caused himself to be initiated in the mysteries of the goddess Neith. He made good the damages sustained by the temples during the conquest, led an unsuccessful expedition against the oases of the Libyan desert, and was not much happier in a campaign against the independent Kingdom of Napa- tia, plundered by these enemies, he defeated later, from his former conciliatory policy, and committed sacrilegious acts which exasperated the people against him. Darius I (521-486) completed the canal begun by Necho between the Nile and the Red Sea. He reopened the road from Coptos to the Red Sea, garrisoned the oases, and thus ther the prosperity and security of Egypt. In his reorganization of the Persian Empire, which he divided into a number of governments under a central administration, Egypt, with Cyrene, Bata, and Lower Nubia, formed the sixth government, or satrapy. This, however, affected the cities and their respective territories. Elsewhere the old feudal organization was left untouched, and from time to time the local princes availed themselves of their semi-independence to rebel.

After the battle of Marathon (487) the Egyptians revolted and expelled the Persians. But in the following year Achemenes, who had just been appointed satrap by his brother Xerxes I (486-465), brought them back to submission. Of a far more serious character was the insurrection which broke out in 463 under Artaxerxes I (465-425), and which was not quelled until 425, when the garrison cities of Lydia and the Black Sea, (the Athenians, who had two successive Persian armies (454). Under Darius II the power of the Persians began to decline. The weakness of their administration at that time is attested by the Judeo-Aramaic papyri recently discovered at Elephantine. From these documents we learn that, while the provincial governor was absent, the commander of the garrison of Syene had been bribed by the Egyptian priests of Chnub (Chnun) to plunder and destroy the temple of the Jewish colony of Elephantine. The culprits, it seems, were put to death by the Persian authorities, yet, when the victims applied for a permission to rebuild their temple, their request was granted only on the condition that they should not in future offer up bloody sacrifices—a concession, evidently, to the priests of Chnub, who probably objected to the slaughter of animals sacred to their god. The little colony, we may well suppose, did not long enjoy its curtailed privileges; it very probably succumbed to Egyptian fanaticism during the two following dynasties (Stähelin, “Israel in Egypten nach neugedundene Urkunden,” 14 sq.), the last of which formed by Cyrus, an animal sacred to their god, the little colony, we may well suppose, did not long enjoy its curtailed privileges; it very probably succumbed to Egyptian fanaticism during the two following dynasties (Stähelin, “Israel in Egypten nach neugedundene Urkunden,” 14 sq.). The Twenty-ninth Dynasty (Mendesian), comprising the reigns of Neferites, Achoris, and Paummatna, who took an active part in the wars of Greece against Artaxerxes II, lasted twenty years. The Thirtieth Dynasty (Sebennytic) began with Nectanebo I (378-361), who successfully repelled the Persians. Tachos (360-359), his successor, attempted to invade the Syrian territory, but, as a result of the treachery of his agent, Tachos himself was killed by the Persians, who had appointed his own successor. He was supplanted by Nectanebo II (358-342), a cousin of Tachos the king, and went to war with Artaxerxes II, to whom he tasted defeat, and the Persians once more became masters of Egypt (341). The king fled to Ethiopia, and the temples were plundered. It was then that Egypt lost forever the right of being governed by rulers of her own.

HILPERT (Philadelphia, 1908); GRIFFITH in Authority and Archaeology (London); LICHTENBERG, “The Egyptian Collections,” Abhandlungen zur Geschichte und Kunde der alten Welt (Leipzig, 1899-1901); MÜLLER, _Aegyptische Rundschauern zum 1906. Konvent (Strassburg, 1901); IDEN, “Aegypten nach neugedundene Urkunden” (Stähelin, “Israel in Egypten nach neugedundene Urkunden,” 14 sq.).

**III. ANCIENT EGYPTIAN RELIGION.**—God and man, those two essential terms of every religion, are but imperfectly reflected in the Egyptian religious monuments. A book similar in scope to our Bible certainly never existed in Egypt, and if their different theological schools, or the priests of some particular theological school, ever agreed on certain truths about God and man, it is certain that the latter did not condone such writings. Nor is the vast body of religious monuments bequeathed to us by ancient Egypt of such a nature as to compensate for this lack of positive and systematic information. The figured and inscribed monuments discovered in the temples, and especially in the tombs, acquaint us with the names and external aspects of numerous deities, with the material side of the funereal rites, from which we may safely conclude that they admitted the dependency of man on superior beings, and a certain survival of man after death. But as to the essence of these gods, their relation to the world and man as expressed by the worship of which they were the objects, the significance and symbolism of the rites of the dead, the nature of the surviving principle in man, the nature and modes of the survival itself as depending on earthly life and the like, the monuments are either silent about or offer us such contradictory and incongruous notions that we are forced to conclude that the Egyptians never evolved a clear and complete system of religious views. What light can be brought out of this chaos we shall concentrate on two chief points: (a) The Future Life, as best representing the term Man. (b) The Egyptian Pantheon.
demons or spirits which animated almost everything man came in contact with—stones, plants, animals—and the lesser deities which presided over every stage of human life—birth, naming, etc. The worship they received was of an entirely local and private nature, and we know almost nothing of it.

Each nome had its own chief deity or divine lord, male or female, apparently inherited from the ancient tribes. With each deity an animal, as a rule, but sometimes a tree or mineral, was associated. Thus Osiris of Bubastis was associated with a pillar, or the trunk of a tree; Hathor of Denderah, with a sycamore; Osiris of Mendes, with a goat; Set of Tanis, with an ass; Buto of the city of the same name, with a serpent; Bast of Bubastis, with a cat; Atum, or Tum, of Heliopolis, with a serpent, a lion, or possibly, later the bull Minneus; Ptah of Memphis, with the bull Apis; Sovek, in the Fayum and at Omoos (Kom Ombo), with a crocodile; Anubis of Assiut, with a jackal; Ament, and Chons; in Memphis the group of Pthah, Sekhmet, and Nefertem; etc. Sometimes the triad consisted of one god and two goddesses, as at Elephantine, or even of three male deities. Those groups were probably first obtained by the fusion of several totems, the number into one suggested by the human family, or possibly by the family triad Osiris, Isis, and Horus, of the Osiris cycle. In some cases the second element was a mere grammatical duplicate of the first, as Amun, wife of Amen (Amon), and was considered as one with it; it was then the son with his parents, and so arose the concept of one god in three forms. There was in this a germ of monotheism. It is doubtful, however, whether it would ever have developed beyond the limits of henotheism but for the solar religion which seems to have sprung into existence towards the dawn of the dynastic times, very likely under the influence of the school of Heliopolis. But before we turn to this new phase of the Egyptian religion, we must consider another aspect of the ancient gods which may have furnished the first basis of unification of the various local worship.

The Gods of the Dead.—Gods, being fancied like men, were like them, subject to death, the great leveler. Each community had the mummy of its god. But in the case of gods, as in that of men, death was not the cessation of all life. With the assistance of magical devices the dead god was simply transferred to another world, where he was still the god of the departed who had been his devotees on earth. Those two forms of the same god, frequently under two different names which eventually led to the conception of distinct gods of the dead. Such were Chen-Atm, the first of the Westerners (the dead) at Abydos, Sokar (or Seker), probably a form of Ptah, at Memphis. Sometimes, however, the god of the dead retained the name he had before, as Anubis at Assiut, Khenty at Thebes, and Osiris, wherever he began to be known as such.

Legend of Osiris.—Each of these gods had his own legend. Osiris was the last god who reigned on earth, and he was a wise and good king. But his brother Set was a wicked god and killed Osiris, cutting his body into fragments, which he scattered all over the land. Isis, sister and wife of Osiris, collected the fragments, put them together, and embalmed them, and her son Horus. Anubis here, perhaps, a substitute for Set, who does not seem to have been originally conceived as his brother's slayer), and Nephthys, Set's wife. Isis then, through her magical art, revives her husband who becomes king of the dead, while Horus defeats Set and reigns on the earth in his father's place. According to another version, Qeb, father of Osiris, and Set put an end to the strife by dividing the land between the two competitors, giving the South to Horus and the North to Set.

Sidereal and Elemental Gods.—It is generally conceded that some of the local gods had a sidereal or elemental character, of Edfu and El-Kab (Heliopolis), and Anher, of this, represented one or other aspect of the sun. Thoth of Heliopolis and Khonsu of Thebes were solar gods. Min of Akhmim (Chemmis) and Coptos, represented the cultivable land and Set, of Omoos (near Nakadeh), the desert. Hapi was the Nile, Hathor the vault of heaven. In some cases this sidereal or elemental aspect of the local gods may be primitive, especially among the tribes of Asiatic origin; but in other cases it may be of later date and due to the influence of the solar religion of Re, which, as we have already said, came into prominence, if not into existence, during the early dynastic times.

Solar Gods, Re or Ra.—That Re was such a local god representing the sun, is generally taken for granted although by no means proven. We cannot assign him to any locality not furnished with another
god of its own. We never find him, like the vast majority of the local gods, associated with a sacred animal, nor is he ever represented with a human figure, except as a substitute for Atum, or as identified with Horus or some other god. His only representative among the pharaohs was the pharos, who in the earliest dynastic monuments appears as his son. Finally, it is difficult to understand how the kings of the southern kingdom, after having extended their rule to the north, should have given up their own patron god, Horus, for a local deity of the conquered land. It looks as if the worship of Re had been inaugurated some time after the union of the two lands, and possibly for political reasons. At all events, the solar religion soon became very popular, and it may be said that to the end it remained the state religion of Egypt. Re, like the other gods, had his legend—or rather myth—exaggerated by the theologians of Heliopolis in connexion with the cosmogonic system of the same school. He had created the world and was king over the earth. In course of time the mortals rebelled against him because he was too old, whereupon he offered their destruction by the goddess of war, but on the presentation of jars of human blood he was satisfied and decided to spare men. Tired of living among them, he took his flight to heaven, where, standing in his sacred bark, he sailed on the celestial ocean. The fixed stars and the planets are so many gods who play the parts of pilot, steersman, and oarsmen. Re rises in the east, conquers the old year, could be no perfect and lasting political unity as long as the various names retained their individual gods.

It is significant that in the only two periods when the pharaohs seem to have had absolute political control of Egypt—viz. from the Fourth to the Fifth and from the Eighteenth to the Twentieth Dynasty—the systems of Re, in the former period, and his Theban form, Ammon-Re, in the latter period, came clearly to the front, while the local religious systems fall into the background. These, however, though they were no more tolerated, seemed to constitute a menace to political unity. The effort of Amenhotep IV to introduce the cult of his own god, Aton (see above), in Dynastic History; Second Period, was perhaps not prompted exclusively by a religious ideal, as is generally believed. A similar attempt in favour of Re and his symbol Horus was perhaps evolved by the Thebans under the name of Heliopolitan Re, from Khafre, second king of the fourth dynasty, to the end of the sixth dynasty, the word Re is a part of the name of almost every one of those kings, and the monuments show that during that period numerous temples were erected to the chief of the Heliopolitan gods, the form of Osiris and combinations of the names of the official religion on the local forms of worship may have caused the disturbances which marked the passage from the fifth to the sixth dynasty and the end of the latter. That such disturbances were not of a merely political nature is clear in the light of the well-known facts that the royal tombs and the temples of that period were violated and plundered, if not destroyed, and that the mortuary statues of several kings, those of Khafre in particular, were found, shattered into fragments, at the bottom of a pit near these pyramids. Evidently Qeb analyst had not been quite as baseless as is assumed by some modern scholars (Maspero, Histoire Ancienne, pp. 78 sq.).

If the foregoing sketch of the Egyptian religion is somewhat obscure, or even produces a self-contradictory effect, this may perhaps be attributed to the fact that the extremely remote periods considered (most of which are prehistoric) are known to us from monuments of later date, where they are reflected in

EGYPT

345

EGYPT
superimposed outlines, comparable to a series of pictures of one person at different stages of life, and in different attitudes and garbs, taken successively on the same photographic plate. The Egyptians were a most conservative people; like other peoples, they were open to new religious concepts, and accepted them, but they never got rid of the older ones, no matter how much the older might conflict with the newer. However, if the writer is not mistaken, two prominent features of their religion are sufficiently clear: first, animal fetishism from beginning to end in a more or less mitigated form; second, superposition, during the early Memphite dynasties, of the sun-worship, the sun being considered not as creator, but as organizer of the world, from an eternally pre-exist-

ing matter, perhaps the forerunner of the demigurges of the Alexandrine School.

(b) The Future Life — As early as the predynastic times the Egyptians believed that man was survived in death by a certain principle of life corresponding to our soul. The nature of this principle, and the conditions on which its survival depended, are illustrated by the monuments of the early dynasties. It was called the ka of the departed, and was imagined as a counterpart of the body it had animated, being of the same sex, remaining throughout its existence of the same age as at the time of death, and having the same needs and wants as the departed had in his lifetime. It endured as long as the body, hence the paramount importance the Egyptians attached to the preservation of the bodies of their dead. They generally buried them in ordinary graves, but always in the dry sand of the desert, where moisture could not affect them; among the higher classes, to whom the privilege of being embalmed was at first restricted, the mummy was sealed in a stone coffin and deposited in a carefully concealed rock-cut vault over which a tomb was built. Hence, also, the presence in the tombs of lifelike statues of the deceased to which the ka might cling, should the mummy happen to meet destruction. But the ka could also die of hunger or thirst, and for this reason food and drink were left with the body at the time of the burial, fresh supplies being deposited from time to time on the top of the grave, or at the entrance of the tomb. The ka, or “double,” as this word is generally interpreted, is confined to the grave or tomb, often called “the house of the ka”. There near the body, it now lives alone in darkness as once, in union with the body, it lived in the sunny world. Toilet articles, weapons against possible enemies, amulets against serpents, are also left in the tomb, together with magic texts and a magic wand which enable it to make use of these necessaries.

Along with the ka, the earliest texts mention other surviving principles of a less material nature, the ba with the kha. Like the ka, the ba resides in the body during man’s life, but after death it is free to wander where it pleases. It was conceived as a bird, and is often represented as such, with a human head. The kha is luminous; it is a spark of the divine intelligence. According to some Egyptologists, it is a mere transformation which the ba undergoes when, in the hereafter, it is found to have been pure and just during lifetime; it is then admitted to the society of the gods; according to others, it is a distinct element residing in the ba. Simultaneously with the concepts of the ba and the kha, the Egyptians developed the concept of a common abode for the departed souls, not unlike the Hades of the Greeks. But their views varied very much, both as to the location of that Hades and as to its nature. It is very likely that, originally, every god of the dead had a Hades of his own; but, as those gods were gradually either identified with Osiris or brought into his shade as secondary infernal deities, the various local concepts of the region of the dead were ultimately merged into the Osiran concept. According to Professor Maspero, the kingdom of Osiris was first thought to be located in one of the islands of the Northern Delta, whither cultivation had not yet extended. But when the sun, to which the realm of the dead was shifted to the region traversed by the sun during the night, wherever that region might be, whether under the earth, as more commonly accepted, or in the far west, in the desert, on the same plane with the world of the living, or in the north-eastern heavens beyond the great sea that surrounds the earth.

As the location, so does the nature of the Osiran Hades seem to have varied with the different schools; and here, unfortunately, as in the case of the Egyptian pantheon, the monuments exhibit different views superimposed on one another. We seem, however, to discern two traditions which we might call the pure Osiris and the Re-Osiris traditions. According to the former tradition the aspiration of all the departed is to be identified with Osiris, and live with him in his kingdom of the Faru, or Yalu, fields—such a paradise as the Egyptian peasant could fancy. There ploughing and reaping are carried on as upon the earth, but with hardly any labour, and the land is so well irrigated by the many branches of another Nile that wheat grows seven eels. All men are equal; all have to answer the call for work without distinction of former rank. Kings and grandees, however, can be spared that light burden by having ushebtis (respondents) placed with them in their tombs. These ushebtis were small statuettes with a magic text which enabled them to impersonate the deceased and answer the call for him.

To procure the admission of the deceased into this realm of happiness his family and friends had to perform over him the same rites as were performed over Osiris by Isis, Nepthys, Horus, and Anubis. Those rites consisted mostly of magical formulae and incantations. The mumification of the body was considered an important condition, as Osiris was supposed to have been mumified. It seems, also, that in the beginning at least, the Osiran doctrine demanded a certain dismemberment of the body previous to all further rites, as the body of Osiris had been dismem-
bered by Set. Possibly, also, this took place in the pre-dynastic times, when the bodies of the dead appear to have been intentionally disembowelled and then put together again for burial (Chantepie de la Sauysse, op. cit., I, 214). At all events Diodorus narrates that the artisans made the first incision on the body and, vi-s-ous to the removal of the viscera had to take to flight immediately after having accomplished his duty, while the mob pretended to drive him away with stones (Diodorus Siculus, I, 91), as though he im-
personated set. This custom, however, of disemboweling bodies may be older than that of the Osirian doctrine, may explain it rather than be explained from it (Chantepie de la Sauysse, op. cit., I, 220). When all the rites had been duly performed the deceased was pronounced Osiris so-and-so—he had been identified with the god Osiris. He could now proceed to the edge of the great river beyond which are the Eura fields. Turn-face, the ferryman, would carry him across, unless the four sons of Horus would bring him a craft to float over, or the hawk of Horus, or the ibis of Thoth, would condensate to transport him on its pinions to his destination. Such were, during the Memphite and Dynastic ages, the conditions on which the parted soul obtained eternal felicity; they were based on ritual rather than on moral purity. It seems, however, that already at that time some texts show the deceased declaring himself, or being pronounced, free of certain sins. In any case, under the twelfth dynasty, the deceased was represented in the Memphite Tombs by a Scarab inscribed with a magical spell which prevented the heart from testifying against the deceased. The concept of retribution implied by the judgment very likely originated with the School of Abydos (see Maspero, "Revue de l'histoire des Religions," I, 305 sqq.).

According to another tradition, which is represented along with the foregoing in the Pyramid Texts, the deceased is ultimately identified not with Osiris himself, but with Re identified with Osiris and his son Horus. His destination is the bark of Re on the eastern horizon, whither he is transported by the same ferryman Turn-face. Once on the sacred bark, the deceased may bid defiance to all dangers and enemies, he enjoys absolute and perfect felicity, leaves the kingdom of Re-Osiris, and follows Re-Horus across the heavens into the region of the living gods. The same concept was resumed by the Theban School. An important variant of this Re-Osiris tradition is to be found in two books due to the Theban Ammon-Re School of theology, the "Book of what there is in the Dust" (Hades) and the "Book of the Gates". In both books the first incision on the body is performed by the sacred serpent, and the darkness is divided into twelve sections corresponding to the twelve hours of night, but in the latter book each section is separated by a gate guarded by gigantic serpents. Some of these sections are presided over by the old gods of the dead, Sokar and Osiris, with the new gods, the gods older than the ancients. The difference between these two books is the concept of a retribution which we now meet clearly expressed for the first time. While the innocent soul, after a series of transforma-
tions, reaches at last, on the extreme limit of the lower world, the bark of Re, where it joins the happy crowd of the gods, the criminal one is submitted to various tortures and finally annihilated (see, however, below under IV).

IV. LITERY MONUMENTS OF ANCIENT EGYPT.—

The earliest specimens of Egyptian literature are the so-called Pyramid Texts engraved on the walls of the pyramids and tombs of the kings of the Fifth Dynasty (Fifth Dynasty) and Teti, Pepi I, Memrie, and Pepi II (Sixth Dynasty). They represent two ancient rituals of the dead, the older of which, as is generally conceded, antedates the dynastic times. The texts concerning to this one are mostly incen-
tations and magic prayers supposed to protect the deceased against serpents and scorpions, thirst, and old age. The gods are made to trans-
it to the deceased the offerings deposited in the tomb; nay, these offerings are so placed in his power that he positively eats and digests them, thus assimilating their strength and other desirable qualities. In these last two features Professor Maspero sees an indica-
tion that although the concept of the ba had already been superposed on that of the ka, when that ritual first came into existence, yet anthropophagous sacri-
fices, if no longer in use, were still fresh in the memory of the Egyptians. This high, probably predynastic, antiquity is confirmed by peculiarities of language and orthography, which in more than one case seem to have puzzled the copyists of the Fifth and Sixth Dynasties [Maspero, in "Revue de l'histoire des religions", XII (1886), pp. 115 sqq.]. The other ritual texts of the Pyramid Tombs, besides the Pyramid Texts, are the Funeral Texts, known already in several recensions and published by Professor E. Schiaparelli (Il libro de' funerali degli Antichi Egitiani, Rome, 1881-2). It is sup-
posed to be the repetition of the rites by which Isis and Horus had animated the mummy of Osiris with the life he had as god before his death. The form of the text consisted in the opening of the mouth and eyes of the mummy, so that the deceased, in his second life, could enjoy the mortuary offerings and guide and express himself in the next world. For the details of this exceedingly interesting ritual we refer the reader to the excellent analysis of Professor Maspero in the "Revue de l'Histoire des Religions" [XV (1887), 158 sqq.]. These two books were very popular with the Egyptians down to the end of the Ptolemaic times, especially the second one, which is profusely illus-
trated in the tomb of Seth I, "The Book of the Dead." This text in antiquity comes the Book of the Dead, the most widely known monument of Egyptian literature. Numerous copies of it are to be found in all the principal museums of Europe. It may be best described as a general illustrated guidebook of the departed soul in Amenti (the Region of the West). There, whatever his belief as to the survival of man in the hereafter, or the location and nature of the region of the dead, the deceased found what he had to do to be admitted, what ordeals he would have to undergo before reaching his destination, what spirits and genii he would have to propitiate, and how to come out of all this victorious. Broadly speaking, the book can be divided into three sections: (1) "Book of the Going Out by Daytime" (cc. i-xvi), a title general-
ly, though wrongly, extended to the whole book; (2) Chapters xxvii-xxxiv: fitting the deceased for admission to the Hall of Justice, which book comprised the dead man's right to, whether by water or overland (xxiii-ci, exii-cxix), and his settlement therein (ciii-cx), without further formality than conciliating the ferryman or the guar-
dian genii with certain incantations and magical prayers recited with the right intonation; in case of deceased believing in retribution, before gain-
ing admission he had to repair to the Hall of Justice, there to be tried by Osiris (cxxii-cxxv); (3) Chapter cxxv to the end: practically another guide-
book for the special profit of the followers of the School of Abydos. It begins with the trial, after which it goes over pretty much the same ground as the con-
mon guide, with variations peculiar to the doctrine of the school. For further details see the masterly review by Maspero of Naville’s edition of the Book of the Dead during the Eighteenth to Twentieth Dynasties, in “Revue de l’histoire des religions,” XV (1887), pp. 209–215. As far as the chapters, from a mythological viewpoint, are perhaps the seventeenth, a compendious summary of what the deceased was supposed to know on the nature of the gods with whom he was to identify himself, and the one hundred and twenty-fifth, where, along with the dissertation of forty-two odes, we find also an enumeration of several gods, are borrowed according to his own belief (in Budge, “Egypt’s Place in Universal History,” V, 66–83) and Piffret (Le Livre des Morts des Anciens Egyptiens, Paris, 1882) are based on that edition. In 1886 E. Naville published a critical edition of the Theban recension, “Das ägyptische Todtenbuch der XVIII bis XX. Dynastie” (Berlin, 1886). In 1901 Dr. E. A. W. Budge published a translation of that same recension, but augmented with a considerable number of chapters (in all, 160) from the new Theban manuscripts and 16 chapters from the Saitic recension (The Book of the Dead, London, 1901). For further bibliographical details see Budge, “The Papyrus of Ani” (London, 1895, 371 sqq.).

Substitutes for the Book of the Dead.—Other books similar in scope to the Book of the Dead, and often substituted for it in tombs, are: (1) “The Book of the Respirations communicated by Isis to her brother Osiris to restore a new life to his soul and body and renew all his limbs, so that he may reach the horizon with his father Re, and his soul may rise to the heavens in the disk of the moon, and his body shine in the stars of Orion on the bosom of Nut; in order that this may also happen to the Osiris N.” This book has some similarity only with the incantations of the Dead, and priests and priestesses of Amun-Re. It not only makes allusion to the formula and acts by means of which the resurrection is effected, but also treaties of the life after death (tr. by P. J. Horrocks in “Records of the Past”, IV, 119 sqq.). A variation of this book under the title of “Another Chapter of Coming Forth by Day, in order not to let him [the deceased] absorb impurities in the necropolis, but to let him drink truth, eat truth, accomplish all transformations he may please, to restore a new life” etc. (as above) was published by Wiedemann in “Denk-Texte für den Museen zu Berlin u. Paris” (Leipzig, 1879). (2) “The Lamentations of Isis and Nephthys” (tr. by Horrocks, op. cit., II, 117 sqq.). (3) “The Book of the Glorification of Osiris”, a variation of the preceding, published by Piffret from a Louvre papyrus. (4) The “Book of the Wandering of Eternity”, published by Bergmann, “Das Bluten-Gang der Seele” in “Sitzungsber. d. K. K. Ak. d. Wiss. in Wien” (1882).

Mythological Compositions.—A different group of funeral books is represented by certain mythological compositions. They consist principally of figures relating to the various diurnal and nocturnal phases of the sun, accompanied with explanatory legends. The oldest of such compositions can be assigned to the Eighteenth Dynasty, and refers to both the daily and nightly courses of the sun, the two being often combined in one picture in two sections. In later times the nocturnal aspect of the sun prevails, and the composition becomes more and more funereal in character and scope, until the diurnal solar symbols disappear almost entirely (see Devéria, “Catalogue,” etc., pp. 1–13). Several of the figures are borrowed from the Book of the Dead.

Book of the Duat.—Closely related to these mythological compositions is the “Book of what there is in the Duat” (or Lower Hemisphere, as commonly, though perhaps wrongly, understood. See below, under Astronomy). It consists of a hieroglyphic text with numerous mythological or symbolical illustrations describing the nocturnal navigation of the sun (represented as the ram-headed god Chnum) on the river Uernes (cf. the Oypasos of the Greeks) during the twelve hours of night, through as many halls. To each hall corresponds one of the successive modifications through which the deceased is supposed to be brought back from death to a new life. Such modifications are effected by the deities in charge of the various halls, who, in addition, contribute, either by towing or in other more mysterious ways, to the progress of the solar bark on the Uernes, typifying that of the solar regeneration. However, this process of regeneration is not accomplished in Chnum himself but in the god Sokar, who plays the part of the dead sun. The deceased, who is never mentioned by his name, appears as a mere figurant, or rather an onlooker. All those who take part in the action seem to be permanently settled in the Duat, with no other apparent purpose than to play their own parts on the passage of the solar bark. This is the case even with the damned, who, when the time of retribution comes at the end of the tenth, and during the eleventh, hour, impersonate the enemies of Osiris, and for the time being are submitted to atrocious torments and even annihilated. Whether one is justified, as generally granted, in seeing in this last point a proof that the Egyptians as a people believed in eternal retribution, does not appear quite certain if we consider the highly mystical character of that book, the understanding of which was the privilege of a few initiated. For further details see the introduction to and the analysis of that book by Devéria (“Catalogue,” etc., pp. 15–39. See also Jéquier, “Livre de ce qu’il y a dans l’Hâdès”, Paris, 1804).

Ritual of the Embalming.—To close the above remarks on the funerary books we mention the Ritual of Embalming, published by Professor Maspero (Notices et Extraits des Manuscrits etc., t. XXIV, Paris, 1802).

Liturgies.—The religion of the living, if we may so express ourselves, is far from being as largely repre-
presented in Egyptian literature as that of the dead. Yet we have a few important works such as the ritual, or rather the liturgy, of Osiris in his temple at Abydos, of which an illustrated edition has been preserved on the walls of that temple (published by Moret, “Le Rituel dédié du divin Jouster en Egypte”); and the liturgy of the Amon-worship contained in a Berlin papyrus (O. v. Lemm, Ritualbuch des Amon-dienstes, 1828). The Litany of the Sun has been translated by Naville, in “Records of the Past,” VIII, 103 sqq.; also a fragment of the Legend of Re to which we have already alluded (op. cit. 103 sqq.) and several hymns to Osiris (op. cit., New Series, IV, 17 sqq.), the Nile (op. cit., New Series, III, 46 sqq.), and Amon-Re (in Maspéro, “Histoire ancienne”, pp. 328 sqq.; Grébaut, “Hymnes à Amenon-Ra”, Paris, 1875; cf. Stern in “Zeitschrift für ägyptische Kunstgeschichte”); and Brugsch, “Religion u. Mythologie der alten Aegypter”, Leipzig, 1885, pp. 690 sqq.). From the point of view of composition and style these hymns are the most remarkable literary products of ancient Egypt, as they are the most striking specimens of the monothetic tendencies which were developed under the Eighteenth and Nineteenth Dynasties as a result of the political supremacy of Thebes. Not less noteworthy are the hymns composed by Amenophis IV in honour of his sole god Aton (see the specimen published by Breasted, “History of the Egyptophiles”, pp. 273 sqq.).

Several Egyptian literary compositions of a moral nature have reached us. The two oldest are attributed to Kagemen, vizier of King Snefru, and Ptahottep, vizier and chief judge under King Iesi, last but one of the fifth dynasty. Both compositions, preserved in a manuscript of the Twelfth Dynasty, contain a collection of apothegms, or wise sayings, which contain a rather positive and practical nature, as “A slight failure is enough to make vile a great man” (Kagemen), or “A wise son shall be happy on account of his obedience; he shall grow old and get favour”. If you are a wise man, fix your home pleasantly, love your wife, do not quarrel with her, give her food and jewels, because this makes her come, give her perfume and pleasures during your life. She is a treasure which must be worthy of its owner” (Ptahottep). Under the Twelfth Dynasty we have the teaching of Amenemhet, where the old Egyptian language gives way to the new successor, Ausetesen, against placing too much confidence in, and being too intimate with, those around him, exemplifying his teaching from his own experience (translated in “Records of the Past”, II, p. 9 sqq.). Of a much higher order and wider scope are the counsels that Ani, a scribe of the Nineteenth Dynasty, gives to his son Khons-Hotep: “Let thine eye observe the deeds of God; it is he who strikes whatsoever is stricken. Piety to the gods is the highest virtue”; “It is I who gave thee to thy mother, but it is she that bore thee and while she was carrying thee she suffered many pains. When the time of her delivery arrived thou wert born and she carried thee like the veriest yoke, her lap in thy mouth, for three years. Thou didst grow, and thy filthiness never so far disgusted her as to make her cry out: ‘Oh! what am I doing?’ Thou wert sent to thy mother, and she again with the very day, bringing thee meat and drink from home. Thou didst take a house and wife of thine own, but never forget the pains of childhood thou didst cost to thy mother; give her not cause to complain of thee, lest perchance she lift up her hands to the gods, and they may smite this in mind whenever thou hast to make a decision: Even as the most aged die thou also shalt lie down among them. There is no exception; even for him whose life is without blame, the same lot awaits him as well. Thy death-messenger will come to thee too, to carry thee away. Discontent will avail thee nothing, for he is coming, yea, he is ready even now. Do not begin to say: ‘I am still but a child, I whom thou takest off.’ Thou knowest not how thou shalt die. Death comes to the sucking babe; yea, to him who is yet in the womb, as well as to the old, old man. See, I tell thee things for thy good, which thou shalt perhaps ponder in thy heart in Egypt” (tr. of Chabas, “L’Egyptologie”, Paris, 1876-8).

History.—Egyptian historical literature is somewhat illustrated from what we have said of the sources of chronology (see above, II, subsection Chronology). There is a sharp contrast with that which generally characterizes such documents, the so-called prose-poem of Pentaur stands alone so far. Pentaur is the name of the copyist, not of the author, as was long believed. Its subject is an episode of the famous campaign of Ramses II against the Hittites. When taken by surprise he, with only the household troops and a few officers who happened to be there, bravely charged the van of the enemy who were in pursuit of his defeated army, and so brilliantly successful was he that the rout was turned into a victory. The work displays a good deal of literary skill and is the nearest that can be found among the ancient Egyptians’ compositions. The first dynasty is left out of our book, for it was but a scanty series of kings, usually driven to flight by the Hittites. The noblest form of ancient Egyptian historical literature and the most important historical document of that time (Breasted, “Anc. Rec. of Egypt”, I, 134 sqq.); (2) the famous stele of Piankhi (see above, II, under Dynamic History; Second Period) which Professor Breasted calls the clearest and most rational account of the history of ancient Egypt, (Breasted, “Hist. of the Anc. Egyptians”, 320; cf. Maspéro, “Hist. Anc.”, 272 sqq.). Not less remarkable, perhaps, although less pretentious in point of style are: (1) the long autobiography of Uni, under three successive kings, (see above, II, under Dynamic History; Second Period) which Professor Breasted calls the clearest and most rational account of the history of ancient Egypt (Breasted, “Hist. of the Anc. Egyptians”, 370); (3) the great Papyrus Harris, a huge roll one hundred and thirty feet long, the longest document from the Early Orient. It contains an enormous inventory of the gifts of Ramses III to the three chief divinities of Egypt, a statement of his achievements abroad, and his benefactions to his people at home (op. cit., 347).

Fiction.—If history proper is not more largely represented in Egyptian literature, it is because its naturally positive and dry character, which is the structure of Egyptian life that is deficient in this respect. The Egyptian mind was not in harmony with the highly imaginative Egyptian mind. No doubt the Egyptians were proud of their kings; but from one end of the country to the other the rivers and the Nile flowed, and the walls of the temple, which were carved with scenes in gorgeous inscriptions and reliefs. That was all the history they needed. It furnished them with historical outlines which their fertile imaginations filled out with stories or tales after their own taste, tales in the style of the “Arabian Nights”; or tales after their own taste, tales in the style of the “Arabian Nights”, where only a few tales filled out with stories or tales after their own taste, tales in the style of the “Arabian Nights”, where only a few tales
change of fortune, as in the case of Sinuhet, Twelfth Dynasty, or in some clever stratagem, as in "How Thutiy captured Joppa", Twentieth Dynasty, and in the story of Ramsesnit (Herod., I, 121), Suite times. The "dramatis personae" of such tales and stories are often personified, the god or the royal person himself not infrequently playing the principal part; and the names which they bear, as a rule, are real historic names, so that in some cases it is not clear, at first sight, whether one has to deal with history or with fiction. More frequently, however, the names have been selected at random, sometimes from proper names, sometimes from the "personae" or even from popular nicknames. Moreover, chronology, as usual in popular fiction, is grossly disregarded. In the story of "Satni-Khâmûn", for instance, Menepthah, instead of appearing as the brother of the hero, is alluded to as a remote predecessor of Ramesses II (Usarmi of the tale, a "praenomen of Rameses II in his youth"). This literature of historical fiction was evidently very popular in Egypt at all times and in all classes of society. That it was chiefly from this source that Herodotus collected most of his notices concerning the ancient kings of Egypt is evident from the chronological confusion and the great many wrong names, "praenomina" which prevail in his writings. See on this all-important point the very interesting introduction of Prof. Maspero to his "Contes populaires de l'ancienne Egypte" (3d ed., Paris, 1903).

The Egyptian astronomers have no special treatise on astronomy written by ancient Egyptians in book form. They dealt, however, with the seasons and tombs especially, giving us a fair idea of their astronomical knowledge. On the whole, their notions were rather elementary. They knew the zodiac and the principal constellations, and had special names for Orion (Saoun) and Osiris (Saupel), the former being at the latter to Isis, and for the thirty-six decom which prevailed over the thirty-six decades of the year. They had compiled tables of the risings and settings of the great many, if not all, of the stars visible to the naked eye. They knew the difference between fixed stars and planets, and the apparently retrograde motion of Mars at certain periods of the year had not escaped their attention. Beyond this they knew probably little or nothing (see Ginzel, "Handbuch der mathematischen u. technischen Chronologie", I, 153).

We have seen above (I, subsection Chronology) how the Egyptians used what they knew of astronomy for the division of time and its computation. They fancied the earth round and flat, surrounded with mountains beyond which flowed a large river which they called Uerne (cf. the Ópeavl of the Greeks). At the four cardinal points the mountains rose higher and supported the celestial vaults, which they imagined as solid, although transparent. Over this vault flowed the celestial waters on which the sun, and the moon, and the stars floated in banks. The sun at the end of every day went out through the western mountains, and ended on the Uerne first northward, then southward to the mountain of the east, where he entered our world again through a large gate. Egyptian mythology saw in the celestial vault an immense cow (Hathor), or a woman, the goddess Nuit, whom shu (the atmosphere) had separated from her husband Geb, or Seb (the earth), and who brought forth the sun every morning, and swallowed it every evening. Maspero in "Revue de l'Histoire des Religions", XV, 239 sqq.) the many representations of the celestial vault in tombs and on the inner sides of the lids of sarcofagi are purely mythological (op. cit., I, 151).

Our earliest Egyptian treatise on mathematics is the Rhind Papyrus of the British Museum ed. Eisenlohr, Ein mathematisches Handbuch der alten Ägypter, 1877; L. Rodet in Jour. de la Soc. Math. de France, VI (1878), 130 sqq.; it dates back to the Nineteenth Dynasty. It contains: (a) several theorems of plane geometry with rules for measuring solids; (b) a manual of the calculator on a purely arithmetical basis, not algebraic (Rodet in Jour. Asiatique (1881), XVIII, 184 sq., 390 sq.). The numerical system was decimal, and contained figures which, like the symbols of the figures were repeated as many times as contained in the number to be expressed. With the exception of two-thirds, the only fractions which they could write with one sign were those having 1 as numerator.

**Astrology.**—Among the documents belonging to this science the most important is a fragmentary astronomical calendar (British Museum) written at the time of the Nineteenth Dynasty. It contains a list of the things which it is proper to do or to avoid on each day of the year. The reason why such a day was fas or nefes was ordinarily taken from some mythological tradition. The Greeks and Romans were not ignorant of this science, but the name "Egyptian days" (diai Egyptian), by which they designated it, shows clearly that they borrowed it from Egypt.

**Medicine.**—The Museum of Berlin preserves a copy of an Egyptian treatise on medicine, said to have been completed by, or at least under, Kings of the First and Second Dynasties. There is besides, the University Library of Leipzig, a papyrus commonly known as the Ebers Papyrus containing a copy (Eighteenth Dynasty) of another treatise attributed to King Cheops of the Fourth Dynasty. From these two documents and others of lesser importance we may infer that the Egyptians knew little about this science, as, for religious reasons, they were not allowed to study anatomy. Practical medicine on the other hand, was so far developed among them that the Egyptian physicians were those most highly esteemed by the Greeks and Romans. The names given to diseases are not always available; but the description of its symptoms is often sufficiently detailed to enable a physician to identify them. Pharmaceutical science was still more advanced. Four kinds of remedies are to be found in the recipes: ointments, potions, plasters, elixirs; they were usually taken from vegetables, sometimes from minerals (as sulphate of copper, salt, nitre, memphis stone); the raw flesh, blood (fresh or dried up), hair, and horn of animals were also used, especially to reduce inflammations. The elements of such remedies were first washed, boiled, and strained, then diluted with water or with beer. The names of these substances are given in the treatise on Chronology, and even human urine. But the Egyptians believed that not all diseases were of natural origin; some were caused by evil spirits who obsessed the patients.

For Egyptian Art see Temple.

(a corruption of Gr. Ἀγάντων). The Arab conquerors thus designated the old inhabitants of Egypt (in vast majority followers of Dioscorus) in contradistinction both to themselves and to the Melchites of Greek origin and language who were still in communion with the Coptic Church, but have since drifted within the orbit of the so-called Orthodox, i.e. schismatic Greek Church. A general article on the Coptic Church will be found under ALEXANDRIA, THE CHURCH OF. Special features of importance are treated under the titles ALEXANDRIA, COUNCILS OF; Gnosticism; Monasticon; Panarion; Sacerdotal; Versions; Writings of the Bible. See also Athanasius; Cyril of Alexandria; Dionysius of Alexandria; Mark; Theophilus, Patriarch of Alexandria; Clement of Alexandria; Origen; Dioscorus; Melchites; Missions. In the present article we shall treat in particular of the origins and constitution of the Coptic Church, especially the question of its episcopate, to the Council of Nicea (325). We shall close with a short sketch of the present condition of both the Jacobite and the Uniat branches of the Coptic Church, chiefly from the point of view of their organization.

Christianity in Egypt.—We have no direct evidence of Christianity having existed in Egypt until Clement of Alexandria (A.D. 150-200) when it had already spread over the land. What we know of the Church of Egypt before that time is exclusively through inferences or unconfirmed traditions preserved gradually by Eusebius. It may infer the existence of Christianity in Egypt during the second century from the fact that under Trajan a Greek version of the "Gospel according to the Hebrews" was being circulated there (Duchesne, Histoire Ancienne de l'Eglise, I, 120). We know that this Gospel, like the Jewish-Christian baptism which it shows that the Jewish Christians and Gentile Christians of the same date of another Christian community, recruited from among the Gentiles. This, presumably, followed another Gospel which Clement of Alexandria calls "the Gospel according to the Egyptians" (On the Gospel of the Egyptians, see Harnack, Chronologie der alchristlichen Litteratur, I, 1, pp. 612-22 on the Gospel of the Hebrews, ibid., pp. 631-49.) This writer quotes it along with the "Gospel according to the Hebrews". However, he clearly distinguishes both from the canonical Gospels, which show that these and other relics of the past, or at least were old enough to be entitled to some consideration in spite of their uncanonical character. Some writers, as Bardenhewer (Geschichte der alchristlichen Litteratur, I, 337), think that the "Gospel according to the Egyptians" owed its name to its diffusion among the Egyptians throughout the land, in contradistinction to some other Gospel, canonical or uncanonical, in use in Alexandria. In this case we might conclude furthermore to the existence of a third Christian community, consisting of native Egyptians, as it is difficult, to suppose that two Hellenistic communities would have used two different Gospels. But we have no evidence of a native Church having existed at as early a period as suggested by the elimination of the Gospel of the Egyptians from the canon at the time of Clement of Alexandria.

It is certain, however, that Christianity at an early date in Egypt is, indirectly at least, attested by the activity of the Gnostic schools in that country in the third and fourth decades of the second century. Eusebius is authority that "Basilides the heresiarch," founder of one of these schools, came into prominence in the year 150 and that he set up "the school of Basilides". Clement of Alexandria, Carpocterus, belong to the same period. Valentinus had already moved to Rome in 140, under the pontificate of Pope Hyginus (Irenaeus, Adv. Her., III, iv, 3), after having preached his doctrines in Egypt, his native country. As Duchesne (op. cit., I, 391) well remarks, one cannot believe that these heretical manifestations represent all the Alexandrine Christianity. These schools, precisely because they are nothing but schools, suppose a Church, "the Great Church", as Celsius calls it; such aberrations, precisely because labelled with their authors' names, testify to the existence of a Church, as())->Eusebius, to the effect that Christianity was first introduced in Egypt by St. Mark the Evangelist in the third year of Claudius (A.D. 43), only one year after St. Peter established his see in Rome, and one year before Evodius had been raised to the See of Antioch. He preached there the Gospel and founded Churches in Alexandria. Little is added by
Eusebius, viz., that, according to Clement of Alexandria, Mark had come to Rome with St. Peter (probably after Agrippa's death in 44), and that, according to Papias, after Peter's death (probably 64), Mark had written there the Gospel that bears his name (see Har- 
nam's note). This is just related. The apostolate and death of St. Mark, have been handed down mostly by the Oriental compilers of chronicles. They are strongly legendary and often conflict with one another and with the Eusebian traditions. In more than one instance they seem to have originated from a misunder-
standing of Eusebius's text, of which we know there was a Coptic translation, or from an effort to harmonize or supplement the traditions reported (but not confirmed) by that writer. Until these Oriental sources have been critically edited and their chronol-
gy brought out of its chaotic state, it is impossible to make them to any determinable purpose.

It seems, however, certain (1) that St. Mark died a martyr, though the constant tradition that his martyrdom was on Easter Day and on the 24th or 25th of April seems to be worthless, seeing that from the year 15 to the end of the first century Easter never fell on either of these dates; (2) that, however, the Gospel was composed in Egypt to go (or to return) to the Pentapolis. St. Mark had appointed Anianus his successor several years prior to his own death. Severus of Nesteraweh, a bishop of the ninth century, says that it was seven years before his martyrdom. It is remarkable that liable, while stating that Anianus succeeded St. Mark in the eighth year of Nero (A.D. 62–3), does not mention Mark's death (as in the case of St. Peter). Probably he had found no tradition on that point. The fact, however, that he gives Anianus as the first Bishop of Alexandria shows that, in his mind, the two events were not contemporaneous. For if Anianus had taken possession of the see on St. Mark's death he would have been the second, and not the first, bishop. There is some reason to suspect the correctness of the traditions transmitted by Julius Africanus through Eunapius. The round number of ten is, to a period of which we otherwise know nothing, the fact that in every case the pontificate consisted of complete years only without extra months and days, the further fact that we find in that short list two pontificates of ten years, two of eleven, two of twelve, two of thirteen, which seems to indicate that the other two originally were fourteen years each—all this might suggest that the list of Julius Africanus is to some extent at least artificial, and based on a number of twelve years for each pontificate, giving a sum total of one hundred and twenty years for the list. One might surmise that the list was originally supposed to start from St. Mark's death, and that later on the enthronement of Anianus was taken as its beginning, his pontificate being, as a consequence, increased by from four to eight years. Nor is it, perhaps, entirely fortuitous that the different recensions of the "Chronicon Orientale," Armenian recension, for instance, should so very near 144 years (12 x 12) from St. Mark's arrival in Egypt to Demetrius. It would not be difficult to find other instances of chronologies of predocumentary times thus artificially rounded out on the basis of the numbers ten and twelve.

But, perhaps, a relic of an entirely different tradition in a remark to be found in the "Chronicon Orientale" of Peter Ibn Ruhib, namely, that after the pontificate of Anianus there was a vacancy of three years, owing to the destruction of the Temple of Jerusalem under Titus. If we had not the list of Julius Africanus, such a statement might not seem devoid of plausibility. As we have seen before, the first Christian community of Alexandria consisted chiefly of Jews, and we should naturally suppose that its first pastors were chosen from among the Jews. At any rate they were regarded as Jews by the Government, and the Jews were, indeed, much more persecuted. But it is known that, when the Temple of Jerusalem, Vespasian adopted measures of extreme rigour against the Jewish population of Egypt, lest they should try to make their temple of Leontopolis the national centre of their race, and thus defeat his very purpose in wiping out of existence the temple of Jerusalem, it was not until A.D. 73, when this obnoxious temple was, in its turn, destroyed, that the persecution ceased, and the Jews were restored to their former privilege of free worship. Supposing that the predecessor of Abilius died A.D. 70, it would ap-
pear likely enough that the see should have remained vacant during the time of the persecution.

3. Nature of Early Episcopate.—There is much dis-
sussion as to the nature of the early episcopate of Egypt.

Tradition seems to point to a collective episcopate con-
sisting of twelve presbyters with a bishop at their head. St. Jerome, in a letter to Evangelus (P. L., XXII, 264), insists on this as the "true order of the patricians." The period for which this is given is from St. Mark's time to the end of the first century. The presbyters of Alexandria used to call bishop one they elected from among themselves and raised to a higher standing, just as the high priest makes an emergency appointment to the office of a missing archpriest, one from their own body whom they know to be of active habits." This is confirmed by: (1) A passage of a letter of Severus of Antioch, written from Egypt between 514 and 538. Speaking of a certain Dasias who added an ancient canon to prove the validity of his episcopal ordination, although performed by a single bishop, Severus says: "It was also customary for the bishop of the city famous for the orthodoxy of its faith, the city of the Alexandrians, to be appointed by priests. Later, however, in agreement with a canon which obtained everywhere, the sacramental institution of their bishop took place by the hands of the bishops." (2) A passage of the annals of Eutychius, Mofhite Patriarch of Alexandria who flourished in the early decades of the tenth century: "St. Mark along with Ananius [Anianus] made twelve priests to be with the patriarch; so that when this should be wanting, they might elect one out of the other eleven, and the remaining eleven should lay their hands upon his head and bless him and appoint him patriarch; and should after this choose a man of note and make him priest with them in the place of the one who had been made patriarch from among the twelve priests, in such sort that they should always be twelve. This custom, that the priests of Alexandria should appoint the patriarch from the twelve priests, did not come to an end till the time of Alexander Patriarch of Alexandria, one of the three hundred and eighteen [the Fathers of Nicea] who forbade the presbyters [in the future] to appoint the patriarch, but decreed that on the death of the patriarch the bishops should convene and appoint the patriarch, and he furthermore decreed that on the death of the patriarch they should elect a man of note from whosoever place, from among those twelve priests or not appoint him [cf. from the Arabic text ed. Cheikho, in "Corpus Script. Christ. Orientalium; Scriptores Arabici," Ser. III, tom. VI, 95, 96]. Finally, we read in the apothegms of the Egyptian monk Psemen (Butler, "Lives of the Fathers of the Church") that certain heretics came to Psemen and desired the Archbishops of Alexandria as having ordination (episcopalia) from them. Psemen did not answer, but he said to the brothers: "Prepare the table, make them eat, and dismiss them in peace." It is generally supposed that the heretics in question were Arians and really intended to make Psemen believe that the then Archbishop of Alexandria had been

ordained by priests, and St. Athanasius is supposed to have been that archbishop. Now, as it is a well-known fact that St. Athanasius was consecrated by bishops, that accusation is considered one of the many calumnies the Arians used to spread against him. If this interpretation be true, the Lausiac text should add nothing for the nature of the early Alexandrian episcopate. But it seems highly improbable that the Arians should have dared to assert what everyone in Egypt in the least familiar with contemporary events, must have known to be false. In fact the Lausiac text is capable of a more plausible interpretation, viz., that the episcopal character of the Archbishop of Alexandria was to be traced to simple presbyters, while in other Churches the Apostolic succession had been transmitted from the very beginning through an uninterrupted line of bishops. In this case the Lausiac would be the oldest witness of the tradition transmitted by Jerome, Severus, and Eutychius, for Ptolemaios flourished in the first half of the fifth century (Dict. Christ. Biog., s. v.), or even as early as the latter half of the fourth century, if Charles Gore is right in his argument that Rufinus visited that holy bishop (Journal of Theological Studies (JTS), 2d ed., II, 133, n. 3). Moreover, that the bishops of Alexandria were originally not elected, but also appointed, by presbyters is, indirectly at least, confirmed by another tradition for which Eutychius is authority, viz., that, till Demetrius there was no other bishop in Egypt, and the Bishop of Alexandria was appointed by the synod of priests (cf. Sellaris (Hist. Chron. Patr. Alex., 8° = 108) and others, but we shall see in the following section that their reasons are not conclusive (cf. Harnack, "Missa u. Ausbreitung", 2d ed., II, 133, n. 3). The tradition that the early Bishops of Alexandria were appointed by the synod of presbyters is therefore, if not certain, at least highly probable. On the other hand it seems almost certain that that custom came to an end much earlier than Eutychius, or even Jerome, would have it. Significant is the fact that they disagree on the term or ad quem; still more significant that Severus of Antioch is silent on that point. Besides, several passages of the works of Origines and Clement of Alexandria can hardly be understood without supposing that the mode of episcopal election and ordination was then the same as throughout the rest of the Christian world (see Cabrol in his "Dict. d'archéologie chrét."); s. v. Alexandria: Election du Patriarche.

We may not dismiss the question without recalling the use which Presbyterians, since Selden, have made of that tradition to uphold their views on the early organization of the Church. It suffices to say that their theory rests, after all, on the gratuitous assumption (to put it as mildly as possible) that the presbyters who used to elect the Bishop of Alexandria, were priests as understood in the now current meaning of this word. Such is not the tradition, according to Eutychius himself, Selden's chief authority, the privilege of patriarchal election was vested not in the priests in general, but in a college of twelve priests on whom that power had been conferred by St. Mark. They were in that sense an episcopal college. Later on, when it became necessary to establish resident bishops, the station in question was filled by a bishop who had been selected from the college of presbyters, while still retaining their former quality of members of the episcopal college. So that, little by little, the power of patriarchal election passed into the hands of regular bishops. The transfer would have been gradual and natural, had the Lausiac text been true, the Lausiac text is silent about it in that case all certainly would have taken part in the election. Besides, if Cedalon's predecessor had called a synod or council, Severus, or the author from whom he borrowed that message biography, would not have failed to swell the list of representatives. There seems to be no other solution than to see in that synod a body of presbyters or delegated bishops who were habitually in residence in Alexandria, but some of them, being on the mission, were not able to take part in the election. There was, therefore, under the archbishop of Alexandria a body of clergy which were called bishops, and yet had no ordinary jurisdiction, as is evidenced, first, by the express statement in Cedalon's case and, secondly, by the fact that they usually resided in Alexandria, as stated or implied in the other two cases. Such a body of men the twelve presbyters of Eutychius must have been; so that
those three passages, far from contradicting Eutychius’s testimony, rather confirm it. We find, however, a more direct confirmation of Eutychius’s statement in another, so far equally misinterpreted, passage of Severus. In the biography of Julian, the immediate successor of Diocletian, we read: “His father, the Patriarch of Alexandria, did not remain always there, but he used to go out secretly and organize the hierarchy [yauism kahanat, literally, “ordain clergy”], as St. Mark the Evangelist had done.”

The same remark is to be found in the “Chronicon Orientale” of Peter Ibn Rabih, with the variation, “No bishop always remained in Alexandria”; and the omission of the last words “as St. Mark” etc. We know that the words yauism kahanat have been so far rendered “ordinationes sacerdotum faciabat” (Renaudot, Hist. Patr. Alexandr., p. 181), “ordained priests” (Evett, “Hist. of the Patriarchs of the Cop- tic Church of Alexandria” in Graffin-Nau’s “Patrologia Orientalis”, i, 154). There is no doubt, however, that the word kahanat (plur. of kabin) as a rule stands for bishops and deacons as well as for priests. That it really is so in this case is made clear from a comparison with the Severian version of the same episcopate of the life of St. Mark. The author of the second biography in Severus’s work says that the Evangelist, seeing that the people of Alexandria were plotting against his life, went out from their city (secretly, adds Severus of Nesteraweh, Bargis, op. cit., p. 56) and returned to Pentapolis, where he “appointed bishops, priests, and deacons in all its provinces.” The Melchite Martyrology of Alexandria, under 25 April, says that St. Mark went from Alexandria to Barca (Pentapolis) and beautified the churches of Christ, “instituting bishops and the rest of the clergy of that country. It is evident that in the mind of the author of the latter passage kahanat, on the one hand, and “bishops, priests, and deacons”, on the other, are interchangeable.” Finally, in the “Chronicon Orientale”, where the same episode of St. Mark’s life is related, we find simply: “appointing clergy [kahanat] for them”, without special mention of the bishops.

And the argument will appear all the more convincing if we notice that the remark of Julian’s biography must have had in view the labours of St. Mark in the Pentapolis, when he added “as St. Mark the Evangelist had done”, for neither the Oriental nor the Severian sources mention the ordinations performed by St. Mark outside of Alexandria.

Before we dismiss this interesting passage of Julian’s biography, let us call attention to another detail of it. The patriarch is styled simply the Bishop of Alexandria, which shows that the source from which the remark was borrowed must belong to a time when the expressions archbishop and patriarch had not yet come into use. It may, therefore, be considered as absolutely certain that, according to all the Oriental sources, there was from the times of St. Mark to Julian’s death only one diocese in the whole territory of Egypt proper, namely, the Diocese of Alexandria, and only one bishop, the Bishop of Alexandria. That bishop was assisted by a college of presbyters. These were bishops to all intents and purposes, excepting jurisdiction, which they had by delegation only. If Eutychius calls them presbyters, it is because he found that word in the source he was using, possibly the very same in which the author of Julian’s biography found the word bishop used to designate the patriarch. In the “Lives of the Patriarchs” by Severus of Asmunein, they called bishops, in agreement with the current usage of the time, when these biographies were first written. On so much the Oriental sources agree, and substantially they confirm the traditions preserved by St. Jerome and Severus of Antioch. They disagree as to the number of presbyters created by St. Mark; Makrizi, who probably copied Eutychius, gives the same number (twelve) and does not speak of deacons. Severus’s second biography of St. Mark, Al-Makin, and the “Chronicon Orientale” say three presbyters and seven deacons. According to Severus of Nesteraweh, St. Mark “ordained the sons of Ananias, who were the clergy of Aquantiaca.” Although we have no means of determining, to what extent Christianity had spread over Egyptian territory during the first two centuries of our era, there is hardly any doubt that the number of communities, as well as the area over which they were scattered, very much exceeded the proportions of an ordinary diocese of the primitive Church. Christianity, says Clement of Alexandria (Strom., vi, xviii, 107), has spread πάνω μέρος καὶ κάθε ἐν πανίν παρανά, i.e. whole houses and families have embraced the faith, which has found adherents in all classes of society. And this statement is borne out by Eusebius (Hist. Eccl., vi, 1), who says that in the year 202, during the reign of Emperor Elagabalus, he went to Alexandria, for trial ἀρχειοντα καὶ ἕναἰδιον ἀνάτομα. It would seem that under ordinary circumstances there must have been a call for an ordinary resident bishop at least in each of the three great provinces of Heptanomis (Middle Egypt), Thébaïs (Upper Egypt), and Diesis (the Fayum).

But in Egypt, as elsewhere, the Church in its infancy naturally copied the political organization of the country, and Egypt, in that respect, was entirely different from the rest of the Roman Empire. Rome, or rather Augustus, in taking possession of Egypt as his personal spoil, took in almost bodily the old political organization created by the Pharaons and strengthened and the Ptolemies, simply replacing the king by a prefect in whom, as his representative, all authority, judicial and military, was vested. That organization was characterized by the total absence of municipal institutions; no organized cities, as in the rest of the Roman Empire, no magistrates elected by a senate and governing in its name. The country was divided, as of old, into nomes, each of which was administered by a strategos (formerly, nomarch) under the prefect, though occasionally two nomes were temporally united under a further inferior strategos, or one nome was divided between two strategos. The strategoi appointed all subaltern officials throughout the nome, subject to approval from the prefect, and transmitted to them his orders. In judicial matters they could initiate proceedings, but could deliver judgment only when specially empowered as delegates of the prefect. In each village there was a council of elders who acted as intermediaries for the payment of taxes, and were held responsible to the authorities of the nome for the good order of their fellow villagers; they had, however, no authority except by way of delegation.

In Alexandria there was no exact parallel. The authority of the strategos extended to the whole nome, and was transferred to the city by the prefect until the reign of Septimius Severus that the city was granted a senate, and even then the citizens were not permitted to elect their own magistrates. The situation was probably the same in other cities which at a still later period secured the privilege of a senate. For convenience’ sake the Ptolemies had grouped the nomes of Upper Egypt into one province governed by an epistrategos: the Romans at first did the same for the nomes of Middle Egypt (including the Arsinoite nome, the modern Fayum) and the Delta, or Lower Egypt. But this and other later arrangements of the nomes into provinces serves only to show the old organization of the country. The epistrategoi were the usual delegates for many of the powers nominally exercised by the prefect. They appointed the strategoi and other local officials, subject to confirmation by the prefect. In a general way they acted as intermedi-
aries for the transmission to the authorities of the nome of the orders issued by the prefect (Miline, p. 4–6). In each nome there was a metropolis which was the residence of the strategos and, as such, the political centre of the nome. It was a religious centre as well, and it was also the chief sanctuary of the sacred revenue of the whole nome. The chief priest in charge of that sanctuary naturally ruled in religious matters over all the secondary temples scattered throughout the territory of the nome. There was in Alexandria a "High-Priest of Alexandria and all Egypt," appointed by the emperor, and probably a Roman, like the prefect, whom he depended and whose substitute he was in religious matters. He had supreme authority over the priests and control of the temple treasures all over Egypt. In course of time, particularly under Diocletian, several changes took place in that organization; but these changes affected in no way the workings of the administration of the country, which, through a chain extending from the prefect to the last and least subaltern of the smallest village, brought every inhabitant under the control of the imperial prefect.

A more striking example of centralized power can be imagined, however, which should have been brought about by the branches of administration: between him and the people, intermediaries who transmit his orders, but never act except on his behalf, and refer to him all cases of any importance. Such, also, was the organization of the Coptic Church in the first one hundred years of its existence: one master presbyter, supreme patriarch, supreme metropolitan; one seat and source of jurisdiction, one judge—the Bishop of Alexandria. It is, therefore, this fullness of jurisdiction rather than the fullness of the priesthood—plenitude sacerdotii—that is understood by the title of the presbyters who elect the Bishop of Alexandria, also have the fullness of the priesthood but they have no jurisdiction of their own. We found them temporarily in charge in the provinces, but they were acting in behalf of the bishop; and for that reason, in the older sources, they are not called bishops. With Demetrius (188–232) a new era opens. The bishops of Alexandria, we have seen, began to leave the city secretly, and ordained bishops, priests, and deacons everywhere, as St. Mark himself had done when he went to the Pentapolis. The word secretly is suggestive of times of persecution (cf. Abraham Hefele, "Eutychius vindicatus," 25; Renanot, "Hist. Petarchearum Alexandrini," 25). We seem to accept this new departure of Demetrius took place in the very first years of the third century, when the Severian persecution broke out. The dangers then threatening the Christian communities—which by this time had greatly increased in all parts of Egypt—may have been the chief consideration that prompted the bishop to come to the assistance of his flock by giving it permanent pastors (see, however, Harnack, "Mission," II, 137, note 2, quoting Schwartz). According to the tradition of Eutychius, Demetrius created three bishops: Hesecas (232–48), as many as twenty. The number of bishops so increased, under Dionysius (248–65), Maximus (265–82), Theonas (282–300), Peter Martyr (300–11), Achillas (312), and Alexander (313–326), that the last of these could, in 320, muster nearly one hundred bishops against Arians (it contained the chief sanctuary of the special god), the Pentapolis. The Egyptian hierarchy was then fully organized (cf. Harnack, op. cit., II, 142), a fact which explains, and is explained by, the wholesale Christianization of Egypt during the third century. In spite, however, of that astonishing development of the hierarchy, the monasteries of the desert, the old institutions of the monks, were not yet entirely disappeared. It happened often during the persecutions that bishops were incarcerated pending trial, and therefore were unable to hold ordinations. Their places were then filled by "episkopos", or itinerant bishops ordained for that purpose, and resident in Alexandria when not actively engaged in their sacred functions. It was for having presumed to usurp the functions of such "episkopoi" that Mele- tius, Bishop of Lycopolis (in Upper Egypt) was censured by the Patriarch Alexander, and finally condemned and deprived of his jurisdiction by the Council of Nicæa (see Hefele-Leclercq, I, p. 381). Paris, 1907, I, 488–500, where all the sources are indicated.

The existence of metropolitan (in the canonical sense of the word) in the Church of Egypt is a matter of considerable doubt (see Harnack, op. cit., II, 150, 164, 173; B. H. Swartz, "Athanasiana," I, "Nachricht d. K. Gesellschaft d. Wiss. zu Göttingen," 1904, p. 180, and Lübeck, "Reichsein- theilung u. kirchliche Hierarchie," pp. 109 sqq., 116 sqq.). If some bishops (which is very likely; see Hefele, "Conciliengeschichte," I, pp. 391, 392) bore that title, they could not have differed from the ordinary Egyptian bishops in their relations to the Bishop of Alexandria. It is a well-known fact that the Bishop of Alexandria was wont to ordain not only his metropolitan, as did other patriarchs, but also their suffragans, with the sole proviso that their election was sanctioned by the bishops of Egypt (Hefele, op. cit., I, p. 393). St. Epiphanius, writing of Meletius, whom he calls ἀρχιεπίσκοπος (Heres., Ixix, c. iii), by which he means really metropolitan (Hefele, ibid.), says: "Hoc quidem ceteris [Egypti episcopis antecellentes, secundum unum Petro Alexandrinorum] dignitatem ac honorem in ecclesiastical affairs: one master presbyter, supreme patriarch, supreme metropolitan; the whole humanity adiutor sed eadem tamen subjectus et ad ipsum de rebus ecclesiastici referens" [He indeed, being preeminent over all the other bishops of Egypt, held the position next in dignity to that of Peter (of Alexandria), as being his helper, yet subject to him and dependent on him in ecclesiastical affairs]. In what concerns Meletianism St. Epiphanius is not to be implicitly trusted. In this case, however, his testimony is probably correct; his words depict just such a condition of affairs as we should naturally expect from the general analogy of the church-organization with the civil government. The existence of the episcopate and the nature of their relations to the prefect of Egypt might well have suggested the appointment of metropolitans with just as limited an independence of the Bishop of Alexandria as St. Epiphanius attributes to Meletius.

PRESIDENT STATE OF THE COPTIC CHURCH.—The Jacobite Church has thirteen dioceses in Egypt: Cairo, under the Patriarch of Alexandria, with 25 churches and 35 priests; Alexandria, with a metropolitan, having charge also of the Provinces of Bohaire and Menouf, 48 churches, 55 priests; Memphis, 6 bishops, 16 priests, 4 churches; Pentapolis, 6 bishops, 856 priests, 449 churches, and about 600,000 souls. There are in addition, outside of Egypt, a metropolitan in Jerusalem, a bishop for Nubia and Kharthum, a metropolitan and two bishops in Abyssinia. Some ten years ago the Abbots of the monastery of St. Anthony, St. Paul (both in the Arabian Desert), and Baramús (in the desert of Nitria) were raised to the dignity of bishops.

There are three categories of schools. (a) Church schools under the patriarch (conservative): 1 ecclesiastical college, 90 pupils; 6 boys' schools, 1,100 pupils;
2 girls' schools, 350 pupils. (b) Tewfik schools, under the society of the same name (rather liberal and in opposition to the patriarch): 1 boys' school, 290 pupils; 1 girls' school, 110 pupils. (c) Private schools: 5 boys' schools, 350 pupils; 1 girls' school, 5 pupils.

During his administration the Schismatic Church of Alexandria captured by the Patriarchate of Alexandria, and elsewhere. Athanasius continued to reside in Jerusalem, whence he ministered to his charge in Egypt through his vicar-general, Justus Manari. During his administration flourished Raphael Tuki, a native of Circelia and an alumnus of the Urban (Propaganda) College at Rome. After a few years of fruitful labours in his native land he was recalled to Rome (where he received the title of Bishop of Arsinus) to superintend the printing of the Coptic liturgical books (Misali, 1746; Psalter, 1749; Breviary, 1750; Pontifical, 1761; Ritual, 1763; Thebain, 1764). Athanasius was succeeded (1751) by John Farghali as Vicar of the Coptic Church, with the title of Bishop of Hypsopolis; but he never received episcopal consecration, there being no Catholic bishop of the Coptic Rite to perform it. The same can be said of his successor Matthew Righet, appointed (1751), and made Bishop of Uthina in 1752; he died in 1752, and was succeeded also Bishop of Uthina in 1784, and a few months later Patriarch of Alexandria, by decree of Leo XII, who, at the request of the Khedive Mehmet-Ali, had decided to restore the Catholic Patriarchate of Alexandria. The decree, however, never went into effect owing, apparently, to the opposition of Abrahah Cashoor, then at Rome, where he had been consecrated Archbishop of Memphis by the pope himself. Maximus died in 1831. His successor was Theodore Abi-Karim, made Bishop of Alia in 1832, and appointed Delegate and Visiting Bishop of Athos, and at the same time Bishop of Arsinus in 1840. He died in 1864, and was succeeded in 1856 by Athanasius Khúnum, Bishop of Maronza, who in turn was succeeded in 1866 by Agapius Behai, Bishop of Cariopolis, representative of his nation at the Vatican Council in 1869-70. Owing to regrettably, with his flock, this bishop, more learned and pious than tactful, was recalled to Rome in, or soon after, 1878, and did not return to Egypt until 1887, forty days before his death. During his absence, and after his death, the Church was administered by an Apostolic visitor, Monsignor Anthony Moreo (not a Copt nor a bishop) with the title of pro-vicar Apostolic. His successor was also a simple Apostolic visitor and governor of the Uniat Copts until 1895, when the Patriarchate of Alexandria was restored by Leo XIII (Litter. Apost. “Christi Domini”) with a bishop, Cyril Macaire, as Apostolic administrator, and two suffragans, Hibernus (residence at Minieh) and Thebes (residence at Tirtah), which were entrusted respectively to Bishops Maximus Seddouai and Ignatius Berzi, both consecrated in 1896. In 1899 Bishop Cyril Macaire was promoted to the title and rank of Patriarch of Alexandria, with residence at Cairo, taking the name of Cyril II; he resigned in 1908, and Bishop Seddouai was named administrator. The Uniat Coptic Diocese of Alexandria counts (Lower Egypt and Cairo) 2500 souls, 4 churches or chapels, 14 priests (2 married), a petit seminaire with 8 pupils (under the direction of the Rev. Father Assan Benoit). In the Diocese of Hermopolis (Middle Egypt) there are 2500 Catholics, 10 priests (4 married), 7 churches or chapels, 12 stations, 9 schools for boys, 240 pupils, and 1 for girls, with 50 pupils. The Diocese of Thebes (part of Upper Egypt) has 15,250 souls, 31 priests (15 married), 35 churches or chapels, 18 stations, 1 theological seminary (for all three dioceses), with 17 pupils, 21 schools for boys, with 240 pupils, and 5 schools for girls, with 253 pupils. In addition to the above-mentioned clergy and institutions, there are several local religious (both men and women) whose members minister to the Catholic Church.
The Graffin-Nau, Sahidic Sahidic, There literary the Sophonias The Bohairic 'nally perseded the They manuscripts are of Demotic have ing frequently the manuscript had Demotic language by Egyptian Demotic letters which is frequent use in apocalyptic and apocryphal literature. In this chapter, the author will discuss the Apocalyptic and Apocryphal literature of the Graffin-Nau, Sahidic Sahidic, and Bohairic, specifically focusing on the manuscript and its historical context. The manuscript is a Sahidic manuscript, which was published by F. Robinson in 1896. The manuscript contains apocryphal and apocryphal literature, including the Acts of the Apostles and the Gospel of the Egyptians. The manuscript is an important resource for understanding the history of the Graffin-Nau, Sahidic Sahidic, and Bohairic, as it provides valuable insights into the development of these literatures. The manuscript is a significant resource for scholars interested in the history of the Graffin-Nau, Sahidic Sahidic, and Bohairic, as it provides valuable insights into the development of these literatures. The manuscript is an important resource for understanding the history of the Graffin-Nau, Sahidic Sahidic, and Bohairic, as it provides valuable insights into the development of these literatures.
Bartholomew, the Martyrdoms of St. James, son of Zebedee, St. James the Less, St. Peter, St. Paul; also by the life of the pseudo-Prochoros and the martyrdom of St. John and a Martyrdom of St. Simon (different from the documents generally known under the names of Prochoros and "Martyrdom of St. John and a Martyrdom of St. Simon," and of which short fragments only have been preserved in Coptic). The texts of all these have been published by Professor I. Guidi in his "Framenti Copti" (Rendiconti della Reale Accademia dei Lincei, III and IV, 1887-88), and "Di alcune pergamente Suidiche (dei Presbiteri della R. Acc. dei Lincei, Classe di Lettere morali, storie e filologiche, II, fasc. 7, 1893), and the translations in the same author's "Gli atti apocrifi degli Apostoli" (Giornale della Società Asiatica Italiana, vol. II, pp. 1-66, 1888), and in his "Di alcune Pergamente," just mentioned. The same documents have been to no small extent supplemented from St. Petersburg manuscripts by Oscar v. Lemm, in his "Koptische apocryphe Apostelaschen" in "Mélanges Asiatiques tirés du Bulletin de l'Académie impériale de St. Pétersbourg," X, 1 and 2 [Bulletin, N. S., I and II (XXXIII and XXXV), 1890-92].

A section with the mention of two documents of more than usual interest: first, seven leaves of papyrus (Berlin P. S. 502) of the πράξεως Πηγον and a considerable portion of the Acta Pauli (Heidelberg Copt. Papyrus IV), in their original form (i.e. including the so-called "Acta Pauli et Theae"). Both of these documents have been published, translated into German, and thoroughly discussed by C. Schmidt ("Die alten Petrusakten," etc. in "Texte u. Unters." N. S., IX (1903)); "Acta Pauli," Leipzig, 1904, 2 vols. (vol. II, photographic reproduction of the Coptic text); 2d edit. (without photographic plates), Leipzig, 1905, 1 vol."

Post-Chalcedon Fathers.—Only a few of these had the honour of a place in Coptic literature. The separation of the Church of Egypt from the Catholic world was complete after the brief pontificate of Dioscorus (431), and, in spite of the efforts of the Byzantine Court to bring back Egypt to unity by forcing orthodox pontiffs on her and by other means of coercion, the native Egyptians stubbornly refused to allegiance to the "intruders," and from that time on would have nothing to do with the Greek world, the very name of which became an abomination to them. The chief exception was in favour of the works of Severus, the expelled Monophysite Patriarch of Antioch, who had taken refuge and died in Egypt. We may judge from what has come down to us in the various dialects. In Bohairic we have over forty complete homilies or sermons of St. John Chrysostom, several of St. Cyril of Alexandria, St. Gregory Nazianzen, Theophilius of Alexandria, and St. Ephraem the Syrian, while in Sahidic we find a few complete writings and a very large number of fragments, some quite considerable, of the homiletical works of the same Fathers and of many others, like St. Athanasius, St. Cyprian, Proclus of Cyprus, Libanus, and Severianus of Gabala, Cyril of Jerusalem, Eusebius of Cesarea, and the pseudo-Dionysius the Areopagite. Liberius of Rome and St. Ephraem are also represented by several fragments of sermons. We need not say that these writings are not always spurious, and that they can in no case be held up as models of translation.

The Bohairic part of this great mass of literature is still almost entirely undescribed, we might say unexplored. Two sermons of St. Ephraem have been published, one, on the adulterous woman of the Gospel, by Guidi (Bessarione, Ann. VII, vol. IV, Rome, 1893), the other (fragment) on the Transfiguration by Budge (Proceedings of the Soc. of Bibl. Archaeology, IX, 1887, pp. 317 sqq.). Budge published also a large fragment of an encomium on Elijah the Tishbite attributed to St. John Chrysostom (Transactions of the Soc. Bibl. Arch., XXIV, 3rd ser. 1893, pp. 355 ff.).

also mention here a panegyric of St. George, Martyr, by Theodosius, Monophysite Bishop of Jerusalem (d. after 453), published and translated into English by E. A. Wallis Budge, "The Martyrdom and Miracles of St. George of Cappadocia" (Oriental Text Series, I, London, 1888). The compiler of the version of the epitaph of the Monophysite successor of Dossorius, which the Monophysite successors of Dossorius were involved accounts probably for the almost complete absence of their works from Coptic literature in general and in particular from this section. The only homilies or sermons we can record are, first, a sermon on the homily in the edition of the Victory of the Cross (already mentioned among the Apocrypha) and an encomium on St. Michael, by Theodosius (the latter published by Budge, "Three Encomiums", mentioned above), both in Bohairic and probably spurious; also a Sahidic fragment of a discourse pronounced by the same on the 11th of Thoth; secondly, a sermon on the Marriage at Cana, by Benjamin, in Bohairic; thirdly, the first sermon of Mark II on Christ's Burial, also in Bohairic. Rarer still are the sermons or homilies by other bishops of Egypt. The only two names worthy of mention are those of John, Bishop of Paralou (Burlos), and Bishop of Thebes, both of unknown century. To the latter, we have one short Sahidic fragment of a discourse on "St. Michael and the blasphematory books of the heretics that are read in the orthodox churches"; of the latter, several important fragments of homilies on the Gospels of St. Matthew and St. Luke, also in Sahidic. (See P. Botticher, "Memoires d'apres le manuscrit d'Alep, de S. Marcou".)

Church Discipline.—Among the various early collections of Apostolic precepts and church regulations which the Copts incorporated from the Greek into their native literature, we shall mention:

(1) The Didache.—It is true that up to the present this document is known to be extant in Coptic except in so far as chapters iv—xiv of the Apostolic Church Ordinance (see below) are a paraphrase of the first four chapters of the Didache as revealed to us by Bryennios. Towards the end of the last century, however, the first part of the Didache (chapter ii—iv), the so-called "Dum Verum," was discovered imbedded in Shenute's Arabic life published by Amelineau (Monuments pour servir à l'histoire de l'Egypte chrétienne aux IVe et VVe siècles. Vie de Schénoûti, pp. 289 sqq.), in "Mémoires publiés par les membres de la Mission archéologique française au Caire", vol. I, 1880, and although that insertion is in Arabic, like the rest of the Life, its grammar is so thoroughly Coptic that there can be no doubt that it, also, was translated from a Coptic original. For further detail see Iselin and Heusler, who were first to make the discovery ("Eine bisher unbekannte Version der ersten Teil der Apostellehre" in "Texte u. Unterschungen", XIII, I, 1895), and U. Benigni, who, three years later, quite independently of Iselin and Heusler, had reached the same conclusions [Didache Coptica: 'Durum viarum' recensio Copticæ monastica per arabicam versionem superser, 2d ed., Rome, 1889 (Reprint from "Bessarione", 1898)].

(2) The so-called Apostolic Church Ordinance, consisting of thirty-two canons, and extant both in Bohairic and in Sahidic. The former text was published and translated into English by H. Tattam (The Apostolic Constitutions of the BohairicManuscripts of the Apostles, London, 1848, pp. 1–30), and re-translated into Greek by P. Botticher (later P. de Lagarde) in Chr. C. Bunsen's "Analecta Ante-Nicena" (London, 1864, II, 435–460); the latter text was edited, without translation, both by P. de Lagarde, in his "Egyptiaca" (Göttingen, 1864, pp. 280–300), and by Bouriant, in "Les Canones Apostoliques de Clément de Rome": traduction en dialecte thénain d'après un manuscrit de la biblio théque du Patriarche Jacobite du Caire" [in "Recueil de travaux relatifs à la philologie et à l'archéologie égyptienne et assyrienne", V (1884), pp. 202–206].

(3) The Egyptian Church Ordinance, consisting of thirty-two canons and extant, likewise, both in Bohairic and in Sahidic. The Bohairic was published and translated into English by H. Tattam (op. cit., pp. 31–92), and re-translated into Greek by P. Botticher (in Bunsen's "Analecta", pp. 461–477). The Sahidic was published by de Lagarde, "Egyptiaca", (pp. 218–256, can. 31–92) and Bouriant (op. cit., pp. 206–216). A translation into German by G. Stein dorf, from the edition of de Lagarde, is found in Achelis, "Die Kanones Hippolyti" (Leipzig, 1891, in "Texte u. Untersuchungen", VI, 4, pp. 39 sqq.).

An epitomized section of chapters 1–34 of the Eighth Book of the Apostolic Constitutions both in Bohairic (published and translated into English by H. Tattam, op. cit., pp. 93–172) and in Sahidic (published by de Lagarde, "Egyptiaca", pp. 266–291, canons 63–78, and Bouriant, op. cit., VI, pp. 97–109; examined and translated into English from the Lagarde edition, by Leopold, "Säidische Auszüge", etc., in "Texte u. Untersuchungen", new series, 1, 6, Leipzig, 1894). According to Leopold (op. cit., pp. 6–9), this abstract, in which the liturgical sections are either curtailed or entirely omitted, has much in common with different versions per Hippolytum, in the choice of the selection, as already shown by Achelis, but also in point of style; the Coptic document is beyond doubt of Egyptian origin. Besides the above Bohairic and Sahidic texts, there is a fragment (de Lagarde, can. 72–78, 24) of another Sahidic version, which, according to Leopold (who copied it and translated it into German, op. cit.), belongs to an older recension. The text published by de Lagarde and Bouriant is derived from an older recension, with corruptions from the Greek Apostolic Constitutions as they were when the "Constitutiones per Hippolytum" were taken from them. On this theory of Leopold's, however, see Funk, "Das achte Buch der apostolischen Konstitutionen in der Koptischen Ueberlieferung" in "Theologische Quartalschrift", 1904, pp. 429–447.

The above three documents, (2), (3), (4), form one collection of 78 canons, under the following title: "These are the Canons of our holy Fathers the Apostles of our Lord Jesus Christ, which they established in the Churches". As a whole they are known, since de Lagarde's edition, as "Canones Ecclesiasticorum Apostolorum (4th, or 4°, Tractatus de Sacra, De Sacra Virginum Communione, etc.,)". The last, however, see Funk, "Das acht Buch der apostolischen Konstitutionen in der Koptischen Ueberlieferung" in "Theologische Quartalschrift", 1904. The author gives variant readings from several manuscripts for each version, and in a long introduction he examines the mutual relationships of the various texts.

(5) Canones Apostolorum.—A Recension of Book VIII, canons 1–47, of the Apostolic Constitutions entitled: The Canons of the Church which the Apostles gave through Clement (Clementine) and the Apostles, London, 1848, pp. 1–30), and re-translated into Greek by P. Botticher (later P. de Lagarde) in Chr. C. Bunsen's "Analecta Ante-Nicena" (London, 1864, II, 451–460); the latter text was edited, without translation, both by P. de Lagarde, in his "Egyptiaca" (Göttingen, 1864, pp. 280–300), and by Bouriant, in "Les Canones Apostoliques de Clément de Rome": traduction en dialecte thénain d'après un manuscrit de la bibliothèque du Patriarche Jacobite du Caire" [in "Recueil de travaux relatifs à la philologie et à l'archéologie égyptienne et assyrienne", V (1884), pp. 202–206].

(6) Canones Hippolyti.—A Sahidic fragment of the Paris collection (B. N. Copte 129 14 ff. 71–78) contains a series of canons under the title of "Canones of the Church which Hippolytus, Bishop of Rome, wrote". So far as the present writer knows, these
canons have not yet been the object of a critical study; nor does it seem that they were ever published.

(7) The Canons of Athanasius, or rather the Coptic writing which underlies the Copto-Arabic collection of 167 canons bearing that name, are undoubtedly one of the most important sources of church regulations and are likely rightly attributed by the tradition to St. Athanasius of Alexandria, and, in that case, perhaps to be identified with the "Commandments of Christ" which the Chronicle of John of Nikiu attributes to this Father of the Church and the "Canons of Apa Athanasius" mentioned in the catalogue of the library of a Theban monastery, which catalogue dates from about A. D. 600. The Sahidic text, unfortunately not complete, was published and translated (along with the Arabic text by Riedel) by Crum from a British Museum papyrus (sixth or seventh century) and two fragments of a manuscript on parchment (tenth century) preserved in the Borgia Collection (Naples) and the Rainer collection (Vienna), in Riedel and Crum's "Canons of Athanasius of Alexandria," London, 1904. To this work we are indebted for the information contained in this brief notice. Although this interesting document is a pure Egyptian production, there is but little doubt that it was originally written in Greek.

(8) The Canons of St. Basil, preserved in a Turin papyrus broken into many hopelessly disconnected fragments, which Fr. Rossi published and translated although he could not determine to what writing they belonged. The papyrus (Coptic de Muza, II, fasc. II, fac. IV) of late those fragments were identified by Crum, who, despairing of establishing their original order, arranged them for convenience according to the Arabic recension published by Riedel ("Die Kirchenrechtquellen des Patriarchats Alexandriens," Leipzig, 1900, pp. 231) and translated them into English ("Coptic Version of the Canons of St. Basil" in "Proceedings of the Society of Biblical Archeology," XXVI (1904), pp. 81-92).

History.—Among the historical productions of Coptic literature, none of which can be highly commended, we shall mention the following:

(1) An Ecclesiastical History in twelve books, extending from a period we cannot determine, to the re-establishment of Timothy Ælurus as patriarch of Egypt. If we suppose that in this, as often in similar works, the author continued his narrative until his own times, it would seem almost certain that he wrote it in Greek. At all events the prominence given to the affair of the Church of Alexandria shows him an Egyptian, from his tone it is clear that he professed Monophysitism. Like so many other Coptic literary productions, the Ecclesiastical History reached us in the shape of fragments only. They are all in Sahidic, and once belonged to two different copies of the same work, or perhaps to two copies of two works very similar in scope and method. Both copies (or works) contain a number of passages translated (more frequently paraphrased, sometimes abridged) from the "Ecclesiastical History" of Eusebius. On the other side the Coptic work was heavily laid under contribution by Severus of Ashmunein in his "History of the Patriarchs of Alexandria." Some of the fragments were published by Zögera in "Catalogus Byzantinarum Codicorum," with a Latin translation, some by O. v. Lomm, "Koptische Fragmente zur Patriarchengeschichte Alexandriens" ("Memories de l'Acad. Imp. de St. Péetersb.," VIIe sér., XXXVI, 11, St. Petersburg, 1888; and "Bulletin de l'Acad. Imp. de St. Péetersb.," 1896, IV, p. 257, in both cases with German translation; the others by Crum, "Eusebius and Coptic Church Histories" in "Proceedings of the Soc. of Bibl. Archeology," XXIV, 1902, with English translation).

(3) The Acts of the Council of Ephesus, of which we have considerable fragments in a Sahidic text in the Borgia and Paris collections. The fragments of the former collection were published by Zoega, "Catalogus," pp. 272-280, with a Latin translation; those of the latter collection by Bouriant, "Actes du concile d'Ephese: texte Copte publié et traduit" ("Memories publiés par la Mission archéol. française au Caire," VIII, Paris, 1892). The Paris fragments have also been translated into German and thoroughly discussed by Kraaz, with the help of C. Schmidt, "Koptische Acten zum Ephesischen Konzil vom Jahre 431 (Texte u. Untersuchungen, new series, XI, 2, Berlin, 1904). Kriezler thinks that this recension is the work of an Egyptian and, in substance, it is the best representative of the Greek documents already known. These fragments contain, however, additional information not entirely devoid of historical value.

(4) The so-called "Mémores de Dioscorus," a Monophysite collection of the Acts of St. Dioscorus of Chalcedon. It is in the shape of a Bohairic panegyric of Macarius, Bishop of Tkhlu, delivered by Dioscorus during his exile at Gangrie in presence of the Egyptian delegates who had come to announce to him the death of Macarius. The publication of this curious document with a French translation and commentary was begun by Revillout under the title of "Récits de Dioscore exilé à Gangrie sur le concile de Chalcédoine" ("Revue Egyptologique," I, pp. 187-189, and II, pp. 21-25, Paris, 1880, 1882), published and translated into French by E. Amelineau, "Monuments pour servir" ("Mémories publiés," etc., IV, Paris, 1884, pp. 92-161). As against Revillout, Amelineau asserts the spuriousness of these Acts. Almost immediately after the latter's publication, Krall published and translated some Sahidic fragments which exhibited a better recension of the same document, and show that the Bohairic version was translated from the Sahidic. In disagreement with Amelineau, Krall thinks it more probable that the Memoirs of Dioscorus were originally written in Greek, and sees no reason to doubt their genuineness ("Koptische Beitritte zur ägyptischen Kirchengeschichte" in "Mittheilungen aus der sammlung der Papyrus Erzerzog Rainer," IV, p. 67, Vienna, 1888). In 1903 Crum published copies by A. des Rivières of ten leaves of a papyrus codex, once a part of the Harris collection, now lost. Three of those leaves belonged to the panegyric of Macarius, while the others were part of a collection of Dioscorus, of which a summary was published by Nau ("Histoire de Dioscorus, patriarche d'Alexandrie écrité par son disciple Théophilète" in "Journal Asiatique," Série X, t. 1, pp. 5-108, 241-310). Nau thinks that the Syriac and Coptic recensions of the life are independent of each other, which points to a Greek original for that document and probably also for the panegyric ("Notes sur quelques fragments copiés relatifs à Dioscore, ibid., t. II, pp. 181-4).

(5) A correspondence in Bohairic between Peter Mongus, Patriarch of Alexandria, and Acacia, Patriarch of Constantinople. It includes the Henoton which Zeno issued at the suggestion of Acacia. It was published in a French translation by E. Revillout, "Le premier schisme de Constantinople" ("Revue des questions historiques," XXII (1877), Paris, pp. 83-134), and by Amelineau, "Lettres de Pierre Mongus et
The Euchologium was edited by Raphael Tuki in three books under both Coptic and Arabic titles, which we translate as follows: (1) “Book of the three Anaphoras, namely, those of St. Basil, St. Gregory the Theologian, and St. Cyril, with the other holy prayers”, Rome, Propaganda, 175 pp.—Morning Incense, Evening Incense, and Morning Incense with the prærior tempóris thereto; Mass, including the three Anaphoras; Prayers Before and After Meals, Blessing of the Water, and the Ordo Renovationis Caelestis. (2) “Book containing all the holy prayers”, ibid., 1761-2, 2 vols.—Concerning Religious Habit, Enthronization of Bishops, Consecration of myron (Holy Chrim) and Churches (676 pages); II, Consecration of Altars and Sacred Vessels, Blessing of Church Vestments, Sacred Pictures, Relics, Consecration of Churches (if rebuilt) and Baptismal Fonts; Blessing of the Boards used for the Hëzik (Holy of holies); Reconciliation of the same if replaced because decayed or if desecrated; Special Services for the Epiphany, Maudy Thursday, Pentecost, the Feast of St. Peter and St. Paul; Reconciliation of persons guilty of apostasy and other special crimes; Blessing of the water, Wine bitten by a wolf, etc. (515 pages). (3) “Book of the Service of the Holy Mysteries, Funerals of the Dead, Canticles, and one month of the Katameros” (this last item, a reduction of the work of the same name described hereunder, is printed here for convenience). (4) as “Missale Copto-Arabice”, “Pentecostale Copto-Arabice”, and “Rituale Copto-Arabice”, although these designations do not appear on the title pages nor elsewhere in the books. Neither does the name of the editor (Tuki) appear.

The edited Missal has a slightly different arrangement, both in Coptic and Arabic, under the title: “Euchologium of the Alexandria Church”, Cairo, Catholic Press of St. Mark, Era of the Martyrs 1614 (A. d. 1898). Another Egyptian edition (Jacobite!) of the Missale (Cairo, 1887) is mentioned by Brightman (Liturgies Eastern and Western, II, p. lxvi), and a Jacobite “genuine” edition of the “Euchologium [complete?] from manuscript sources” (Cairo, 1902), by Crum (Reaencyclopaide für protestantische Theologie, 3d edition, XII, p. 810). The Missal edited by Tuki does not differ from the oldest Coptic Liturgical manuscript of the Very Church, for reasons stated above, except that the names of Dioscorus, Severus of Antioch, and Jacobus Baradseus have been expunged from the dipytches, and that of the pope added to them, mention of Chaledon introduced after that of Ephesus, and the Filoque inserted in the Creed. As for his description of the Coptic and Rituale, they contain nothing but everything that is essential and common to the majority of good codices. Naturally the latter vary both in the arrangement and in the selection of prayers according to their origin and date of compilation. Tuki’s Ordo Communiun, and St. Basil’s Anaphora, with rubrics in Latin only, were reprinted by J. A. Assemani, “Missale Alexadrinum”; pars II, pp. 1-90, in “Codex Liturgicus”, VII (Rome, 1751). John, Marquess of Bute, published also an edition of the Morning Incense, Ordo Communiun (from Tuki’s text with some additions), and St. Basil’s Anaphora (from Tuki’s). “Ordo Copto-Arabic of the Copti Morning Service for the Lord’s Day” (London, 1882), pp. 35 sqq. (See Brightman, op. et loc. cit.)

There has been no complete translation. The Ordo Communiun and the three Anaphoras have been translated into (1) Latin, (a) from an Arabic (Vienenna) manuscript by Vercor; (b) the Ordo Coptici Gregorii Theologi, Cyrillici Alexandrini ex Arabico converse” (Vienna, 1604—reprinted in “Magnus Bibliotheca Patrum”, Paris, 1654, t. VI); (2) from a Paris Copti manuscript by Renaudet, “Liturgiarum Orientalium Collectio” (2 vols., Paris; Frankfort, 1847); (3) English, (a) from “an old manuscript” by Malan, “Original Documents of the Coptic Church,” V, the
Divine Εὐχέρειαν" (London, 1857); (b) from a manuscript now in the library of Lord Crawford, by Rodwell, "The Liturgies of St. Basil, St. Gregory and St. Cyril from a Coptic manuscript of the thirteenth century." (London, 1870). The Ordo Communis and St. Basil’s Psalter are in Latin. The Psalms and Gospels are in Arabic (op. et loc. cit.); in English by Rouaud's Latin, by Neile, "History of the Eastern Church" (London, 1850), introduction, pp. 381 sqq., 532 sqq. The Ordo Communis and St. Cyril's Anaphora (from Bodleian manuscripts of the thirteenth and fourteenth centuries) by Brightman (op. cit., pp. 104-186). Most Incense, Ordo Communis, and St. Basil's Anaphora, by John, Marquess of Bute (op. cit.).

Horarium (Arab. Agniñah, Eqbiñah), corresponding to our Breviary, edited by R. Tuki under the following title (Coptic and Arabic): "A Book of the seven prayers of the day and of the night" (Rome, 1750), generally referred to as "Diurnius Alexandrinum Copto-Arabicum" [Morning (Prime), Terce, Sext, None, Evening (Vespers), Sleep (Complin), Prayer of the veil (extra-canonical)], Midnight (Matins). This book is intended for private recitation and gives but an imperfect idea of the office as performed in the monasteries even in the churches where a numerous clergy is in attendance.

Katamarios (Gr. Karà μετά, Arab. Kutamrûd) contains the portions of the Psalms, Acts, Catholic Epistles, St. Paul's Epistles, and the Gospels which are read between the monastic Hours. It is divided into three volumes: (1) from Thoth to Mechir; (2) from the beginning of Lent to Pentecost inclusive; (3) from Pachon to the Epagomenes days which the Copts called the "little month" or in Arabic, the "forgotten days." The Katamarios for the two weeks from Palm Sunday to Easter Sunday has been published under the Coptic and Arabic title of "Book of the Holy Pasch according to the rite of the Alexandrine Church" (Catholic Press of St. Mark, Cairo, 1899). This portion of the Katamarios contains numerous lessons from the Old Testament (see Versions of the Bible). Its current text is attributed to Gabriele I Tureik, seventieth patriarch (d. 1145). Mai (Scriptorum vetera nova collectio, IV, Rome, 1831, pp. 15-34) gives a table of the Gospels for feasts and fasts and for Saturdays, Sundays, Wednesdays, and Fridays of the year. Malan (Original Documents of the Coptic Church, IV, London, 1853) gives the Gospels and versicles for Vespers, Matins, and Mass for the year. De Lagarde tabulated the lessons and Psalms from Athyr to Mechir, and from Epiph to the "little month", also those for Lent and the Ninevites' fast, for the Sundays of Eastertide, and for the principal feasts. Abhandlungen d. histor.-philol. K. d. U. Gesellschaft d. Wiss. zu Göttingen, XXIV, 1879).

The Psalmodia.—This is a collection of poetical compositions in honour of Our Lord and the Blessed Virgin, the saints and the angels, sung during the various services, especially at Vespers, Matins, and Prime. They form two distinct systems, one of which, called Théotokia, is most elaborate, and, as its name indicates, deals exclusively with the Mother of God. The other, the Doxologia, extends to all saints. A compendium of this book has been published by Tuki, under the title "Book of the Holy Theotokia and Katastox of the month of Choia" (Rome, 1746), 341 pp. The book is the subject of an interesting study by Mallon, "Les Thêotokia ou office de la Sainte Vierge dans le rite copte" in "Revue de l'Orient Chrétien" (1904), IX, pp. 17-51.

The Antiphonary (Arab. Andinîrû, Dînarray), a collection of anthems in honour of the saints. The composition or the arrangement of this book is attributed to Gabriel I Tureik. (See Manual.)

Of the Sahidic recension (or recensions) of the Egyptian Liturgy we have fragments from the various books, which books seem to have been the same as in the Bohairic recension. The most interesting of those relics belong to the Liturgy proper or Mass, to the Anaphoras principally. Of these the Churches of Upper Egypt apparently had a large number, for we have portions of those of St. Cyril, St. Gregory, St. Pachom, St. James, and St. Macarius, besides others not yet identified. Some have been published and translated by Giorgi (Lat. tr.), Krall (Ger. tr.), and Hyvernat (Lat. tr. only). For the titles of the publications and further information on nature of fragments published, see Brightman, "Liturgies East and Western" (1889), pp. Ixxxvi-lxxxix. There are also important relics of the Dionysius, probably enough to reconstruct that book entirely (one fragment published by Giorgi, "Fragmentum Evangelii St. Joannis" etc., Rome, 1789, a very large number of fragments of the Katameros, lectionaries, and not a few hymns (some of them particular rather than liturgical) which of late have aroused the interest of students of Coptic poetry see Junker, "Koptische Poesie des 10. Jahrhunderts" in "Orients Christianus" (1906), VI, pp. 319-410; with literature on the subject complete and up-to-date). The fragments in British Museum and Leiden University collections have been published in full in the catalogues of Cruze (pp. 144-161, 969-978) and Pleye-Boeser. A complete edition and translation of the Sahidic liturgy is being prepared (1909) by the writer of this article for the "Corpus Scriptorum Christianorum Orientalium", V. H. Costen.—Coptic was revived, and Coptic liturgy was translated into Arabic by Abu Ishaq ibn al-Assal, for having realized the uselessness of composing, as was done before, dictionaries extending to the whole literature. This remark would hardly be intelligible if the translating of the non-liturgical part of Coptic literature had not been then completed, much less if it had not yet begun. Those early translations include not only the works already referred to in the preceding section of this article, but a good many more now lost in the Coptic version or translated anew from the Greek or the Syriac originals. Among the latter are quite a number of Nestorian writers, expurgated when necessary. But the glory of the Copto-Arabic literature lies in its original writings. We have already mentioned (see above, V.) the three historians of the Coptic Church, Severus of Ashmúnein, Eutychius, and Al-Makín. The authors of new Canons are: Christodulós, sixty-sixth patriarch, 1047-77; Cyrilus II, sixty-seventh patriarch, 1078-92; Macarius, sixty-eighth patriarch, 1094-1106; Gabriel, seventieth patriarch, 1106-12; Cyrilus III, 1131-45; Cyrilus III Ibn Lalaq, seventy-fifth patriarch, 1235-43, and Michael, Metropolitan of Damietta, twelfth century. Collectors of Canons: Abu Sohit Ibn Bâná, eleventh cent., Macarius, fourteenth cent. (if not to be identified with the Simeon Ibn Maqárá, mentioned by Abu ʿI-Barakát)—Compilers of Nomo-Canons: Michael of Damietta, twelfth cent., Abu ʿI-Faddaib Ibn al-Assal, fourteenth cent., etc. (see Riedel, "Die Kirchenrechtsquellen des Patriarchats Alexandrien", Leipzig, 1900).—Hagiographers are represented by Peter, Bishop of Melig, twelfth and thirteenth centuries; credited by Abu ʿI-Barakát with the composition of the rimasákâ, a liturgical, and Michael, also Bishop of Melig, fifteenth cent., to whom the same book is also attributed (because he revised and completed the work of his predecessor). Severus of Ashmúnein, Peter of Melig,
Abū Isḥāq Ibn al-'Asāṣī and his brother Abū 'l-Fadā'il Ibn al-'Asāṣī are the chief representatives of theology, as Severus of Ashmunein and Abū 'l-Farag Ibn al-'Asāṣī, thirteenth cent., are of Scriptural studies, and John Abū Zakariya Ibn Sāba and Gabriel V, eighty-eth of the Coptic Church. The Testament of the City of Egypt, of the eleventh century, of liturgy: John’s treatise “Gauhatr an-nafṣāsah” (Pecorous Gem) has been published ( Cairo, 1902).—For the grammarians and lexicographers, several of whom have already been mentioned in one connection or another, see the excellent study of A. Mallon, S.J., “Une école de savants Égyptiens au moyen âge” (Dehlinger de l’École Orientale de l’université Saint Joseph”, I, pp. 109-131, II, pp. 213-264. There remains to mention the great eclectic encyclopedia of the Coptic Church, the “Lamp of Darkness and Illumination of the Church Service” of Shams al-Rūsah Abū ‘l-Barakāt Ibn Khīb (1273-1363). This stupendous work sums up, so to speak, the four centuries of liturgical activity we have just reviewed. (See Riedel, op. cit., pp. 15-80.)

Coptic Literature—QUATREMIERE, Recherches sur la langue de l’Égypte (Paris, 1818); RENARDIN, Bases de la bibliographie: Copte (Paris, 1895); Literature chrétienne de l’Égypte récente. (Berlin, 1890).

In the Coptic Church, the “Testament of the Lord” (or Hailman in 1899. H. Achelis strenuously maintained that the “Canones Hippolyti” are the oldest in the series and were written early in the third century; on the contrary, according to him, the other documents of the Eighth Book of the Apostolic Constitutions being the latest development. Von Funk maintained the same order of documents as Achelis, only inverting their sequence, beginning with Book VIII of the Apostolic Constitutions, and ending with the “Canones Hippolyti.” Gradually, however, Funk’s thesis seems to be winning almost universal acceptance, namely that Book VIII of the Apostolic Constitutions was written about 400, and the other documents are modifications and developments of the same. The Coptic Church, in particular having arisen in Monophysite Egyptian circles between the years 400 and 500.

Eichendorff, JOSEF KARL BENEDIKT, FREIHERR VON, “the last champion of romanticism”, b. 10 March, 1778, in the Upper-Silesian castle of Lubowitz, near Ratibor; d. at Neisse, 26 Nov., 1857. Till his thirteenth year he remained on the parental estate under the care of a Clerical Tutor; when fourteen he was sent to the University of Breslau where he attended the Mariagolden gymnasium, at that time still Catholic. During those student years (1804) were written the first of Eichendorff’s extant poems; no doubt his poetical talent had already been awakened in his patriotic home. In the spring of 1805 he matriculated at the University of Halle. Here, under the influence of Professor Steffens, he became a follower of the Romantic School of poetry, and at the same time became acquainted with Calderon, some of whose plays were performed by the ducal company of Wei mar in the neighboring town of Lauchstädt. In later years he translated several autors socrates in the truly poetical language. Eichendorff’s development was even more strongly influenced by his sojourn in Heidelberg (1807), where the triumvirate of romanticism, Göres, Armin, and Brentano, in the brave time of the “first siedler Zeitung”, took the field against pedantry and philistinism. With the two last-named the young poet did not then cultivate a closer acquaintance—he certainly did so in 1809 at Berlin—but the lectures of the great Göres made a deep impression on him. Recommended by Count Lichtenberg, Göres’ intimate friend, his first poems were printed in Ast’s periodical, among them the famous song “In einem kühlen Grunde”. The
first of his larger works, the novel "Ahnung und Gegenwart", was written partly at home, in Lubowitz, where he spent several years after the completion of his studies, partly in Vienna, where he had gone to qualify himself for the Austrian civil service; his friendly relations with Fr. Schlegel and his adopted son, the painter Veit, kept awake the poet's romantic enthusiasm.

In 1815, when Prussia and Austria were preparing for the War of Liberation, Eichendorff abandoned his poetry, his professional studies, and his preparation for the civil service, and joined the famous volunteers of Lutzow at Breslau. Again, in 1817, when Napoleon had returned to Elba, he followed the call to arms, although he had just married (Oct., 1814) Luise von Larisch, and entered Paris with the conquerors. It was only in 1816, when the chivalric baron left the army and entered the Prussian civil service as a lawyer at Breslau. The next three years passed in quiet seclusion; their principal literary production is the story "Das Mor- morbild". He received his first appointment in 1820 on the Catholic board of education at Danzig; there he took a lively interest in the restoration of the Marienburg, a house of the Teutonic Order; later (1844) he wrote its history at the request of the Government. His tragedy "Der letzte Held von Marienburg" was suggested by this circumstance. At the same time appeared his most popular production, "Aus dem Leben eines Taugenichts". In the year 1831 he was called to Berlin as councillor in the ministry of public worship. In this high office he found many opportunities to be useful to the Church; but he also met with difficulties under a government which did not shrink from imprisoning the Archbishop of Cologne, Clemens August. When Eichendorff, who was a staunch Catholic, was asked to defend the measures of the Government in public, he asked for his dismissal, which, however, was not granted till 1844. The succeeding years were passed mostly in Berlin, where the poet was occupied more with literary and historical than with poetical work; after the death of his wife (1835) he lived with his family in Neisse. Two years later, having finished his swan-song, the epic "Lucius", he died.

What has estabilished the fame of Eichendorff as a poet and has given him a place not only in literature, but also in the heart of the people, are his simple but heartfelt songs. Many of them have become Volkslieder (popular songs) in the truest sense of the word; almost all are fitted for singing owing to their spirit and their melodious language. There is hardly another German poet who has found so many composers for his songs. The great lyrical talent which made Eichendorff the master of the short story, "Aus dem Leben eines Taugenichts", "Das Mormorbild", "Schmuage" (Erlaune); his "Durande", was prejudicial to the novel "Ahnung und Gegenwart", and to the longer story "Dichter und ihre Gesellen", inasmuch as the action is neglected for discursive discussions. Lack of compression and of action has also been censured in the two dramas, "Ezelin von Romano" and "Der letzte Held von Marienburg". Still, "Ezelin"; the tragedy of a consuming pride ruined through the very abuse of its gigantic strength, no less than "Der letzte Held", in which Flauen fails on account of his excesses of magnanimity and bravery, amply fits the dramatic talent of the poet. His best comedy "Die Freier" has been found very well adapted to the stage. In his later years Eichendorff devoted his genius more to the history of literature. His history of the poetical literature of Germany (Kempten, 1807), especially the description of romanticism, outsold as it is by one of its best representatives, is of lasting value, also the sketch of the German novel in the eighteenth century. His solid character and his strong religious faith raise "the champion of romanticism" far above his fellow-poets. Not only did his genius never lead him away from the duties which religion and custom imposed upon him, but he also knew how to distinguish between poetical ideal and reality, and to avoid the underlying wish of truth to which the earlier romanticism had succumbed.

Eichstätt (Eystadium, Dioecese of (Eystettensis or Aiystetensis), in Bavaria, lies north of the Romanic Alps, and is suffragan to Bamberg. This diocese was founded by St. Boniface, who consecrated his nephew St. Willibald (born 700 of an Anglo-Saxon royal family) first as abbot- and regional bishop (741), and then (743) circumscribed and organized the diocese. Willibald called to his aid his brother Wunibald, who, together with St. Boniface, had been active on the German mission of Thuringia, and also his sister St. Walburga. He erected for them the monastery of Heidenheim on the Hahnmann, where the saintly pair laboured most effectively and found their resting-place (Wunibald d. 761, Walburga d. 779). Willibald, well known for his knowledge of the Christian Orient and as a pilgrim to Palestine, founded in Eichstätt a flourishing school over which he presided as magister. He died in 781. The unbroken series of his successors down to the present time (1909) counts seventy-five names. Bishop Erchenbach, who was consecrated Bishop of Eichstätt, acquired sovereignty (under Bishop Hartwig in 1220), and after various struggles became, from the fourteenth century, independent rulers over a territory which at one time comprised 437 square miles with 56,000 subjects. In the "secularization" of 1803 these domains were made over to Bavaria.

There were many illustrious incumbents of the See of Eichstätt. Bishop Gregorius (965-989) was admired as a poet, musician, scholar, and orator. Bishop Heribert (1022-1042) was a patron of the cathedral school. Gundekar II (1057-1075) rebuilt the cathedral; composed the Pontilium, in which the lives of his predecessors, the "Vita Pontilium Eystettensium", and many other subjects, especially liturgical, are treated. This work, still preserved in the original (Codex M), is of great value for the history of the diocese. Gundekar is venerated as a saint. His predecessor was Gebhard (1042-1057), the chamberlain and friend of Henry III. Hildebrand, afterwards Gregory VII, did not rest until this emperor allowed the reluctant Gebhard to assume the papal dignity. He was the first pope whom in a long time the clergy and people of Rome had chosen freely. As Victor II (1055-
1057) he was friendly to reforms, an extremely energetic man, and saintly in his life. Had he lived longer he would have taken rank among the greatest of the popes; he died in 1057 at the age of thirty-nine. Bishops Eberhard I (1049-1112), Ulrich II (1112-1123), Gebhard II (1125-1149), and Otto (1132-1185) vigorously inaugurated reforms that were perfected and confirmed in the diocesan synod of 1180. A similar activity was displayed by Bishops Henry IV (1246-1259), Reimboto (1279-1297), and Philipp von Rathsmahausen (1306-1322). The last-named was a prolific writer, patron of the cathedral school, and by synods tried to raise clergy and people to a higher level. Bishop (1354-1365), for instance, built the Willibaldsburg, provided for the material welfare of the clergy, and protected them against the attacks of laity, nobility, and princes (Constitutio Bertoldiana). On all sides we meet with evidence of his regulating and stimulating zeal (Synodal statutes of 1554). The Western Schism left its traces on the diocese. Bishop Johann III von Eich (1446-1464), a saintly man, did all in his power to avert them. He reformed the monasteries, organized the instruction of the clergy, issued pastoral directions, protected vigorous conduct of the Church, and attracted the interest of many among him the Humanist Albert of Eyb). Having been, before his election, chancellor of the emperor and his representative at the Council of Basle, he continued as bishop to serve the State on diplomatic missions of great importance. Thus, he represented the emperor in the congress of princes which Pius II called at Mantua. His friend and successor, Wilhelm von Reichenau (1464-1486), the tutor of Maximilian I, was a statesman, diplomat, and patron of the fine arts, but also a bishop who walked in the footsteps of his predecessor and left after him the memory of a brilliant administration. In 1480 he made a visitation of the whole diocese. The original records of this visitation, the oldest thus far known, are still extant, and give us an interesting picture of religious life in the Middle Ages, in which, however, there are not lacking deep shadows. His successors, the cultured Gabriel von Eyb (1496-1535) and the noble Moritz von Huttten (1539-1552), were men who fully understood the critical situation and set themselves against the perilous innovations of their time, but they could not prevent the imperial cities of Nuremberg and Weissenburg, the margraves of Ansbach and the palgroves of the Rhine, from annexing a large part of the territory of the diocese in order to restore their finances by means of church property, and from forcing the people to apostatize. Bishop Moritz gathered about him men of ability (Vitus von Ammerbach, Coehlause, and convoked (1548) a diocesan synod whose records exhibit the spreading spiritual desolation.

Bishop Martin von Schauberg (1560-1590) founded the first Trinitarian seminary (1564) one year after the close of the council, and secured for it the assistance of its teachers (Robert Turner, Peter Stifter, Frederick Staphylus). Bishop Konrad von Germingen (1593-1612) rebuilt the Willibaldsburg, founded the "Hortus Eystettenensis," a garden well known to all European botanist and ordered frequent visits of the diocese, made the cathedral a lyceum and a fine church, in which the theologians are Johann Eck, P. Canisius, Gregory of Valencia, Salmeron, Jacob Gretser; among its canonists: Reifenstuel, Pirching, Schmalzgrueber; among its jurists, Wiegules Kreitzmayer, Ad. Ickstatt; among its philosophers, scientists, and mathematicians: Johann Reuchlin, Conrad Celtis, Christoph Scheiner, Caspar Seipppus, Philipp and Petrus Apian, Fuchs Leonhard, and others. Early in the nineteenth century the university was transferred to Landshut, thence to Munich.

The most important monastery of the diocese in olden times was the Benedictine abbey founded by St. Willibald in 710 and out of which grew the diocese. At the end of the tenth century it became the cathedral chapter with secular canons. Heidenheim was at first a double monastery, founded by St. Willibald; it was changed (800) to a chapter of canons; later it became again a Benedictine chapter with the monks moved to Herrieden and erected there, under Abbot Dietker and through the benevolence of Charlemagne, a new monastery, which was changed to a chapter of canons in 885 and secularized in 1584. The nuns moved from Heidenheim to Morbach, taking with them some of the relics of St. Walburga, which were lost in the "secularization" of the sixteenth century. St. Walburga (Benedictine nuns) in Eichstatt (founded 870) was endowed in 1035 by Count Leodegar and reorganized by Bishop Heribert. It is yet flourishing despite its temporary seculariza-
EIMHIN

EINHARD (less correctly EINGHARD), historian, born c. 770 in the district watered by the River Main in the eastern part of the Frankish Empire; d. 14 March, 840, at Seligenstadt.

His earliest training he received at the monastery of Fulda, where he showed such unusual mental powers that Abbot Baugulf sent him to the court of Charles-magne. His education was completed at the Palace School, where he was fortunate enough to count among his masters the great Alcuin, who bears witness to his remarkable talent in mathematics and architecture, and also to the fact that, in spite of his unattractive person, he was among the emperor's most trusted advisers. Charlemagne gave...

Our EINSIEDELN

of robbers who coveted the treasures offered at the shrine by devout pilgrims, but during the next eighty years the place was never without one or more hermits emulating St. Meinrad’s example. One of them, named Eberhard, previously Provost of Strasburg, erected a monastery and church there, of which he became first abbot. The church was miraculously consecrated, so the legend runs, in 948, by Christ Himself assisted by the Four Evangelists, St. Peter, and St. Gregory the Great. This event was investigated and confirmed by Pope Leo VIII and subsequently ratified by many of his successors, the last ratification being by Pius VI in 1793, who confirmed the acts of all his predecessors. In 965 Gregory, the third Abbot of Einsiedeln, was made a prince of the empire by Otto I, and his successors continued to enjoy the same dignity up to the cessation of the empire in the beginning of the nineteenth century. In 1274 the abbey, with its dependencies, was created an independent principality by Rudolf of Hapsburg, over which the abbot exercised temporal as well as spiritual jurisdiction. It continued independent until the French Revolution. The abbey is noted for its name is termed nullius honorum, the abbot having quasi-episcopal authority over ten parishes served by the monks and comprising nearly twenty thousand souls. For the learning and piety of its monks Einsiedeln has been famous for a thousand years, and many saints and scholars have lived within its walls. The study of letters, printing, and music have greatly flourished there, and the abbey has contributed largely to the glory of the Benedictine Order. It is true that discipline declined somewhat in the fifteenth century and the rule became relaxed, but Ludovicus II, a monk of St. Gall who was Abbot of Einsiedeln 1526–44, succeeded in restoring the stricter observance. In the sixteenth century the religious disturbances caused by the spread of the Protestant Reformation in Switzerland were a source of trouble for some time. Zwingli himself was at Einsiedeln for a while, and used the opportunity for protesting against the famous pilgrimages, but the storm passed over and the abbey was left in peace. Abbot Augustine I (1600–29) was the leader of the movement which resulted in the erection of the Swiss Congregation of the Order of St. Benedict in 1602, and he also did much for the establishment of unrelaxed observance in the abbey and for the promotion of a high standard of scholarship and learning amongst his monks. The pilgrimages, just mentioned, which have never ceased since the days of St. Meinrad, have tended to make Einsiedeln the rival even of Rome, Loreto, and Compostela, and constitute one of the features for which the abbey is chiefly celebrated. The pilgrims number from 150,000 to 200,000 annually, from all parts of Catholic Europe. The miraculous statue of Our Lady, originally set up by St. Meinrad, and later

ABBESS OF EINSIEDELN

in 1274, the abbey, with its dependencies, was created an independent principality by Rudolf of Hapsburg, over which the abbot exercised temporal as well as spiritual jurisdiction. It continued independent until the French Revolution. The abbey is noted for its name is termed nullius honorum, the abbot having quasi-episcopal authority over ten parishes served by the monks and comprising nearly twenty thousand souls. For the learning and piety of its monks Einsiedeln has been famous for a thousand years, and many saints and scholars have lived within its walls. The study of letters, printing, and music have greatly flourished there, and the abbey has contributed largely to the glory of the Benedictine Order. It is true that discipline declined somewhat in the fifteenth century and the rule became relaxed, but Ludovicus II, a monk of St. Gall who was Abbot of Einsiedeln 1526–44, succeeded in restoring the stricter observance. In the sixteenth century the religious disturbances caused by the spread of the Protestant Reformation in Switzerland were a source of trouble for some time. Zwingli himself was at Einsiedeln for a while, and used the opportunity for protesting against the famous pilgrimages, but the storm passed over and the abbey was left in peace. Abbot Augustine I (1600–29) was the leader of the movement which resulted in the erection of the Swiss Congregation of the Order of St. Benedict in 1602, and he also did much for the establishment of unrelaxed observance in the abbey and for the promotion of a high standard of scholarship and learning amongst his monks. The pilgrimages, just mentioned, which have never ceased since the days of St. Meinrad, have tended to make Einsiedeln the rival even of Rome, Loreto, and Compostela, and constitute one of the features for which the abbey is chiefly celebrated. The pilgrims number from 150,000 to 200,000 annually, from all parts of Catholic Europe. The miraculous statue of Our Lady, originally set up by St. Meinrad, and later
enthroned in the little chapel erected by Eberhard, is the object of their devotion. This chapel stands within the great abbey church, in much the same way as the Holy House at Loreto, encausted in marbles and precious woodwork, elaborately decorated, though it has been so often restored, rebuilt, and adorned with the offerings of pilgrims, that it may be doubted whether much of the original sanctuary still remains. The fourteenth of September and the thirteenth of October are the chief pilgrimage days, the former being the anniversary of the miraculous consecration of Eberhard's basilica, and the latter that of the translation of St. Meinrad's relics from Reichenaus to Einsiedeln in 1039. The millenary of St. Meinrad was kept there with great splendour in 1861. The great church has been many times rebuilt, the last time by Abbot Maurus between the years 1704 and 1710, and one of its chief treasures now is a magnificent corona presented by Napoleon III when he made a pilgrimage there in 1865. The library, which dates from 946, contains nearly fifty thousand volumes and many priceless MSS. The work of the monks is divided chiefly between prayer, the confessional, and study. At pilgrimage times the number of confessions heard is very large. The community numbers about one hundred priests and forty lay brothers, and attached to the abbey is a seminary and a college for about two hundred and sixty boys, both of which are taught by the monks, who also direct six convents of nuns. In 1854 a colony was sent to America from Einsiedeln to work amongst the native Indian tribes. From St. Meinrad's Abbey, Indiana, which was the first settlement, daughter-houses were founded, and these in 1881 were formed into the Swiss-American Congregation, which comprised (in 1906) seven monasteries and nearly four hundred religious. Dom Thomas Bossart, the fifty-third Abbot of Einsiedeln and formerly dean of the monastery, was elected in 1905.

Gallia Christiana (Paris, 1781), V; Album Benedictinum (St. Vincent's, Pennsylvania, 1809); Migne, Dict. des Ab-

burgomaster of Stuttgart, Eisengrein matriculated as student of jurisprudence at the University of Ingolstadt, 25 May, 1553, but before a year had passed he was at the University of Vienna, where he took the degree of Master of Arts in May, 1554. During the tolerant rule of Ferdinand I, Eisengrein, though still a Protestant, became in 1555 professor of oratory and, two years later, of physics at the University of Vienna, a Catholic institution. Though his Catholic surroundings and especially his frequent intercourse with the Jesuits of Vienna may have had great influence in bringing about his acceptance of the Catholic Faith, still his conversion was one of conviction, as is apparent from his numerous controversial writings and his scrupulous solide for the integrity of Catholic Faith and morals at the University of Ingolstadt. His conversion took place about 1558. In 1559 he received a canonry at St. Stephen's in Vienna, and a year later he was ordained priest. In 1562 he went to the University of Ingolstadt whither he had been invited by the superintendent of the university, Frederick Staphylus. He was appointed pastor of the church of St. Maurice, which was incorporated with the university, and in April of the same year he was elected rector of the university. Besides being professor, he devoted much of his time to the study of theology and, after receiving the degree of licentiate in this science on 11 No-
their names would seem not to refer to any title of their father, but might be more correctly interpreted as the "children of Divine or ardent love". This interpretation is further strengthened by an account of a vision, accorded the two virgins, in which it is related that Christ, in the form of an infant rested in their arms. In one of the legends contained in the "Acts" of St. Moling, Bishop of Ferns, it is told that Eithene and her sister were visited by this venerable saint. The abode of St. Eithene, called Tech-Ingen-Baith, or the "House of the daughters of Baith" lay near Clonard in the present Barony of Nethercross, County Dublin. This saint is also venerated at Killinis, the former name of a townland in the same locality.

Eithene, Saint, styled "of the golden hair", is commemorated in the Irish martYROLOGIES under the name of March. Eithene was daughter of Leogaire, of the noble family of the Ard-Righ, or Hy-Sovereign of Ireland at the time of St. Patrick's first visit, as a missionary, to the court of Tara (433). According to the prevailing custom of those days the children of kings and princes were frequently placed, at an early age, in the charge of the family of the Ugallach-Diarmait, to acquire the coveted honour of guardianship of the royal offspring. Hence it is assumed that Eithene and her younger sister were fostered close to Cruachan Magh Al, the dwelling-place, or royal residence, of the Gaelic kings of Connaught. However the brief story of the saint's life in the one scene, which took place beside the ford of Clebach, County Roscommon, and is described in the "Acts" of the national apostle of Ireland.

On his way to the royal abode, during his mission to the western province, it is told that St. Patrick and his disciples camped one evening close to the Well of Clebach. On the following day the clerics rose at dawn to chant the Divine Office, and prepare for the mystic sacrifice. It would appear that the two royal princesses were accustomed to visit the same fountain, and on this occasion were surprised at the appearance of the strange company who were in possession of the place. They were not, however, dismayed, and Eithene, the elder of the sisters, accosted Patrick and his companions, asking who they were and whence they came. Whereupon the apostle, speaking in a sweet voice, said—"It was not for you to confess your faith in our true God than ask about our race." Then, at their request, St. Patrick unfolded to them the doctrines of Christianity, which, under the influence of Divine grace, they accepted with heart and soul. Having baptized them, the saint placed on their brows the veil of virginity.

Then, it is related, Eithene and her sister asked "to see the face of Christ, the Son of the true God", but Patrick said: "You cannot see the face of Christ unless you taste death, and receive the Sacrifice". Whereupon they besought him to give them the Sacrifice that they might see their Spouse, the Son of God. So, by the brink of the fountain, the Sacrifice was offered, and having received their First Communion, Eithene and her sister, in an ecstasy of rapture, swooned away and died. Their mourning was ended both were laid side by side, close by the scene of their death, where afterwards a church was raised over the grave.

**EITHENE**

Eithene, Saint, styled "daughters of Baite", with her sister Sodelib, are commemorated in the Irish calendars under 20 March. They were daughters of Ailch, son of Calibre, King of Leinster, who flourished about the middle of the 6th century. The designation "daughters of Baite" usually coupled with this page...
Ekkehard, name of five monks of the (Swiss) Abbey of St. Gall from the tenth to the thirteenth century. (1) Ekkehard I (Major, “the Elder”), d. 14 Jan., 973. He was of noble birth, of the Jonschwy family in Toggenburg, and was educated in the monastery of St. Gall; after joining the Benedictine Order, he was made a canon of St. John the Baptist in the inner church there. Later, under Abbot Kralo, who trusted him implicitly, he was elected dean of the monastery, and for a while directed all the affairs of the abbey. Ekkehard made a pilgrimage to Rome, where he was retained for a time by Pope John XII, who presented him with various advantages of the imperial court; he was also elected abbot of Aquitaine with the Burgundian princess Hildesdegne, from the land of the Huns, followed by the battle of Waggenstein between Walter and the followers of Gunther and Hagen (ed. Peiper, Berlin, 1873). He also composed various religious hymns and sequences, e.g. in honour of the Blessed Trinity, St. John the Baptist, St. Benedict, St. Columbanus, St. Stephen (Meyer, “Philologische Bemerkungen zum Waltharius” in “Abhandl. der bayer. Akad. d. Wissenschaften, Munich, 1873; Strecrer, “Ekkehard und Waltharius,” Mittheil f. deutsches Altertum,” 1898, XLIII, 338–366). (2) Ekkehard II (Palatinus, “the Courtier”), d. 23 April, 990. He and Ekkehard III were nephews of the preceding, who educated also at St. Gall his other nephews, Notker the physician and Burkard, later abbot of the monastery. Ekkehard II was taught by his uncle and the monk Geraldus, and was later a teacher in the monastery school. A number of his pupils joined the order; others became bishops. According to the “Casus Sancti Galli” he was called later to the seat of the Duchesse Hadwig of Saba, widow of Burkard II. The duchess occasionally invited him to visit St. Gall, and eventually (973) asked for and obtained the services of Ekkehard as her tutor in the reading of the Latin classics. Nevertheless, he continued to render great services to his monastery, especially on the occasion of the differences between St. Gall and Reichenau (Abbot Ruedmann); in many other ways also he proved himself useful to the monks by the influence he had obtained as tutor of the duchess. Ekkehard was also prominent at the imperial court of Otto I. Later he became provost of the cathedral of Mainz, where he died 23 April, 1000. He was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius. (3) Ekkehard III, also a nephew of Ekkehard I and a pupil of the preceding, he shared the educational advantages of his cousin and, at his invitation, accompanied him to Hohentwiel to superintend and direct the studies of the local clergy. On his return to St. Gall he was made dean of the abbey, and is reported to have filled this office for thirty years. He died early in the eleventh century. (4) Ekkehard IV.—According to the testimony in his “Chronicle” (especially in view of his statement that he had heard from eyewitnesses of the great conflagration at St. Gall in 937), the date of his birth is usually placed about 1000; he died 21 Oct., but the year of his death is unknown (1057–1060?). The same “Chronicle” indicates Alsace as his birthplace, though we do not know with certainty either the place of his birth, or his family origin. His boyhood was spent at St. Gall where he had for tutor Notker Labeo the German, one of the most learned scholars of his time. From him Ekkehard acquired a profound knowledge of the Latin and Greek classics, he also studied mathematics, astronomy, and music, and was acknowledged while living as a scholar of note even outside the monastery. After the death of Notker Labeo (1022) Ekkehard was called to Mainz by Archbishop Aribo, where he became director and teacher in the cathedral school, and held both offices until the death of his patron (1031), distinguishing himself as head of the school; indeed, he was noted as a successful teacher and promoter of learning. A treatise on the “Jube me, Domine, benedicere”, inscriptions, and benediction prayers remain as evidence of his literary activity. Emperor Conrad II, when at Ingelheim near Mainz, distinguished him by marks of personal favour (Easter, 1030). Shortly after his return to St. Gall Abbot Tietbald died (1034) and Norbert of Stavelot, who introduced the reforms of Cluny, was elected to succeed him. A dissension, however, arose among the monks, the seniors being dissatisfied with the new reforms. Ekkehard, meanwhile, began work on the ancient abbey chronicle, the famous “Casus S. Galli”, begun by Ratpert and continued to Abbot Solomon (883), and carried it on from that date to Notker’s novice (972). This work is a most important document for the contemporary history of St. Gall (ed. von Arx in “Mon. Germ. Historiae: Scriptores” II, Hanover, 1821; ed. Meyer von Knonau in “St. Gallische Geschichtsquellen” in “Mitteil. zur vaterl. Geschichte” (new series, nn. 5 and 6, St. Gall, 1857); it is also the main source of our knowledge concerning the Ekkehards. The “Casus” is mostly a compilation of anecdotes and traditions concerning distinguished monks. They contain, however, many historical errors and misrepresentations, and the Latin diction is often barbarous. Nevertheless, owing to the excellence and simplicity of the narrative, they are a valuable source of contemporary history, especially of its culture. The second important literary work of Ekkehard is his “Liber Benedictinum”. It comprises metrical inscriptions for the walls of the Mainz cathedral, and benedictions (also in verse) for use by the monks, the seniors being also poems in honour of the festivals of various saints, partly from his own pen and partly by Notker Labeo. In poetical merit these works are inferior enough; nevertheless they betray a very fair knowledge of Latin. The glosses from his pen, both on his own manuscripts and others belonging to the abbey, remain as proof of his lifelong zeal in pursuit of knowledge. He was also skilled in music, especially ecclesiastical music, always diligently and successfully cultivated at St. Gall. (5) Ekkehard V (Minimus), d. about 1200. He is the last of the St. Gall Ekkehards, and flourished towards the end of the twelfth, and the beginning of the thirteenth century. No particulars are known concerning his life, and tradition is silent as to his origin, the year of his birth and of his death. He was abbot of the abbey in the reign of Innocent III. About 1214 he wrote a life of St. Notker Balbus, a learned monk of St. Gall, who lived towards the end of the ninth, and the beginning of the tenth century (Acta SS., April, I, 579), from which work we gather that his author was versed in ecclesiastical music. 

J. P. Kirch.
Ekkehard of Aura

Ekkehard of Aura (Uraugensis), Benedictine monk and chronicler, b. about 1050; d. after 1125. Very little is known of his life. About 1101 he went on a pilgrimage to the Holy Land, and in 1106 took part in the Council of Guastalla. Apparently he began at first to the monastery of St. Michael at Bamberg, and later (1108 or 1113) was abbot of the monastery of Aura, founded by Bishop Otto of Bamberg, on the Franconian Saale, near Kissingen, Bavaria; this monastery followed the Rule of Hirschau. The "Chronicon universale", called after the monasteries of Aura, is the chief source for the history of Germany during the years 1080–1125. In its present form it was divided into five books: the first contains ancient history from the Creation to the buildling of the city of Rome; the second extends to the birth of Christ; the third reaches the time of Charlemagne; the fourth goes to the opening of the reign of Emperor Henry V; the fifth contains an account of the title of this ruler. No other medieval general chronicle covers so much ground; in the manuscripts now extant it is evidently not the work of one man but represents rather the fusion of various recensions and continuations. Bresslau, in his acute investigation of the subject (Neues Archiv für ältere deutsche Geschichtskunde, VII), traces these changes, for the most part, to Rutollo, prior of St. Michael's (d. 17 Feb., 1103). It is now believed that Ekkehard simply rewrote the greater part of the chronicle, and that his original contribution is the account of the reign of Emperor Henry V. The chronicle, taken as a whole, is a very skilful compilation, and shows in the selection and arrangement of the matter a good understanding and mastery of the material at hand. The language is good and simple, and the presentation clear and well summarized. Continuations were written by various chroniclers, among whom may be mentioned Conrad of Liechtenau and Albert of Stade. Ekkehard's chronicle has been published several times (Mon. Germ. Hist., Script. VI, 13–265; Migne, P. L., CLIV, 459–1060). A German translation was issued by Pflüger (Leipzig, 1893), as vol. LI of the series "Geschichtsschreiber der deutschen Vorzeit".

PATRICIUS SCHLAGER.

Elba, a titular see of Asia Minor. Elba, said to have been founded by Mesenethus, was situated at a distance of twelve stadia from the Caicus, one hundred and twenty stadia from Pergamus. It appears in history about 450 b. c., at the time of the Athenian naval league. It belonged to Alexander, then to the kings of Pergamus, and was the port of the latter. In 190 b. c. it was besieged by Antiochus of Syria, in 150 by Prusias, who ravaged all the country. It was partly destroyed in a. d. 90 by an earthquake. In its Roman period it struck coins. As a suffragan of Ephesus Elba is mentioned by most "Notitiae episcopatuum" as late as the twelfth or the thirteenth century. We know only three of its bishops: Iainius in 451, Obianius in 787, Theodulus in 960. In the twelfth century, Or. Con. 1202. In the tenth century St. Paul the Younger, a monk of Mount Latros, was born there (Analecta Bollandiana, XI, 1–74, 136–182). The city must have been destroyed either by the Mongols or by the Turks. The ruins stand about three kilometres south of Kiliisse Keui in the vilayet of Smyrna. The Greek Church also gives the title of Elba to auxiliary bishops.

S. PETRIDS.
landed on the island, 1 May, 1814, but left it on 26 February, 1815; during his short administration Napoleon did much for the benefit of the island, especially in the improvement of the roads. The Congress of Vienna, in 1815, restored the island to Tuscany, with which it was finally incorporated into the united Kingdom of Italy.

Ecclesia (or Chalema), a sect of Gnostic Ebionite, whose religion was a wild medley of heathen superstitions and Christian doctrines with Judaism. Hippolytus (Philosophumena, IX, 13-17) tells us that under Callistus (217-222) a cunning individual called Aelcius, a native of Apamea in Syria, came to Rome, bringing a book which he said had been received from Parthia by a just named Elchasai (θέλθαια; but Epiphanius has θελήται and ἐλέκσαι; Methodius, ϕοιτ.-method.) The contents of the book had been revealed by an angel ninety-six miles high, sixteen miles broad, and twenty-four across the shoulders, whose footprints were fourteen miles long and four miles wide by two miles deep. This was the Son of God, and He was accompanied by His sister, who had the same dimensions. Aelcius announced that a new remission of sins had been proclaimed in the third year of Trajan (A. D. 100), and he described a baptism which should import this forgiveness even to the grossest sinners. Harnack makes him say that Elchasai 'proclaimed' instead of 'had been proclaimed' (as εὐαγγελιζόμενος and not εὐαγγελισθέντο), and thus infers that a special year of remission was spoken of as past once for all—that Aelcius had no reason for inventing this, so that Hilgenfeld was right in holding that Elchasai really lived under Trajan, as Epiphanius supposed. If we put aside this blunder of Harnack's (and also his earlier odd conjecture that the remission in the third year of Trajan meant that the first two books of the Pastors of Hermes were published in that year), we see that the remission offered is by the new baptism. Hippolytus represents this doctrine as an improvement made by Aelcius on the lax teaching of his enemy Callistus. He does not perhaps expect us to take this seriously—it is most likely ironical—but he seems to regard Aelcius as the author of the book. Origen, writing somewhat later (c. 246-9), says the heresy was quite new; he seems to have met with Aelcius, though he does not give his name. There is no reason why we should dissent from these contemporary witnesses, and we must place the first appearance of the book of Elchasai c. 220. A century and a half later, S. Epiphanius found it in use among the Samnitians, descendants of the earlier Ecclesiastes, and also among the Osages, and many of the other Ebionite communities. En-hadim, an Arabic writer, c. 987, found a sect of Sabeans in the desert who counted Elchasai as their founder (Chwolson, Die Sababier, 1891, 343, cited by the author).

According to Hippolytus the teaching of Aelcius was borrowed from various heresies. He taught circumcision, that Christ was a man like others, that he had many times been born on earth of a virgin, that he devoted himself to astrology, magic, and incantations. For all sins of impurity, even for lust, as a first step, a second baptism is enjoined, "in the name of the great and most high God and in the name of His Son the great King", with an adjuration of the seven witnesses written in the book, sky, water, the holy spirits, the Angels of prayer, oil, salt, and earth. One who has been bitten by a mad dog is to run to the nearest water and jump in with all his clothes on, using the foregoing formula, and promising the seven witnesses that he will abstain from sin. The same treatment—forty days consecutively of baptism in cold water—is recommended for consumption and for the insane. Other Ebionites of Epiphanius' time also practised this treatment. That saint tells us that mention was made in the book of Elchasai's brother, Ixai, and that the heresiarch was a Jew of the time of Trajan. Two of his descendants, two sisters, Marthas and Marthana, lived till the days of Epiphanius. They were revered by the people and the dust of their feet and their spittle were used to cure diseases. This suggests that Elchasai was not a fictitious personage. He was presumably a primitive leader of an Ebionite community, to whose Aelcius ascribed his own book. We learn further from Epiphanius that the book condemned virginity and continence, and denied marriage and the Priestly Order. It permitted the worship of idols to escape persecution, provided the act was merely an external one, disowned in the heart. Prayer to be made not to the East, but always towards Jerusalem. Yet all sacrifice was condemned, as was a denial that it was offered by the high priests or under the Law. The Prophets as well as the Apostles were rejected, and of course St. Paul and all his writings. It has been customary to find Ecclesiastical doctrine in the Clementine "Homilies" and "Recognitions", especially in the former. On the groundlessness of this see Codd, The Faith.

Hippolytus, Philosophumena, IX, 13-17; X, 29; Orig. in Euchresius, H. E., VI, 38; Methodius, Conv., VIII, 18; Epiphanius, Hær., XIX and XXX, 1819, 17, 13, and 21, but the latter has simply used Epiphanius. See Hilgenfeld, N. T., extra eonem receptum (Leipzig, 1881), fass. III; cf. also A. K. Riese and Christiane (Leipzig, 1886) and the various writings on the Sabaean-Clementine, esp. Uhlhorn. A good account is by Salmon in Diet. Christ. Theol., s. v. Ebionites; more recent is Harnack, Gesch. der altchristl. Lit., I, 207; II, 197; II, 167; Bardenhewer, Gesch. der altchristl. Lit., I, 350; idem, Schari, I, Petrologie (Freiburg in Br.); 1898.)

John Chapman.

Elder, George, educator, b. 11 August, 1793, in Kentucky, U. S. A.; d. 28 Sept., 1838, at Bardstown. His parents, James Elder and Ann Richards (a convert), natives of Maryland, emigrated shortly after their marriage to Hardin's Creek, in the present Marion County, Kentucky, where George, the second of their seven children was born. The Elders enjoyed many of the advantages of a good religious education. The family was well versed in the Scriptures and thoroughly acquainted with the teaching of the Church, which he frequently defended in discussion and explained to converts who were preparing for baptism. The elder Elder imbued a love for serious study, and in his sixteenth year he entered Mount St. Mary's College, Emmitsburg, Maryland, to pursue classical studies. Here he became the friend of William Byrne (q. v.), afterwards founder of St. Mary's College, Kentucky. Both studied theology in St. Mary's Seminary, Baltimore, and were ordained priests at Bardstown by Bishop David, 18 Sept., 1819. In addition to the duties of an assistant at the cathedral there, Father Elder was entrusted by Bishop Flaget with the founding of a high-school or college for lay students. This was, at first, a day school and was taught in the basement of the theological seminary (erected in 1818). A separate building was erected in 1820-23. The college was then one of the largest and best appointed educational institutions in the entire West. The arrival in 1825, of fifty-six Southern students was the beginning of the college patronage the college received from the Southern States, notably Louisiana and Mississippi, and which continued down to the Civil War. In 1827 the Rev. Ignatius A. Reynolds (afterwards Bishop of Charleston) was appointed president and Father Elder was given charge of the congregation of St. Fius, in Scott
County. Dr. Reynolds was transferred in 1830 to pastoral work, and Father Elder again became president, a position which he held until his death. He frequently did duty in the cathedral and was one of the editors of the Louisville "Catholic Advocate" newspaper (founded in 1836), to which he contributed a series of well-written articles on the education of children and the obligations of parents in such matters. "Letters to Brother Jonathan", half satirical, half controversial, were also the product of his pen. His sense of justice forced him, in spite of his characteristic amiability, to prosecute a bigoted persecutor, Nathan L. Rice, for libelling, after the manner of "Maria Monk", a worthy Kentucky priest, then absent in Europe. Father Elder's last illness was brought on by over-exertion and fatigue at the burning down (25 Jan., 1838) of the main college building.

Elder, William Henry, third Bishop of Natchez, Mississippi, U. S. A., and second Archbishop of Cincinnati, b. in Baltimore, Maryland, 22 March, 1819; d. in Cincinnati, 31 Oct., 1904. His father, Basil Elder, was a descendant of William Elder, who had emigrated from England to America, in colonial times; his mother, Elisabeth Miles (Snowden) Elder. In 1831 he entered Mt. St. Mary's College, Emmitsburg, Maryland, then presided over by the Rev. John Baptist Purcell, who, two years later, became the second Bishop, and later the first Archbishop, of Cincinnati. In 1842 he went to Rome, to complete his theological studies at the College of the Propaganda, where he received the degree of Doctor of Divinity. He was ordained priest in Rome, 29 March, 1846. Returning to Maryland, he became professor at Emmitsburg, which position he held until he was appointed Bishop of Natchez, for which he was consecrated in the cathedral of Baltimore, by Archbishop Kenrick, 3 May, 1857. In 1864 he was brought into prominence by his refusal to obey the order of the Federal troops at Natchez, to have certain prayers for the President of the United States read publicly in the churches of the town. The right was arrested, tried, and convicted; but the decision of the military court was reversed at Washington. His devotion to his people during the yellow-fever epidemic of 1878 won universal commendation. On 30 January, 1880, he was made titular Bishop of Avara and transferred to Cincinnati, as coadjutor with the right of succession to Archbishop Purcell, whom he succeeded 4 July, 1883. Great financial difficulties clouded the last years of Archbishop Purcell's life and made the task of his successor a trying one. But the reopening of the theological seminary, Mt. St. Mary's of the West, the founding of St. Gregory's Preparatory Seminary, the enlarging of St. Joseph's Orphan Asylum, besides the building of numerous other religious institutions, show how well Archbishop Elder overcame these difficulties. (See CINCINNATI.)

ELEAZAR

ELEAZAR (Heb. אלעזר, God's help).—I. Elizahbat, daughter of Aminadab and sister of Nahashon, bore to him four sons, Nadab, Abihu, Eleazar and Ithamar (Ex., vi, 23), all of whom, with their parents, were anointed . . . and consecrated, to do the functions of priesthood (Num., iii, 2-3; Lev., viii., i-13). As Nadab and Abihu died without children, punished for offering strange fire before the Lord (Lev., x, i-7; I Par., xxix, 1-2), "Eleazar and Ithamar performed the priestly office in the presence of Aaron (Num., iii, 4). Thus entitled to succeed his father in the office of high-priest, "Eleazar . . . took a wife of the daughters of Phutiel", and so became the father of Phinees (Ex., vi, 25). Prince of the princes of the Levites "that watch for the guard of the sanctuary" (Num., iii, 22), directing the sons of Caath when wrapping up "the sanctuary and the vessels thereof at the removing of the camp" (Num., iv, 15-16), Eleazar was selected as the suitable official, "to whose charge pertaineth the oil to dress the lamps, and the sweet incense, and the sacrifices of holocaust, and whatsoever pertaineth to the service of the tabernacle, and of all the vessels that are in the sanctuary" (Num., iv, 16). At the very moment when his brothers were punished "by fire coming out from the Lord", Eleazar, though deeply affected by mental anguish, obeyed the order of Moses, and consecrated their garments (Lev., x, i-20). After the terrible punishment inflicted on the daring usurpers, Core, Dathan, and Abiram, as if to make more evident his right to become the high-priest, Eleazar, complying with orders, beat into plates the still smoking censers used by these unfortunate rebels, and for a sign and a memorial, fastened this metal to the altar (Num., xvi, 1-40). Appointment to preside over the immolation of the red cow (Num., xix, 1-10), Eleazar next appears, clothed with the vesture of Aaron, and exercising the office of high-priest (Num., xx, 22-29). Hence it is that we find what is remarkable associated with him, the children of Israel after the slaughter of the twenty-four thousand (Num., xxxvi, 1-4), in settling the inheritance case presented by the daughters of Salphad (Num., xxvii, 1-3), in distributing the spoils taken from the Amalekites (Num., xix, 1-5), and, finally, in considering the request of Ruben and Gad for land east of the Jordan (Num., xxxii, 1-5). To Eleazar, Josue, the successor of Moses, is presented by the Jewish lawgiver himself (Num., xxvii, 12-23). On the list of those appointed to divide among the Israelites the lands west of the Jordan, the very first name is that of Eleazar (Num., xxxiv, 16-19; Jos., xiv, 1-2; xix, 51), who was buried "in Gabaaath, that belonged to Phinees his son, which was given him in mount Ephraim" (Jos., xxiv, 33). If we except the period from Heil to Solomon, during which the descendants of Ithamar continued to exercise the office of high-priest (I Kings, ii, 30-36; III Kings, ii, 26-27), those holding this most sacred calling, down to the time of the Machabees, belonged to the family of Eleazar (Ex., vi, 25). II. Eleazar, surnamed Aboran, was the fourth son of Mathathias (I Mach., ii, 5). With some probability, he is identified with the Elzaras who bore to Sisera his wife, and with Nic словам the Holy Book to the Jewish warriors (II Mach., viii, 22-24). In the engagement at Bethzacharam, he displayed marvellous courage in attacking and killing the elephant, on which "it seemed to him that the king [Antiochus Eupator] was crushed to death beneath the charging elephant. Eleazar exposed himself to deliver his people.
and to get him an everlasting name" (I Mach., vi, 17-46.)

III. Eleazar, a scribe and doctor of the law, though ninety years of age, bravely preferred to die a most glorious death than to purchase a hateful life by breaking the law which forbade the Israelites use of swine’s flesh. His friends, "moved with wicked pity", were willing to substitute lawful flesh, that Eleazar, feigning to have eaten the forbidden meat, might be delivered from death. But, considering "the dignity of his age . . . and the inbred honour of his grandfathers", Eleazar refused the offer, and turned his well-meant proposal, which if accepted, though securing his deliverance from punishment, might scandalize many young persons, and could not deliver from the hand of the Almighty. Having thus changed into rage the rejected sympathy of his friends, the holy man bravely endured his cruel tortures, probably at Antioch, during the reign of Antiochus IV Epiphanes. (II Mach., vi, 18-31; I Mach., i, 57-63.)

D. P. DUFFY.

**Elec**t denotes in general one chosen or taken by preference from among two or more; as a theological term it is equivalent to "chosen as the object of mercy or Divine favour, as set apart for eternal life". In order to determine the meaning of the word more accurately, we may have to study its usage both in the Old Testament and the New.

I. **The Old Testament** applies the term elect, or chosen, only to the Israelites in as far as they are called to be the people of God, or are faithful to their Divine call. The idea of such an election is common in the Book of Genesis, in the Deuteronomy and in Ps. cxlv, 6 and 43, and cv, 5, the chosen ones are the Hebrew people, in as far as it is the recipient of God’s temporal and spiritual blessings; in Is., lv, 9, 15, and 23, they are the repentant Israelites, as few in number "as if a grain be found in a cluster" (ibid., 8); in Tob., xiii, 10, they are the Israelites remaining faithful during their captivity; in Wisd., iii, 9, and iv, 15, they are God’s true servants; in Eccles., xxiv, 4, 13, and xliv, 2, these servants of God belong to the chosen people.

II. **The New Testament** (excepting perhaps Acts, xiii, 17) the meaning of the term from its connexion with the people of Israel to the members of the Church of Christ, either militant on earth or triumphant in heaven. Thus I Pet., i, 1, speaks of the elect among the "strangers dispersed" through the various parts of the world; I Pet., ii, 9, represents them as "a chosen generation, a kingly priesthood, a holy nation, a purchased people", called from darkness into God’s marvellous light. St. Paul, too, speaks of the elect (Rom., viii, 33) and describes the five degrees of their election: they are foreknown, predestined, called, justified, and glorified (loc. cit., 29, 30). He returns to the idea again and again: II Thess., ii, 12 sq.; Col., iii, 12; Tit., i, 1, 2; II Tim., ii, 10. St. John gives the title of elect to those who fight on the side of the Lamb against the powers of darkness (Apoc., xvii, 14). According to St. Luke (xvii, 7), God hears the cries of his elect for vengeance; according to the first two Books of Maccabees, the Lamb will shorten the days on them, the elect (Matt., xxiv, 22, 24, 31; Mark, xiii, 20, 22, 27).

If it be asked why the name elect was given to the members of the Church Militant, we may assign a double reason: first, they were freely chosen by God’s goodness (Rom., xi, 5-7, 28); secondly, they must and do conduct the life which God will have to them. The word elect (Matt., xxv, 13; xvi, 19; xxii, 14). It is agreed on all sides that the term refers to members of the Church Triumphant, but there is some doubt as to whether it refers to mere membership, or to a more exalted degree. This distinction is important; if the word implies mere membership in the Church Triumphant, then the chosen ones, or those who will be saved, are few, and the non-members in the Church Triumphant are many; if the word denotes a special degree of importance, all will attain this rank, and many will fail to do so, though many are called to it. The sentence “many are called, but few chosen” does not, therefore, settle the question as to the relative number of the elect and the lost; theologians are divided on this point, and those who consider the object of saving one’s soul (Luke, xiii, 23, 24), he alternately so strengthens our hope and excites our fear as not to leave us any solid ground for either presumption or despair.

A. J. MAAS.

**Election** (Lat. *elictio*, from *eliger*, to choose from).

—This subject will be treated under the following heads: I. Juridical Concept; II. Electors; III. Persons Eligible; IV. The Act of Electing: Forms and Methods; V. After Election; VI. Elections Now in Use.

I. **Juridical Concept**—In its broadest sense election means a choice among many persons, things, or sides to be taken. In the stricter juridical sense it means the choice of one among many persons for a definite charge or function. If we confine ourselves to ecclesiastical law, canonical election, in a broad sense, would be any designation of a person to an ecclesiastical office. The word thus understood includes various modes: postulation, presentation, nomination, recommendation, request or petition, and, finally, free collation. In a narrower sense, election is the canonical appointment, by legitimate electors, of a fit person to an ecclesiastical office. Its effect is to confer on the person thus elected an actual right to the benefice or charge, independently of the confirmation or collation ulteriorly necessary. Hence it is easily distinguished from the aforesaid modes that only in a broad sense can be termed election.

(a) Postulation differs canonically from election, not as regards the electors, but as regards the person elected, the latter being juridically ineligible on account of an impediment from which the superior is asked to dispense him. For instance, if in an episcopal election the canons designate the bishop of another see, or a brother of thirty years of age, or one of illegitimate birth, etc., no actual right would be conferred on such a person, and the ecclesiastical superior would be in no wise bound to recognize such action; hence the electors are then said to *postulate* their candidate, this postulation being a matter of favour (gratia), not of justice; (b) Presentation, on the contrary, differs from election not in respect to the person elected but to the electors; it is the exercise of the right of patronage, and the patron may be a layman, whereas the electors to ecclesiastical dignities must be clerics. In both cases the right of the candidate is the same (ad rem); but when the candidate is canonical, confirmation, presentation by a patron leads to canonical institution by a competent prelate. Moreover, when the right of patronage belongs to a moral body, e.g. a chapter or an entire congregation, presentation may have to follow along the lines of election. Though frequently called nomination, the designation of bishops and beneficed clergy by the metropolitan in virtue of concordats is in reality presentation, and results in canonical institution. (c) Correctly speaking, nomination is the canonical act by which the electors propose several fit persons to the free choice of the superior. The role of electors in nomination is
ELECTION

the same as in election properly so called; as election, however, can fall only on one person, so nomination cannot confer on several a real right to a benefice—rather, their right is real inasmuch as it excludes third parties, though none of them possesses the jus ad rem (see Bishop). It differs from election and nomination in that the bishop or members of the clergy do not act as electors, i.e., all the persons designated do not acquire any real right to be the Holy See remaining perfectly free to make a choice outside of the list proposed. (e) Still further removed from election is simple request, or petition, by which the clergy or people of a diocese beg the pope to grant them the prelate they desire. The authors of this petition, not being properly qualified, as in the case of recommendation, to make known their appreciation of the candidate, it is needless to say the latter acquires no right whatsoever from the fact of this request. (f) Finally, free collation is the choice of the person by the superior, free and precise: and, being method most in use for appointment to inferior benefices, and the practical rule for the filling of episcopal sees, apart from some well-known exceptions. Evidently, where free collation obtains, election, properly so called, is excluded.

Electors.—Electors are those who are called by ecclesiastical law or statute to constitute an electoral college, i.e. to designate the person of their choice, and who have the qualifications required for the exercise of their right to vote. The law appoints competent electors for each kind of election; cardinals for the election of a pope; and for the election of a bishop or a vicar capitular; and the various chapters of their order, etc. for the election of regular prelates. In general, election belongs, strictly speaking, to the college, i.e., the body of which the person elected will become the superior or prelate; if this college have a legal existence, like a cathedral chapter, it can exercise its right as long as it exists, even if reduced to a single member, though, of course, such a one could not elect himself. Electors called upon to give a prelate to the Church must be ecclesiastics. Hence laymen are excluded from participation in a canonical election; it would be invalid not only if made by them exclusively (c. iii, h. t.), but even if they only co-operate with ecclesiastics, every custom to the contrary notwithstanding. Ecclesiastics alone, and those only who compose the college or community to be provided with a prelate, can be electors. This is well exemplified in the cathedral chapter, all of whose canons, and they alone, are episcopal electors. Other ecclesiastics have no right to associate with the chapter in the election of a bishop, unless (a) they are in full possession of this right and it is proved by long prescription; (b) hold a pontifical privilege, or (c) can show a right resultant from the foundation of the chapter or the church in question. To exercise their right, the electors, whoever they may be, must be full members of the body to which they belong, and must, moreover, be in a condition to perform a juridical, hierarchical act; if different from the time of nomination and those who have not reached the age of puberty; ecclesiastical law debar (1) canons who have not attained full membership in the chapter, i.e. who are not yet subdeans (Council of Trent, Sess. XXII, c. iv, De ref.), and (2) religious who have not made their profession, in punishment of certain offences; some may have forfeited their right to elect, either for once or permanently, e.g. those excommunicated by name, those suspended, or those placed under interdict. The Constitution of Martin V, "Ad evitanda scandala," permits the excommunicated known as tolerati (tolerated) to take part in an election, but exception may be taken to them, and their exclusion must follow; if, after such exception, they cast a vote, it must be considered null. Apart from censures incurred, privation of an active share in elections occurs frequently in the ecclesiastical law affecting bishops; in common law and for the secular clergy, it exists in only two cases: First, when they have elected or postulated an unworthy person (c. vii, h. t.); second, when the election has been held in consequence of an abusive intervention of the civil authority (c. xliii, h. t.); finally, when it has not been made within the required time. In all these cases the election devolves upon the superior (c. xii, h. t.).

III. PERSONS ELIGIBLE.—Those persons are eligible who meet the requirements of common ecclesiastical law, or special statutes, for the charge or function in question; hence, for each election it is necessary to ascertain what is required of the candidate. In general, for all kinds of elections, the necessary qualifications are mature age, moral integrity, and adequate knowledge (c. vii, h. t.); for each charge or function dependent on an election these conditions are defined with greater detail. Thus, no layman, nor a religious who is not yet subdeacon can be elected bishop; and no regular can be elected superior, etc., unless he has made his final profession. Some of the aforesaid requirements are easily verified, e.g. the proper age, adequate knowledge, the latter being normally exacted in some degree (Council of Trent, Sess. XXII, c. ii. De ref.); others, especially an upright life, must usually depend on negative evidence, i.e. on the absence of proof to the contrary, such proof being positive offences, particularly when they have seriously impaired the reputation of the person in question or called for canonical punishment. It is principally candidates of consummate morality who are termed unworthy; the sacred canons constantly repeat that the unworthy must be set aside. Such unworthy persons are: (1) all outside the Church, viz. infidels, heretics, and schismatics; (2) all who have been guilty of great crimes (crimina majora), viz. the sacrilegious, forgers, perjurers, sodomites, and simoniacs; (3) all whom law or fact, for whatever reason, has branded as infamous (infamii juris aut facti); (4) all under censure (excommunication, suspension, interdict), unless said censure is an irregular one, particularly a penal one (ex crimen), debar from receiving or exercising Holy orders. Those also are excluded who, at the time of election, hold several incompatible benefices or dignities without dispensation (c. lib. h. t.); or who, at a preceding election, have already been rejected as unworthy (c. xii, h. t.), and all who have consented to be elected through the abusive intervention of lay authority (c. xiii, h. t.). There are other cases in which regulars cease to be eligible. The legislation here described was meant for the episcopal elections of the thirteenth century and aims at abuses now impossible.

IV. THE ACT OF ELECTION: FORMS AND METHODS.

—in this matter, even more than in the preceding paragraphs, we must consider special laws and statutes. Strictly speaking, the common ecclesiastical law, precisely the thirteenth-century Decretals, considers only episcopal elections (lib. i. tit. vi. De electone et electi potestate; and in VI). Since an election is held to appoint to a church or an ecclesiastical charge or office that is vacant, it is obvious that the first condition requisite for an election is the vacancy of said church, charge, or office, in consequence of death, transfer, resignation, or deposition; any election made with a view to filling an office not yet vacant is a canonical offence. When an election becomes necessary, the first step is to convoke the electoral assembly in some specified place, and for a certain day within the legal time-limit. The
place is ordinarily the vacant church or, if it be question of an election in a chapter, wherever the deliberations of the chapter are usually held. The time-limit set by common ecclesiastical law is three months, after the lapse of which the election devolves upon the immediate successor (c. xxix, h. t.). In an electoral college, the duty of convoking the members belongs to the superior or president; in a chapter this would be the highest dignitary. He must issue an effectual summons, for which no special form is prescribed, to all the electors without exception, whether present in the locum or absent, unless where, however, there be too far away.

The distance considered as constituting a legitimate excuse for absence (see c. xviii, h. t.) should be more narrowly interpreted to-day than in the thirteenth century. It is unnecessary to convolve electors publicly known to be incompetent to exercise their electoral right, e.g. canons excommunicated by name or not yet subdeacons. So binding is this conviction that if even one elector be not summoned he can, in all justice, enter a complaint against the election, though the latter is not ipso facto null by reason of such absence. Such an election will stand provided the elected elector abides his colleagues or abandons his complaint. As no one is bound to use a right, common law does not oblige an elector to attend the assembly and take part in the voting; the absent are not taken into consideration. As a general rule the absent cannot be represented or voted for unless, accidentally, they are summoned. "Quia propter" (xliii, h. t., Lateran Council, 1215) they are at a great distance and can prove a legitimate hindrance. Moreover, they can choose as proxy only one member of the assembly, but they can commission him to vote either for a particular person or for whomsoever he himself may deem more worthy.

On the appointed day the president opens the electoral assembly. Though the common law requires no preliminary solemnities, such are frequently imposed by special statute, e.g. the Mass of the Holy Ghost, which should be attended by all the assembled electors and those not prevented from attending; also the recital of certain prayers. Moreover, the electors are often obliged previously to promise under oath that they will conscientiously vote for the most worthy. However, apart from such oath, their obligation is more absolute and serious. These preliminaries over, the electoral assembly proceeds if necessary to verify the credentials of certain electors, e.g. those who act as delegates, as happens in the general chapters of religious congregations. Then follows the discussion of the merits (tituli) of the candidates. The latter need not have previously made known their candidacy, though they may do so. The electors, nevertheless, have all freedom to propose and sustain the candidates of their choice. Frank and fair discussion of the merits of candidates, far from being forbidden, is perfectly conformable to the law, because it tends to enlighten the electors; indeed, some maintain that an election made without such a discussion would be null or could be annulled (Matheucci, in Ferraris, "Bibliotheca", s. v. "Electio", art. iv, n. 5). It is more accurate to say that the election would be vitiated if the presiding officer were to oppose such discussion for the purpose of influencing votes. However, though the law strictly prohibits cabals and secret negotiations in the interest of certain candidates, the line between illicit manoeuvring and permissible negotiating is in practice not always easily recognizable. [See the Constitution "Ecclesia" of the Council of Trent (1563), chapter ii, v., no. 6, also the regulations that govern a conclave (q.v.)]

The discussion concluded, voting begins. Actually there is only one customary method, i.e. secret voting (secretum secreto) by written ballots. The common ecclesiastical law (c. Quia propter, xliii, h. t., Lateran Council, 1215) admits only three modes of election: the normal or regular method by ballot, and two exceptional modes, namely, compromise and quasi-inspiration. Recourse to lots is especially prohibited; nevertheless, the Sacred Congregation of Elections (May 21, 1757) ratified an election where the chapter, equitably called between two candidates in other respects fit, had drawn lots: just about as was done for the Apostolic election of St. Matthias. As to the two exceptional methods: (1) Election by quasi-inspiration takes place when the name of a candidate with enthusiasm and acclamation, in which event the ballot is omitted as useless since its result is known in advance, and the candidate in question is proclaimed elected. However, modern custom in this matter differs from ancient habits, and it is wiser, even in the case of such apparent unanimity, to proceed by ballot. (2) Compromise occurs when all the electors confide the election to one or several specified persons, either members of the electoral college or strangers, and ratify in advance the choice made by such arbitrator or arbitrators. Formerly this exceptional method was often resorted to, either to avoid prolonging and fruitless sessions, or when there was a lack of exact information concerning the candidates; it is minutely regulated by the law of the Decretals. The compromise must be agreed to by all the electors without exception, and can be confined to ecclesiastics only. It may be absolute, according to the law, i.e. free, or conditional, i.e. accompanied by certain reservations concerning the manner of election, the persons to be elected, the time-limit within which the election should be held, and so on.

The normal or regular method by ballot, according to the law of the Decretals was to be worth-while. The law "Quia propter" (see above) merely calls for the choice of three trustworthy scrutineers from among the electors. These were charged with collecting secretly (in a whisper) and in succession the votes of all; the result was then drawn up in writing and made public. The candidate who had obtained the votes of the more numerous or sounder party (major vel sanior pars) of the chapter was declared elected. However, this appreciation, not only of the number but also of the value of the votes, led to endless discussions, it being necessary to compare not only the number of votes obtained, but also the merits of the electors and their zeal, i.e. the honesty of their intentions. It was presumed, of course, that the majority was also the sounder party, but proof to the contrary was admitted (c. ixi, h. t.). The use of the secret and written ballot has long since remedied these difficulties. If the Council of Trent did not modify on this point the existing law, at least it exacted the secret ballot for the elections of regulars (Sess. XXV, c. vi, De regul.). According to this method the scrutineers silently collect the ballots of the electors present; when occasion requires it, certain members are delegated to collect the votes of electors beneath the same roof (e.g. at a conclave or at one of the regular chapters) or even in the city (for cathedral chapters), if the statutes so prescribe. This accomplished, the scrutineers count the number of the votes collected, and if, as should be, they tally with the number of electors, the same officers proceed to declare the result. Each ballot is in turn opened, and one of the scrutineers proclaims the name inscribed thereon, then passes it to the second scrutineer for registration, while the third, or secretary, adds up the total number of votes obtained by each candidate. As a general rule, elections, by ballot, are decided for the candidate who obtains the majority of votes, i.e. an absolute, not merely a relative, majority; however, certain statutes require, e.g. in a conclave, a majority of two-thirds. When the electors are odd in number, a gain of one vote ensures the majority; if the number be...
even, it requires two votes. In calculating the majority, neither absent electors nor blank ballots are taken into account; whoever casts a blank vote is held to have forfeited his electoral right for that ballot. If no candidate obtains an absolute majority, balloting is recommenced, and so on until a definite vote is reached. However, not to prolong useless balloting, special statutes can prescribe, and in fact have provided, various solutions, e.g. that after three rounds of fruitless balloting the election shall devolve upon the superior; or again, that in the third round the electoral vote only between the two most favored candidates; or, finally, that in the fourth round a relative majority shall suffice (Rules of the Sacred Congregation of Bishops and Regulars for congregations of women under simple vows, art. cxxxiii sq.). Other special regulations provide for the case of two candidates receiving the same number of votes (the voters being of even number), in which event the election is decided in favor of the senior (by age, ordination, or religious profession); sometimes the deciding vote is assigned to the presiding officer. For all these details it is necessary to know and observe the special legislation which covers them.

When the final vote is obtained, whatever its character, it should be made public, i.e. officially communicated to the electoral assembly by the presiding officer. The decree of election is then drawn up; in other words, the document which verifies the voting and confirms the election. The role of the electoral college thus fulfilled, the election is closed.

The principal duty of an elector is to vote according to his conscience, without allowing himself to be actuated by human or selfish motives, i.e., he must vote for him whom he deems the most worthy and best qualified for the person elected, or for the college. External law can scarcely go farther, but moralists rightly declare guilty of mortal sin the elector who, against his conscience, casts his vote for one who is unworthy. In order, however, to fulfill his duty, the elector has a right to reasonably and unreservedly oppose the dread of any unjust annoyance (vexatio) which might affect his vote, whether such annoyance be in its source civil or ecclesiastical (cc. xiv and xliii, h. t.).

V. After Election. We are confronted here by two cases: either an election is or not disputed. An election may be disputed by whoever is interested in it, in which case the question of its validity is referred to the superior, in accordance with the same rule as for judicial appeals. Now, an election may be defective in three ways, i.e. as to the electors, the person elected, or the mode of election. The defect concerns the electors if, through culpable neglect, one or more of those who have a right to participate in the election are not summoned; or if laymen, excommunicate vitandus, or unauthorized ecclesiastics are admitted as electors. The defect lies with the person elected if it can be proved that he was not fit (idoneus) in which case he may be postulated, or that he was positively unworthy, in which event the election is invalid. Finally, the defect concerns the form or mode of election when the legal prescriptions relative to balloting or compromising are not observed. The challenged election, with proofs of its imperfection, is judged canonically by the proper ecclesiastical superior. If the alleged defect is not proven, the election is sustained; if it be proven, the judge declares it, whereupon the law provides the following sanctions: All who aided by laymen, or who are involved (c. lvi, h. t.); the one at which an excommunicated person has been admitted to vote, as also that to which an elector has not been invited, must be closely investigated, but is not to be annulled unless the absence of the excommunicated person, or the presence of the unwelcome elector might have given a different turn to the vote. The election of a person who is not unworthy, but simply the victim of an impediment, may be treated indulgently; that of an unworthy person is to be annulled, while the electors who, knowing him to be such, nevertheless elected him, are deprived of that time of the right to vote and are suspended for three years from the benefices they hold in the vacant church in question. Finally, the election wherein the prescribed form has not been observed must be annulled. In all of these cases the right to elect (bishops) devolves upon the Holy See (Boniface VIII, c. xviii, h. t., in VI²); the only case in which it devolves upon the immediate superior is when the election has not been made within the prescribed time-limit.

If, on the contrary, the election meets with no opposition the first duty of the presiding officer of the electoral college is to notify the person elected that choice is made of his person. If he be present, e.g. in the elections of regulars, the notification takes place immediately; if he be absent, the decree of election must be forwarded to him within eight days, barring legitimate hindrance. On his side, the person elected is allowed a month within which to make known his acceptance or refusal, then within a third month receiving the decree of election or the permission of the superior when such is obligatory. If the person elected refuses the honour conferred upon him, the electoral college is summoned to proceed with a new election, under the same conditions as the first time he refused, if he accepts, it is to be noted well as his duty to demand from the superior the confirmation of his election within the peremptory limit of three months (c. vi, h. t., in VI²); but if, without legitimate hindrance, he allows this time to pass unused, the election has lapsed. From the moment of acceptance, the person elected acquires for the first time, although still incomplete, right to the benefice or charge, the jus ad rem to be completed and transformed into full right (justinum) by the confirmation of the election; it is his privilege to exact this confirmation from the superior, just as it is the latter’s duty to give it, except in the event of unworthiness, of which fact the superior remains judge. However, until the person elected has received this confirmation, he cannot take advantage of his still incomplete right to interfere in any way whatever in the administration of his benefice, but the punishment being the indemnity of his negligence, all acts thus accomplished and privation of the benefice itself. The ecclesiastical legislation on this point is very severe, but it concerns episcopal sees only. In the time of Innocent III (1198-1216) those elected to an ordinary episcopal see had to seek the confirmation of the metropolitan, or the metropolitan had to seek the confirmation of the see, but not the metropolitan; bishops outside of Italy who had to obtain from Rome the confirmation of their election (metropolitans, or bishops immediately subject to the Holy See) were authorized (c. xiv, h. t.), in cases of necessity, to enter at once on the administration of their churches, provided their election had aroused no opposition; meanwhile real confirmation proceedings went their ordinary course at Rome.

At the Second Council of Lyons, in 1274 (c. Avariar. v, h. t., in VI²), elected persons were forbidden, failing of their due elections, not to be admitted to the episcopal dignity in the administration of their benefices by assuming the title of administrator, procurator, or the like. A little later, Boniface VIII (Extrav., Injunctae, i, h. t.) established the rule still in force for entering on possession of major benefices and episcopal sees, according to which the person elected must immediately appear in person, unless he present to the provisional administrators the Apostolical Letters of his election, promotion, and confirmation. The Council of Trent having established the vicar capitular as provisional administrator of the dioceses during the vacancy of the see, it became necessary to prohibit elected persons from entering on the administration of their future dioceses in the ca-

the
tian (Hic aecepto epistula Lucio Britannio rege, ut Christianus efficereur per ejus mandatum). Whence the author of the first part of the "Liber Pontificalis", drew this information, it is now impossible to say. Historically speaking, the fact is quite improbable, and is refuted by all recent critics.

As at the end of the second century the Roman administration was so securely established in Britain, there could no longer have been in the island any real native kings. That some tribal chief, known as king, should have applied to the Roman bishop for instruction in the Christian faith seems improbable enough at that period. The unsupported assertion of the "Liber Pontificalis", a compilation of papal biographies that in its earliest form cannot antedate the first quarter of the sixth century, is not a sufficient basis for the acceptance of this statement. By some it is considered a story intended to demonstrate the Roman origin of the British Church, and consequently the latter's natural subjection to Rome. To make this clearer they locate the origin of the legend in the course of the seventh century, during the dissensions between the primitive British Church and the Anglo-Saxon Church newly established from Rome. For this hypothesis all proof is lacking. It falls before the simple fact that the first part of the "Liber Pontificalis" was compiled long before these dissensions, most probably (Duchesne) by a Roman cleric in the reign of Pope Boniface II (550-552), or (Waitz and Monball) even earlier in the seventh century, more probably during the entire conflict that centred around the peculiar customs of the Early British Church no reference is ever made to this alleged King Lucius. Saint Bede is the first English writer (673-735) to mention the story repeatedly (Hist. Eccl., I, V, V, 24, De tempore primo, ad loc. 25), and he took it, not from native sources, but from the "Liber Pontificalis". Harnack suggests a more plausible theory (Sitzungsberichte der Berliner Akademie, 1901, I, 906-916). In the document, he holds, from which the compiler of the "Liber Pontificalis" drew his information the name found was not Britonia, but Britto. Now this is the name (Birtha Brittonum) of the fortress of Edessa. The king in question is, therefore, Lucius Aelius Septimius Megas Abgar IX, of Edessa, a Christian king, as is well known. The original statement of the "Liber Pontificalis", in this hypothesis, had nothing to do with Britain. The identity of the name was to Abgar IV of Edessa. But the compiler of the "Liber Pontificalis" changed Britio to Britannio, and in this way made a British king of the Syrian Lucian.

The ninth-century "Historia Brittonum" sees in Lucius a translation of the Celtic name Lleuwer Maaw (Great Light), says that the envoy of Lucius were Fagan and Wervan, and tells us that with this king all the other island kings (regii Britanniae) were baptized (Hist. Brittonum, xviii). Thirteenth-century chronicles add other details. The "Liber Landavensis", for example (ed. Rees, 26, 65), makes known the name of Elfan and Medwy, the envoy sent by Lucius to the pope, and transfers the king's dominions to Wales. An echo of this legend penetrated even to Switzerland. In a homily preached at Chur and preserved in an eighth- or ninth-century manuscript, St. Timothy is represented as an apostle of Gaul, whence he came to Britain and baptized there a king named Lucius, who became a missionary, went to Gaul, and finally settled at Chur, where he preached the gospel with great success. In this way Lucius, the early missionary of the Swiss district of Chur, became identified with the legendary British King of the "Liber Pontificalis". The latter work is authority for the statement that Eulogius died 24 May, and was buried on the Vatican Hill (in Vaticano) near the body of St. Peter. His feast is celebrated 26 May.

J. P. Kirsch.

**Eulogius** (Fr. *ELEUTHERE*), Saint, Bishop of Tournai at the beginning of the sixth century. Historically there is very little known about St. Eulogius, but he was without doubt the first Bishop of Tournai. Theodore, whom some give as his immediate predecessor, was either a bishop of Tours, whose name was placed by mistake on the episcopal list of Tournai, or simply a missionary who ministered to the Christian scattered throughout the small Frankish Kingdom of Tournai. Before he became Bishop of Tournai, Eulogius lived at court with his friend Medardus, who predicted that he would attain the dignity of a count and also be elevated to the episcopate. After Clovis, King of the Franks, had been converted to Christianity in 496, with more than 3000 of his subjects, bishops took part in the royal councils. St. Remigius, Bishop of Reims, organized the Catholic hierarchy in Northern Gaul, and it is more than likely that St. Eulogius was named Bishop of Tournai at this time.

The saint's biography in its present form was really an invention of Henri of Tournai in the twelfth century. According to this, Eulogius was born at Tournai towards the end of the reign of Cloidric, the father of Clovis, of a Christian family descended from Irenus, who had been baptized by St. Platus. The saint's father's name was Teronius, and his mother Blanda. Persecuted by the tribune of the Scheldt obliged the Christians to flee from Tournai and take refuge in the village of Blandinium. The conversion of Clovis, however, enabled the small community to reassemble and build at Blandinium a church, which was dedicated to St. Peter. The church he was made Bishop of Tournai, and Eulogius succeeded him. Consulted by Pope Hormisdas as to the best means of eradicating the heresy which threatened nascent Christianity, Eulogius convened a synod and publicly confounded the heretics. They vowed vengeance, and as he was on his way to the synod, they fell on him and, after beating him unmercifully, left him for dead. He recovered, however, but his days were numbered. On his death-bed (529) he confided his flock to his lifelong friend, St. Medardus.

The motive underlying this biography invented by Canon Henricus (1141), was to prove the antiquity of the Church of Tournai, which from the end of the eleventh century had been trying to free itself from the jurisdiction of the bishops of Noyon. The sermons on the Trinity, Nativity, and the feast of the Annunciation (Bibliotheca Patrum, vol. XV), sometimes attributed to St. Eulogius, are of a more doubtful authenticity. His cult, however, is well established; there is record of a recovery of his relics during the episcopate of Heliodorus in 597 or 598, and a translation of them by Bishop Baudouin in 1064 or 1065, another in 1217. Relics of this saint are preserved in the monastery of St. Martin at Tournai, and in the cathedral at Bruges. His feast is given in martyrologies on 20 or 21 July, but is usually celebrated on the former date. The translation of his relics is commemorated 25 August.

Eleutheropolis, a titular see in Palestina Prima. The former name of this city seems to have been Beth Gabra, “the house of the strong men”, which later became Beit Djibrin, “the house of Gabriel”. Vespasian slaughtered almost all its inhabitants, according to Josephus, De Bell. Jud., IV., viii, 1, where its name is written Betarais. In A.D. 200 Septimius Severus, on his Syrian journey changed its name to Eleutheropolis, and it soon became one of the most important cities of Judea. Its special era, which figures on its coins and in many inscriptions, began 1 Jan., A.D. 200. (See Echos d’Orient, 1903, 310 sq.; 1904, 39 sq.) Its first known bishop is Macarius (325); five others are mentioned in the fourth and two in the sixth century (Lequien, Or. Christ., III, 631). In 393, during the episcopate of Zebennus, the relics of the Prophets Habakuk and Micah were found at Celia and Tell Zakariya near Eleutheropolis (Sozom., H. E., XV, xxix). At Eleutheropolis was born St. Epiphanius, the celebrated bishop of Salamis in Cyprus; at Aδ in the neighbourhood he established a monastery which is often mentioned in the polemics of St. Jerome with Rufinus and John, Bishop of Jerusalem. The city in later times, an important monastic centre, was at least the till the coming of the Arabs. The latter beheaded (638) at Eleutheropolis fifty soldiers of the garrison of Gaza who had refused to apostatize. They were buried in a church built in their honour. (See Anal. Bolland., 1904, 289 sq., and Echos d’Orient, 1905, 40 sq.) The city was destroyed by the Mussulmans in 700 in the civil wars. The Crusaders erected there a fortress, in 1134, under Fulco of Anjou; the Knights of St. John, to whom it was committed, restored at this time the beautiful Byzantine church at Sandahsana. The citadel was taken in 1187 by Saladin, conquered in 1191 by Richard Lion Heart, destroyed in 1263 by Sultan Bihars, and rebuilt in 1551 by the Turks. Today Beit Djibrin is a village with about 1000 Mussulman inhabitants, on the road from Jerusalem to Gaza, in a fertile and very healthy region. The medieval fortress still stands, about (80) feet square; there are also the remains of the walls, and a cloister and medieval church. In the neighbourhood are remarkable grogutes, which filled St. Jerome with wonderment. Some of these grogutes were used in early Christian times as places of worship; others bear Arabic inscriptions.

Elevation, The.—What we now know as par excellence the Elevation of the Mass is a rite of comparatively recent introduction. The Oriental liturgies, and notably the Byzantine, have indeed a showing of the consecrated Host to the people, with the words “Holy things to the holy”, but it should rather be regarded as the counterpart of our “Eece Agnus Dei” and as a preliminary to the Communion. Again, in the West, a lifting of the Host at the words “omnien honor et gloria”, immediately before the Pater Noster, has taken place since the ninth century or earlier. This may very probably be looked upon as originally an invitation to adore when the great consecratory prayer of the canon extending from the Preface to the Pater Noster (see Cabrol in “Dict. d’Archeologie”, I, 1558) had been concluded. But the showing of the Sacred Host (and still more of the Chalice) to the people after the utterance of the words of Institution, “Host est corpus meum”, is not known to have existed earlier than the close of the twelfth century. Eleudes de Sully, Bishop of Paris from 1196 to 1208, seems to have been the first to direct in his episcopal statutes that after the consecratory words the Host should be “elevated so that it can be seen by all”.

There has, however, been a good deal of confusion upon this point in the minds of some early liturgists, owing to the practice which prevailed of lifting the Host from the altar and holding it in the hands above the chalice while consecrating it. The degree of lifting, at the words “accepit panem in sanc- tias ac venerabiles manus suas”, was unavoidable, and many priests carried it so far that liturgical commentators spoke of their act as “elevere hostiam” (cf. Migne, P. L., CLXXXVII, 370), and (CLXVI, 1186), as a careful examination of the case would prove that this was quite a different thing from showing the Host to the people. Moreover, the motive of this latter showing has generally been misconceived. It has often been held to be a protest against the heresy of Berengarius; but Berengarius died a century before, and the statements of writers at the beginning of the thirteenth century make the whole development plain. The great centre of intellectual life at that period was Paris, and we learn that at Paris a curious theological view was then being defended by such eminent scholars as the chancellor Peter Manducator and the professor Peter Canterbury, that the Host of the bread only took place when the priest at Mass had pronounced the words of consecration over both bread and wine (see, e.g., Giraldeus Cambrensis, Works, II, 124; Cesarius of Heisterbach, “Dialogus”, IX, 4, 13, and “Libri Miraculorum”, II, 22), to quote the words of Peter of Poitiers “dicit quidam... quod non facit transubstantiatio panis in corpus donec prolata sint hic verba ‘Hic est corpus’” (Migne, P. L., CCX, 1245; Pope Innocent III; “De sacro altaris mysterio” IV, 22, uses similar words). This view, as may readily be understood, aroused considerable opposition, and notably on the part of Bishop Eudes de Sully and Stephen Langton, afterwards Archbishop of Canterbury and cardinal. It seems clear that the theologians of this party, by way of protest against the teaching of Peter Canterbury, adapted the custom of adoring the Host immediately after the words “Host est enim corpus meum” were spoken, and by a natural transition they encouraged the practice of showing it to the people for this purpose. The developments can be easily followed in the synodal decrees of France, England, and other countries during the thirteenth century. We find mention of a little bell of warning in the early years of that century, and before the end of the same century it was enjoined in many dioceses of the Continent and in England that one of the great bells of the church should be tolled at the moment of the Elevation, in order that those at work in the fields might kneel down and adore.

It will be readily understood from the above explanation that there was not the same motive at first for insisting on the elevation of the Chalice as well as the Host. No one at that period doubted that by the time the words of Institution had been spoken over the Host, transubstantiation had already taken place in both species. We find accordingly that the elevation of the Chalice was introduced much more slowly. It was not adopted at St. Alban’s Abbey until 1429, and we may say that it is not practised by the Carthusians even to this day. The elevation of the Host at Mass seems to have brought in its train a great idea of the special merit and virtue of looking upon the Body of Christ. Promises of an extravagant kind circulated freely among the people describing the privileges of him who had seen his Maker at Mass. Sudden death could not befall him. He was secure from hunger, infection, the danger of fire, etc. As a result of the elevation desire developed to see the Host when elevated at Mass, and this led to a variety of abuses which were rebuked by preachers and satirists. On the other hand, the same devout instinct undoubtedly fostered the introduction of processions of the Blessed Sacrament and
the practice of our familiar Exposition and Benediction (qq. v.).

All the usual authorities upon the liturgical history of the Mass draw a satisfactory, though not necessarily safe, conclusion from this important point as to the teaching of the Paris theologians of the fourteenth century. See Thurston, El Elevation in The Tablet, 10 Oct., 1907. But many useful details may be gleaned from Giorghi, De Liturgia Rom. Pont. (Rome, 1744); III. Lavrion, Exposition, et description des circonscriptions de la Messe (Paris, 1726); GHR, Das heilige Messopfer (tr. St. Louis, 1902); Thamesser, Liturgia (Freiburg, 1893); II. Duberger, Enquestes sur l'action liturgique (Cambridge, 1907), and other authors of value. See further the bibliography of the article CANON OF THE MASS.

Eleven Thousand Virgins, THE. See Ursula, SAINT.

Eluyar ye Suvisa, Fausto de, a distinguished mineralogist and chemist, b. at Logroño, Castile, 11 Oct., 1755; d. 6 Feb., 1833. He was professor in the School of Mines, Vergara, Biscay, from 1781 to 1785. His most celebrated work is the isolation of tungsten. Associated with his br. Juan José, in 1783, two years after Schelle and Bergman had announced the probable existence of this metal, he isolated it, reducing it by carbon. At the present time when tungsten steel, known as high speed steel and self-hardening steel, is revolutionizing machine-shop practice, the work of Eluyar is of particular interest. He named the metal Wolfram, a name which it still retains in the German language; the name, tungsten, meaning heavy stone, is generally used in other tongues.

The Academy of Sciences of Toulouse, 4 March, 1784, received notice of this discovery. Eluyar then spent three years in travelling, for the purpose of study, through Central Europe and went to Mexico, then called New Spain. Here he had general superintendence of the mines and founded a Royal School of Mines in 1792. Driven away by the Revolution, he returned to Spain, where he was appointed general director of mines and was busy reorganizing his department when he was seized with a fit of apoplexy and died. His works are numerous; he wrote on the theory of amalgamation, a system for the reduction of silver from its ore which received great development in Mexico. In 1818, he published the mintage of coins. He was also the author of memoirs on the state of the mines of New Spain (now Mexico) and on the exploitation of the Spanish mines. At Madrid, in 1825, he published a work on the influence of mineralogy in agriculture and chemistry.

BEAUMONT, La Grande Encyclopédie, and under tungsten and Wolfram. His work on the reduction of tungsten is described in VON HUMBOLDT: Dictionnaire des arts et des sciences (Berlin); WATTS, Dictionary of Chemistry, MEMPH. Chim. C.

T. O'CONNOR SLOANE.

Elías (Heb. 'El'ıhwh, "Yahveh is God"); A.V., Elijah, the loftiest and most wonderful prophet of the O. T. What we know of his public life is sketched in a few popular narratives enshrined, for the most part, in the Third (Heb., First) Book of Kings. These narratives, which bear the stamp of an almost contemporary age, very likely took shape in Northern Israel, and are full of the most graphic and interesting details. Every part of the prophet's life therein narrated bears out the description of the writer of Ecclesiasticus: He was "a fire, and his word burnt like a torch" (xlviii, 1). The times called for such a prophet. Under the baneful influence of his Tyrian wife Jezebel, Ahab, though perhaps not intending to forsake altogether Yahveh's worship, had nevertheless erected in Samaria a temple to the Tyrian Ba'al (III K., xvi, 32) and introduced a multitude of foreign priests (xvii 19); doubtless he had occasionally offered sacrifices to the pagan deity, and, most of all, had allowed a bloody persecution of the prophets of Yahveh.

Of Elías's origin nothing is known, except that he was a Thebrite; whether from Thebes of Nephthi (Tob., i, 2; Gr.) or from Thebom of Galaad, as our texts have it, is not absolutely certain, although most scholars, on the authority of the Septuagint and of Josephus, prefer the latter opinion. Some Jewish legends, echoed in a few Christian writings, assert moreover that Elías was of priestly descent; but there is no other warrant for the statement than the fact that he offered sacrifices. His whole manner of life resembles somewhat that of the Nazarene, and is a loud protest against his corrupt age. His skin garment and leather girdle (IV K., 1, 8), his swift foot (III K., xvii, 46), his habit of dwelling in the clefts of the torrents (xvii, 3) or in the caves of the mountains (xix, 9), of sleeping under a scanty shelter (xvii, 5), betray the true son of the desert. He appears abruptly on the scene of history to announce to Ahab that Yahveh had determined to avenge the apostasy of Israel and her king by bringing a long drought on the land. His message delivered, the prophet vanished as suddenly as he had appeared, and, guided by the spirit of Yahveh, betook himself by the brook Jabbok, to the east of the Jordan, and there the ravens (some critics would translate, however improbable the rendering, "Arabs" or "merchants") "brought him bread and flesh in the morning, and bread and flesh in the evening, and he drank of the torrent" (xvii, 6).

After the brook had dried up, Elías, under Divine direction, crossed over to Sarepta, within the Tyrian dominion. There he was hospitably received by a poor widow whom the famine had reduced to her last meal (12); her charity he rewarded by increasing her store while and oil all the while; the drought and famine prevailed, and later on by restoring her son from death (14–24). For three years there fell no rain or dew in Israel, and the land was utterly barren. Meanwhile Ahab had made fruitless efforts and secured the country in search of Elías. At length the latter resolved to confront the king once more, and, supernaturally appearing before Abídi, bade him summon his summer heat (xviii, 7 sq.). When they met, Ahab bitterly upbraided the prophet as the cause of the misfortune of Israel. But the prophet flung back the charge: "I have not troubled Israel, but thou and thy father's house, who have forsaken the commandments of the Lord, and have followed Baalim" (xviii, 18). Taking advantage of the discomfiture of the silent king, Elías bids him to summon the prophets of Baal to Mount Carmel, for a decisive contest between their god and Yahveh. The ordeal took place before a great concourse of people (see CARMEL, MOUNT) whom Elías, in the most forcible terms, presses to choose: "How long do you halt between two sides? If Yahveh be God, follow him; but if Baal, then follow him" (xviii, 21). He then commanded the heathen prophets to invoke their deity; he himself would "call on the name of his Lord"; and the God who would answer by fire, "let him be God" (24). An altar had been erected by the Baal-worshippers and the victim laid upon it; but their cries, their wild dances and mad self-mutilations all the day long availed nothing; "there was no voice heard, nor did any one answer, nor regard them as they prayed" (29). Elías, having repaired the ruined altar of Yahveh which stood there, prepared thereon his sacrifice; then, when it was time to offer the evening oblation, as he was praying earnestly, "the fire of the Lord fell, and consumed the holocaust, and the wood, and the stones, and the dust, and licked up the water that was in the trench" (38). The issue was fought and won. The people, maddened by the success, fell at Elías's command on the pagan prophets and slew them at the brook Cison. That same evening the drought ceased with a heavy downpour of rain, in the midst of which the strange prophet ran before Ahab to the entrance of Jezreel.

Elías's triumph was short. The anger of Jezebel, who had sworn to take his life (xix, 2), compelled him to flee without delay, and take his refuge beyond the desert of Judá, in the sanctuary of Mount Horeb. There, in the wilds of the sacred mountain, broken-
spirituated, he poured out his complaint before the Lord, who strengthened him by a revelation and restored his faith. Three commands are laid upon him: to anoint Hazael to be king of Syria, Jehu to be king of Israel, and Elisha to be his own successor. At once Elisha set out on the appointee of the Lord and new burden. On his way to Damascus, he meets Elisha at the plough, and throwing his mantle over him, makes him his faithful disciple and inseparable companion, to whom the completion of his task will be entrusted. The treacherous murder of Naboth was the occasion for a new reappearance of Elisha at Jezreel, as a champion of the people's rights and of social order, and as a witness that his impending doom. Ahab's house shall fall. In the place where the dogs licked the blood of Naboth will the dogs lick the king's blood; they shall eat Jezabel in Jezreel; their whole posterity shall perish and their bodies be given to the fowls of the air (xxi. 20–26). Consequence-striking, Ahab qualifier before the man of God, and in view of his penance the threatened ruin of his house was delayed. The next time we hear of Elisha, it is in connexion with Ochozias, Ahab's son and successor. Having received severe injuries in a fall, this prince sent messengers to the shrine of Elijah, and Ananias, to inquire whether he should recover. They were intercetted by the prophet, who sent them back to their master with the intimation that his injuries would prove fatal. Several bands of men sent by the king to capture Elisha were stricken by him in the heavenly; finally the man of God appeared in person before Ochozias to confirm his threatening message. Another episode recorded by the chronicler (II Par., xxi, 12) relates how Jerom, King of Juda, who had indulged in Baal-worship, received from Elisha a letter warning him that all his house would be smote by a plague, and that he himself was doomed to an early death.

According to IV K., iii, Elisha's career ended before the death of Josaphat. This statement is difficult—but not impossible—to harmonize with the preceding narrative. However this may be, Elisha vanished still more mysteriously. As he had appeared. Like Enoch, he was "translated", so that he should not taste death. As he was conversing with his spiritual son Elisha on the hills of Moab, "a fiery chariot, and fiery horses parted them both asunder, and Elisha went up by a whirlwind into heaven" (IV K., ii, 11), and all the efforts to fill him made by the prophets disbelieving Elisha's recital, availed nothing. The memory of Elisha has ever remained living in the minds both of Jews and Christians. According to Malachias, God preserveth the prophet alive to entrust him, at the end of time, with a glorious mission (iv. 5–6); at the New Testament period, this mission was believed to precede immediately the Messianic Advent (Matt., xvii, 10, 12; Mark, ix, 11); according to some Christian commentators, it would consist in converting the Jews (St. Jer., in Mal., iv, 5–6); the rabbis, finally, held that its object will be to give the explanations and answers hitherto kept back by them. I Mach., ii, 58, extols Elisha's zeal for the Law, and Ben Sira entwines in a beautiful page the narration of his actions and the description of his future mission (Eccles., xxviii, 1–12). Elisha is still in the N. T. the person up to the consummation of God (Matt., xvii, 14; Luke, i. 17; ix, 8; John, i. 21). No wonder, therefore, that with Moses he appeared at Jesus' side on the day of the Transfiguration.

Nor do we find only in the sacred literature and the commentaries thereof evidences of the conspicuous name Elishas won for himself in the minds of after-generations. To this day the name of Jebeel Mar Elyas, usually given by modern Arabs to Mount Carmel, perpetuates the memory of the man of God. Various places on the mountain: Elishas's groto; El-Khadr, the supposed school of the prophets; El-Muhraka, the traditional spot of Elishas's sacrifice; Teli El-Kassis, or Mound of the priests—where he is said to have slain the priests of Baal—are still in great veneration both among the Christians of all denominations and among the Moslems. Every year the Druses assemble at El-Muhraka to hold a festival and offer a sacrifice in honour of Elias. All Mussulmans have the prophet in great reverence; no Druse, in particular, would ever consider an oath made in the name of Elisha. Not only among them, but to some extent also among the Jews and Christians, many legendary tales are associated with the prophet's memory. The Carmelites monks long cherished the belief that their order could be traced back to unbroken succession to Elias whom they hailed as their founder. Vigorously opposed by the Bollandists, especially by Papenbroeck, their claim was no less vigorously upheld by the Carmelites of Flanders, until Pope Innocent XII, in 1698, deemed it advisable to silence both contending parties. Elisha is honoured by both the Greek and Latin Churches on 20 July.

The old stichometrical lists and ancient ecclesiastical writers (Const. Apost., VI, 16; Origen, Comm. in Matth., xxvii, 9; Euthalius; Epiphanius, Haer., xiii) mention an apocryphal "Apocalypse of Elisha", citations from which are said to be found in I Cor., ii, and Eph., v. 14. Lost to view since the early Christian centuries, this work was partly recovered in a Coptic translation found (1883) by Maspero in a monastery of Upper Egypt. Other scraps, likewise in Coptic, have since been discovered, and the work is now no longer considered as this Apocalypse—and it seems that we have by far the greater part of it—was published in 1899 by G. Steindorf; the passages cited in I Cor., ii, 9, and Eph., v. 14, do not appear there; the Apocalypse, on the other hand, has a striking analogy with the Jewish "Sepher Elia".

CHARLES L. SOFTY.

Elias, Apocalypse of. See Elyas; Egypt, VI, Coptic Literature.

Elias of Cortona, Minister General of the Friars Minor, b., it is said, at Bevila near Assisi, c. 1180; d. at Cortona, 22 April, 1253. In the writings of Elias that have come down to us he styles himself "Elia, Sinner", and his contemporaries without exception call him simply "Brother Elias". The name of a town was first added to his name in the fourteenth century; in Franciscan compilations like the "Chronica XXIV generalium" and the "Liber Conformitatum" Elias is described as Helias de Assisio, whereas the name of Cortona does not appear in connexion with his before the seventeenth century. It is clear in any event that Elias did not belong to the noble family of Coppe as some have asserted. From Salimbe, who knew Elias well, we learn that his family name was Bonisbaro or Bounbarone, that his father was from the neighbourhood of Bologna, and his mother an Assianian; that before becoming a friar Elias worked at his father's trade of mattress-making and also taught the children of Assisi to read the Psalter. Later on, according to Eccleston, Elias was a scrivener, or notary, at Bologna, where he doubtless applied himself to study. But he was not a cleric and never became a priest. Elias appears to have been one of the earliest companions of St. Francis of Assisi. The time and place of his joining the saint are uncertain; it may have been at Assisi in 1211, as Wedding says; or in the service of the seraphs, or among the friars from the first. After a short sojourn, as it seems, in Tuscany, Elias was sent in 1217 as head of a band of missionaries to Palestine, and two years later he became the first provincial of the then extensive province of Syria. It was in this
In Elias He In Faenza great St. We household few Faversham, Elias Ravenna. Elias Elias
ELIAS
capacity in St. this burial of splendour, pope, end 1226), Elias Elias
so-sole Collis Inferni at the western extremity of the town, and proceed to collect money in various ways to meet the expenses of the building. Elias thus alienated the zealots in the order, who felt entirely with St. Francis upon the question of poverty, so that at a chapter held in May, 1227, Elias was ejected in spite of his prominence, and Giovanni Parenti, provincial of Spain, was elected second general of the order.

Thenceforth Elias devoted all his energies to raising the basilica in honour of St. Francis. The first stone was laid 17 July, 1228, the day following the solemnity of saint's canonization, and the work advanced with such incredible speed that the lower church was finished within twenty-two months. It was consecrated 25 May, 1230, the hurried, secret, and still unexplained translation of St. Francis's body thither from San Giovanni in Colline by Elias having taken place a few days previously, before the general and other friars assembled for the purpose were present. Soon after this, though there is some difference of opinion as to the exact date, Elias attempted, as it seems by a kind of coup de main, to depose Innocent, and secure the government of the order by force, but the attempt failed. He thereupon retired to a distant hermitage, where we are told he allowed his beard and hair to grow, wore the vilest habit, and to all appearances led a most penitential life. However this may be, Elias was afterwards elected general at that time, and in 1232, magis tumuloque quam canonice, as a contemporary chronicler expresses it; and he continued to govern the Friars Minor for nearly seven years. During that period the order was passing through one of the crises of its earlier development. It is well known (see CONVENTUALS) that during that time a division of St. Francis a division had shown itself in the ranks of the friars, some being for relaxing the rigour of the rule, especially as regards the observance of poverty, and others for adhering to its literal strictness. The conduct of Elias after his election as general helped to widen this breach and fan the flames of discord in the order. In arbitrary fashion he refused to convene a chapter or to visit any of the provinces, but sent in his place "visitors", who acted rather as tax collectors—for Elias's chief need was money to conduct a war and convert the Franchise—than only violating the rule himself, but causing others to do so also.

In many other respects Elias abused his authority, receiving unworthy subjects into the order and confiding the most important offices to ignorant lay brothers, and when several of the early and most vocal companions of St. Francis failed to wear the capes of the mendicant order, they were dealt with as mutineers, some being scourged, others exiled or imprisoned. Elias's manner of life made his despotism more intolerable. It seems to have been that of a powerful baron rather than of a mendicant friar. We are told that he gathered about him a household of great splendour, including secular lackies, dressed in the gayest livres, that he kept "a most excellent cook" for his exclusive use, that he fared sumptuously, wore splendid garments, and made his journeys to different courts on fine palfreys with rich trappings. Because of these excesses, which threatened the complete destruction of the rule, the opposition to Elias became widespread. It was organized by Aymon of Faversham, who, in conjunction with other provincials from the North, determined to have him removed, and appealed to Gregory IX. Elias excommunicated the appoints and sought to prevent their reception by the pope. But Gregory received them and, in spite of Elias, summoned a chapter at Rome. Elias resisted to the utmost and strove to browbeat his accusers, but Gregory called on him to resign. He refused to do so, and thereupon deposed by the pope, the English provincial, Albert of Pisa, being elected general in his stead. This was in 1239.

After his deposition, Elias, who still kept the titles of Custos of the Assisian Basilica and Master of the Works, seems to have busied himself anew for a time at the task of completing the church and convent of S. Francesco, but subsequently retired to Cortona. Refusing, as he was wont, to obey either the general or the pope, Elias now openly transferred his allegiance to Frederick II, and resigned, in 1240 with the emperor's army, riding on a magnificent charger at the siege of Faenza and at that of Ravenna. Some two years before this Elias had been sent by Gregory IX as an apostolic assignato to Frederick. He now became the supporter of the excommunicated emperor in his strife with Rome and was himself excommunicated by Gregory. It is said that Elias then forwarded a letter to the pope explaining his conduct and asking pardon, and that this letter was found in the tuine of Albert of Pisa after the latter's death. Aymon of Faversham, who had been the principal opponent of Elias, and who was elected general in succession to Albert, having died in 1244, a chapter was thereupon held at Genoa. Elias was summoned by Innocent IV to attend it, but he failed to appear. Some say that the papal mandate never reached him. Be this as it may, Elias was excommunicated anew and expelled from the order. The news of his disgrace spread quickly "to the great scandal of the Church", and the very children might be heard singing in the streets:

"Hor attorna frat': Helya
Ke pres' ha la mala via",
a couplet which met the friars at every turn, so that the very name of Elias became hateful to them. It was about this time that Elias was sent by Frederick II on an important diplomatic mission to Constantinople and Cyprus. When not employed by the emperor, Elias resided at Cortona with a few friars who had remained faithful to him. He dwelt for a time in a private house which he had acquired in the city, and which he granted to his friars. In this house he was assassinated, probably the work of some disorderly friar, or perhaps of the very friars whom Elias had estranged by his haughty and despotic conduct.

Soon after, his brother-in-law, Giovanni da Parma, became gen-
eral in 1247, he sent Fra Gerardo da Modena to Cortona to beg Elias to submit, promising that he would be treated with the utmost clemency. But Elias, who seems on the one hand to have feared imprisonment by the pope and on the other to have been unwilling to renounce the favour of Frederick II, died during the Passiontide, 1253, the lonely old man,—for Elias had lost his protector by Frederick’s death in 1250—fell seriously ill. We learn from the sworn testimony of several witnesses that Bencius, Archpriest of Cortona, recognizing at once the gravity of Elias’s condition and the reality of his distress, went on Saturday, 19 April; that two days later Elias received Holy Communion at the hands of Fra Diotante, but that he could not be anointed, since Cortona was then under interdict, no holy oil was to be found. On Easter Tuesday Elias died, reconciled indeed with the church, but outside the order. He was buried at Cortona in the church he had built, which two years later—his followers having returned to obedience—passed into the hands of the order. But Elias’s bones were not suffered to rest at St. Francesco, for a later guardian dug them up and flung them out.

Elias is perhaps the most difficult character to estimate in all Franciscan history. In the first place it is wellnigh impossible, with the documents at our disposal, to obtain even a clear idea of his chequered career. There is no contemporary life of Elias, and, with the exception of Celano’s Vita Prima, of which our only evidence is that written under the influence of Elias, none of the early biographies of St. Francis make any allusion to him. In the second place, considerable bias has to be reckoned with in what is recorded of Elias in later works, especially in the writings of the Zealots, who are often indebted less by analogy than by direct considerations than by party spirit. Many stories have gathered around the life of Elias which are largely inventions. Yet these fictions have been indiscriminately reproduced by subsequent writers, with the result that Elias has come to be depicted by too many of the early biographers of St. Francis as a traitor to his master’s interests, as a mere tool of the Curia in transforming the order and destroying the manner of life intended by the Poverello. But if some have branded Elias as another Judas, others, going to the opposite extreme, have not hesitated to call St. Paul of Sicily the “Blessed Paul of St. Francis.” The stress on some words of St. Antoninus, he has sought to exculpate Elias altogether, to justify his conduct at all hazards, even where it is wholly unjustifiable; they would fain make him appear as a second founder of the order, to whose ability its great success was mainly due. It is just because so few have written calmly about Elias that it becomes additionally difficult to form a just estimate of the real motives which guided him. He has been too much abused and too much lauded. Between the two extremes it seems necessary, if we would judge with fairness, to distinguish two periods in the life of Elias, namely, before the death of St. Francis and after it. In spite of the account of Elias’s early pride and profoundness given by the “Fioretti” which may be set aside as a picturesque slander introduced for artistic effect, there is nothing to show that Elias was other than a good religious during the lifetime of St. Francis, else it is hard to understand how the latter could have entrusted him with so much responsibility, and how he could have merited the special death-bed blessing of the Poverello. On the other hand that Elias really loved St. Francis there can be no doubt, and since we have means of ascertaining there never was any breach between them. At the same time it would be difficult to imagine two characters more widely different than Elias and St. Francis. Their religious ideals were as far apart as the poles. The heroic ideal of poverty and detachment which the Poverello con-

ceived for his friars Elias regarded as exaggerated and unpractical. Hence, while St. Francis did not desire large loci for his friars, Elias multiplied spacious convents. Again, Elias’s views with regard to learning among the friars were very far removed from those of St. Francis. “The habit of Helias,” writes Salimbene, “qua Ordinem fratum Minorum ad studium theologiam promovit.” But Elias did more than this. In particular the extension of the Franciscan missions among the infidels owes more to his work than is commonly admitted. For all that, Elias was cherished, beloved by the men of the Antonine Order, whom he thought to be the glory of the order. On the other hand it would be idle to deny that Elias was utterly lacking in the true spirit of his master. Ambition was Elias’s chief fault. So long as he remained under the influence of Francis his ambition was curbed, but when he came to govern, forgetting his own past life, the example of St. Francis, and the obligations of his office, Elias so far allowed ambition to dominate him that when it was thwarted he had not the humility to submit, but, reckless of consequences, plunged to his ruin.

There is no doubt owing to his fall and disgrace that in an order so prolific in early biographies Elias remained so long without a biographer. It would be difficult, however, to exaggerate the importance of his influence upon the history of the Franciscan Order. Even his opponents conceded that Elias possessed a remarkable ability, and, none denied his eloquence. His “Who in the whole of Christendom,” asks Eccleston, “was more gracious or more famous than Elias?” Matthew of Paris dwells on the eloquence of his preaching and Bernard of Besse calls him one of the most erudite men in Italy. We know that good as well as great men sought his friendship and that strange as it may seem, he appears to have retained the confidence of St. Clare and her companions.

Nothing that can really be called a portrait of Elias remains. Giunta Pisano’s picture of him “taken from life” in 1236 having disappeared in 1634, but a seventeenth-century replica in the Museum at Assisi is believed to have been more or less copied from it. In the latter, Elias is represented as a small, sparse, dark-haired man, with a melancholy face and thin beard, and wearing an Armenian cap. With the exception of his letter to the order announcing the death of Francis, the writing of Elias has been very little preserved. The works dealing with alchemy, formerly circulated under his name, are undoubtedly supposititious. Whether or not Elias was himself the architect of St. Francesco, the fact remains that if the tomb of the Poverollians remains, “the flower and the fairest of Italian Gothic” and the glory of Assisi, it is to Elias we owe this, and it constitutes his best monument.

Biographies of Elias: Anonimo Cortonese, (Veneza), Vita di Frate Elias (2nd ed., Leghorn, 1784); Affco, Vita di Frate Elias, (2nd ed., Padua, 1818); Ryker, Elias von Cortona (Leipzig, 1872); these may still be read with interest, but they have been to some extent superseded by Le Pégion, De Aldeo Minorum in Angliae in Ansel. Franc., I (Paris, 1841), and passing: ibid., I. III, (ibid., 1841). Celano, Chronicle, Catalogus Generalis, ibid., III (1867), 695; Glassborow, ibid., I (1855) 504; Pahl, Emblemata, Chronicon in Germ. Rec. Script. XXXI, 279; Pahl, Emblemata, ed. Wollfinger, in Breviarium (Munich, 1890); II, Prima e seconda Legenda Minorum; Chron. XXII, 979, 297; Pahl, Liber conglomeratus, ibid., IV (1890). Elia of Jerusalem, d. 518, one of the two Catholic bishops (with Flavian of Antioch) who resisted the attempt of the Emperor Anastasius I (491–518) to abolish the Council of Chalcedon (451). Anastasius spent the greater part of his reign in a vain attempt to impose Monophysitism on his subjects. Unlike his predecessors, who favoured Monophysitism merely as a political expedient whereby to conciliate Egypt and the great number of Monophysites in Syria, Anastasius carried on his propaganda apparently from religious conviction. His chief advisor, Marinos, a Syrian, was also a convinced Monophysite. At first the emperor tried to arrange a compromise. The population of Constantinople and nearly all the European provinces were too Chalcedonian for an open attack of the Emperor. Macedius II, Patriarch of Constantinople (450–511), submitted so far as to sign Zenon’s Heriotikon (482), but refused to condemn the council. Flavian of Antioch also for a time approved of a policy of compromise. The Acacian schism (484–519) still continued during the reign of Anastasius, but the emperor and his patriarch made advances to the Roman see—advances that came to nothing, since the pope always insisted on the removal of the names of former schismatics from the Byzantine diptychs. Gradually Anastasius went over completely to the Monophysite position. Macedius, Severus of Scythopolis, Xenias of Tahal in Persia, and a great crowd of Syrian and Egyptian Monophysite monks overwhelmed him with petitions to have the courage of his convictions and to break openly with the Dyophysites. In the emperor’s chapel the Trisagion was sung with the famous Monophysite addition (“who was crucified for us”). Macedius of Constantinople was deposed (511), and an open Monophysite, Timothy I (511–518), took his place. Timothy began a fierce persecution of Catholics. Then the Government summoned a synod at Sidon in 512 that was to condemn the Chalcedon. But the chiefly Elia of Jerusalem who prevented this result.

Elia was an Arab, by birth, who had been educated in a monastery in Egypt. In 457 he was driven out by the Monophysite Patriarch of Alexandria, Timothy the Cat. He then came to Palestine and founded a monastery at Jericho. Anastasius of Jerusalem ordained him priest. In 464 Elia succeeded Sallustius as Bishop of Jerusalem and governed the see until 513. He acknowledged Euphemius of Constantinople (see Euphemius) and refused the communion of Macedius, the intruder about 508. The Monophysite Xennias of Hierapolis tried to make Elia sign a Monophysite formula, and the emperor ordered him to summon a synod that should condemn the Council of Chalcedon. Instead, Elia sent the emperor a Catholic profession that his enemies seem to have falsified on the way. Evagrius says: “The bishop has written it and sent it to the Emperor by the hands of Diocorus’ followers” (Monophysites). “And the profession that they then showed contained an anathema against those who speak of two natures in Christ. But the Bishop of Jerusalem, saying that it had been counterfeited with, sent another without that anathema. Nor is this surprising. For they often corrupted works of the holy Fathers” (II. É., III., xxxi). The Synod of Sidon in 512 was to condemn Chalcedon and depose Elia and Flavian. But they succeeded in persuading the Fathers to do neither (Labbe, Concil. IV, 1414). The Monophysites went on accusing these two of Nestorianism, and Anastasius deposed them, in spite of the protest of Elia’s legate, Sabas. Flavian was deposed first and Severus, an open Monophysite, was intruded in his place. With this person Elia and the monks of Palestine would have no communion (Evagrius, II. É., III., xxxii). Then the Council of Palestine, in 513, at Jerusalem and offered Elia his choice of signing a Monophysite formula or being deposed. Elia refused to sign and was banished to Aila on the Red Sea (513). His monasteries were closed. Elia remained faithful to the end.

Elia of Jerusalem was the founder of many monasteries in his patriarcate. The imperial presentation of him as a compromiser is unjust. He was steadfastly Catholic throughout and protested at once against the heretical formula brought to the emperor in his name. The Syrian Uniat Church keeps his feast, with St. Flavian of Antioch, on 18 Feb. (Nilles, Kalend. Man., I, 471). These two are named in the Roman Martyrology on 4 July.

ADRIAN FORTESSUCC.
conspicuous for his fairness and consideration for his colleagues. He was also the author of "Observations sur les différentes formations dans le système des Vosges", Paris, 1829; "Mémoires pour servir à une description géologique de la France" (with Dufrenoy), 4 vols., Paris, 1830-38; "Recherches sur quelques accidents de la surface du globe", Paris, 1834; "Explications de la carte géologique de la France", Paris Part I, 1841; Part II-IV, 1848-78 (with Dufrenoy).

H. M. BROOK.

Eliquis (Fr. Eloï), Saint, Bishop of Noyon-Tournai, b. at Châtellerat near Limoges, France, c. 590, of Roman parents, Eucherius and Tergidia; d. at Noyon, 1 December, 660. His father, recognizing unusual talent in his son, sent him to the noted goldsmith Abbo, master of the mint at Limoges. Later Eliquis went to Neustria, where he worked under Babo, the royal treasurer, on whose recommendation Clotaire II commissioned him to make a throne of gold adorned with stones. Eliquis stayed in this so long that the king that he appointed him master of the mint at Marseilles, besides taking him into his household. After the death of Clotaire (629), Dagobert appointed his father's friend his chief councillor. The fame of Eliquis spread rapidly, and ambassadors from various kings went to him before going to the king. His success in inducing the Breton King, Judith, to submit to Frankish authority (636-37) increased his influence. Eliquis took advantage of this to obtain arms for the poor and to ransom Roman, Gallic, Breton, Saxons, and Missionaries captives, who were arriving daily at Marseilles. He founded several monasteries, and with the king's consent sent his servants through towns and villages to take down the bodies of malefactors who had been executed, and give them decent burial. Eliquis was a source of edification at court, where he and his friend Dagobert I were of the same age. He also built the basilica of St. Basile, and restored that of St. Martial at Paris. He erected several fine churches in honour of the relics of St. Martin of Tours, the national saint of the Franks, and St. Denis, who was chosen patron saint by the king. On the death of Dagobert (639), Queen Nade rode took the reins of government, and Eliquis and Dado left the court and entered the priesthood. On the death of Acarius, Bishop of Noyon-Tournai, 13 May, 640, Eliquis was made his successor with the unanimous approbation of clergy and people. The inhabitants of his diocese were pagans for the most part. He undertook the conversion of the Flemings, Antwerpians, Frisians, Suevi, and the barbarian tribes along the coast. In 644 he approved the famous privilege granted to the Abbey of Saint-Denis, Paris, exempting it from the jurisdiction of the ordinary. In his own episcopal city of Noyon he had a church built and endowed an abbey for virgins. After the finding of the body of St. Quentin, Bishop Eliquis erected in his honour a church to which was joined a monastery under the Irish rule. He also discovered the bodies of St. Piatus and companions, and in 654 removed the remains of St. Ikerus, the celebrated Irish missionary (d. 636). Eliquis was buried at Noyon. There is in existence a sermon written by Eliquis, in which he combats the pagan practices of his time, a homily on the last judgment, also a letter written in 645, in which he begs for the prayers of Bishop Desiderius of Cahors. The fourteen other homilies attributed to him are of doubtful authenticity. His homilies have been edited by Krusch in "Mon. Germ. Hist." (loc. cit. infra).

St. Eliquis is particularly honoured in Flanders, in the province of Antwerp, and at Tournai, Courti of Ghent, Bruges, and Donai. During the Middle Ages his relics were the object of special veneration, and were often transferred to other churches. Eliquis was made church in 1,066, 1,137, 1,235, and 1,306. He is the patron of goldsmiths, blacksmiths, and all workers in metals. Cabmen have also put themselves under his protection. He is generally represented in Christian art in the garb of a bishop, a crozier in his right hand, on the open palm of his left a miniature church of chased gold.

Elijah. See Elia.

Elined (ALMEDHA), Saint, virgin and martyr, flourishing c. 490. According to Bishop Challoner (Britannia Sancta, London, 1746, II, 59), she was a daughter of Bragan (Brychan), a Briton, whom the present province of Brecknock is named, and her memory was kept in Wales. Giraldus Cambrensis, in his "Itinerarium Cambir," (I, ci. ii), the chief authority for Elined, speaks of the many churches throughout Wales named after the children of Bragan, and especially of one on the hill, in the region of Brecknock, not far from the castle of Aberhodni, which is called the church of St. Almeda, "who, rejecting the marriage of an earthly prince, and espousing herself to the eternal King, consummated her course by a triumphant martyrdom." Her feast was celebrated 1 August, on which day the religious visited the church, and many miracles were wrought. William of Worcester says that she was buried at Usk. The church mentioned by Giraldus was called, says Rees, Swith chapel. The Bollandists (1 August) express themselves satisfied with the evidence of her cultus. This saint is the Luned of the "Mabinogion" (Lady Guest, I, 113-14, II, 164) and the Luyne of Tennyson's "Gareth and Lynette." She is also supposed to be identical with the End of the "Mabinogion" and Tennyson's "Idyls.

Elipandus. See Adoptionism.

Eliseus (Elisea; Heb. יְלָשָׁא, God is salvation), a Prophet of Israel.—After learning, on Mount Horeb, that Eliseus, the son of Saphat, had been selected by God as his successor in the prophetic office, Eliseus set out to make known the Divine Will. Thelaid by casting his mantle over the shoulders of Eliseus, whom he found "one of them that were ploughing with twelve yoke of oxen" Eliseus delayed only long enough to kill the yoke of oxen, whose flesh he boiled with the very wood of his plough. After he had shared this farewell repast with his father, mother, and
friends, the newly chosen Prophet “followed Elias, and ministered to him”. (II Kings, xix, 8–21.) He went with his master from Galgal to Bethel, to Jericho, and thence to the eastern side of the Jordan, the waters of which, touched by the mantle, divided as to let them pass over on dry ground: and then beheld Elias in a fiery chariot taken up by a whirlwind into heaven. By means of the mantle let fall from Elias, Elisha miraculously recrossed the Jordan, and so won from the prophets at Jericho the recognition, that “the spirit of Elias hath rested upon Elisha” (IV Kings, ii, 1–15.) He won the gratitude of the people of Jericho for healing with salt its barren ground and its waters. Elisha also knew how to strike with salutary fear the adorers of the calf in Bethel, for forty-two little boys, probably encouraged to mock the Prophet, on being cursed in the name of the Lord, were torn by “two bears out of the forest”. (IV Kings, ii, 19–24.) Before he settled in Samaria, the Prophet passed some time on Mount Carmel (IV Kings, ii, 25.) When the armies of Juda, and Israel, and Edom, then allied against Mesha, the Moabite king, were bestridden by the Idumean desert, Elisha conceived a scheme to relieve them of that obstacle. He sent a letter to King Benadad of Syria, offering to give him up upon the judgment of God, and afterwards to strike him dead. Benadad, who had been mortally wounded by his own sword, lettered back for Elisha to come and see what the Lord would do for him. The latter was not deceived about the king’s condition, and predicted that Benadad should live, and die by the sword in a distant land. He was of course true to his word, and died in that manner (IV Kings, iv, 37–41.) By the cure of Naaman, who was afflicted with leprosy, Elisha, little impressed by the possessions of the Syrian general, whilst willing to free King Joram from his perplexity, principally intended to show “that there is a prophet in Israel.” Naaman, at first reluctant, obeyed the Prophet, and washed seven times in the Jordan. Finding his flesh ‘restored to him like the flesh of a little child’, the prophet was struck with amazement at this momentous sign, by this evidence of God’s power, and by the disinterestedness of His His Prophet, as to express his deep conviction that “there is no other God in all the earth, but only in Israel” (IV Kings, v, 1–19.) It is to this chapter that Arminius refers when he said: “And there were many lepers in Israel in the time of Elisha the prophet: none of them was cleansed but Naaman the Syrian” (Luke, iv, 27.) In punishing the avarice of his servant Gide (IV Kings, v, 20–27), in saving “not once nor twice” King Joram from the ambuscades planned by Benadad (IV Kings, vi, 8–12), in ordering the ancients to shut the door against the messenger of Israel’s ungrateful king (IV Kings, vi, 25–32), in bestriding a wild blindness the soldiers of the Syrian king (IV Kings, vi, 13–23), in making the iron tablets to remove from embarrassment a son of a prophet (IV Kings, vi, 21–22), in confuting the sudden flight of the enemy and the consequent cessation of the famine (IV Kings, vii, 1–20), in unmaking the treachery of Hazael (IV Kings, viii, 7–15), Elisha proved himself the Divinely appointed Prophet of the one, ungrateful, Whose knowledge and power he was privileged to share.

Mindful of the order given to Elias (III Kings, xix, 16), Elishas delegated a son of one of the prophets to quietly anoint Jehu King of Israel, and to commission him to cut off the house of Ahab (IV Kings, ix, 1–10). The death of Joram, pierced by an arrow of the Ammonites (I Kings, iv, 1), the ignominious end of Jezebel, the slaughter of Ahab’s seventy sons, proved how faithfully executed was the Divine command (IV Kings, ix, 11–x, 30).

After predicting to Josiah his victory over the Syrians at Aphek, as well as three other subsequent victories, ever bold foretold to kings, ever kindly towards the lowly, Elisha died, and they buried him (IV Kings, xiii, 14–20). The very tomb of his corpse proved to be a place to cite a dead man (IV Kings, xiii, 20–21). “In his life he did great wonders, and in death he wrought miracles.” (Eccles., xviii, 15.)

**ELISHA. See ELSIEUS.**

Elisha, a famous Armenian historian of the fifth century, place and date of birth unknown, d. 480. Some identify him with Elishé, Bishop of Ani, who took part in the Synod of Artashat (449). According to a different and more common tradition, he had been in his younger days a companion, as soldier or secretary, of the Armenian general Vahram, during the war of religious independence (449–451) against the Persian King. His memoirs, relating to the life and wars of the Armenians in union with the Iberians and the Albanians, for their common faith, against the Persians (449–451). It is considered one of the masterpiece of ancient Armenian literature and is almost entirely free from words and expressions. An old edition of it was published at Venice (1826) by the Mechitarists of San Lazaro. One of the manuscripts on which it is based purports to be a faithful copy of another manuscript dated 616. The text of that edition was further improved in subsequent editions at the same place (1829, 1838, 1859, and 1864). Among other editions of value may be mentioned those of Theodosia (Crimes), 1801, and of Jerusalem, 1865. There is an English, but unfinished, translation by C. F. Neumann (London, 1830); one in Italian by G. Capellelli (Venice, 1849); and one in French by R. Langlois in his “Collection des mémoires et modernes de l’Arménie” (Paris, 1869). Among the seven chapters mentioned by Elishé himself in his introductory remarks, all the editions contain an eighth chapter referring to the so-called Leonian martyrs (451) and other historical events. It has been noted that in all manuscripts the fifth chapter is missing, while in the earlier editions the original sixth chapter is cut in two so as to make up for the missing chapter. On the first point see Langlois, op. cit., II, p. 190; on the second see G. F. Neumann, “Versuch einer Geschichte der armenischen Literatur, nach den Werken der Mechitaristen feat gearbeitet.” (Leipzig, 1836), pp. 64 sqq. See also Terminansians, “Die armenische Kirche in ihren Beziehungen zu der syrischen Kirche” (Leipzig, 1894), p. 37. Elishé is also the author of a commentary on Joshua and Judges, an explanation of the Our Father, a letter to the Armenian monks, etc., all found in the syllabus of the “History of Vahram.”

**H. HYVERNAT.**

**Elizabeth.** (God is an oath—Ex., vi, 23.) Zachary’s wife and John the Baptist’s mother, was “of the daughters of Aaron” (Luke, i, 5), and, at the same time, Mary’s kinswoman (Luke, i, 36), although what their actual relationship was, is unknown. St.
Hippolytus (in Niceph. Call., Hist. Eccles., II, iii) explains that Sohe and Anna their mothers were sisters, and that Sohe had married a "son of Levi." Whether this indication, probably gathered from some apocryphal writings, and later on adopted by the compilers of the Greek Menologium, is correct, cannot be ascertained. Elizabeth, like Zachary, was "just before God, walking in all the commandments and justifications of the Lord without blame" (Luke, i, 6). She had been deprived, however, of the blessings of motherhood until, at an advanced age, a son was promised her by the Angel Gabriel (Luke, i, 8–20). When, five months later, Elizabeth was visited in her home by the Virgin Mary, not only was her son sanctified in her womb, but she herself was enlightened from on high to salute her cousin as "the mother of my Lord." (Luke, i, 45). According to some modern critics, we should even attribute to her the canticle "Magnificat!". After the birth and circumcision of John the Baptist, the Gospels do not mention Elizabeth any more. Her feast is celebrated on 8 September by the Greeks, and 5 November in the Latin Church.

The Visitation

Triumphal Arch, Venice

ELIZABETH, SISTERS OF SAINT, generally styled "Grey Nuns". They sprang from an association of young ladies established by Dorothea Klara Wolff, in connexion with the sisters, Mathilde and Maria Merkert, and Franziska Werner, in Neisse (Prussia), to tend in their own homes, without compensation, helpless sick persons who could not or would not be received into the hospitals. The members purposed to support the needy through the labour of their own hands. Without adopting any definite rule, they led a community life, and wore a plain dress, a brown woolen habit with a grey bonnet. For this reason they were soon called by the people the "Grey Nuns". As their work was soon recognized and praised everywhere, and as new members continually applied for admission, their spiritual advisers sought to give the association some sort of religious organization. They endeavoured, whenever possible, to affiliate it with already established confraternities having similar purposes. But their foremost desire was to educate the members for the care of the sick in hospitals. Great difficulties arose, and the attempt failed, principally through the resistance of the foundresses, who did not wish to abandon their original plan of itinerant nursing. Thus the association which had justified such bright hopes was dissolved, and many of the newly admitted members joined the Sisters of St. Charles Borromeo, while the foundresses left the novitiate which they had already entered. Klara Wolff and Mathilde Merkert died shortly after, in the service of charity. The other two began their work anew in 1830 and placed it under the special protection of St. Elizabeth. They speedily gained the sympathy of the sick of all classes and creeds, and also that of the physicians. New candidates applied for admission, and the sisters were soon able to extend the sphere of their activity beyond Neisse. Of especial importance was the foundation made at Breslau, where the work of the sisters came under the direct observation of the episcopal authorities. Soon after, 4 Sept., 1839, Prince-Bishop Heinrich Forster was prevailed upon by the favourable reports and testimonials to grant the association ecclesiastical approbation. As such a recognition presupposed a solid religious organization, a novitiate was established, according to the statutes submitted. In the following year the twenty-four eldest sisters made the three religious vows. State recognition, with the grant of a corporative charter, was obtained by the confraternity 25 May, 1864, under the title, "Catholic Charitable Institute of St. Elizabeth", through the mediation of the Prussian Crown-Prince Frederick William, subsequent Emperor of Germany, who had observed the beneficent activity of the sisters on the battle-fields of Denmark. The approbation of the Holy See was granted for the congregation on 26 Jan., 1887, and for its constitutions on 26 April, 1898. The congregation has spread to Norway, Sweden, and Italy, and has (1908), dependent on the mother-house at Breslau, 305 filial houses, with 2565 sisters and about 100 postulants.

Elizabethans. See THIRD ORDER OF ST. FRANCIS.

Elizabeth Associations (Elisabethenvereine), charitable associations of women in Germany which aim for the love of Christ to minister to the bodily and spiritual sufferings of the sick poor and of neglected children. On 10 December, 1842, eight ladies of Munich formed a society, of which the Princess Leopoldine von Löwenstein was the head, for the purpose of visiting and aiding the sick poor in their homes. In 1841 it was made a religious corporation, by which many indulgences were granted by the Holy Father. In order to carry on better the visiting of the sick the first branch or conference of the association was founded in 1870. According to its statutes the members are divided into two classes: associate members,
or those who aid the organization by means of annual contributions, and active members who, besides contributing of their means, also visit the sick poor and perform other duties, as those of administration, at the direction of the president of the society. The branches are merely means of carrying on the affairs of the main society with which they are closely affiliated, but they are independent in administration. The Elizabeth Association of Munich, according to the financial report covering the year 1907, has 157 active and 3686 associate members; the receipts were 129,550.06 marks ($32,339.76), and disbursements of 123,422.77 marks ($30,585.69). During the year 1907 4345 poor persons were assisted, 195 children cared for in asylums and nurseries, and 18 old people were provided for in asylums and infirmaries.

Other Elizabeth Associations, although with some differences of organization, were formed on the model of that of Munich at Barmen and Trier in 1843, Cologne in 1848, etc. These societies are now found chiefly in the following sections of Germany: Bavaria, 36 societies, 24 of these in the Palatinate; Diocese of Cologne, 110 societies with 1200 members, and 190 contributors, and an income of 150,000 marks, families assisted 3500; Diocese of Paderborn, 120 societies with 16,000 members and contributors, and an income of 175,000 marks, families assisted 3000. There are also Elizabeth Associations in the Dioceses of Freiburg, Münster, Trier, Limburg, and the Vicariate Apostolic of Cologne; in the Diocese of Breslau, instead of Elizabeth Associations, there are about 130 women's conferences of the Society of St. Vincent de Paul. In Germany the Elizabeth Associations number altogether some 550 branches or conferences which aid annually 10,000 to 50,000 families.

MS. History of the Elizabeth Association of Munich; by-laws, annual and financial reports of the different associations, MS. Historical Collection, etc.; Regel des Vereins von der St. Elisabeth (Cologne, 1900); Regeln und Gebote des Vereins der hl. Elisabeth in die Diöcesen Paderborn (Paderborn, 1900); short sketch of the association in Frankfurt. Die heilige Elisabeth von Thüringen (München-Gluckstadt, 1907); statistics in Krause, Kirch. Handbuch, 1903-09 (Freiburg im Breisgau, 1908), 224-25.

GREGOR REINHOLD.

Elizabeth of Hungary, Saint, also called Saint Elizabeth of Thuringia, b. in Hungary, probably at Angyalföld (Angelfeld) near Angyalföldybergen (not 19 November), 1231. She was a daughter of King Andrew II of Hungary (1205-35) and his wife Gertrude, a member of the family of the Counts of Andechs-Meran; Elizabeth's brother succeeded his father on the throne of Hungary as Bela IV; the sister of Gertrude was Swietogen, or Swietogenia, wife of Duke Heinrich I, the Bearded, of Silesia, while another saint, St. Elizabeth (Isabel) of Portugal (d. 1336), the wife of the tyrannical King Diniz of that country, was her great-niece. In 1211 a formal embassy was sent by Landgrave Hermann I of Thuringia to Hungary to arrange, as was customary in that age, a marriage between his eldest son Hermann and Elizabeth, who was then four years old. This plan of a marriage was the result of political considerations and was intended to be the ratification of a great alliance which in the politics of the time it was thought to form against the German Emperor Otto IV, a member of the house of Guelph, who had quarreled with the Church. Not long after this the little girl was taken to the Wartburg in Thuringia to court to be brought up with her future husband and, in the course of time, to be betrothed. The court of the Wartburg was this period famous for its magnificence. Its centre was the stately castle of the Wartburg, splendidly placed on a hill in the Thuringian Forest near Eisenach, where the Landgrave Hermann lived surrounded by poets and minnesingers, to whom he was a generous patron. Notwithstanding the turbulence and purely secular life of the court and the pomp of her surround-

ings, the little girl grew up a very religious child with an evident inclination to prayer and pious observances and small acts of self-mortification. These religious impulses were undoubtedly strengthened by the sorrowful experiences of her life. In 1215 Elizabeth's mother, Gertrude, was murdered by her father, in all likelihood, probably out of hatred of the Germans. On 31 December, 1216, the oldest son of the landgrave, Hermann, whom Elizabeth was to marry, died; after this she was betrothed to Ludwig, the second son. It was probably in these years that Elizabeth had to suffer the hostility of the married couple of the Thuringian court, to whom the contemplative and pious child was a constant rebuke. Ludwig, however, must have soon come to her protection against any ill-treatment. The legend that arose later is incorrect in making Elizabeth's mother-in-law, the Landgravine Sophia, a member of the royal family of Bavaria, the leader of this court party. On the contrary, Sophia was a very religious and charitable woman and a kindly mother to the little Elizabeth. The political plans of the old Landgrave Hermann involved him in great difficulties and reverses; he was excommunicated and lost his mind. He died, 25 April, 1217, unreconciled with the Church. He was succeeded by his son Ludwig IV, who, in 1221, was also made regent of Meissen and the East Mark. The same year (1221) Ludwig and Elizabeth were married, the groom being twenty-one years old and the bride fourteen. Their marriage was really a happy and exemplary one, and the couple were devotedly attached to each other. Ludwig proved himself worthy of his wife. He gave protection to her acts of charity, penance, and her vigils and often held Elizabeth's hands as she knelt praying at midnight beside his bed. He was also a capable ruler and brave soldier. The Germans call him St. Ludwig, an appellation given to him as one of the best men of his age and the pious husband of St. Elizabeth. They had three children: Hermann II (1222-41), who died young; Sophia (1224-84), who married Henry II, Duke of Brabant, and was the ancestress of the Landgraves of Hesse, as in the war of the Thuringian succession she won Hesse for her son Heinrich I, called the Child; Gertrude (1227-97), Elizabeth's third child, was born several weeks after the death of her father; in after-life she became abbess of the convent of Oldenburg near Wetzlar.

Shortly after their marriage Elizabeth and Ludwig made a journey to Hungary; Ludwig was often after this employed by the Emperor Frederick II, to whom he was much attached, in the affairs of the empire. In the spring of 1226, when floods, famine, and pestilence wrought havoc in Thuringia, Ludwig was in Italy attending the Diet at Constance on behalf of the emperor and the empire. Under these circumstances Elizabeth assumed control of affairs, distributed alms in all parts of the territory of her husband, giving even state robes and ornaments to the poor. In order to care personally for the unfortunate she built below the Wartburg a hospital with twenty-eight beds and visited the inmates daily to attend to their wants; at the same time she aided nine hundred poor daily. It is this period of her life that has preserved her name as that of gentle and charitable châtelaine of the Wartburg. Ludwig on his return confirmed all she had done. The next year (1227) he started with the Emperor Frederick II on a crusade to Palestine but died, 12 September of the same year at Otranto, from the news that Elizabeth was still alive in Thuringia until October, just after she had given birth to her third child. On hearing the tidings Elizabeth, who was only twenty years old, cried out: "The world with all its joys is now dead to me."

The fact that in 1221 the followers of St. Francis of Assisi (d. 1226) made their first permanent settlement in Germany was one of great importance in the later
career of Elizabeth. Brother Rodeger, one of the first Germans whom the provincial for Germany, Cassarius of Speier, received into the order, was for a time the spiritual instructor of Elizabeth at the Wartburg; in his teachings he unfolded to her the ideals of St. Francis, who was strongly impressed by her. The story of Elizabeth the Franciscans in 1225 founded a monastery in Eisenach; Brother Rodeger, as his very close companion in the order, Jordanus, reports, instructed Elizabeth, to observe, according to her state of life, chastity, humility, patience, the exercise of people filled with the spirit of poverty. His rule prevented the attainment of the other ideals of St. Francis, voluntary and complete poverty. Various remarks of Elizabeth to her female attendants make it clear how ardently she desired the life of poverty. After a while the post of Brother Rodeger had filled was assumed by Master Conrad of Marburg, who belonged to no order, but was a very ascetic and, it must be acknowledged, a somewhat rough and very severe man. He was well known as a preacher of the crusade and also as an inquisitor or judge in cases of heresy. On account of the latter activity he has been more severely judged than is just; at the present day, however, the evidence of his judgments is a fairer one. Pope Gregory IX, who wrote at times to Elizabeth, recommended himself to the God-fearing preacher. Conrad treated Elizabeth with inexorable severity, even using corporal means of correction; nevertheless, he brought her to a firm hand by his self-mortifications. Her poverty and the importance of her death was very active in her canonization. Although he forbade her to follow St. Francis in complete poverty as a beggar, yet, on the other hand, by the command to keep her door she was enabled to perform works of charity and tenaciousness. It was believed, on account of the testimony of one of Elizabeth’s servants in the process of canonization, that Elizabeth was driven from the Wartburg in the winter of 1227 by her brother-in-law, Heinrich Raspe, who acted as regent for her son, then only five years old. About 1888 various investigators (Korn, Marcel, Wenzel, E. Michael, etc.) asserted that Elizabeth left the Wartburg voluntarily, the only compulsion being a moral one. She was not able at the castle to follow Conrad’s command to eat only food obtained in a way that was certainly right and proper. Lately, however, Huyskens (1897) tried to prove that Elizabeth was of her own free will in Marburg in Hesse, which was hers by dover right. Consequently, the Te Deum that she directed the Franciscans to sing on the night of her expulsion would have been sung in the Franciscan monastery at Marburg. Accompanied by two female attendants, Elizabeth left the castle that stands on a height commanding Marburg. The next day her children were brought to her, but they were soon taken elsewhere to be cared for. Elizabeth’s aunt, Matilda, Abbess of the Benedictine nunnery of Kitzingen near Nuremburg, took charge of the unfortunate landgravine and sent her to her uncle Eckhart, Bishop of Bamberg. The bishop, however, was intent on arranging another marriage for her, although during the lifetime of her husband Elizabeth had made a vow of continence in case of his death; the same vow had also been taken by Francis, and these strongly appealed to her. When Elizabeth was mainly for her position against her uncle the remainders of her husband were brought to Bamberg by her faithful followers who had carried them from Italy. Weeping bitterly, she buried the body in the family vault of the landgraves of Thuringia in the monastery of Reinhardsthal, the widow of Conrad she received the value of her dower in money, namely two thousand marks; of this sum she divided five hundred marks in one day among the poor. On Good Friday, 1228, in the Franciscan house at Eisenach Elizabeth formally renounced the world; then going to Master Conrad at Marburg, she and her maids received from him the dress of the Third Order of St. Francis, thus being among the first tertians of Germany. In the summer of 1228 she built the Franciscan hospital at Marburg and on its completion devoted herself entirely to the care of the sick, especially to those afflicted with leprosy, which was common in Marburg still imposed many self-mortifications and spiritual renunciations, while at the same time he even took from Elizabeth her devoted domains. Constant in her devotion to God, Elizabeth’s strength was consumed by her charitable labours, and she passed away on the twenty-fourth day of the following month, at the age of forty, a time when life to most human beings is just opening.

Very soon after the death of Elizabeth miracles began to occur at her grave in the church of the hospital, especially miracles of healing. Master Conrad showed great zeal in advancing the process of canonization. By papal command three examinations were held of those who had been healed; namely, in August, 1232, January, 1233, and January, 1235. Before the process reached its end, however, Conrad was murdered, 30 July, 1233. But the Teutonic Knights in 1233 founded a house at Marburg, and in the same month, 1233, Conrad, Elizabeth’s brother-in-law of Marburg, entered the order. At Pentecost (28 May) of the year 1235, the solemn ceremony of canonization of the “greatest woman of the German Middle Ages” was celebrated by Gregory IX at Perugia. Landgrave Conrad being present. In the course of the same year (1235) the corpse was exhumed from the beautiful Gothic church of St. Elizabeth was laid at Marburg; on 1 May, 1236, Emperor Frederick II attended the taking-up of the body of the saint; in 1249 the remains were placed in the choir of the church of St. Elizabeth, which was not consecrated until 1253. Pilgrimages to the grave soon increased in such importance that at times they could be compared to those to the shrine of Santiago de Compostela. In 1539 Philip the Magnanimous, Landgrave of Hesse, who had become a Protestant, put an end to the pilgrimages by unjustifiable interference with the church that belonged to the Teutonic Order and by forcibly removing the relics and all that was sacred to Elizabeth. Nevertheless, the entire German people still honour the “dear St. Elizabeth,” as she is called; in 1907 a new impulse was given to her veneration in Germany and Austria by the celebration of the seven-hundredth anniversary of her birth from the council of the Church. The church of St. Elizabeth is generally represented as a princess graciously giving alms to the wretched poor or holding roses in her lap; in the latter case she is portrayed either alone or as surprised by her husband, who, according to a legend, which is, however, related of other saints as well, met her unexpectedly as she went secretly on an errand of mercy, and, so the story runs, the bread she was trying to conceal was suddenly turned into roses.

The original materials for the life of St. Elizabeth are to be found in the letters sent by Conrad of Marburg to Pope Gregory IX (1232) and in the testimony of her four female attendants (Libellus de actis quatuor anniculare) taken by the third papal commission (January, 1235). The best account of this testimony is to be found in Huyskens, Quellenstudien zur Geschichte der St. Elisabeth, Leipzig, 1898, pp. 110-40. Pp. 1-150 of these Quellenstudien were published in Historisches Jahrbuch for the Grosse Society (Munich, 1887), XXVIII, 499-510; 720-729, etc. The work of E. Menken, ed. in Monographs of the Germanic Institute (Leipzig, 1728-30), II, 357-43; Epistola Cornelia in Huyskens, Quellenstudien, 154-60; and in Weis, Geschichte der Kirchen in Deutschland, Buch 1, Neukirchen der Deutschen Bibelgesellschaft (Leipzig, 1879), 31-45, in the Publications of the prehistoric Society of Strasbourg, III, formerly issued in Allatia, Seraglio, etc., Nouvelles (Cologne, 1653), 28Q. For bibliography of these and other works see Dobeneck, Register der Geschichtsquellen Thuringia, 1-111 (Jena, 1894-1904), III, 298; for the Acts of the process of canonization see Huyskens, Quellenstudien, 110-295; Voss, Die Biographie der hl. Elisabeth, O. Curt. (1226), ed. Huyskens, in Annalen der historischen Freunde in den Niederlanden (1887), Pf. LXXXI, 147-176; and in Bornbom, Thesaurus Monumentorum Ecclesiasticorum (Amsterdam, 1731), IV, 115-132. For other
Elizabeth of Portugal, Saint, Queen (sometimes known as The Peacemaker); b. in 1271; d. in 1336. She was the illegitimate daughter of King Denis I of Portugal, later ruled by her greatest-aunt, the great Elisabeth of Hungary, but is known in Portuguese history by the Spanish form of that name, Isabel. The daughter of Pedro III, King of Aragon, and Constantia, grandchild of Emperor Frederick II, she was educated very piously, and led a life of strict regularity and self-denial from her childhood; she said the full Divine Office daily, fasted and did other penances, and gave up amusement. Elizabeth was married very early to Denis (Denis), King of Portugal, a poet, and known as the “busy king”, from his hard work in his country's service. His morals, however, were very bad, and the court to which his wife was brought consequently most corrupt. Nevertheless, Elizabeth quietly pursued the regular religious practices of her maidenhood, while doing her best to win her husband’s affections by gentleness and extraordinary forbearance. She was devoted to prayer and sick, and gave every moment she could spare to helping them, even pressing her court ladies into their service. Naturally, such a life was a reproach to many around her, and caused ill will in some quarters. A popular story is told of how her husband’s jealousy was aroused by an evil-speaking page; of how he condemned the queen's supposed guilty accomplice to a cruel death; and was finally convinced of her innocence by the strange accidental substitution of her accuser for the intended victim. 

Diniz does not appear to have reformed in morals till 1294, when we are told that the saint won him to repentance by her prayers and unfailing sweetness. They had two children, a daughter Constantia and a son Afonso. The latter so greatly resented the favours shown to the king’s illegitimate sons that he rebelled, and in 1233 was declared and hemmed up. St. Elisabeth, however, rose in person between the opposing armies, and so reconciled her husband and son. Diniz died in 1235, his son succeeding him as Afonso IV. St. Elisabeth then retired to a convent of Poor Clares which she had founded at Coimbra, where she took the Franciscan Tertiary habit, wishing to devote the rest of her life to the poor and sick in obscurity. But she was called forth to act once more as peacemaker. In 1336 Afonso IV marched his troops against the King of Castile, to whom he had married his daughter Maria, and who had neglected and ill-treated her. In spite of age and weakness, the holy queen dowager insisted on hurrying to Extremos, where she was drawn up. She again stopped the fighting and caused terms of peace to be arranged. But the exertion brought on her final illness; and as soon as her mission was fulfilled she died of a fever, full of heavenly joy, and inhoring herself to the love of holiness and peace. St. Elisabeth was buried at Coimbra, and miracles followed her death. She was canonized by Urban VIII in 1625, and her feast is kept on 8 July.

Elizabeth of Reute, Blessed, of the Third Order of St. Francis, b. 25 Nov., 1386, at Waldsee in Swabia, of John and Anne Acheer; d. 25 Nov., 1420. From her earliest days “the good Berta”, as she was called, showed a rare piety, and under the learned and devout Conrad Kügelin, her confessor, provost of the Canons Regular of St. Augustine at St. Pölten, she made extraordinary progress towards perfection. When fourteen she received the habit of the third order, but continued to live at home. Finding the life uncongenial, she secured the consent of her parents after long entreaties to leave home. Receiving the support from that she remained at the house of a pious tertiary, and the two worked at weaving; but the remuneration was small and they frequently suffered from hunger and other privations. After three years Conrad Kügelin established a house for tertiarys at Reute on the outskirts of Waldsee and Elisabeth entered it together with some others.

Here she took up her work in the kitchen, and now began her wonderful life of seclusion, fasting, and prayer. There was no clausura at the convent, still she led so retired a life that she was called “the Retired”. She spent many hours in a little garden, kneeling on a stone or prostrate on the ground in contemplation. So pure was her life that her confessor could scarcely find matter for absolution. She had much to suffer from attacks of the evil spirit, from suspicions of her sister in religion, from leprosy, and other sicknesses, but in all her trials she showed a heavenly patience, learned from the Passion of Christ, which she made the continual subject of meditation, the object of her love, and the rule of her life. In consequence God permitted her to bear the marks of the Passion on her body; her head often showed the marks of the Thorns, and her body those of the Scourging. The stigmata appeared only now and then, but her pains never ceased. She was shown the happiness of the blessed and the souls in the state of purgation; the secrets of hearts and of the future were unveiled to her. She foretold the election of Martin IV and the end of the Western schism. Though so much favoured by Divine Providence she always preserved a great humility. After her death she was buried in the church of Reute. Her life was written by her confessor and sent to the Bishop of Constance, but it was only after 1623, when her tomb was opened by the provost of Waldsee, that veneration spread in Swabia. After several miracles had been wrought through her intercession the Holy See was asked to ratify her cult. This was done 19 June, 1766, by Clement XIII. The Franciscans celebrate her feast on 25 November.

ELIZABETH

Elizabeth of Schonau, Saint, b. about 1129; d. 18 June, 1165.—Feast 18 June. She was born of an obscure family, entered the double-monastery of Schonau in Nassau at the age of twelve, received the Benedictine habit, made her profession in 1147, and in 1157 was made superior of the nuns under the Abbess Hildebrand. After her death she was buried in the abbey church of St. Florin. When her writings were published the name of saint was added. She was never formally canonized, but in 1351 her name was entered in the Roman Martyrology and has remained there.

Given to works of piety from her youth, much afflicted with bodily and mental suffering, a zealous observer of the Rule of St. Benedict and of the regulations of her convent, and devoted to practices of mortification, Elizabeth was favoured, from 1152, with ecstasies and visions of various kinds. These generally occurred on Sundays and Holy Days at Mass or Divine Office or after hearing or reading the lives of saints. Christ, His Blessed Mother, an angel, or the special saint of the day would appear to her and instruct her; or she would see quite realistic representations of the Passion, Resurrection, and Ascension, or other scenes of the New Testament. What she saw and heard she put down on wax tablets. Her abbot, Hildebrand, told her to relate these things to her brother Egbert (Eckard), then priest at the church of Bonn. At first she hesitated, fearing lest she be deceived or be looked upon as a deceiver; but she obeyed. Egbert received the inspiration of Elizabeth and, according to the accounts written by oral explanations. Egbert (who became a monk of Schonau in 1155 and succeeded Hildebrand as second abbot) put everything in writing, later arranged the material at leisure, and then published all under his name.

Thus came into existence (1) three books of "Visions"—of these the first is written in language very simple and in unaffected style, so that it may easily pass as the work of Elizabeth. The other two are more elaborate and replete with theological terminology, so that the influence of Egbert is very plain. She utters prophetic threats of judgment against priests who are unfaithful shepherds of the flock of Christ, against the avarice and wordliness of the monks who only wear the garb of poverty and self-denial, against the vices of the laity, and against bishops and superiors delinquent in their duty: she urges all to combat earnestly the heresy of the Cathari; she declares Victor IV, the antipope supported by Frederick against Alexander III, as the one chosen of God. All of this appears in Egbert's own writings. (3) The revelation of the martyrdom of St. Ursula and her companions. This is full of fantastic exaggerations and anachronisms, but has become the foundation of the subsequent Ursula legends. There is a great diversity of opinion in regard to her revelations. The Church has never passed sentence upon them nor even examined them. Elizabeth herself was convinced of their supernatural character, as she states in a letter to Hildegarde; her brother held the same opinion; Trithemius considers them genuine; Eusebius Amort (De revelationibus visionibus et apparitionibus privatis regule tute, etc., Augsburg, 1744) holds them to be nothing more than his own imagination; viewed with some suspicion, and a few suspect them as human inventions. The canonization of the Blessed Virgin, and, above all, the dogma of her Immaculate Conception have made her the patron of new and popular legends. Elizabeth, a great example of humility and charity, was, like Gertrude, the patron of hospital foundations.

ELWANGEN

Ellis, Philip Michael, first Vicar Apostolic of the Western District, England, subsequently Bishop of Segni, Italy, b. in 1562; d. 16 Nov., 1726. He was the son of the Rev. John Ellis, Rector of Waddesdon, Buckinghamshire, a descendant of the Ellis family of Kiddall Hall, Yorkshire, and Susannah Welbore. Of six brothers, John, the eldest, became Under-Secretary of State to Edward I. William, a Jacobite Protestant, was Secretary of State to James II in exile; Philip became a Benedictine monk and Catholic bishop; Welbore became Protestant Bishop of Kildare and afterwards of Meath, Ireland; Samuel was Marshall of King's Bench; and Charles an Anglican clergyman. Philip, while still a Westminster schoolboy, was converted to the Catholic faith, and when eighteen years old went to St. Gregory's, Douai, where he was professed, taking the name of Michael in religion (30 Nov., 1670). After ordination he returned in 1688 to the English mission where he became one of the first members of the English Missions. As such he was one of the first Vicars Apostolic of the newly created Western District and was consecrated by Mgr. d'Aluè (6 May). At the revolution of 1688 he was imprisoned, but being soon liberated he retired to Saint-Germain and afterwards to Rome. In 1696 he was named assistant-prelate at the pontifical throne; and in Rome his knowledge of English affairs made him so useful that his repeated petitions for leave to return to his vicariate were refused. In 1704 he resigned the vicariate, and in 1708 was made Bishop of Segni, being ennobled on 25 Oct. His first care was to rebuild the ruined monastery of St. Chiara, and open an obse- sian seminary. This he enriched with many gifts and a large legacy. A curious survival of his English title survives in an inscription at Segni to "Ph. M. Mylord Ellis." Eleven sermons preached in 1685 and 1686 before James II, Queen of Modena, and Queen Henrietta Maria, were published in pamphlet form, some of which have been reprinted (London, 1714; 1772). The Acts of his Alexander III in Segni in 1710 were also published by order of Clement XI.

Edwin Burton.

Ellwangen Abbey, the earliest Benedictine monastery established in the Duchy of Württemberg, situated in the Diocese of Augsburg about thirty miles north-east of the town of Stuttgart. Harlof, Bishop of Langres, was, in 1453, with his new foundation abbot. The foundation of the abbey was about 764, though there are a few authorities for as early a date as 752. In later times it became a royal abbey, a privilege which seems to have been conferred in 1011 by the Emperor Henry II, and afterwards confirmed by the Emperor Charles IV, in 1347. Some authorities date the granting of this privilege as late as 1555. This cannot be correct, for it is known that the suprema of Ellwangen took his seat in the Diet among the princes of the country in 1500. The Benedictine occupation of the abbey came to an end in the first half of the fifteenth century. In 1460 it was sold by the Abbot William, and the abbey was passed into the hands of the secular canons under the rule of a provost. Ellwangen had many men of renown connected with it: the Abbot Lindolf and Erfinan, whom Mabillon speaks of as famous authors; Abbot Gebhard began to write the life of St. Udalricus but died before completing it;
Abbot Ermenrich (c. 845), author of the life of St. Solus which may be found in the fourth volume of the "Acta Sanctorum" of Mabillon. Adalbero, a monk of the Abbey of St. Gall, was made Bishop of Augsburg in 894. Abbot Lindebert became Archbishop of Mainz, as also did Abbot Hatto (891). St. Gebhard, Abbot of Ellwangen, became Bishop of Augsburg in 996. Abbot Milo about the middle of the tenth century was one of the visitors appointed for the visitation of the famous Abbey of St. Gall. Nothing is known of the property connected with Ellwangen during the period of its Benedictine history, but in the eighteenth century, after it had passed into the hands of the secular canons, its possessions included the court manor of Ellwangen, the manors of Taustall, Neuler, Rothlien, Tannenburg, Wasserthal, Abts-Gundand, Koekenberg near the town of Aalen, Henschlingen on the River Lein, and Lautern. Most of the ecclesiastical buildings still exist, though they are no longer used for religious purposes.

Since the secularization they have been held by the State and used for state purposes.

**Elmo, Saint.** See Peter Gonzalez, Saint.

**Elne, Diocese of.** See Perpignan.

**Elne, Synod of.** See Perpignan.

**Ellohim (Sept., Ἱάσως; Vulg., Deus) is the common name for God. It is a plural form, but "the usage of the language gives no support to the supposition that we have in the plural form *Ellohim* to the God of Israel, the remains of an early polytheism, or at least a combination with the higher spiritual beings" (Kautzsch). Grammarians call it a plural of majesty or of rank, or of abstraction, or of magnitude (Gesenius, Grammatik, 27th ed., nn. 124 g, 132 h). The Ethiopic plural * ḥ̄ ḫ̄ * has become a proper name of God. Hoffmann has pointed out an analogous plural *dim* in the Phenician inscriptions (Ueber eine phil. Inscr., 1889, pp. 17 sqq.), and Barton has shown that in the tablets from El Amarna the plural form * dani* replaces the singular more than forty times (Proceedings of the American Oriental Society, 21-23 April, 1892, pp. xxvi-xxix).

**Etymology.** - *Ellohim* has been explained as a plural form of * Eloah* or as a plural derivative of *El*. Those who adhere to the former explanation do not agree as to the derivation of *Eloah*. There is no such verbal stem as *Eloah* in Hebrew; but in the Arabist Fleischer, Franz Delitzsch, and others appeal to the Arabic *a'lah*, meaning "to be filled with dread", "anxiously to seek refuge", so that * ḥ̄ ḫ̄ (Eloah) would mean in the first place "dread", then the object of dread. Gen., xxxi, 42, 53, where God is called "the fear of Israel", Is., viii, 13, and Ps. lxxv, 12, appear to support this view. But the fact that *a'lah* is not only an independent verbal stem but only a denominate from * ḥ̄ ḫ̄*, signifying originally "possessed of God" (cf. *ebyd waw aram, bmm*), renders the explanation more probable. It is not in the contention of Ewald, Dillmann, and others that the verbal stem, *dālah* means "to be mighty", and is to be regarded as a by-form of the stem * ṣ̄ ḫ̄*; that, therefore, *Ellohim* grows out of * ḥ̄ ḫ̄* as *El* springs from * ḥ̄ ḫ̄*. Baethgen (Beitraige, 297) has pointed out that of the seventy-four occurrences of *Eloah* forty-one belong to the Book of Job, and the others to late texts or poetic passages. Hence he agrees with Bulan in maintaining that the singular form *Eloah* came into existence only after the plural form *Ellohim* had been long in common use; in the case, a singular was supplied for its pre-existing plural. But even admitting *Ellohim* to be the prior form, its etymology has not thus far been satisfactorily explained. The ancient Jewish and the early ecclesiastical writers agree with many modern scholars in deriving *Ellohim* from *El*, but there is a great difference of opinion as to the method of derivation. Nagel (Theol. Stud., 1877, 217) supposes that the plural has arisen by the insertion of an artificial h, like the Hebrew *m̄m̄h̄* (maiden) from *m̄h̄*. Buhl (Gesenius' Hebräisches Handwörterbuch, 12th ed., 1895, pp. 41 sqq.) considers *Ellohim* as a sort of augmentative form of *El*; but in this respect as well as to the method of derivation, these writers are one in supposing that in early Hebrew the singular of the word signifying God was *El*, and its plural form *Ellohim*; and that only more recent times coined the singular form *Eloah*, thus giving *Ellohim* a grammatically correct correspondent. Lagrange, however, maintains that *Eloah* and *Ellohim* are derived collaterally and independently from *El*.

**The Use of the Word.** - The Hebrews had three common names for God, *El*, *Ellohim*, and *Eloah*: besides, they had the proper name *Yehoech.* Nestle is authoritative for the statement (Mont. Yehoech., 1900, p. 353) that *El* was in the thousand times in the Old Testament, while all the common names of God taken together do not occur half as often. The name *Ellohim* is found 2576 times; *Eloah*, 57 times (41 in Job; 4 in Pss.; 4 in Dan.; 2 in Hab.); 2 in Canticle of Men (Dietrich, 760); in Gen., ii, 3; 1 in Ps. ; 1 in Neh. (iv. 1.); *El*, 226 times (El, 9 times). Lagrange (Etudes sur les religions sémitiques, Paris, 1905, p. 71) infers from Gen., xvi, 3 (the most mighty God of thy father), Ex., vi, 3 (by the name of God Almighty), and from the fact that *El* replaced *Eloah* in the proper name of God. Hoffmann has pointed out an analogous plural *dim* in the Phenician inscriptions (Ueber eine phil. Inscr., 1889, pp. 17 sqq.), and Barton has shown that in the tablets from El Amarna the plural form * dani* replaces the singular more than forty times (Proceedings of the American Oriental Society, 21-23 April, 1892, pp. xxvi-xxix).

**Meaning of the Word.** - If *Ellohim* be regarded as derived from *El*, its original meaning would be "the strong one" according to Wellhausen's derivation of *El* from *d̄l* (Skizzen, 133, 199); or "the foremost one", according to Nödecke's derivation of *El* from *d̄l* (Sitzungsberichte der Leipz. Akademie der Wissenschaften, 1880, pp. 175 sqq.; 1882, pp. 1175 sqq.); or the "mighty one", according to Dillmann's derivation of *El* from *d̄l,* or *b̄l,* or *b̄l,* to be mighty" (On Genesis, i, 1); or, finally "He after whom one strives", "who is the goal of all human aspiration and endeaue", "to whom one has recourse in distress or when one is in need of guidance", "to whom one attaches oneself closely", coincidentibus interea bene et sine, according to the Ration of the *El* from the preposition *d̄l,* to*, advocated by L. Place (cf. Lagarde, 1885, etc., p. 107), Lagarde gives the meaning of the word derived from the root *d̄l* (Religions, pp. 79 sqq.), and others. A discussion of the arguments which militate for and against each of the foregoing derivations would lead us too far.

If we have recourse to the use of the word *Ellohim* in the context, we find that its meaning is seven occurrences, it is used to denote either the true God or false gods, and metaphorically it is applied to judges, angels, and kings; and even accompanies other nouns, giving them a superlative meaning. The presence of the article, the singular construction of the word, and its context show with sufficient clearness whether it must be taken in its proper or its metaphorical sense, and what is its precise meaning in each case. Kautzsch
(Encyclopædia Biblica, III, 3324, n. 2) endeavours to do away with the metaphorical sense of "Elohim. Instead of the rendering "judges" he suggests the translation "God", as witness of a lawsuit, as giver of decisions on points of law, or as dispenser of oracles; for the rendering "angels" he substitutes "the gods of the heavens", which, in later post-exilic times, fell to a lower rank. But this interpretation is not supported by solid proof.

According to Renan (Histoire du peuple d'Israel, I, p. 30) the Semites believed that the world was surrounded, penetrated, and governed by the Elohim, many of whose active beings, analogous to the spirits of the savages, alive, but somehow inseparable from one another, not even distinguished by their proper names as the gods of the Aryans, so that they can be considered as a confused totality. Marti (Geschichte der israelitischen Religion, p. 26), too, finds in Elohim a trace of the original Semitic polytheism; he maintains that the word signified the sum of the divine beings that inhabited any given place. Baethgen (op. cit., p. 257), F. C. Baur (Symbolik und Mythologie, I, 304), and Hellmuth-Zimmer (Elohim, Berlin, 1900) make Elohim an expression of power, godhead, and totality. Lagrange, op. cit., urges against these views that even the Semitic races need distinct units before they have a sum, and distinct parts before they arrive at a totality. Moreover, the name El is prior to Elohim (op. cit., p. 77 sq.), and El is both a proper and a common name of God. Originally it was either a proper name and has become a common name, or it was a common name and has become a proper name. In either case, El, and, therefore, also its derivative form Elohim, must have denoted a single God. This inference becomes clearer after a little reflection. If El was, at first, the proper name of a false god, it could not become the common name for deity any more than Jupiter or June would; and if it was, at first, the common name for deity, it could become the proper name only of that God who combined in him all the attributes of deity, who was the true God. This does not imply that all the Semitic races had from the beginning a clear concept of God's unity and Divine attributes, though all had originally the Divine name El.

A. J. MAAS.

Eloi (Ely, St. See ELOI.

Elphege (or Alphege), Saint, b. 954; d. 1012; also called Goldwine, martyred. Archbishop of Canterbury, left his widow mother and patrimony for the monastery of Deerhurst (Gloucestershire). After some years as an anchorite at Bath, he became abbot, and (19 Oct., 981) was made Bishop of Winchester. In 994 Elphege administered confirmation to Olaf of Norway at Andover, and it is suggested that his patriotic spirit inspired the decrees of the Council of Elnham. In 1006, on becoming Archbishop of Canterbury, he went to Rome for the pallium. At this period England was much harassed by the Danes, who, towards the end of September, 1011, having sacked and burned Canterbury, made Elphege a prisoner. On 19 April, 1012, at Greenwich, his captors, drunk with wine, and enraged at ransom being refused, pelted Elphege with bones of oxen and stones, till one Thurnham dispatched him with his own axe. Elphege's body, after resting for years in St. Paul's (London), was translated by King Canute to Canterbury. His principal feast is kept on the 19th of April; that of his translation on the 8th of June. He is sometimes represented with an axe cleaving his skull.

Patrick Ryan.

Elphin (Elphinum), Diocese of, suffragan of Tuam, Ireland, a see founded by St. Patrick. All the known facts respecting its first bishop are recorded in two important memorials of early Irish hagiography, the "Vita Tripartita" of St. Patrick, and the so-called "Patrickian Documents" in the "Book of Armagh" (q. v.). On his missionary tour through Connaught, within he entered by crossing the Shannon at Drum-boolan, near Battle-bridge, in the parish of Arderne, in 134 or 453, St. Patrick came to the territory of Coreoglan on, in which was situated the place now called Elphin. The chief of that territory, a noble Druid named Ono, of the royal Connacht race of Hy-Britain, gave land, and afterwards his castle or fort, to St. Patrick to found a church and monastery. The place, which has hitherto been called Elphin, or Elphinum, or Emlagh-Ono, received the designation of Elphin, which signifies "rock of the clear spring", from a large stone raised by the saint from the well opened by him in this land and placed on its margin, and the copious stream of crystal water which flowed from it and still flows through the street of Elphin. There St. Patrick built a church called through centuries Tempull Phadraig, i.e. Patrick's church. He established here an episcopal see, and placed over it St. Assicus as bishop, and with him left Bate, a bishop, son of the brother of Assicus, and Cita, mother of Bate. St. Patrick also founded at Elphin an episcopal monastery, or college, one of the first monasteries founded by him, and placed Assicus over it, in which office he was succeeded by Bate. Both were buried at Raccun, in Donegal, where St. Patrick built a church and a habitation for seven bishops. The "Septem episcopi de Raccun" are invoked in the Festology of Angus the Culdees (q. v.).

The first bishop of Elphin is described in the "Book of Armagh" as the cera i.e. the wight or goldsmith of St. Patrick; and he made chalices, patens, and many book-covers for the newly founded churches. Following the example of their masters, the successors and spiritual children of St. Assicus founded a school of art and produced beautiful objects of Celtic workmanship in the Diocese of Elphin. Some of these remain to the present day, objects of interest to all who see them. The famous cross of Cong (see Cross), undoubtedly one of the finest specimens of its age in Western Europe, was (as the inscription on it and the Annals of Inisfallen testify) the work of Manus MacEgan, successor of St. Finian of Clooneraff near Elphin, in the County Roscommon, and was made at Roscommon under the superintendence of Domhnall, son of Flanagan O'Duffy, successor of Coman and Kieran, abbots of Roscommon and Collannacoe, and Bishop of Elphin. It is held that the exquisite Ardagh Chalice, which was given to Collannacoe by Turlough O'Coner, and was stolen thence by the Danes, was made, if not by the same artist, at least in the same school at Roscommon. The Four Masters record (1166) that the shrine of Manchan
of Maothail (Mohill) was covered by Rory O’Conor, and an embroidery of gold placed over it by him in as good style as relic was ever covered in Ireland. It is, therefore, fair to conclude that this beautiful work was also executed in the school of art founded by St. Assicus in the Diocese of Elphin. Within four miles of the present town of Elphin is Rathoroughan, the famous palace of Queen Maeve and the Connaught kings; Relig-na-Righ, the Kings’ Burial Place; also the well of Ogulla, or the Virgin Monument, the scene of the famous conversion and baptism of Aithne (Eithe) and Fidelma, the daughters of Leoghar, monarch of Ireland in the time of St. Patrick. Ware states that after the union with Elphin of the minor sees of Roscommon, Arderne, Drumcliffe, and other bishoprics of lesser note, finally effected by the Synod of Kells (1132), the see was esteemed one of the richest in all Ireland, and had about seventy-nine parish churches. The Four Masters describe its cathedral as the “Great Church” in 1235, and speak of the bishop’s court in 1258. It had a dean and chapter at this time, as we learn from the mandate of Innocent IV, sent from Lyons, 3 July, 1245, to the Archbishop of Tuam, notifying him that the pope had annulled the election of the Provost of Roscommon to the See of Elphin, and ordering him to appoint and consecrate Archdeacon John, postulated by the dean Malachy, the archdeacons John and Clare, and the treasurer Gilbert. Among the early bishops was Bron of Killaspugbroke, a favoured disciple of St. Patrick. He was also the friend and adviser of St. Brigid when she dwelt in the plain of Roscommon and founded monasteries there. According to Ware, of the successors of St. Assicus in the See of Elphin he found mention of only two before the coming of the English, Domhnall O’Dubhatag (O’Duffy), who died in 1036, and Flanachan O’Dubhatag, who died in 1168. There is reference to at least two other bishops of Elphin, in 640 and 1190. From St. Assicus to 1099 the names of at least fifty-four occupants of the see are enumerated in the ecclesiastical annals and public records of Ireland and Rome. Many of them were renowned for learning, wisdom and piety. During the Reformation and subsequent persecutions, there continued in Elphin an unflagging succession of canonically appointed Catholic bishops. They were faithful dispensers of the divine mysteries, like George Brann and John Max; confessors true to the Catholic Faith and the See of Peter, through years of persecution and exile like O’Higgins and Ó’Cearn; martyrs sealing their testimony with their blood, like O’Healy and Galviri. The present Diocese of Elphin includes nearly the whole of the county of Roscommon, with large portions of Sligo and Galway. In the census of 1901 the population was: Catholices, 125,743; non-Catholices, 7661. The present chapter consists of a dean, archdeacon, treasurer, chancellor, theologian, penitentiary, and four prebendaries. The parishes number 33, parish priests and curates 100. There is a convent of Dominicans at Sligo. The female orders in the dioce- se: Ursulines of Mixed Habit; Sisters of St. Vincent de Paul; Ursulines of Mary, of the Immaculate Conception; at Sligo. The Marist and Presentation Brothers teach large schools. The cathedral of the diocese at Sligo, an early Romanesque structure, simple and massive, was erected by Most Rev. Dr. Gillooly, and consecrated in 1897. He also built St. Mary’s Prebastery, and the College of the Im- maculate Conception, Sligo. These, with a Temper- ance Hall, form a group of ecclesiastical buildings worthy of their beautiful scenic surroundings. Bishop Gillooly was succeeded, 24 March, 1895, by the Most Rev. John Joseph Clancy, born in the parish of Riverstown, County Sligo, in 1856. Educated at the Marist College, Sligo, and Summerhill College, Athlone, and entered Maynooth in 1876, where he spent two years on the Dunboyne Establishment. In 1883 he was appointed professor in the Diocesan College, Sligo, and in 1887 professor of English Literature and French in Maynooth College. The archdeacon he held until he was made Bishop of Elphin.

Ruins of Cistercian Abbey (1161) Boyle, County Roscommon, Ireland

_Élusa_, a titular see of Palestina Tertia, suffragan of Petræ. This city is called Χαλεάς in the Greek text of Judith, i. 9. It is also mentioned by Ptolemy, V, xv, 10 (in Idumæa), Peutinger’s “Table”, Stephano Byzantius (as being formerly in Arabia, now in Palest- ina Tertia), St. Jerome (In Isaiam, V, xv, 4), the pilgrim Theodosius, Antonius of Piacenza, and Joanna Moschus (Pratum Spirituale, cix). In the fourth century, as is to be learned from St. Jerome’s life of St. Hilarioun, there was at Élusa a great temple of Aphrodite; the saint seems to have introduced Chris- tianity there (“Vita Hilarionis” in P. G., XXIII, 41). Finally in the following century a Bishop of Élusa, redeeming the son of St. Nilus, who had been carried off from Mount Sinai by the Arabs, ordained both him and his father (P. G., LXXIX, 373-403). Other bishops known are Theodulius, 451; Aretas, 451, Peter, 518; and Zenobius, 559 (Lequien, Or. christ., III, 752). Today the ruins of the city are seen at El-Khalasa (Khalasa), about nineteen miles south of Bersabe, in a large plain belonging to nomad tribes. Many inscriptions have been found there (Revue Biblique, 1908, 246-48, 253-55). In the vicinity, according to the Targums, was the desert of Sura with the well at which the angel found Agar (Gen., xvi, 7). (See Revue Biblique, 1906, 597.)

The ancient See of Élusa (Elæze) in Gaul was united with that of Auch (q. v.) probably in the ninth cen- tury.

Reland, Palestina (Utrecht, 1714), II, 717, 755-757; Robinson, Biblical Researches in Palestine (London, 1860), I, 201-246; Palmer, The Desert of the Exodus (Cambridge, 1885); Gelzer, Georgii Cyprii descriptio orbis Romani (Leipzig, 1890), 199.

S. Vailhée.

_Élvira_, Council of, held early in the fourth century at Elliberis, or Iliberis, in Spain, a city now in ruins not far from Granada. It was, so far as we know, the first council held in Spain, and was at- tended by nineteen bishops from all parts of the Pen-
insula. The exact year in which it was held is a matter of controversy upon which much has been written. Some copies of its Acts contain a date which corresponds with the year 324 of our reckoning; by some writers the council has accordingly been assigned to that year. It is true that the emperor Diocletian, Hefele 305 or 306. Recent opinion (Duchesne, see below) would put the date considerably earlier, from 300 to 303, consequently previous to the persecution of Diocletian. The principal bishop attending the council was the famous Hosius of Cordova. Twenty-six priests and also several sitting with the bishops. It is eighty-one canons were, however, subscribed only by the bishops. These canons, all disciplinary, throw much light on the religious and ecclesiastical life of Spanish Christians on the eve of the triumph of Christianity. They deal with marriage, baptism, idolatry, fastings, and yetonialy, excommunication, the cemeteries, usury, vigils, frequentation of Mass, the relations of Christians with pagans, Jews, heretics, etc. In canon xxxii we have, says Hefele (op. cit. below), the oldest positive ecclesiastical ordinance concerning the celibacy of the clergy. Canon xiii is the institution of the clergy of the Virgin (virginis Domini), so long familiar to Spain. Canon xxxvi (placuit picture) in ecclesia sive non debere ne quod coluit et adoraret in parietibus deponat) has often been urged against the veneration of images as practised in the Catholic Church. Binterim, De Rossi, and Hefele interpret this prohibition as directed against the use of images in over-ground churches only, lest the pagans should caricature sacred scenes and ideas; Von Funk, Turmel, and Dom Leclercq opine that the council did not pronounce as to the licency or non-licency of the use of images, but as an administrative measure simply forbid them, lest new and weak converts from paganism should incur thereby any danger of relapse into idolatry or be scandalized by such superstitions excesses in no way approved by the ecclesiastical authority. (See Von Funk in "Tübingen Quartalschrift", 1883, 270-79; Nolte in "Rev. des Sciences ecclésiastiques", 1877, 273-84; Turmel in "Rev. des Sciences ecclésiastiques" 1906, XIV, 508.) Several other canons of this council offer much interest to students of Christian archaeology. (See text and commentary in Hefele-Leclercq, "Hist. des Conciles", I, 212 sqq.)

**Arthur S. Barnes.**

**ELY (ELIA or ELYS), ANCIENT DIocese of (ELiais), in England. The earliest historical notice of Ely is given by Venerable Bede who writes (Hist. Eccl., IV, vii): "Ely is in the province of the East Angles, an island of about six hundred families, in the centre of an island, enclosed either with marshes or waters, and therefore it has its name from the great abundance of eels which are taken in those marshes." This district was assigned in 649 to Etheldreda, or Audrey, daughter of Anna, King of the East Angles, as a fief for her marriage with Tonbert of the Saxon race and Girwy. After her second marriage to Egfrid, King of Northumbria, she became a nun, and in 673 returned to Ely and founded a monastery on the site of the present cathedral. As endowment she gave it her entire principality of the Isle, from which subsequent Bishops of Ely derived their temporal power. Etheldreda died in 679, and her shrine became a place of pilgrimage. In 970 the monastery was restored by King Edgar and Bishop Ethelwold it was a foundation for monks only. For more than a century the monastery flourished, till about the year 1105 Abbot Richard suggested the creation of the See of Ely, to replace the enormous Diocese of Lincoln. The pope's brief erecting the new Bishopric was issued 21 Nov., 1108, and in Oct., 1109, the king granted his charter, the first bishop being Harvey, formerly Bishop of Bangor. The monastery church thus became one of the "conventional" cathedrals. Of this building the transepts and two bays of the nave already existed, and in 1170 the nave as it stands to-day (a complete and perfect specimen of late Norman work) was finished. As the bishops succeeded to the principality of St. Etheldreda they enjoyed palatine power and great resources. Much of their wealth they spent on their cathedral, with the result that Ely can show beautiful examples of Gothic architecture of every period, including two unique features, the un-rivalled Galilee porch (1198-1215) and the central octagon (1322-1328) which rises from the whole breadth of the building and towers up until its roof forms the only Gothic dome in existence. The western tower (215 feet) was built between 1174 and 1197, and the octagon was added to it in 1900. Of the cathedral as a whole it is true that "a more vast, magnificent and beautiful display of ecclesiastical architecture and especially of the different periods of the pointed style can scarcely be conceived" (Winkles, English Cathedrals, II, 46). It is fortunate in having perfect specimens of each of the successive styles of Gothic architecture: the Early English Galilee porch, the Decorated lady-chapel (1321-1349), and the Perpendicular chantry of Bishop Alcock (c. 1500).

The original cathedral was much smaller than the present Anglican see and consisted of Cambridge-shine alone, while even of this county a small part belonged to Norwich diocese. The bishops of Ely usually held high office in the State and the roll includes many names of famous statesmen, including eight lord chancellors (marked * ) and six lord treasurers (marked + ). Two bishops—John de Fontibus and Hugh Belsham—were reputed as saints, but never received formal cultus; the former was commemorated on 19 June. The following is the list of bishops:

- Harvey, 1109
- Nigal, 1133+
- Geoffrey Riddell, 1174
- William Longchamp, 1188
- Eustace, 1198*
- John de Fontibus, 1220+
- Geoffrey de Burgh, 1225
- Hugh Norwold, 1229
- William de Kilkenney, 1256*
- Hugh Belsham, 1257
- John Kirkby, 1260+
- William de Louth, 1290
- Ralph Walpole, 1290
- Robert Orford, 1302
- John Kesteven, 1310
- John Hotham, 1316+
- Simon Montague, 1337
- Thomas de Lisle, 1445
- Simon Langham, 1362*
- John Barnet, 1396†

**INTERIOR OF ELY CATHEDRAL, LOOKING WEST FROM CHOIR**
Showing famous octagon and lantern.
Elymos. See Barjeus.

Elzar of Sabran, Saint, Baron of Ansouis, Count of Ariano, b. in the castle of Saint-Jean de Robians, in Provence, 1285; d. at Paris, 27 September, 1323. After a thorough training in piety and the sciences under his uncle William of Sabran, Abbot of St. Victor at Marseille, he acceded to the wish of Charles II of Naples, who desired the virtuous Bishop of Glandéves. He respected her desire to live in virginity and joined the Third Order of St. Francis, vying with her in the practice of prayer, mortification, and charity towards the unfortunate. At the age of twenty he moved from Ansouis to Puy-Michel for greater solitude, and formulated for his servants rules of conduct that made his household a model of Christian virtue. On the death of his father, in 1309, he went to Italy and, after subdued by kinship his subjects who despised the French, he went to Rome at the head of an army and aided in expelling the Emperor Hohenstauzen. Returning to France, he made a vow of chastity with his spouse, and in 1317 went back to Naples to become the tutor of Duke Charles and later his prime minister when he became regent. In 1323 he was sent as ambassador to France to obtain Marie of Valois in marriage for Charles, edifying a worldly court by his heroic virtues. He was buried in the Franciscan church in the castle of the Minor Conventuals at Apt. The decree of his canonization was signed by his godson Urban V and published by Gregory XI. His feast is kept by the Friars Minor and Conventuals on the 27th of September, and by the Capuchins on the 20th of October.

Gregory Carr.

Emanationism, the doctrine that emanation (Lat. emanare, "to flow from") is the mode by which all things are derived from the First Reality, or Principle.

I. The term emanation, being itself a metaphor, has been, still, used in many senses, and frequently by writers who are not emanationists. Others, without using the word, really hold the doctrine of emanation. Furthermore, emanationism is always interwoven with different opinions on various subjects; to separate it from these so as to arrange its fundamental elements is more or less arbitrary. Taking emanationism in the sense commonly received to-day, it is not primarily a theological, but rather a cosmogonic system, not a direct answer to the question of the nature of God, but to that of the mode of origin of things from God. In general it holds that all things proceed from the same Divine substance, some emanations or descendants. All beings form a series, the beginning of which is God. The second reality is an emanation from the first, the third from the second, and so on. At every step the derived being is less perfect than its source; but, by giving rise to other beings, the source does not lose any of its perfections. The first source, then, from which everything flows, remains; its perfection is neither exhausted nor lessened.

Emanationism is frequently referred to as a form of pantheism; but while this latter is primarily a system of reality, identifying all things as modes or appearances of the one substance, emanationism is concerned chiefly with the mode of derivation. Nor does it necessarily affirm the substantial identity of all things; it may assert the distinct, though dependent, substantiality of emanated realities. It is true that emanation is conceived by some in a pantheistic sense, as an expansion of the substance, but the substance itself is unaffected. Hence, not only some forms of pantheism are not emanationistic, but also many emanationists—with more or less consistency—revert pantheism. For the latter who admit that matter is eternal and independent of God, God cannot be more than an architect, who arranges pre-existing materials. In the doctrine of complete emanationism, all things, from the highest spiritual substances to the lowest forms of matter, come from God as their first origin, matter being the last and the most imperfect emanation. Some views, however, combine the theory of the eternity of matter with the theory of emanation.

The doctrine of creation teaches that all things are distinct from God, but that God is their efficient cause. God does not produce things from His own substance or from any pre-existing reality, but by an act of His will brings them out of nothing. According to emanationism, on the contrary, the Divine substance is the reality from which all things are derived, not by any voluntary determination, but by a necessity of nature. And God does not produce all things immediately; the lower steps are more distant, and are separated from Him by necessary intermediaries. (It may be noted, however, that sometimes the word emanation is used in a broader sense including also creation. Thus St. Thomas: "Quaritur de modo emanationis rerum a primo principio qui dictur creatio"—Summa, I, Q. xiv, a. 1.)

Evolution implies the change of one thing into something else, whereas a reality from which another emanates remains identical with itself. The process of evolution—at least in its totality—is generally considered as an ascent, a movement upwards towards a greater perfection. Emanation is a descent; it begins with the infinitely perfect, and at every step the emanating beings are less perfect, less perfect, less divine. The Infinite is postulated as a starting-point, instead of being the goal which the universe is ever striving to realize. Some comparisons used by emanationists, though only metaphors, and consequently misleading if taken literally, may give a clearer idea of the system. Things proceed from God as water from a spring or an overflowing vessel; as the stem, branches, leaves, etc., from the root ; as the web from the spider; as the heat from the sun or a fire; as the doctrine from the teacher. It is easy to see that all such comparisons are deficient in many points. They are intended simply to illustrate that which is above human comprehension.

II. Vague indications of emanationism are found in ancient mythologies and religions, especially those of
EMANATIONISM

India, Egypt, and Persia. Thus in the Upanishads things are said to issue from their eternal principle as the webs from the spider, the plant from the earth, the hair from the skin. But, while these and other comparisons and expressions may be interpreted in the sense of emanationism, they are not sufficiently explicit to serve as a basis for the assertion that such systems of philosophy or religion are emanationistic. Philo's teaching on this point is not much clearer. His thought was influenced by two distinct currents: Greek philosophy, especially Platonism, and Judaism. In his endeavour to reconcile them, he sometimes falls into inconsistencies, and his system is confused. According to him, God, infinitely perfect, cannot act on the world immediately, but only through powers or forces (δύναμες) which are not identical with Him, but proceed from Him. The primitive Divine force is the Logos. Whether the Logos is a substance or only an attribute, remains an obscure point. From the Logos the Spirit (πνεῦμα) proceeds. It is the soul, or vivifying principle, of the world. Sometimes God is looked upon as the efficient and active cause of the world, sometimes also as immanent, as the one and the whole (δι' αυτοῦ καὶ τοῦ ἁπάντος). The emanationistic expression of emanationism is found in the Alexandrian school of Neo-Platonism. According to Plotinus, the most important representative of this school, the first principle of all things is the One. Absolute unity and simplicity is the best expression by which God can be designated. The emanation proceeds in a determined and systematic order. Neither a distribution nor a determination would introduce both limitation and multiplicity. Even intelligence and will cannot belong to this Primal Reality, for they imply the duality of subject and object, and duality presupposes a higher unity. The One, however, is also described as the First Cause, the Light, the Universal Cause. From the One all things proceed; not by creation, which would be an act of the will, and therefore incompatible with unity; nor by a spreading of the Divine substance as pantheism teaches, since this would do away with the essential oneness. The One is not the unity of all things, but before all things. Emanation is the process by which all things are derived from the One. The infinite goodness and perfection "overflows", and, while remaining within itself and losing nothing of its own perfection, it generates other beings, sending them forth from its own superabundance. Or again, as brightness is produced by the rays of the sun so everything is a radiation (πνεῦμα ἐκ σωμάτος) from the Infinite Light. The various emanations form a series every successive step of which is an image of the preceding one, though inferior to it. The first reality that emanates from the One is the Nous (Νοῦς), a pure intelligence, an immanent and changeless thought, putting forth no activity outside of itself. The Nous is an image of the One, and, coming to recognize itself as an image, introduces the first duality, that of subject and object. The Nous includes in itself the intellectual world, or world of ideas, the Universal Cause. From the Nous emanates the Soul of the world, which forms the transition between the world of ideas and the world of the senses. It is intelligent and, in this respect, similar to the ideal world. But it also tends to realize the ideas in the material world. The World-Soul generates particular souls, or rather plastic forces, which are the "forms" of all things. Finally, the soul and its particular forces beget matter, which is of itself determined and becomes determined by its union with the form. With a few variations in the details, the same essential doctrine of emanation is taught by Iamblichus and Plotinus. While Pseudo-Dionysius identifies the One with the Good, he assumes an absolutely first One, anterior to the One, and utterly ineffable. From it emanates the One from the One, the intelligible world (ideas); and from the intelligible world, the intellectual world (thinking beings). According to Proclus, from the One come the unities ( Monadēs), which alone are related to the world. From the unities emanate the triads of the intelligible essences (being), the intelligible-intellectual essences (life), and the intellectual essences (thought). These again are further distinguished. Matter comes directly from one of the intelligible triads.

Gnostics teach that from God, the Father, emanated numberless Divine, supra-mundane Αόνα, less and less perfect, which, taken all together, constitute the fullness (αὐξημα) of Divine life. Wisdom, the last of these, produced an inferior wisdom named Achemoth, and also the psychic and material world. With the Logos, the idea of creation is made manifest. Whether Creation, as in the case of Pseudo-Dionysius, and the later Neo-Platonists, especially Proclus, frequently borrowing their terminology. Yet he endeavours to adapt his views to the teachings of Christianity. God is primarily goodness and love, and other beings are emanations from His goodness, a light is an emanation from the sun. John Scotus Eriugena takes his doctrine from Pseudo-Dionysius and interprets it in the sense of pantheistic emanationism. There is only one Being who, by a series of substantial emanations, produces all things. Nature has four divisions, or rather there are four stages of the one nature: (1) The immaterial which is not created, is in His primordial, incomprehensible reality, unknown and unknowable for all beings, even for Himself. God alone truly is, and He is the essence of all things.

(2) The created and creating nature, i.e., God considered as containing the ideas, prototypes, or, to use Eriugena's expression, the primordial causes of things. It is the ideal world. (3) The nature which is created, but does not create, is the world of things existing in time and space. All flow, proceed, or emanate from the first principle of being. Creation is a procession of things, and God is one and the same reality. In creatures God manifests Himself. Hence the name theophania which Eriugena gives to this process. (4) Nature, which neither creates nor is created, i.e., God as the term towards which everything ultimately returns.

Arabic philosophy—not to speak here of the various forms of Arabian mysticism—is in many points influenced by Neo-Platonism, and generally holds some form of emanationism, the emanation of the different spheres to which all things celestial and terrestrial belong. According to Alfarabi, from the First Being, conceived as intelligible (in this Alfarabi departs from Plotinus), the intellect emanates: from the intellect, the cosmic soul; and from the cosmic soul, matter. Avicenna teaches that matter is eternal and uncreated. From the First Cause comes the intelligentia prima, from which follows a series of processes and emanations of the various species of celestial sphere and the earthly sphere. For Avicenna the intellect is not individual, but identical with the universal spirit, which is an emanation from God. Interests is a comparison found in one of the later mystics, Ibn Arabi. Water that flows from a vessel becomes separated from it; when this comparison is defective, for things that issue from God are not separated. Emanation is illustrated by the comparison of a mirror, which receives the features of a man, although the man and his features remain united.

In Jewish philosophy, influences of Neo-Platonism
are apparent in Avicenna and Maimonides. In the Cabbala the famous doctrine of the Sephiroth is essentially a doctrine of emunations. It was developed and systematized especially in the thirteenth century. The Sephiroth are the necessary intermediaries between God and the universe, between the intellectual and the material world. They are divided into three groups, the first group of three forming the world of thought, the second group, also of three, the world of soul, and the last group, of four, the world of matter.

III. Philosophically the discussion of emanationism supposes God and the universe, the whole problem of the nature of God, especially of His simplicity and infinity. The doctrine of the Catholic Church is contained in the definition of the dogma of the creatio ex nihilo by the Fourth Lateran Council and, especially, the Council of the Vatican.

The latter expressly condemns emanationism (I. De Deo rerum omnium creatore, can. iv.), and anathematizes those “asserting that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance”.

The literature on this subject includes the works of the authors mentioned in the course of this work of [name], of philosophy, both general and of special schools and philosophers. Reference is made to the disciplines, for pro. Thes., IV, 329, Hagermann in Kulturkenken., IV, 431.

Emancipation, Catholic. See England; Roman Catholic Relief Bill.

Emancipation, Ecclesiastical. — In ancient Rome emancipation was a process of law by which a slave released from the control of his master, or a son liberated from the authority of his father (patris potestas), was declared legally independent. The earliest ecclesiastical employment of this process was in the freeing of slaves. The Church, unable to change at once the condition of the slave, was able, however, to gradually substitute for slavery the milder institution of serfdom, and to introduce in place of the elaborate formalities of the emancipation the simpler form of the manusmissio in ecclesia (Cod., De his, qui in ecclesia manumittuntur, i, 13), in which a simple statement to that effect by the master before the bishop and the congregation sufficed. The emancipation of a slave was especially necessary as a preliminary to his ordination (i.e., the Synod of Toledo, 1078, can. viii), X, De filius presbyterorum ordinandis vel non, i, xvii; c. iii (Fourth Synod of Toledo, 683, can. lxxiv), X, De servis non ordinandis et eorum manumissioni, i, xviii. Similarly, the entrance of a son into a religious order, i.e., the taking of the tonsure, was enjoined, or the profession of religion carried with it in canon law his emancipation from the legal authority (patris potestas) of the father. No positive law, however, can be quoted on this point, nor does modern civil legislation recognize this consequence of religious profession. The canon law recognizes another, purely imitative form of emancipation. This was the release of a pupil of a cathedral school, a domicellarius, from subjection to the authority of the scholastics, or head of the school. This emancipation took place with certain well-defined ceremonies, known in the old German cathedral schools as Koppengang.

The term emancipation is also applied to the release of a secular ecclesiastic from his diocese, or from a regular from obedience and submission to his former superior, because of election to the episcopate. The petition required from the former condition of condition of the or submission, which the collegiate electoral body, or the newly elected person, must present to the former superior, is called postulatio simplex, in contradistinction to the postulatio sollemnis, or petition to be laid before the pope, in case some canonical impediment prevents the elected person from taking the episcopal office. The document granting the dismissal from the former relations is called littera dimissoraria or emancipatoria. It is not customary to use the term emancipation for that form of dismissal by which a church is released from parochial jurisdiction, a bishop from subordination to his metropolitan, a monastery or order from the jurisdiction of the bishop, for the purpose of placing such person or body under the ecclesiastical authority of the pope, or under the pope himself. This act is universally known as excommunication (q. v.).

Ember-days (corruption from Lat. Quatuor Tempora, four times) are the days at the beginning of the seasons ordered by the Church as days of fast and abstinence. They were definitely arranged and prescribed for the entire Church by Pope Gregory VII (1031-1085) for the Wednesday, Friday, and Saturday, after Ash-Wednesday, after Whitsun, and after 1 September (Exaltation of the Cross). The purpose of their introduction, besides the general one intended by all prayer and fasting, was to thank God for the gifts of nature, to teach men to make use of them in moderation, and to assist the needy. The immediate occasion of the practice of the heathens of Rome. The Romans were originally given to agriculture, and their native gods belonged to the same class. At the beginning of the time for secking and harvesting religious ceremonies were performed to implore the help of their deities: in June for a bountiful harvest, in September for a rich vintage, and in December for the seeding; hence their feria sementiva, feria mesnus, and feria vindemiales. The Church, when converting heathen nations, has always tried to sanctify any practices which could be utilized for a good purpose. At first the Church in Rome had fasted in June, September, and December; the exact days were not fixed but were announced by the priests. The "Liber Pontificalis" ascribes to Pope Callistus (212-222) a law ordering the fast, but probably it is older. Leo the Great (440-461) assumed to his ordination (i.e., the Synod of Toledo, 1078) that the four seasons was added cannot be ascertained, but Gelasius (492-496) speaks of all four. This pope also permitted the conferring of priesthood and deaconship on the Saturdays of ember weeks—these were formerly given only at Easter. Before Gelasius the ember-days were perhaps known only in Rome, or rather, his observance spread. They were brought into England by St. Augustine; into Gaul and Germany by the Carolingians. Spain adopted them with the Roman liturgy in the eleventh century. They were introduced by St. Charles Borromeo into Milan. The Eastern Churches do not know them. The present Roman Missal, in the formulary for the Ember-days, retains in part the old practice of lessons from Scripture in addition to the ordinary two: for the Wednesdays three, for the Saturdays six, and seven for the Saturday in December. Some of these lessons contain promises of a bountiful harvest for those that serve God.

Emblems of the Saints. See Iconography.

Embolism (Greek: ἐμβολία, from the verb, ἐμβάλλειν, "to throw in"), an insertion, addition, interpretation. The word has two specific uses in the language of the Church:

I. The prayer which, in the Mass, is inserted between the Our Father and the Fraction of the Bread: "Libera nos, quassumus, Domine, ab omnibus malis", etc. It is an interpretation of the last petition. The
ECONOMY may date back to the first centuries, since, under various forms, it is found in all the Occidental and in a great many Oriental, particularly Syrian, Liturgies. The Greek Liturgies of St. Basil and St. John Chrysostom, however, do not contain it. In the Mozarabic Missal, this prayer is very beautiful and is inserted not only in the Mass, but also after the Our Father at Lauds and Vespers. The Roman Church connects with it a petition for peace in which she inserts the names of the Mother of God, Sts. Peter and Paul, and St. Andrew. The name of St. Andrew is found in the Gelasian Sacramentary so that its insertion in the Embolism would seem to have been anterior to the time of St. Gregory. During the Middle Ages the provincial churches and religious orders added the names of other saints, their founders, patrons, etc., according to the discretion of the celebrant (see Micrologus).

II. In the calendar this term signifies the difference of days between the lunar year of only 354 days and the solar year of 365.2922 days. In the Alexandrian lunar cycle of 19 years, therefore, seven months were added, one each in the second, fifth, eighth, eleventh, thirteenth, sixteenth, and twentieth centuries. Each embolismic year had 13 lunar months, or 354 days. The lunar calendar was called Dionysian, because Dionysius Exiguus, in the sixth century, recommended the introduction of the Alexandrian Easter cycle of 19 years and computed it for 95 years in advance.

Embroidery. Ecclesiastical.—That in Christian worship embroidery was used from early times to ornament vestments, is confirmed by numerous notices, especially the statements of the Liber Pontificalis. For the period before the tenth century no account, even partially satisfactory, has come down to us, either of the methods of producing the embroidery or of the manner and extent of its use. What is incidentally said is not sufficient to make the matter clear, and no embroidery of this period for ecclesiastical purposes has been preserved. The oldest extant examples are the remnants of a manuscript dating from the beginning of the tenth century, in the museum of Durham cathedral, and fragments of an altar-cover of the same century in the National Museum at Ravenna. Vestments magnificently embroidered appeared at the beginning of the eleventh century, such as the chasuble completely covered with pictures embroidered in pure gold, which is preserved in the Bamberg cathedral; the coronation mantle of Hungary, originally also a chasuble, and other specimens of the highest importance not only on account of their costly material and the skill shown in their execution, but even more on account of the deep significance of the pictures. Up to the thirteenth century embroidery in gold thread was the ornamentation mainly used for ecclesiastical purposes. To a certain degree gold embroidery was intended in the place of tapestry or other materials woven with gold thread. Consequently, this embroidery so closely resembles fabrics woven with gold that on superficial examination it could easily be taken for such. At the same time, however, embroidery with silk threads was also practised, as is shown by the vestments preserved at St. Paul in Carinthia.

Ecclesiastical embroidery reached its fullest development in the thirteenth, fourteenth, and the first half of the fifteenth centuries. In this period whatever the name of vestment, wherever means allowed, was more or less richly embroidered. The working materials were gold, silver, and silk threads, small disks and spangles cut with a stamp from silver, plain or gilded, spangles and small disks of enamel, real pearls, precious stones, paste diamonds, and coral. The embroidery of figures was the branch of the art most pursued, purely ornamental embroidery was employed in ornamentation of more symbolic character. The copes and chasubles covered with pictorial embroidery of a deeply religious character, the aurifissa (bands) magnificently ornamented with embroidered figures, that were laid on the liturgical clothing and other vestments, the covers and wall-hangings embroidered in gold, etc. These works of wonderful needlework, all these examples of the art of the needle of that era, still found in large numbers in the church treasuries and museums, show that ecclesiastical embroidery then reached a height never since regained. In the eleventh and twelfth centuries Sicily was famous for its ecclesiastical embroidery; in the thirteenth and fourteenth centuries the workshops of England were more noted than all others. In this latter period mention of English embroidery, called opus Anglicanum, is found in almost all inventories of the more important churches of the Continent, and most frequently sent from England into other parts of Western Europe was a cope completely covered with a rich embroidery of figures on a background of vine arabesques or elaborate architecture, the background being worked in gold thread; examples of these copes are to be seen at Chartres, Lateran at Rome, at Pienza, Vich, and Daroca in Spain, Salzburg, Saint-Bertrand-de-Comminges in France, and elsewhere. A large amount of superb ecclesiastical needlework, splendid specimens of which still exist, was also produced in Germany, France, and Italy; in the last-named country the work of Florence, Siena, Lucca, and Venice was especially noted. In the fifteenth century the finest ecclesiastical embroidery was done in Flanders, where the work most largely produced was that kind in which the gold thread was worked over with coloured silks. The best examples of this are the mass-vestments of the Order of the Golden Fleece preserved in the Hofburg at Vienna. With the close of the Middle Ages ecclesiastical embroidery began to decline. Instead of the flat stitch, use was now made of the more striking raised embroidery, which frequently degenerated into a purely formal highly unsuited in character to ecclesiastical embroidery. There was a continually growing tendency to aim at brilliant effects and a stately magnificence. At the same time pictorial needlework was less and less in vogue owing to the influence of secular embroidery. Needlework for church vestments was limited more and more to purely ornamental designs, taken chiefly from the plant world, and to certain symbolic designs. The art sank to its lowest depths both in design and technic at the commencement of the sixteenth century, during the so-called Biedermeier (honest citizen) period.

Ecclesiastical embroidery flourished in the various provinces of the Byzantine Empire. While the costly needlework produced there was naturally used mainly in the services of the Greek Church, still many being preserved, the same was also used in the eleventh century; in reality, a Greek sangha (vestment of a Greek bishop or priest) already existed, probably, in the latter half of the fourteenth century. At no period has ecclesiastical differed in its technic from secular embroidery. The same varieties of stitches and other art resources have been employed in both cases. No special ordinances have
EMBRUN

ever been issued by the Church in regard to embroidery for vestments, either as to material, colour, use, or design. Good taste, however, requires that the embroidery should harmonize with the character and colour-effect of the vestment, and that it should not be too crowded, or too stiff.

JOSEPH BRAUN.

EMBROIDERY IN SCRIPTURE.—It is probable that the Israelites learned the art of embroidery during their sojourn in Egypt. The ornamentation of woven fabrics, especially of linen, by needlework in threads of different colours, spun or drawn from various materials, such as wool, flax, or gold, was known to ancient nations. The Greek and Romans acquired the art from the East. The monuments of Assyria and Babylon show that the garments of kings and officials are highly ornamented with what are commonly regarded as embroideries, and specimens of embroidered work have been found in Egyptian tombs. In Ezekiel, xxviii, 7, mention is made of the "fine brodered linen" used for sails on the ship of Tyre. The first record of embroidery in Scripture is found in the Book of Exodus (xxvi, 1, 31, 36) in the directions given to Moses concerning the curtains of the Tabernacle, the veil for the Ark, and the hanging in the entrance to the Holy of Holies. The Douay, following the Vulgate, does not distinguish between the two Hebrew expressions (Ex., xxvi, 1, 31) and the word מַעַט (Ex., xxvi, 36). The former is translated in the Revised Version by "the work of a cunning workman" and seems to refer to the weaving of figured designs from different coloured threads; the latter may have been real embroidery, or needlework, called in the later books מַעַט.

Besides the hanging at the entrance of the Tabernacle (Ex., xxvi, 36), the hanging in the entrance of the court (Ex., xxvi, 16) and the girdle of the high-priest (Ex., xxviii, 39; xxxix, 28) were the work of the same worker, whose work was regarded as the gens of the bride's apparel in Ps. xlv (Heb., xlv), 15, where according to the Hebrew text she is said to be arrayed in embroideries of gold and raiment of needlework. The garments of the faithless spouse, the figure of Israel (Ezech., xvi, 10, 15, 18), were likewise embroidered. In Ezech., xxvi, 16, it is foretold that the princes of the sea shall put off their brodered garments, and brodered stuffs are mentioned among the merchandise of Tyre (Ezech., xxvii, 16, 24).

In the Authorized or King James Version of Ex., xxxix, 28, the word מַעַט of the high-priest's garments is called "a brodered coat"); the Revised Version changed it to "a coat of chequer work"). The Douay has "a straight linen garment" (lineam stricturn in the Vulgate). The Hebrew word מַעַט used here is not found elsewhere in Scripture. It is believed by some to indicate "the work of the exiled archbishop", similar to work still done in Damascus. Even in regard to the nature of מַעַט which is translated "embroidery", authorities are not agreed. Some regard it as painting on cloth, others as an ornamentation produced by sewing on to a stuff pieces of materials of other colours, others as a fabric woven from threads of different colours.

EMERENTIANA, SAINT, virgin and martyr, d. at Rome in the third century. In the old Itineraries to the graves of the Roman martyrs, after giving the place of burial of St. Agnes, speak of St. Emerentiana. Over the grave of St. Emerentiana there was once a church, according to the Itineraries, established to the north of the church erected over the place of burial of St. Agnes, and somewhat farther from the city wall. In reality Emerentiana was interred in the cemeterium majoris located in the vicinity far from the cemeterium Agnetis. Armellini believed that he had found the original burial chamber of St. Emerentiana in the former cemeterium. According to the legend of St. Agnes Emerentiana was her foster-sister. Some days after the burial of St. Agnes Emerentiana, who was still a catechumen, went to the grave to pray, and while praying she was suddenly attacked by the pagans and killed with stones. Her feast is kept on 23 January. In the "Martirologium Hieronymianum" she is mentioned under 18 September, with the statement: In cemeterio maiore. She is represented with stones in her lap, also with a palm or lily.

EMERY, Jacques-André, Superior of the Society of St-Sulpice during the French Revolution, b. 26 Aug., 1732, at Gex; d. at Paris, 28 April, 1811. After his preliminary studies with the Carmelites of his native town and the Jesuits of Mâcon, he passed to the Seminary of St. Irenæus at Lyons and completed his studies at St-Sulpice, Paris, where he became a member of the society of that name and was ordained priest (1758). He taught with distinction in the seminaries of Lyons and Lyons, and, later, in the diocese of Besançon (1770), and of the clergy, too, he enlarged the rights of the Holy See with firmness and ability, yet with due courtesy, before the archbishop, Mgr. de Montazel, a prelate of Jansenistic tendencies. Partly on the recommendation of the archbishop, he was made superior of the seminary at Angers (1779), and later became vicar-general of the diocese; and of both capacities marked powers of governing. In 1782 he was elected Superior-General of the Seminary and Society of St-Sulpice. His rule began in the last days preceding the French Revolution, and Father Emery showed himself indefatigable in his zeal for the reform of the seminaries, and for the training of a clergy fit to cope with existing evils and prepared for the troublous times which, to some extent, he foresees. After the Revolution broke forth, he watched its terrible progress without despair; he was, perhaps, during that period, the coolest head among the churchmen of France. His wide acquaintance among the priests and bishops, many of whom, in the course of his thirty years of teaching and ruling in the seminaries, had been under his authority, and his position as administrator of the Diocese of Paris during the absence of the bishop, and his, to some extent, liberal views, brought many to him for advice. He was, says the historian Sicard, "the chief and the arm" of the party whose counsels were marked by moderation and good sense; "a man who was rarely endowed in breadth of learning, in knowledge of his time, in the clearness of his views, in the calmness and energy of his decisions; the oracle of the clergy, consulted on all sides less by
reason of his high position than of his superior wisdom. M. Emery was called by Providence to be the guide throughout the long interregnum of the episcopate during the revolution" (L'Ancien Clergé, III, 549). And Cardinal de Bausset declares that he was the "keeper of the clergy during twenty years of the most violent storms ".

The decisions of the Archepiscopal Council at Paris concerning the several oaths demanded of the clergy, inspired by Emery, were accepted by large numbers of priests and violently assailed by others. To their acceptance was due whatever practice of cult remained in France during the Revolution; to their rejection was due, in large part, the cessation of worship and the opinion which came to regard the clergy as "the irreconcilable enemies of the republic". Emery did not, like many others, mistake purely political projects for vital questions of religion. "He felt free to take the "Oath of Liberty and Equality", but only as concerning the civil and political order; he upheld the lawfulness of declaring submission to the laws of the Republic (30 May, 1796), and of promising fidelity to the Constitution (28 Dec., 1799). He lent his influence to Mgr. Spina in his efforts to obtain the resignation of the new bishop of Pinerolo to the wishes of Pius VII (15 Aug., 1801). While ready, for the good of religion, to go so far as the rights of the Church permitted, he was stanch in his opposition to the Civil Constitution of the Clergy (1790). Public religious services were suspended during the Revolution, and the seminaries closed. St-Sulpice was taken over by the revolutionists, and Father Emery was imprisoned and several times narrowly escaped execution. His faith, courage, and good humour sustained many of his fellow-prisoners and prepared them to meet death in a brave and Christian spirit; the gaolers, in fact, came to view his presence because it saved them from prisoners condemned to death. The closing of the seminaries in France led Father Emery, on the request of Bishop Carroll, to send some Sulpicians to the United States to found the first American seminary at Baltimore (St. Mary's, 18 July, 1811). The future religion of the country, he wrote to Father Nagot, the first superior, depended on the formation of a native clergy, which alone would be adequate and fit for the work before it. Despite the discouragements of the first years, he continued the support of the institution and welcomed the foundation of the college at Pigeon Hill, and then at Emmitsburg, for young aspirants to the priesthood. At one time, however, Bishop Carroll feared the withdrawal of the Sulpicians, but his arguments and above all the advice of Pius VII convinced Father Emery that the good of religion in America required their presence.

After Napoleon came into supreme control, Father Emery re-established the Seminary of St-Sulpice. His defence of the pope against the emperor caused Napoleon to expel the Sulpicians from the seminary; this, however, did not daunt Father Emery, who defended the papal rights in the presence of Napoleon (17 March, 1811) and gained the emperor's admiration, if not his good will. "He was", remarks Sicard, "the only one among the clergy from whom Napoleon would take the truth."

The death of Father Emery occurred a month later. He left many writings which have been published by Migne in his collection of theological works. They deal chiefly with the politico-religious questions of the day. He is best remembered, perhaps, by his dissertation on the mitigation of the sufferings of the damned. He wrote also on Descartes, Leibniz, and Bacon, and published from the writings of the father of philosophy his "Catholic Doctrine", and his "History of the Episcopacy in England".

JOHN F. FEYNLON.

Emessa, a titular see of Phoenicia Secunda, suffragan of Damascus, and the seat of two Uniat archidioeceses (Greek Melchite and Syrian). Emessa was renowned for its temple of the sun, adored here in the shape of a black stone, whose priests formed a powerful aristocracy. One of them, Bassianus, became Roman emperor under the name of Elagabalus (a. d. 218). A native Arab dynasty ruled over the city between 65 n. c. and A. D. 73, from which period the series of Emessa coins dates. Emessa was the birthplace of the philosopher Longinus (c. a. b. 210), the friend of Queen Zenobia, and St. Romanus, the great Byzantine hymnographer (in the sixth century).

Among twelve Greek bishops, known from the fourth to the eighth century, are: St. Silvanus, a martyr under Maximinus in company with the physician Julian (c. 312); Eusebius, a famous rhetorician suspected of Arianism; Nemeseus (fourth century); and Paul, bishop of old friends of St. Basil and St. Cyril of Alexandria (Le- quien, Or. christ., II, 537). Another, whose name is unknown, was burned by the Arabs in 666 (Lamens in "Mélanges de la faculté orientale de Beyrouth", 1906, 3-14). The diocese was never suppressed and no longer exists for the Greek Melchites, both non-Catholic and Uniat (Echos d' Orient, 1907, 223, 226). It was raised to the rank of an autocephalous archbishopric in 152, when the supposed head of St. John the Baptist was found at the monastery of the Speslon, and it was made a metropolitan see with four suffragan sees in 1571, when the relic was transferred to the cathedral (Echos d' Orient, 1907, 93-96, 142, 368). Sozomen (Hist. eccl., III, xvii) speaks of this church as a marvel; the Arabs on capturing the city in 636 took over half of it; later it was changed into a mosque. In 1110 Emessa was taken by the Crusaders, and in 1187 suffered severely from an earthquake. The modern city, which the Arabs call Homs (Hems, Hums), built on the Orontes in sand-coloured basalt, is the chief town of a cazaa, in the sanjak of Hamah, vilayet of Damascus. The population is about 50,000 including some 50,000 weavers. There are 33,000 Mussulmans, 1,000 Greeks, 1,000 Jacobites, 500 Greek Catholics, 350 Maronites, and a few Catholics of other rites. The Orthodox Greek metropolitan and the Jacobite bishop live at Homs. (For lists of ancient Jacobite bishops see Lequien, op. cit., II, 1141, and " Revue de l'Orient chrétien", 1901, 196, 199.) The Greek Melchite metropolitan resides at Hlab; he has jurisdiction over 8000 faithful, 20 priests, 12 churches, 7 schools, and 2 monasteries of Shooerites. The Syrian Catholic archbishop resides at Damascus; his diocese includes 2000 faithful, with 4 parishes and 5 churches. The Jesuits have a residence and school at Homs, and native Marianist Sisters conduct a school for girls.

Emigrant Aid Societies.—Records of the early immigration to the North American colonies are indefinite and unsatisfactory. The first legislation on the subject was the Naturalization Act of the United States, 1790. On 2 March, 1819, when Congress provided that a record be kept of the number of the immigrants arriving from abroad, their ages, sex, occupations, and nativity, Ireland has always supplied a large proportion of those landed at American ports, the steady
commencing in the first years of the eighteenth century. These immigrants were then nearly all Presbyterians, few Catholics being among those taking passage prior to the Revolution. Arthur Young, in his "Tour in Ireland" (1776–79), declares that "the spirit of adversity in England appears to be contending with the religious and economic circumstances, the Presbyterian religion and the linen manufacture. I heard of very few emigrants except among manufacturers of that persuasion. The Catholics never went; they seemed not only tied to the country, but almost to the parish in which their ancestors lived." In a message to the "Representatives of the Freemen of the Province of Pennsylvania and the Three Lower Counties" Lieutenant Governor Patrick Gordon declared, on 17 December, 1728, that he had "positive orders from Britain to provide by proper law against these crowds of Foreigners who are yearly power'd upon us. It may also require thoughts to prevent the importation of Irish Papists and convicts, of whom some of the most notorious, I am credibly informed, have of late been landed in this River."

The earliest American organization for the care of immigrants was the Charitable Irish Society of Boston, Massachusetts, founded 17 March, 1797. Says its charter: "Several Gentlemen, Merchants and Others of the Irish Nation residing in Boston in New England from an Affectionate and Compassionate concern for their countrymen in these parts, who may be reduced to distress, Shipwreck and accidents, Infirmities and unforeseen Accidents, Have thought fitt to form themselves into a Charitable Society for the relief of such of their poor and indigent Countrymen."

The Managers, according to the rules, were to be "Native of Ireland, or Natives of any other part of the British Dominions of Irish Extractions being Passengers and inhabitants of Boston". This anti-Catholic rule did not last long, for representatives of the Faith were members of the Society in 1742, and to-day they are in the majority on its roll.

In Philadelphia the Hibernian Society for the Relief of Emigrants from Ireland was organized on 3 March, 1790. Mathew Carey was its secretary, and Commodore John Barry, Jasper Moyal, George Meade, and other Catholics prominent in those days were among its first members. The Hibernian Society "for the relief of distressed emigrants" was started at Savannah, Georgia, in March, 1812, and emigration from Ireland being constantly on the increase, other societies were formed in New York, notably the Emigrant Assistance Society in 1817, with Dr. William James Maceneven, one of the United Irishmen of 1798, at its head. It was in the canal-and-railroad-building era, and the aim of this society was to take care of the new arrivals and direct them where to find employment. It was the predecessor of the Irish Emigrant Society founded, also in New York, in 1841, through the efforts of Bishop Hughes, with Gregory Dillon as its first president.

Out of this organization ten years later came the Emigrant Industrial Savings Bank, which in subsequent years developed into one of the greatest financial institutions in the country.

An American was the great entrepôt for aliens, the Legislature, by act of 5 May, 1847, created the Board of Emigration of the State of New York to protect from fraud and imposition alien passengers arriving at New York, and to care and provide for the helpless among them. The president of the Irish Emigrant Society was made a member of the board, and its agents were recognized officially in their arrangements for the care of the incoming immigrant. In addition to looking out for the welfare of the immigrant a banking department was organized by the society to transmit money to Europe, to secure passage tickets over the ocean and the railways, to exchange the money brought in by the immigrants, and safeguard their material interests generally. In this way many millions of dollars, as well as several millions of immigrants, have been safely cared for through the instrumentality of this society. The discounts and commissions in this financial, and an usurpation of the powers of Congress. In the twenty-nine years of its existence it had collected by a head-tax from the immigrants the sum of $11,230,329. The responsibility of caring for the immigrants was then taken over by the Federal Government, in July, 1891.

The State emigration was abolished, Castle Garden abandoned, and the United States landing station established on Ellis Island under the supervision of the Treasury Department. Here, as under the State control, the representatives of the Emigrant Aid Societies are accorded all facilities for protecting and assisting the immigrants who need their help in starting out in the New World.

For the protection of Irish immigrant girls the Mission of Our Lady of the Rosary was founded in New York in 1881, through the efforts of Charlotte Grace O'Brien, daughter of William Smith O'Brien, the Irish Utopian. At the instigation of Father O'Brien, who had been a Jesuit missionary in Ireland, and until several years later a Catholic—Cardinal McCloskey—suggested the Rev. John J. Riordan chaplain at Castle Garden, and he began there the work of the mission which exercises a moral influence over the steamship companies to protect the girls on board their vessels, and watch over and assist the girls at the landing depot. From its opening to the end of 1905, fully 100,000 girls were cared for by the mission, all free of charge. It is supported by voluntary contributions.

The increase of immigration having thus been recognized as a fact calling for charitable action, the German Society of New York offered advice and systematic assistance to German immigrants, but took no interest in their religious welfare. Its president was ex officio a member of the State Emigration Commission. In 1868, at the Catholic Congress held at Trier, Peter Lahm, a prominent merchant of Frankfort and Prussia, suggested the establishment of the St. Raphael Society for the systematic protection of German immigrants, both at the point of departure and the port of landing. Three years later the plan was adopted at the Congress which met at Bamberg in Bavaria, and was taken up with much energy throughout Germany. By 1905 the Society had been established through the Central Verein, which, at its convention in New York, in 1868, created a committee of five for emigrant affairs. The agents of this body looked after the affairs of the immigrants at New York, but received only a warning support from their fellow Germans.

In 1883 Peter Paul Cahensly crossed the ocean to New York, travelling, as Miss O'Brien had done, in the steerage, so that he might learn by personal experience the wants and hardships of the immigrant. At his suggestion a branch of the St. Raphael Society was formed in New York, with Bishop Winand M. Wigger of Newark as its president. Not much progress was made by this society until 1882, when the Rev. John Reuland was sent over from Germany to manage its bureau at New York. As an adjunct to it, a German telegraph office was established in 1883, a Hungarian one in 1885, a French one in 1886, and a Russian one in 1887. At the suggestion of the Leo House, which is the residence of the chaplain in attendance on the German immigrants. From 1889 to 1 November, 1909, there were 51,719 immigrants cared for by the St. Raphael Society. Since the decline of German immigration after 1895, the Leo House has also enter-
tained natives of France, Poland, Bohemia, and other Slavonic sections of the Austro-Hungarian Monarchy. The St. Raphael Society has its agents at Bremen, Hamburg, Antwerp, Rotterdam, Havre, Liverpool, and London, representatives in every diocese in Germany and Belgium, and stations in the large cities of the United States and of South America.

The Austrian Society of New York was founded in 1871 by a number of former Austrians to aid the newly arrived immigrants at Ellis Island, and to maintain a home under its supervision for the purpose of boarding them free of charge until they can afford to pay a nominal fee. Advice and help to employment is given free not only to the newcomers, but also to Austrians who have been in the country for any length of time. The Society is supported by the dues of the members and by donations including an annual subsidy of $5000 from the Austrian Government. Among the members are twenty-one priests. The Austrian Society employs three agents at Ellis Island; one of them is the missionary who leads before the board of inquiry for the unfortunate detained, cares for the sick, and looks after the spiritual needs of all. In the ten years of its existence 72,000 persons were entertained at its immigrant house. To maintain the charitable character of the home and of the Austrian Society at large, as originally intended by the Emperor of Austria, it has from the start been chiefly interested in the Catholic immigrants, but all others are welcome to its care and facilities.

Polish priests ministering in the Eastern section of the United States established at New York, in 1803, the St. Joseph's Society, for the aid and care of the immigrants of that nationality. Its chaplain and agents work on the same lines as those of other societies of the Government and its stations are open to the Filiarion Sisters, and its accommodations are free. Its support is derived from voluntary contributions and a yearly grant of $1000 from the Austrian Government on account of the Poles from Galicia who may seek the assistance of the home.

Under the auspices of the Fathers of Mercy the Jeanne d'Arc Home for the protection of French immigrant women was opened in 1895, in New York. It was founded through the generosity of Miss C. T. Smith, who gave the home as a memorial to her mother Mrs. Jeanne Durand Smith. Two years later the Sisters of Providence took charge of it, and they have since managed its affairs. Since its establishment 6800 women have received its care. It is supported by voluntary contributions. The inmates pay if they can, most of them are taken care of gratuitously. Employment is found for them and they are taught useful domestic arts.

As part of the great work in behalf of Italian immigrants undertaken by Bishop Scalabrini of Piacenza, Italy, members of his Congregation of St. Charles Borromeo established the Society of St. Raphael for Italian Immigrants at New York in 1891. Its charge is managed by the Sisters of Charity (Pallottine). Only women and children are kept there; men are given meals and advice, but lodge elsewhere. The chaplain and agent meet the immigrants at Ellis Island. A branch of this society was organized at Boston, in 1899. Archbishop Blink of Amsterdam appointed an Italian priest as chaplain to look after immigrants from Italy and open a home for them. Work here is carried on by the St. Vincent de Paul Society.

The Society for Italian Immigrants is a secular corporation organized in New York in 1901 for the aid and protection of immigrants. It has no religious affiliations. The Italian government makes it an annual appropriation equal to the amount received from all other sources, and its income is derived from the subscriptions of those interested in philanthropic work. Its home has accommodations for 200. It has founded four schools in Italian labor camps to prevent the demoralization usually attending those communities. The enormous volume of Italian immigration during recent years may be realized from the fact that from 1880 to 1908 it amounted to 2,500,000. In 1910 it was about 1000, in 1900 about 4,000; in 1907, 286,000. It is estimated that 250,000 aliens arrived in the United States between 1789 and 1820. From 1820, when the official records begin, to the end of the fiscal year, 30 June, 1907, the number of immigrants arriving was 25,985,237.

The Association for the Protection of Belgian and Dutch Immigrants was organized 4 June, 1907, at Chicago, Illinois, by priests in charge of congregations in various sections of the United States, made up of those nationalities. Other priests interested in the spiritual and temporal welfare of the Catholic immigrants from Belgium and Holland assisted in its progress.

Emmanuel (Sept., Εµµανουήλ; Heb. שְׁמַעְיָא, A V. "Emmanuel") signifies 6 God with us (Matt., i, 23), and is the name of the child predicted in Is., vii, 14: "Behold a virgin shall conceive, and bear a son, and his name shall be called Emmanuel". The various views advanced as to the identity of the child cannot be fully explained and discussed here; the following observations must suffice: (1) The child is not a merely ideal or metaphorical person; he cannot be identified with the regenerate people of Israel (Hoffmann), nor with religious faith (Porter), for "he shall eat butter and honey". (2) The Prophet does not refer to a child in general, but points to an individual (cf. Roorda, Kuenen, W. R. Smith, Smed, Dubin, Cheyne, Marti); both text and context require this. (3) The child is not a son of the Prophet Isaiah (cf. Hitzig, Reuss); Is. viii, 1-4, shows that the Prophet's son has a name different from that of Emmanuel. (4) The child is not a son of Achaz (cf. Lagarde, McCurdy); for Ezechias did not possess the most essential characteristics of Emmanuel as described by Isaiah. (5) The Emmanuel is the Messiah foretold in the other prophecies of Isaiah. In Is., vii, 8, Palestine is called the land of Emmanuel, though in other passages it is termed the land or the inheritance of Yahweh (Is., xiv, 2, 25; xv, 10, 14, etc.), so that Emmanuel and Yahweh are identified. Again, in the Hebrew text of Is., viii, 9, 10, the Prophet predicts the futurity of all the enemies' schemes against Palestine, because of Emmanuel. In ix, 6, 7, the characteristics of the child Emmanuel are so clearly described that we can doubt no longer of his Messianic mission. The eleventh chapter pictures the Messianic blessings which the child Emmanuel will bring upon the earth. Moreover, St. Matthew (i, 23) expressly identifies the Emmanuel with Jesus the Messiah, and Christian tradition has constantly taught the same doctrine. The question why the Messiah was called Emmanuel, or "God with us", admits of a double answer: the name is a pledge of Divine help, and also a description of the nature of the Messiah. King Achaz had not believed the Prophet's first promise of deliverance from...
his enemies, Rasin, King of Syria, and Phæce, King of Israel (Is., vii, 1–9). And when the Prophet tried a second time to restore his confidence, Achaz refused to ask for the sign which God was ready to grant in confirmation of the prophetic promise (vii, 10–12). The Prophet, therefore, forces, in a way, King Achaz to confess to God, showing that the Messias, the hope of Israel and the glory of the house of David, implies by his very name “Emmanuel”, or “God with us”, the Divine presence among his people. A number of the Fathers, e.g. St. Irenæus, Laetantius, St. Epiphanius, St. Chrysostom, and Theodoret, regard the name “Emmanuel”, not merely as a pledge of Divine assistance, but also as an expression of the mystery of the Incarnation by virtue of which the Messias will be “God with us” in very deed.

A. J. MAA.

Emmaus, a titular see in Palestina Prima, suffragan of Cesarea. It is mentioned for the first time in 166–165 B.C., when Judas Machabeus defeated there the army of Gorgias (I Mach., iii, 40, iv, 35). A little later, the Syrian general Baechides fortified and garrisoned it (Josephus, Ant. Jud., XIII, 1, 3). In A.D. 4, during the rebellion of A throngus against the Romans, the inhabitants left their city, which was nevertheless destroyed by Varus (Josephus, “Ant. Jud.”, XVII, x, 7–9; Iren., “Bel. Jud.”, II, iv, 3). It soon rose again, for Josephus (Bel. Jud., III, iii, 5) and Pliny (Hist. nat., xiv, 3) rank it amongst the “toparchies” of the country. Vespasian took it at the beginning of his campaign against the Jews, stationed a legion in the neighbourhood, and named it Nicopolis (Sosom., Hist. eccl., V, xxii). According to Eusebius and St. Jerome, this name was given to it only in 223, by Julius Africanus, its governor and most illustrious son, and this is the name commonly used by Christian writers. Here a spring in which Christ is said to have washed His feet, and which was reputed to cure all diseases, was closed up by order of Julian the Apostate (Sosom., Hist. eccl., V, xxii). Four Greek bishops are known, from the fourth to the sixth century (Lequien, Or. christ., III, 593). At the beginning of the Arab conquest the plague broke out in the city, and the inhabitants fled; they must have soon returned, however, for Emmaus remained a very important town. It was the last station of the Crusaders on their way to Jerusalem in June, 1099. Eubel (Hierarch. cath., II, 223) has a list of eleven Latin titular bishops, but only for the fifteenth century. Thus Emmaus (the native name) is a Muslim village about eighteen miles from Jerusalem, on the road to Jaffa. There are still visible ruins of a beautiful basilica built in the fourth or the fifth century, and repaired by the Crusaders. Near ‘Amwas, at El-Atroun, the Trappists founded a priory in 1890.

In the opinion of many ‘Amwas is the Emmaus of the Gospel (Luke, xxiv, 13–35), where Christ manifested Himself to two of His Disciples. Such is, indeed, the tradition of the Church of Jerusalem, attested as early as the fourth century by Eusebius of Cesarea, Titus of Bostra, and St. Jerome, a tradition confirmed by all pilgrims, at least to the time of the first Crusade; it may even date back to the third century, to Julius Africanus and Origen. It is also supported by many Biblical commentaries, some of which are as old as the fourth or the fifth century; in these the Emmaus of the Gospel is said to have stood at 160 stadia from Jerusalem, the modern ‘Am was being at 176 stadia. In spite of its antiquity, this tradition does not seem to be well founded. Most manuscripts and versions place Emmaus at only sixty stadia from Jerusalem, and they are more numerous and generally more ancient than those of the former group. It seems, therefore, very probable that the number 160 is a correction of Origen and his school to make the Gospel text agree with the Palestinian tradition of their time.

Moreover, the distance of 160 stadia would imply about six hours’ walk, which is inadmissible, for the Disciples had only gone out to the country and could return to Jerusalem before the gates were shut (Mark, xvi, 12; Luke, xxiv, 33). Finally, the Emmaus of the Gospel is said to be a village, while ‘Am was the flourishing capital of a “toparchy”. Josephus (Ant. Jud., VII, vi, 6) mentions at sixty stadia from Jerusalem a village called Emmaus, where Vespasian and Titus stationed 800 veterans. This is evidently the Emmaus of the Gospel. But it must have been destroyed at the time of the fall of the city of Bar-Cocbeba (A. D. 132–35) under Hadrian, and its site was unknown as early as the third century. Origen and his friends merely placed the Gospel Emmaus at Nicopolis, the only Emmaus known at their time. The identifications of Koubbeh, Abou Ghosh, Koubelieh, Beit Mizheh, etc., with Emmaus, as proposed by some modern scholars, are inadmissible.

S. VALIÉHÉ.

Emmeram, Saint, Bishop of Poitiers and missionary to Bavaria, d. at Poitiers in the first half of the seventh century; martyred at Ascheim (Bavaria) towards the end of the same century. Of a noble family in Con- taine, he received a good education and was ordained priest. According to some authors Emmeram occupied the See of Poitiers, but this cannot be verified, for his name does not appear among the Bishops of Poitiers. He probably held the see for a short time, from the death of Did (date unknown) to the episcopate
of Ansaldo (671). Having heard that the inhabitants of Bavaria were still idolaters, he determined to carry the light of the Faith to them. Ascending the Loire, crossing the Black Forest, and going down the Danube, he reached Ratisbon in a region then governed by Duke Thaddo. For three years he laboured in Bavaria, preaching and converting the people, acquiring also a renown for holiness. He then turned his steps towards Rome, to visit the tombs of Sts. Peter and Paul, but after a five days' journey, at a place now called Kleinhefendorf, south of Munich, he was arrested by command of the Duke of Bavaria, who tortured him cruelly. He died shortly afterwards at Aschheim, about fifteen miles distant. The cause of this attack and the circumstances attending his death are not known. According to the legend related by Aribo, Bishop of Freising, the first to write a life of St. Emmeram, Otto, daughter of the Duke of Bavaria, who had been seduced by Sigwald, an important personage of her father's court, fearing her father's wrath, confessed her fault to the bishop. Moved with compassion, he advised her to name herself, whom every one respected, as her seducer, and it was in consequence of this accusation that Theodo ordered him to be found and put to death. Of the tale, the details of the saint's martyrdom, which are certainly untrue, and the fantastic account of the prodigies attending his death show that the writer, infected by the pious mania of his time, simply added to the facts imaginary details supposed to redound to the glory of the martyr.

All that is known as to the date of the saint's death is that it took place on 22 September, some time before St. Rupert's arrival in Bavaria (896). At Kleinhefendorf, where he was tortured, there stands to-day a chapel dedicated to St. Emmeram, and at Aschheim, where he died, is also a martyr's chapel built in his honour. His remains were removed to Ratisbon and interred in the church of St. George, from which they were transferred about the middle of the eighth century by Bishop Gawibaldus to a church dedicated to the saint. This church having been destroyed by the Sea in 1442, the saint's body was found under the altar in 1645 and was encased in a magnificent reliquary. The relics, which were canonically recognised by Bishop Ignaz de Senestrey in 1833, are exposed for the veneration of the faithful every year on 22 September. It is impossible to prove that Emmeram occupied the See of Ratisbon, for the official episcopal list begins with the above-mentioned Gawibaldus, who was consecrated by St. Boniface in 739 and died in 764.

LÉON CLUGNET.

Emmeram, ABBEY OF SAINT, a Benedictine monastery at Ratisbon (Regensburg), named after its traditional founder, the patron saint of the city. The exact date of foundation is unknown. St. Emmeram flourished in the middle of the seventh century and 652 is given by most authorities as the approximate date of the establishment of this monastery. It began with a chapel in which certain much venerated relics were preserved, and which, in 697, was enlarged and beautified by Theodo, Duke of Bavaria, who built at the same time a new monastery for Benedictine monks, of which Appollonius was first abbot. It was still further enlarged by Charlemagne about the year 800 and was endowed with extensive possessions and many privileges. When St. Boniface, in 739, divided Bavaria into four dioceses, the first Bishop of Ratisbon fixed his see at the Abbey of St. Emmeram, but later on it was removed by a subsequent bishop to the old Cathedral of St. Stephen, which stands beside the present one. In 830, the then bishop obtained from Louis, King of Bavaria, the administration of the abbey for himself and his successors, and for upwards of a hundred years the Bishops of Ratisbon ruled the monastery as well as the diocese, but in 968 St. Wolfgang restored its independence. For a long time, and from that time forward it enjoyed the rule of its own abbots. For some centuries it was customary to elect as bishop a canon of St. Stephen's and a monk of St. Emmeram's alternately. Many of the early bishops of Ratisbon were buried in the abbey church and their tombs are still to be seen there, as also is that of the Emperor Arnulf (d. 899). The abbots held the rank of prince of the Empire, and as such had a seat in the Imperial Diet. The present church, which is a Romanesque basilica, dates from the thirteenth century, but was restored in a somewhat debased style in the eighteenth. It is one of the few German churches with a detached bell-tower. The cloisters date from the fourteenth and fifteenth centuries, and are in a fair state of preservation. The monastery was suppressed early in the nineteenth century and in 1809 the conventual buildings became the palace of the Prince of Thurn and Taxis, hereditary postmaster-general of the old German Empire, and the Prince (1809) reside there. The cloister garth, in the centre of which is a modern mortuary chapel, is now used as the family burial-place.

Migne, Dict. des Abbayes (Paris, 1850).

G. CYPRIAN ALSTON.
Then followed what she dreaded on account of its publicity, an episcopal commission to inquire into her life and the reality of these wonderful signs. The examination was very strict, as the utmost care was necessary to furnish no pretext for ridicule and insult on the part of the enemies of the Church. In general, the famous Overberg, and three physicians conducted the investigation with scrupulous care and became convinced of the sanctity of the "pious Beguine", as she was called, and the genuineness of her stigmata. At the end of 1818 God granted partially her enemies' prayer to be relieved of the stigmata, and she was cured of her wounds in her hands and feet closed, but the others remained, and on Good Friday were all wont to reopen. In 1819 the government sent a committee of investigation which discharged its commission most brutally. Sick unto death as she was, she was forcibly removed to a large room in another house and kept under the strictest surveillance day and night for three weeks, away from all her friends except her confessor. She was insulted, threatened, and even flattered, but in vain. The commission departed without finding anything suspicious, and remained silent until its president, Schmoller, declared that there was fraud, to which the obvious reply was: in what respect? and why delay in publishing it? About this time Klemens Brentano, the famous poet, was induced to visit her; to his great amazement she recognized him, and he found her, put it out to her as the man who was to enable her to fulfill God's command, namely, to write down for the good of innumerable souls the revelations made to her. He took down briefly in writing the main points, and, as she spoke the Westphalian dialect, he immediately rewrote them in ordinary German. He wrote what he wrote to her, and change efface until she gave her complete approval. Like so many others, he was won by her evident purity, her exceeding humility and patience under sufferings indescribable. With Overberg, Sailer of Ratisbon, Clement Augustus of Cologne, Stollberg, Louis Hassel, etc., he reverenced her as a chosen bride of Christ.

In 1853 appeared the first-fruit of Brentano's toil, "The Dolorous Passion of Our Lord Jesus Christ according to the Meditations of Anne Catherine Emmerich" (Sulzbach). Brentano prepared for publication "The Life of the Blessed Virgin Mary", but this appeared at Munich only in 1852. From the MS. of Brentano Father Schmoeger published in three volumes "The Life of Our Lord" (Ratisbon, 1858–60), and in 1881 a large illustrated edition of the same. They reprinted her life in two volumes (Freiburg, 1867–70, new edition, 1884). Her visions go into details, often slight, which give them a vividness that strongly holds the reader's interest as one graphic scene follows another in rapid succession as if visible to the physical eye. Other mystics are more concerned with ideas, she with events; others stop to meditate aloud and to guide the reader's thoughts, she lets the facts speak for themselves with the simplicity, brevity, and security of a Gospel narrative. Her treatment of that difficult subject, the twofold nature of Christ, is admirable. His humanity stands out clear and distinct, but through it shines always a gleam of the Divine. The rapid and silent spread of her works through Germany, France, Italy, and elsewhere speaks well for their merit. Strange enough they produced no controversy. Dom Guéranger extols her merits in his "Lettres chrétiennes" (Le Monde, 1860).

Sister Emmerich lived during one of the saddest and least glorious periods of the Church's history, when revolution triumphed, impurity flourished, and several of the fairest provinces of its domain were overrun by infidels and cast into such ruinous confusion that the Faith was about to be extinguished. Her mission in part seems to have been by her prayers and sufferings to aid in restoring Church discipline, especially in Westphalia, and at the same time to strengthen at least the little ones of the flock in their belief. Besides all this she saved many souls and recalled to the Christian world that the supernatural is around about to a degree sometimes forgotten. A body has been caused to be opened six weeks after her death. The body was found fresh, without any sign of corruption. In 1892 the process of her beatification was introduced by the Bishop of Münster.

Empiricism (Lat. empiric, the standpoint of a system based on experience.)—Primarily, and in its psychological application, the term signifies the theory that the phenomena of consciousness are simply the product of sensuous experience, i.e., of sensations variously associated and arranged. It is thus distinguished from Nativism or Innatism, which hold, that these sensations are caused by a supernatural agency. In its logical (epistemological) usage, it designates the theory that all human knowledge is derived exclusively from experience, the latter term meaning, either explicitly or implicitly, external sense-percepts and internal representations and inferences exclusive of sensory material, interior sensations. In this connexion it is opposed to Intellectualism, Rationalism, Apriorism. The two usages evidently designate but two inseparable aspects of one and the same theory, the epistemological being the application of the psychological to the problem of knowledge.

Empiricism appears in the history of philosophy in three principal forms: (1) Materialism, (2) Sensism, and (3) Positivism.

(1) Materialism in its crudest shape was taught by the ancient atomists (Democritus, Leucippus, Epicurus, Lucretius), who, reducing the sum of all reality to atoms and motion, taught that experience, whereof they held knowledge to be constituted, is generated by images reflected from material objects through the sensory organs into the soul. The soul, a mere complex of the finest atoms, perceives not the objects but their effluent images; or, 2d, by modern materialists (Helvetius, D'Holbach, Diderot, Feuerbach, Moret, Büchner, Vogt, etc.), knowledge is accounted for either by cerebral secretion or by motion; while Haeckel looks on it as a physiological process effected by certain brain cells. Avenarius, Willy, Mach, etc., substitute for visible images an external cause, as to reduce all experience to internal (empirio-criticism).

(2) Sensism.—All materialists are of course sensists. Though the converse is not the case, nevertheless, by denying any essential difference between sensations and ideas (intellectual states), sensism logically involves materialism. Sensism, which is found with Empedocles and Protagoras amongst the ancients, was given its first systematic form by Locke (d. 1704), though Bacon (d. 1626) and Hobbes (d. 1679) had prepared the data. Locke derived all simple ideas from external experience (sensations), all compound ideas (modes, substances, relations) from internal experience (reflection). Substance and cause are simply associations of subjective phenomena; universal ideas are mere mental figurings. Locke admits the existence, though he denies the demonstrability, in man of an immortal principle, the soul, as Berkeley (d. 1753), accepting the teaching of Locke that ideas are only transfigured sensations, subjectivizes not only the sensible or secondary qualities of matter (sensibili propria, e. g. colour and sound) as his predecessor had done, but also the primary qualities (sensibili communis, extension), which Locke held to be objective. Berkeley denies the objective basis of universal ideas and indeed of the
whole material universe. The reality of things he places in their being perceived (esse rei est percipi), and this “perceivability” is effected in the mind by God, not by the object or subject. He still retains the substance-reality of the human soul and of spirits generally, God included. Hume and Condillac (d. 1780) eliminated entirely the subjective factor (Locke’s “reflection”) and sought to explain all cognitional states by a mere mechanical, passive transformation of external sensations. The French sensist retained the spiritual soul, but his followers disposed of it as Hume had done with the Berkeleyan soul relic. The Herbartians confound the image with the idea, not the idea with the image. Condillac makes a distinction between primitive ideas (empirische Begriffe, representations of individual objects) and the image: “Denken ist Phantasieren in Begriffen und Phantasien ist Denken in Bildern”.

(3) Positivism.—Positivists, following Comte (d. 1857), deny the subjective; they declare the soul unknowable; the one source of cognition, they claim, is sense-experience, experiment, and induction from phenomena. John Stuart Mill (d. 1873), following Hume, reduces all knowledge to series of conscious states linked by empirical associations and enlarged by inductive processes. The mind has no certainty of an external world, but only of “a permanent possibility of sensations” and antecedent and anticipated feelings. Spencer (d. 1903) makes all knowledge relative. The actual existence of things is their persistency in consciousness. Consciousness contains only subjective feelings. The relation supposes the absolute, but the latter is unknowable to us; it is the object of faith and religion (Agnosticism). All things, mind included, have resulted from a continual process of mechanical evolution wherein they are still involved; hence all concepts and principles are in a continuous flux.

The Teaching of Catholic Philosophy is that sense-experience is a source, and indeed the primary source, of human knowledge, but it holds that there are other sources beyond sensations. There is nothing in the intellect that had not its birth in sense; this is one of the generalizations of the Schol. Moreover, though every intellectual concept is accompanied by sensory motion, and especially by some sense representation (phantasma, image) differing essentially from the idea produced in and by the intellect, which is an immortal, supersensuous and superorganic power or faculty. The theory here proposed may be called empirico-intellectualism since it conjoins a sensible factor with the purely intellectual or immaterial agency. The genesis of knowledge is then considered as follows: (a) Ideas represent the natures or essences of things, not the mere sensual qualities, the phenomena of things, but the underlying subject and cause thereof, e. g. substance, life, cause, truth, etc.; while ideas of sensual qualities as such represent them in the ideatum and as universal: e. g. light. (b) The mind possesses ideas of things (substances and accidents), immaterial, invisible, possible, and impossible, etc., e. g. ideas of God, spirit, etc.—ideas which cannot be formed from purely sensuous presentations or images. (c) We make clear-cut distinctions between the essential and accidental or contingent properties and attributes of things. (d) Every predicate idea represents not a congeries of sensual qualities, but what the subject is (its essence), under some particular aspect. Now none of these peculiarities of the idea can be discovered in any sensation or image, which always represents existent, concrete, sensible; Locke’s “reflection” and Condillac’s “process” of association” will not suffice to transmute sensations into ideas, since these two states are essentially, because objectively (representatively), different. Positivists inadvertently slip in an immaterial agency, thereby indeed they confound the question when they appeal to induction to explain the genesis of knowledge; the inductive process involves universal abstract principles and logical laws which are constituted of ideas that essentially transcend sensations. The supersensuous character of ideas follows equally from their “extension” or range of applicability. Ideas are representative of essences, are available as predicates, and are the terms whereof absolutely universal principles are constituted. Hence ideas are universal, whereas sensations and images can represent only objects that affect the sensory organs, i.e. individual, physically existing objects. Moreover, ideas represent objects as abstract—physically abstract, e. g. individual sensible qualities; mathematically abstract, e. g. extension and number; metaphysically abstract, e. g. mind, nature, spirit, etc. And indeed unless ideas were of the abstract there could be no science, physical, mathematical, or philosophical; all these sciences consider their objects apart from individual determinations. No intellectual judgment whatsoever would be possible, since every predicate is a universalized term and hence in some degree abstract. Sensation cannot represent an abstract object; for though the sight, etc., perceives colour apart from sound, nevertheless (a) no sense can abstract from the subject-matter—from the existence and individuality of its proper object; the eye does not see colour as such and abstracted, but the coloured object physically and individually existing; (b) no sense can abstract from its proper object, its appropriate stimulus or object-quality; nor from its common object (quantity, the extended object); (c) a fortiori, no sense can perceive one dimension of extension or a mathematical point, or things non-existent, or abstract forms like man and humanity. How does the common image suffice to explain the universal idea as Locke and the Herbartians suppose, for the common image, though indistinct, remains always in some way concrete and sensible; since the imagination as primarily reproductive can represent only what the senses have reported. Consciousness attests this; for if the imagination represent e. g. a triangle, it is always of some certain size and shape; it cannot represent a triangle which is neither rectangular, obtuse, nor acute; while the idea of a triangle precedes from every size or shape. Besides the image there is therefore the thought, the intellectual concept, the latter differing essentially from the former. Hence the common image is not predicative of the individuals distributively, because it is still somehow concrete, singular, sensible, material, and represents only quality. Nor can it be predicated as confusedly blending all the inferences, because the predicate of a judgment is attributed according to comprehension rather than extension. At best, moreover, the image is like to things; the concept is identical with the subject of which it is predicated. According to the empiricists the common image results from a comparison of representations, so that what is common to them, i.e. some prominent quality, stands out from all the rest; the intellect would thus have to immediately perceive and compare the images, which is impossible; nor could it form a concept unless a number of sense perceptions and representations of a thing or things of the same species had preceded. We know, however, that we
immediately form a concept of a thing, even though perceived but once. Furthermore, in order to form the common image a concept of the object must have preceded; for in order to compare similar things we must previously have perceived their likeness. Now, to perceive their likeness means to perceive some common motive or motive aspect wherein the similar things agree, while differing in other aspects. But this the senses cannot perceive; hence there must precede an intellectual perception of the note of agreement common to the objects represented by the images, i.e. a universal idea must precede the common image. The common image therefore does not precede but follows the common concept, whereof it is a sort of shadow. This is specially so in the case of the productive imagination, which re-arranges in new forms previously compared images and hence supposes reflection and judgment, operations which no sense can perform.

Sensism implies septicism. (a) For if we do not immediately perceive external objects but only our subjective sensuous modifications, then, since these differ with different individuals (e.g. the varying judgments of distance, heat, cold, etc., which varying judgments require intellectual reflection whereof the senses are incapable), there could be no certain and objective truth, each individual would be the measure of truth, there would be no objective criterion of certitude, no universal truths. (b) In order to pass from a subjective affection to a knowledge of its object we must, in the principle of causality, either reject sensism, either the concept of cause is not objective or cause is not perceived at all; therefore the principle of causality is either rejected or is pronounced doubtful. Hence there can be no certitude of the objective existence of things. Hume was but logical when he deduced universal scepticism from the theory of Locke.

Sensism involves the destruction of all science. (a) Science is the knowledge of things in and by their causes; but the senses cannot perceive causes. (b) Positivists claim that by their method the sciences have made wonderful progress, that by employing observation and induction the laws of nature have been discovered. Now, observation of phenomena entails universal ideas whereby the phenomena are classified under groups or species, while induction, to be legitimate and certain, postulates the principle of causality. Therefore the physical sciences suppose physical abstraction; the mathematical, mathematical abstraction, the metaphysical, metaphysical abstraction (primitive, i.e. direct, and reflective; ontological, logical, psychological). The negation of universal, necessary, immutable ideas essentially different from sensations means the destruction of even physical science, a fortiorem of mathematical and philosophical sciences.

Sensism destroys the foundations of morality and religion. For, as sensists and positivists admit, their theories leave no proof of the soul's spirituality and immortality; of the existence of moral law, its obligation and sanction in a future life; of the existence of God and His relation to man. Now, history bears witness that these truths are fundamental for man's real moral life.

**EMS**

**EMS** Congress of a meeting of the representatives of the German Archbishops Friedrich Karl von Erthal of Mainz, Maximilian Franz of Cologne, Clemens Wenceslaus of Trier, and Hieronymus von Colloredo of Salzburg, at the little town of Bad-Ems, near Cologne, in August, 1786, for the purpose of protesting against papal interference in the exercise of episcopal powers and fixing the future relations between these archbishops and the Roman pontiff.

The Gallican principles concerning the relation between the bishops and the pope, which had been disavowed by the Council of Lyons, had been violated by the Archbishop of Trier (1748-1790), in his treatise "De statu ecclesiæ et legitimâ potestate Rom. Pontificiæ" (1783) under the pseudonym "Febronius", were shared by some of the most influential archbishops of Germany. The archbishops became convinced in the position which they took toward the pope by the encouragement and support of Emperor Joseph II, who arrogated to himself both temporal and spiritual jurisdiction. As early as 1769 the representatives of the Elector-Archbishops of Mainz, Cologne, and Trier, at a meeting held in Coblenz, had drawn up a list of thirty-one articles, most of which were directed against the Roman Curia. The proximate occasion of the Congress of Ems was the erection of an Apostolic nunciature in Munich (27 Feb., 1785) and the appointment of Zoglio, titular Archbishop of Athens, as nuncio (27 June), with jurisdiction over the entire territory of the Elector Karl Theodor (wherein the core of Bavaria, with the Rhine Palatinate and the former Duchies of Julich and Berg. Pius VI erected this nunciature upon the urgent request of the Elector of Bavaria, who was loath to have parts of his territory under the spiritual jurisdiction of bishops who, being electors like himself, were rather his subordinates than his superiors. He had previously suggested to the Elector-Archbishops of Mainz, Cologne, and Trier to appoint special vicars-general for their districts in his territory. Upon their refusal he requested Pius VI to erect separate dioceses for his territory, but in deference to the wishes of the three elector-archbishops, the pope also refused. Finally the Elector of Bavaria asked for the above-mentioned nunciature, and despite the protests of the archbishops his wish was granted.

Meanwhile Beilisomi, the nuncio at Cologne, was transferred to Lisbon, and Pacca, the then Archbishop of Damietta, was appointed to succeed him at Cologne. Maximilian Franz, Archbishop of Cologne (a brother of Emperor Joseph II), refused to see him, and none of the three elector-archbishops honoured his credentials. Despite protests, both Pacca and Beilisomi began to exert their influence by putting forward the support which Emperor Joseph II had promised, the three elector-archbishops and the Archbishop of Salzburg planned concerted action against Rome and set their representatives to Ems to hold a congress. Von Erthal of Mainz, who was the soul of the proceedings, was represented by his auxiliary bishop, Valentine Heimes; Maximilian Franz of Cologne, by his privy councillor Heinrich von Tauphuius; Clemens Wenceslaus of Trier, by his privy councillor and official representative in temporal matters, Joseph Ludwig Beck; Colloredo of Salzburg, by his consistorial councillor, Johann Michael Boncke. On 25 August, 1786, these archiepiscopal representatives signed the notorious "Punctuation of Ems", consisting of twenty-three articles which aimed at making the German archbishops practically independent of Rome. For the text of the articles see Munich, "Sammlung aller älteren und neuerer Concordiae" (Leipag, 1881), I, 404-423.

Assuming that Christ gave unlimited power of binding and loosing to the Apostles and their successors, the bishops, the "Punctuation" maintains that all legislatives and reservation of ternary powers connected with the primacy during the first three centuries owe their origin to the Pseudo-Isidore decreets, universally acknowledged as false, and, hence, that the bishops must look upon all interference of the Roman Curia with the exercise of their episcopal functions in their own dioceses as encroachments on their rights. Upon these schismatic principles the four archbishops...
based their demands, which may be summarized as follows: all direct appeals to Rome must be discontinued; all exempt monasteries must become subject to the bishops in whose districts the monasteries are situated; no German monasteries must have generals, provinces, or other superiors, who do not reside in Germany; the bishops need not obtain quinquennial faculties from Rome, because by virtue of their office they can dispense from abstinence, from matrimonial impediments, including the second degree of consanguinity and the second and first degrees of affinity, from voided religious vows and the obligations resulting from Holy Orders; priests of all orders and officials of the Roman Curia are binding in each diocese only after the respective bishop has given his place; all Apostolic nunciatures must be abolished; the manner of conferring benefices and the procedure in ecclesiastical lawsuits must be changed in favour of the bishops; the episcopal oath must be changed so that it shall not appear to be the oath of a vassal, etc.

It may easily be seen that the articles of the "Punctation" lower the papal primacy to a merely honorary one and advocate an independence of the archbishops in regard to the pope which is entirely incompatible with the dignity and authority of the Church of Christ. Still the "Punctation" was immediately ratified by the four archbishops and sent to Emperor Joseph II with an humble request for his support. The emperor was pleased with the articles and would have pledged his unqualified support if his councillors, especially his chancellor, Kranitz, had not dissuaded him otherwise. In his reply of 16 Nov., 1786, the emperor wisely makes his support dependent on the condition that the archbishops gain the consent of their suffragan bishops, the superiors of the exempt monasteries, and the estates in whose districts their spiritual jurisdiction extends. The suffragan bishops, especially the pious and learned prince-bishops August von Styrum of Speier and Franz Ludwig von Erthal of Würzburg-Bamberg (a brother of the Archbishop of Mainz), protested against the schismatic tendency of the "Punctation" and saw in the anti-papal procedure of the archbishops merely an attempt to increase their own power to the detriment of their suffragans. The Elector of Bavaria likewise remained a zealous defender of the pope and his nuncio at Munich, and even the Protestant King Frederick II of Prussia was an opponent of the "Punctation" and favoured the uncease Pacea at Cologne.

Still the archbishops insisted on their demands. When the nuncio at Cologne by authority of the pope granted a monarchical dispensation from the second degree of consanguinity to Prince von Hohenlohe-Bartenstein and Countess Blankenheim, Archbishop Maximilian Franz of Cologne addressed to him a strong protest forbidding him for the future the exercise of all jurisdiction in the Archdiocese of Cologne. The archbishops themselves now began to grant dispensations from such degrees of relationship as were not contained in the ordinary dispensations of faculties, just as if the "Punctation of Ems" were in full force. When the nuncio at Cologne, by order of the pope, informed the pastors that all marriages contracted by virtue of such dispensations were invalid, the archbishops ordered their pastors to return the circular to the nuncio and to obtain all future dispensations directly from their ordinary, the archbishop. The Church in Germany was now near to a schism. Fortunately, von Erthal of Mainz needed the services of Rome. He desired Karl Theodor von Dalberg as coadjutor, and, to obtain the consent of Rome, he with due prudence, apparently, found the "Punctation" and obtained a renewal of his quinquennial faculties from Rome on 9 Aug., 1787. Similarly the Archbishop of Trier asked for quinquennial faculties as Bishop of Augsburg, but not as Archbishop of Trier. Von Erthal's submission to Rome was only a pretended one. He continued his opposition and on 2 June, 1788, requested Emperor Joseph II, in the name of himself and the three other archbishops, to bring the affair concerning the German nuncios before a diet. But soon the archbishops discovered that all the estates were opposed to the "Punctation" and that a diet would rather retard than accelerate the execution of their wishes. For this reason they addressed a letter to Rome (1 Dec., 1788) asking the pope to put an end to the unifying ecclesiastical dissensions in Germany by withdrawing the faculties from the nuncios and by sending representatives to the German estates with authority to come to favorable agreements with the other demands of the archbishops. In answer to this request appeared the publication of a memorable document composed by order of the pope and entitled: "Sanctissimi Domini nostri Pii Papae VI respon- sio ad Metropolitanos Moguntinum, Trevirensen, Coloniasen et Salisburgensem super Nunciaturis Apostolicis" (Rome, 1789). It was a masterpiece in form and contents of Apostolic firmness and paternal reproof. After presenting a dispassionate and objective view of the whole litigation, the document refutes all the arguments of the archbishops against papal authority, and enjoining the archbishops to rebel against papal authority, explains that the pope cannot send representatives to worldly estates who have no right to pass judgment on ecclesiastical affairs, and admonishes the archbishops to give up their untenable position towards the Holy See for political reasons.

The papal writing was not without effect. Archbishop Wenceslaus of Trier, who had long desired an amicable settlement of the odious affair, into which, it appears, he was drawn against his will, publicly withdrew from the "Punctation" on 29 Feb., 1790, and admonished his colleagues to follow the same example. They, however, continued their opposition and on occasion of the imperial capitulation of Leopold II (1790) and that of Francis II (1792) obtained the promise that their complaints concerning the nunciatures would be attended to as soon as possible by a decree of the diet. The threatening progress of the French Revolution finally changed the attitude of the Archbishops of Cologne and Salzburg, but the Archbishop of Mainz clung to the "Punctation" until the victorious French army invaded his electorate, and he was deprived of all his authority as "Punctation" and was expelled from the Rhine, at the peace of Campo Formio, in 1797.

**Emser, Hieronymus**, the most ardent literary opponent of Luther, b. of a prominent family at Ulm, 20 March, 1477; d. 8 Nov., 1527 at Strasbourg. At the University of Tübingen, whither he went in 1493, he acquired a thorough knowledge of Greek and Latin, but in 1497 he began the study of law and theology at the University of Basle. Through the good offices of his friend Christoph, later Bishop of Utenheim, he barely escaped imprisonment at Basle for his participation in the satirical verses of his countryman, Bebel, in a volume which was circulated among the students. The legate, Cardinal Raymond Peraudi of Gork, who seems to have been the judge in this trial, shortly after engaged him as secretary. In 1500 he published a medi- tation on the censure of Erasmus and was generally supposed to have fallen from heaven. Four years later he began a series of brilliant lectures at Erfurt on Reuchlin's "Sergius vel Caput Capitis" and numbered Martin Luther among his hearers. On account of his triumphs at Erfurt he always claimed the
distinction of having been one of the pioneers of classical humanism in Germany. Despite his renown and brilliant manner of teaching, Emser's lectures at Leipzig on the classics, in 1505, aroused little admiration. Disgusted at his failure he turned to the study of theology at the degree of bachelor, whereupon he befriended him in a financial way during these and subsequent years. Dissatisfied with the methods of teaching theology then prevalent, Emser applied himself earnestly to canon law, and on the completion of his studies served George of Saxony as secretary. At the request of the latter he composed a Latin ode in honour of St. Benno of Meissen, who had just been canonized. This canonization was largely due to the efforts of Emser at Rome, whether he went in 1510 at the express wish of George of Saxony, who saw in this solemn act a source of glory for his realm. The life of the new saint, which Emser wrote in faultless Latin on his return in 1512, is worthless from a critical point of view.

About this time Emser received Holy orders and two prebends at Dresden and Meissen. While preaching by command of George of Dresden, he became better acquainted with Luther. Emser admired the fiery Augustinian; Luther, the accomplished literature.

But in 1519 they parted. At the disputation in Leipzig, Luther, to the express dissatisfaction of George of Saxony, who was present with Emser, gave utterance to Hussele opinions of a radical sort regarding the pope. Emser was deeply pained at this; and on learning that the Bohemians, who had been in some form or other admired by Luther, had called a second Hüs in Luther, he declared in a letter to John Zack that Luther had reprimanded the Bohemians for their attitude towards the pope, and had upheld the papal supremacy as a necessary means to prevent division. Emser added a very lucid explanation based on these considerations, as the origin, and in a subjoined poem dealt a severe blow to the calumnies against the pope. Luther soon learned the contents of this letter and, regarding it as an attempt to discredit him among the Bohemians, replied in his "Ad agogoratorem Emserianum M. Lutheri additum", where abuse of all kind was heaped upon the Church. Emser answered with an equally violent though not scurrilous work: "A venatoine lutheriană agogoratio Asser- tio", in which he portrayed the certain scandal arising from the words and conduct of a refractory monk. He did not limit his scriptures in a way or another to the arbitrary interpretation of Luther. The letter closes with a history of his life, which was intended to offset the aspersions cast on his probity by his opponent. Luther replied by burning at Wittenberg this letter and other writings of Emser, together with the Bull "Quotannis: communication and the "Corpus juris canon- nici" (10 Dec., 1520). This insult did not provoke Emser. But as Luther displayed an incredible literary activity in 1520, Emser wrote eight polemical works in 1520 and 1521 which abound in personalities and invective, yet defend the Faith in a masterly way and clearly point out the logical results of the new teaching. In 1522 he translated the address which the Englishman, John Clark, delivered on handing over to Pope Leo X the book written by Henry VIII against Luther. (O'Donovan, The Defence of the Seven Sacraments by Henry VIII, New York, 1908, pp. 110-17.) Among other works may be mentioned the German translation of the New Testament with a laudatory preface by George of Saxony. Emser showed in this work the liberties taken by Luther with the Scriptures and refuted his errors.

WEBER, "Nachricht von H. Emser's Leben und Schriften" (Wiesbaden, 1866). SCHRAB F. Gesch. des deutschen Volkes (1889). III. 469 sqq.; SCHRAB IN Kirchenle., IV. 479. — The following are noteworthy: the anonymous Emser, Halle, 1600; the anonymous Emser, Halle, 1600; and the anonymous Emser, Halle, 1600. Of Maren, H. Emser der Vorkämpfer Roma gegen die Reformation (Halle, 1890). KEFFERER, "Der Luststand in den Bibelüber- setzungen der Reformationszeit" (Halle, 1886). EMSEN'S polemical writings of 1521 against Luther were edited in two small volumes by Ewends (Halle, 1890-92).

THOS. M. SCHWERTNER.
ENCISO

Martín Fernández de, navigator and geographer, b. at Seville, Spain, c. 1470; d. probably about 1528 at Seville. It is not known when, why, or with whom he went to America, but in 1508 he was living on the island of Santo Domingo, where he had accumulated a fortune in the practice of law. In 1509 Alonzo de Ojeda (or Hojeda) had been granted the government of Terra Firme (the region about the Isthmus of Darien), but he lacked the funds necessary to colonize the country. He then applied to Enciso, who had the reputation of being rich and able, and adven-turous. The latter agreed to provide a vessel with men and provisions. Ojeda set out in advance in 1509, and it was agreed that Enciso was to equip his vessel and follow him in 1510. When the latter arrived, he found that Ojeda, having been beset by the Indians, and having exhausted his supplies and ammunition, had returned without him. Taking the survivors of Ojeda’s expedition, Enciso founded the town of Santa María la Antigua del Darién (1510). Among his followers was one Vasco Núñez de Balboa who afterwards became famous for his discovery of the Pacific Ocean, then called the South Sea (Márquez) and who had joined the expedition without Enciso’s knowledge or authority, seeking to escape his creditors.

Soon after the founding of the new city, Balboa stirred up rebellion among the men, and was able to depose Enciso, whom he banished to Spain. Here, the latter complained of the arbitrariness of the Emperor Charles V, and, having partly owed to these accusations, sent Pedrarias Dávila to America in 1514 as Governor of Darién, with instructions to have the wrongs of Enciso righted. Enciso accompanied the expedition as “alguen mayor” and continued to oppose Balboa until the latter’s execution by Dávila, 1517. He then afterwards returned to Spain where he published his “Suma de Geografía que trata de todas las partidas del mundo”, the first account in Spanish of the discoveries in the New World. The work was published in 1519 at Seville and was reprinted in 1530 and in 1549. It is dedicated to the Emperor Charles V, and in it, according to Navarrete, Enciso has embodied all that was then known of the theory and practice of navigation. The geographical portion is given with great care, and contains the first descriptions of the lands discovered in the western seas, that is, the results of the explorations of the Spaniards up to 1519. It is, on the whole, a more accurate work than the other early works of its kind.

ENCRIPTIONS

Enclosure. See Cloister.

Encolpion (Gr. ἐκλόπων, that which is worn on the breast), the name given in early Christian times to a species of reliquary worn around the neck, in which were enclosed such relics as fragments of cloth stained with the blood of a martyr, small pieces of parchment with texts from the Holy Scriptures, particles of the True Cross, etc. The custom of bearing on the person objects of this character was evidently derived from the pagan practice of wearing bullae, containing amulets, round the neck as a protection against enchantment; the Church endeavoured to purify this usage from superstition by substituting objects venerated by Christians for those to which they had been accustomed before conversion. According to St. Jerome, however (in Matt. vii. 26), in his day attached a superstitious importance to these aids to piety; he censures certain classes of women who seem to have, in some degree, identified sanctity with an exaggerated veneration for sacred relics: “Hoc quod apud nos superstitione muliebrius in parvis evangelios et in cruces ligno et linum modi rebus, quae habent quidem zelum Dei, sed non secundum scientiam, factant” (That which superstitious women amongst us, who have a certain zeal for God but not of right knowledge, do in regard to little copies of the Gospels, the wood of the cross, and things of that kind). Enkolpios were of various forms, oval, round, four-cornered, and of various materials ranging from gold to glass. In 1571 two gold enkolpios, square in form, were found in tombs of the ancient Vatican cemetery, engraved on one side with the monogram of Christ between the Alpha and Omega, and on the other a cross and a bird. Another is mentioned in the tomb of Maria, wife of the Emperor Honorius, bearing the names of the imperial couple with the legend vivat is and the monogram. The famous treasure of Monza contains the theca persica, enclosing a text from the Gospel of St. John, sent by Pope St. Gregory the Great (590-604) to Queen Theodolinda of the Ostrogoths. Another of the gifts of this pope to the Lombard queen was a cruciform enkolpios containing a portion of the True Cross. Probably the most interesting relicary of this form is a gold pectoral cross discovered at Rome in 1863, in the basilica of St. Lorenzo fuori le mura, on the breast of a corpse. On one side it bears the inscription: EMMANOU ThH NOBISCUM Deus (Emmanuel, God with us), and on the other: CRUX EST VITA MHI, MORS INIMICE TII (To me the Cross is life; to thee, O enemy, it is death). To the category of enkolpios belong also the vials or vessels of clay in which were preserved such esteemed relics as oil from the lamps that burned before the Holy Sepulchre and the golden keys with filigree from St. Peter’s chains, one of which was sent by St. Gregory the Great to the Frankish King Childericht.

MAURICE M. HASSETT.

Encratiæ (ἔκρατεῖς) (Irenæus) ἔκκρατεῖς (Clement Alex., Hippolytus), literally, “abstainers” or “persons who practised continency”, because they refrained from the use of wine, animal food, and marriage. The name was given to an early Christian sect, or rather to a tendency common to several sects, chiefly Gnostic, whose asceticism was based on heretical views regarding the origin of matter.

HISTORY. Abstinence from the use of some creatures, because they were thought to be intrinsically evil, is much older than Christianity. Pythagorism, Esseniism, Indian asceticism betrayed this erroneous tendency, and the Indian ascetics are actually quoted by Clement of Alexandria in one of the sections of the Encratites (Strom., i. xxv). Although St. Paul refers to people, even in his days, “forbidding to marry and abstaining from meats” (1 Tim., iv, 1-5), the first mention of a Christian sect of this name occurs in Irenæus (I, xxviii). He connects their origin with Saturninus and Marcion. Rejecting marriage they implicitly accuse the Christian sect of both male and female. Refraining from all ἐσώρια (animal food and intoxicants), they are ungrateful to Him Who created all things. “And now”, continues Irenæus, “they reject the salvation of the first man [Adam]; an opinion recently introduced among them...
by Tatian, a disciple of Justin. As long as he was with Justin he gave no sign of these things, but after his martyrdom Tatian separated himself from the Church. Elated and puffed up by his professorship, he established some teaching of his own. He fabled about some invisible world of the Valentinians (Philos., V, 100), and professed marriage to be corruption and fornication, as Marcion and Saturninus do, but he made the denial of Adam's salvation a specialty of his own. The Encratites are next mentioned by Clement Alex. (Paed., II, ii, 33; Strom., I, xv; VII, xxi). The whole of the third book of the Stromata is devoted to their fanaticism, though a special sect of Encratites is not there mentioned. Hippolytus (Philos., VIII, xiii) refers to them as "acknowledging what concerns God and Christ in like manner with the Church; in respect, however, of their mode of life, passing their days inflamed with pride", "abstaining from animal food, being water-drinkers and forbidding to marry", "estimated Cynics rather than Christians". On the strength of this passage it is supposed that some Encratites were perfectly orthodox in doctrine, and erred only in practice, but the later books of the Adversus Haereses do not include the whole of Christian doctrine. Somewhat later this sect received new life and strength by the accession of a certain Severus (Eusebius, Hist. Eccl., IV, xxii), after whom Encratites were often called Severians. These Severian Encratites accepted the Law, the Prophets, and the ; but rejected the book of the Apocalypse, the Epistle to St. Paul and his Epistles. But the account given by Epiphanius of the Severians rather betrays Syriac Gnosticism than Judaistic tendencies. In their hatred of marriage they declared woman the work of Satan, and in their hatred of intoxicants they called wine and drugs the venom from the devil (Philos., iv, xlv). Epiphanius states that in his day Encratites were very numerous throughout Asia Minor, in Pisidia, in the Adustain district of Phrygia, in Isauria, Pamphylia, Cilicia, and Galatia. In the Roman Province and in Antioch of Syria they were found scattered here and there. They shut up into a number of smaller sects, of whom the Apostolic (q.v.) were remarkable for their condemnation of private property, the Hydroprastate for their use of water instead of wine in the Eucharist. In the Edict of 382, Theodosius pressed for the execution of death cases those who took the name of Encratites, Saccophori, or Hydroprastate, and commanded Florus, the Magister Officiorum, to make strict search for these heretics, who were Manichaeans in disguise. Sozomen (Hist. Eccl., X, i) tells of an Encratite of Ancyra in Galatia, called Bussiris, who was severely punished. In the Acts of Persecution, and who under Theodosius abjured his heresy and returned to the Catholic Church. On the other hand, we learn from Macarius Magnus (about 403—Apoec., III, xiii) of a certain Dositheus, a Cilician, who about the same time wrote a work in eight books in defence of Encratite errors. About the middle of the fifth century they disappear from history, absorbed, probably, by the Manicheans, with whom they had so much in common from the first.

II. Writings.—The Encratites developed a considerable literary activity. P. Theodoret (Hist. Eccl., III, xi, xii) mentions five works of Dositheus; one of them is now lost. P. Dositheus probably was Tatian in his book "Concerning Perfection according to the Saviour", which Clement of Alexandria quotes and refutes in Strom., III, xi. Almost contemporary with him (about A.D. 150) was Julius Cassianus, known as the founder of Docetism (s仪表性). He wrote a treatise on "Concerning Abstinence and Contency", of which Clement and St. Jerome have preserved some passages (Strom., I, xii; Euseb., Praep. Ev., X, xii; Strom., III, xiii; Jerome, ad Gal., VI, viii). Concerning the eight books of Dositheus we know only that he maintained that, as the world had its beginning by sexual intercourse, so by continency (enerateia) it would have its end; and that he inveighed against wine-drinkers and flesh-eaters. Among the apocryphal works which originated in Encratite circles must be mentioned: The Gospel according to the Egyptians, referred to by Clement (Strom., III, ix, 13), Origen (Hom. in 1 Luc.), Hippolytus (Philos., V, 100), which between Jesus and Salome specially appealed to the Encratites in condemnation of marriage (to This Gospel the recently discovered "Logia" probably belong); the Gospel of Philip, of Thomas, the Acts of Peter, of Andrew, of Thomas, and other Apocrypha, furnishing Gnostic-Encratite views.

Eusebius (Hist. Eccl., IV, 12, 28) says that *Muranus* (A.D. 170 or 210) wrote a most elegant book addressed to some brethren who had fallen into the heresy of the Encratites. Theodoret (Hær. Fab., I, xxi) says that Apollinarius of Hierapolis in Phrygia (about 171) wrote against the Severian Encratites.

Encyclical (Lat. Litterae Encyclicae).—According to its etymology, an encyclical (from the Greek έγκλεις, meaning a circle) is nothing more than a circular letter. In modern times, usage has confined the term to those papal documents which do not differ in their technical form from the ordinary style of either Bulls or Briefs, and which in their superscription are explicitly addressed to the patriarchs, primates, archbishops, and bishops of the Universal Church in communion with the Apostolic See. By exception, certain letters, addressed to the archbishops and bishops of a particular country. This name is given to the letter of Pius X (6 Jan., 1907) to the bishops of France, in spite of the fact that it was published, not in Latin, but in French; while, on the other hand, the letter "Longinquae Oceani" (5 Jan., 1896) addressed by Pius IX to the archbishops and bishops of the United States, is not styled an encyclical, although in all other respects it exactly observes the forms of one. From this and a number of similar facts we may probably infer that the precise designation used by the church is not based on the nature of the case encyclicals addressed to the bishops of the world are generally concerned with matters which affect the welfare of the Church at large. They condemn some prevalent form of error, point out dangers which threaten faith or morals, exhort the faithful to constancy, or prescribe remedies for evils foreseen or already existing. In form an encyclical at the present day begins thus:—we may take the encyclical "Pascendi" on Modernism as a specimen:—

"Sanctissimae Domini Nostri Papae Pii Divinæ Providentiae Pape X Litteræ Encyclæid ad Patriarchas, Præmatres, Archiepiscopos, Episcopos aliisque locorum Ordinariorum pæcem et communionem cum Apostolica Sede habitantes de Modernistarum Doctrinis. Ad Patriarchas, Præmatres, Archiepiscopos, Episcopos aliisque locorum Ordinariorum, pæcem et communione cum Apostolica Sede habentes, Primas et patriarchas populisque..."

The conclusion takes the following form:—"Nos vero, pignus caritatis Nostre divinæ in adversis solutæ, Apostolice Benedictionem vobis, cleris, ac populisque vestris semper reddimus et redderimus,... Datum in Rome, aput Sanetum Petrum, die VIII Septembris MCMVII, Pontificatus Nostri anno quinto. Pius PP. X."
encyclopedia, an abridgment of human knowledge in general or a considerable department thereof, treated from a uniform point of view or in a systematized summary. Although the word, used technically, dates only from the sixteenth century, encyclopedia (ordo et libri) as a treatise on the sciences, and, beginning with the Middle Ages, artes liberales (see arts, the seven liberal). According to their form, systematic encyclopedias are divided into two classes: (a) those which present all branches of knowledge, arranged uniformly and organically according to some fixed system of connection, and (b) the lexicographical encyclopedias, which treat of the same matter arranged according to an alphabetical system. Such, in the tenth century, compiled an encyclopedia of the latter type, which became common only in the seventeenth century after the appearance of encyclopedic dictionaries dealing with particular sciences. Aristotle was the first in ancient times to attempt a summary of human knowledge in encyclopedic form. Compared with Aristotle's work, which is built up on a philosophic basis, the compilations along this line by Marcus Porcius Cato (294-149 B. C.), Marcus Terentius Varro (116-27 B.C.), in his "Disciplinarum libri IX," Piny (A. D. 23-79), in his "Historia naturalis," and Martianus Capella (fifth century), in his "Satyricon," or "De Nuptiis Philosophiae et Mercurii," used during the Middle Ages as a textbook for the liberal arts, to perished. The lack of a philosophic basis and the mechanical stringing together of facts without an organic principle give to most of these works an unsatisfactory and tentative character.

The first attempt to compile an encyclopedia in the real sense of the word is evident in the "Etymologica sive origines" of Isidore of Seville (c. 560-636), re-arranged and more or less independently supplemented by Rabanus Maurus (756-856) in his "De Universo," by Honorius Augustodunensis in his "Imago Mundi," and by others. The most astonishing of these compilations, from the viewpoint of wealth of material and complexity of detail, is the work of Vincent of Beauvais (died c. 1264), which groups the entire knowledge of the Middle Ages under three heads: "Speculum naturale," "Speculum doctrinale," and "Speculum historiale." The following are examples of encyclopedic works in the later Middle Ages: "Liber de natura rerum" of Conrad of Meigenberg (d. 1374); the "Imago Mundi" of Pierre d'Alluy (died c. 1420); the "Margarita philosophica" of Gregor Reisch, O. Cart. (Freiburg, 1503); and at a later date the encyclopedias of Ringelberg, "Luechraniones vel potius absolutissima synes" (Basle, 1541). Paul Scalich, "Encyclopedia seu Orbis Disciplinarum tum sacrarum tum profanarum" (Basle, 1559); Martini, "Ideas methodicus et brevis encyclopediae sive adumbriat universitas" (Herborn, 1600); Alsted's "Scientiarum omnium encyclopediae tomis XIII," 1620; 24th ed. 1702. All the above-mentioned works are simply collections of facts showing no mastery of the material by the writer, much less any critical research or an organic system of compilation.

The first to attempt a work founded on the philo-
phy and interrelation of sciences was Francis Bacon, Lord Verulam, in his incomplete "Instauratio Magna", the second part of which was the "Novum organum" (London, 1620), and his "De dignitate et augmentis scientiarum" (1623). His immediate successors, however, were not satisfied merely with such beginnings. In the middle of the eighteenth century, the transition from the old-fashioned compilation of dry facts suited only for general instruction or as works of reference for scholars, e.g., the "Fama librorum juvenilium" of Wagenseil (Altdorf, 1695), Chevigny's "La science de l'homme de cœur d'épée et de robe" (18 vols., Amsterdam, 1752), and David Morhoö's "Polybius" (Altdorf, 1717 and 1747). A clearer idea of the proper organic construction of an encyclopedia work is first apparent in J. M. Gesner's "Prima lineae isagoges in eruditionem universalum" (3rd ed., Gottingen, 1786), and J. G. Sulzer's "Kurzer Begriff aller Wissenschaften" (Leipzig, 1745; Eisenach, 1778). The way had been prepared, however, by two earlier works, which mark an important advance in the conception of what is proper to an encyclopedia. Both works, but especially the second, exerted a far-reaching influence on the whole intellectual life of the time. These were: Daniel Boullon's "Encyclopedie historique et critique" (Leipzig, 1796), and "Encyclopédie ou dictionnaire raisonné des sciences, des arts et des métiers", compiled by Diderot and d'Alembert (28 vols., Paris, 1751–72, with 7 supplementary vols., 1760–80). While in these works the matter is arranged on an alphabetical system, the author of Sulzer's essays essayed a systematic presentation of sciences on the old plan, e.g., Adelung, "Kurzer Begriff menschlicher Fertigkeiten und Künste" (Leipzig, 1778; Reimarus, "Encyklopädie" (Hamburg, 1775); Büsch, "Encyk. der mathematischen Wissenschaften" (Hamburg, 1782); Reuss, "Encyklopädie" (Berlin, 1791); Buder, "Encyklopädie" (Lemgo, 1790). A successful attempt in this direction, based on Kantian principles, was made by J. J. Eschenburg in his "Lerhrbuch der Wissenschatzkunde" (Berlin, 1792; 3rd ed., 1808).

In competition with this, Krug's introduction of a new method in "Versuch einer systematischen Encyklopädie der Wissenschaften" (Leipzig, 1796–97; Züllichau, 1804–19) was unsuccessful. Not to mention Habel, Rüf, and Strauss, the following imitators of Eschenburg gained no little reputation: Heffter, "Die philosophische Daseinslehre oder System der Wissenschaften" (Leipzig, 1806); Burdach, "Organismus der menschlichen Wissenschaften und Kunst" (Leipzig, 1809); Krauss, "Encyklopädische Ansichten" (Königsberg, 1809); and the followers of Kant, E. Schmidt, "Allgemeine Encyklopädie und Methodologie der Wissenschaften" (Jena, 1810), and K. A. Schaller, "Encyk. und Methodologie" (Mudgbeburg, 1812). The increase in knowledge and the demands for specialization which are noticeable from the beginning of the nineteenth century, destroyed even the possibility of presenting completely all the departments of human knowledge or even a single branch of any great extent. The last attempts made in this direction (and they deserve some attention) were Kirchner's "Akademische Propädeutik" (Leipzig, 1842) and "Hodegetik" (1852), also Schleiermacher's "Bibliographisches System der gesamten Wissenschaften" (Dresden, 1854; 2nd ed., Leipzig, 1886; Hommel, "Semitische Völker und Sprachen" (Leipzig, 1883—); Schmitz's work on the modern languages; Körtig's works on English and Romance philology (Heilbronn, 1883—); Gröber, "Grundris der roman. Philol." (Strasbourg, 1888—); Paul, "Grundris der german. Philol." (Strasbourg, 1889–93); Elze, "Grundrisser der engl. Philol." (Halle, 1887); Geiger-Kuhn, "Grundris der iranischen Philologie" (Strasbourg, 1896—); Bühler-Kriehorn, "Grundrisser der indisch-iranischen Philologie" (Strasbourg, 1896—); Jagie, "Grundris der persisch-iranischen Philologie" (Hamburg, 1896—). Recent reference work has been completed and has been published in a similar manner in the course of the nineteenth century, especially by Arndt, "Jurist. Encyk. u. Methodologie" (Stuttgart, 1843; 10th ed., 1901); Bühme, "Encyk. der in Deutschland geltenden Rechte" (Bonn, 1847–58); Heine, "Juristische Encyk." (2nd ed., Bonn, 1892). Theology was also augmented by the Catholics: Staudenmaier, "Encyk. der theol. Wissenschaften" (2nd ed., Mainz, 1840); Wirhmttuer, "Encyk. der kath. Theologie" (1874); Klee, "Encyk. der Theologie" (1832); Kuhn, "Encyk. und Methodologie der Theologie" (1892); Krieg, "Encyk. der theolog. Wissenschaften" (1896); by Protestants: Zöckler, "Handbuch der theolog. Wissenschaften" (Munich, 1882–85); Hagenbach, "Encyk. und Methodologie der theolog. Wissenschaften" (3rd ed., Leipzig, 1889); Heinri, "Theol. encyk." (1893); Kähler, "Juristische Encyk." (1899); Parry, "Encel. der gesamten Theologie" (1895); and von Molt, "Encel. der gesamten Theologie" (1904). The "Handbuch der klassischen Altertumswissenschaft" (Munich, 1885; vols. since republished separately). Among the various attempts to treat history in this manner may be mentioned Oncken's "Allgemeine Gesch. in Einzeldarstellungen" (40 vols., Berlin, 1879–93). Nearly every branch of classical learning, treated by specialists, "Handbuch der klassischen Altertumswissenschaft" (Munich, 1885; vols. since republished separately). The encyclopedia of Diderot and d'Alembert who were assisted in their work by numerous champions of rationalism, e.g. Voltaire, d'Holbach, Rousseau, and Grimm. "Encyclopédie "Dictionnaire raisonné des arts et des sciences" (28 vols., Paris, 1751–72, with 5 supplementary volumes, Amsterdam, 1776–77, and 2 vols. of analytical index, Paris, 1780). This resembles the German work in breadth of scope, but had much greater influence on European thought, popularizing as it did the empiricism, sensism, and materialism of Locke. The first edition of 30,000 copies was followed by many later editions.

The encyclopedia of Diderot paved the way for the alphabetic encyclopedia. It was not only frequently reprinted but was re-arranged as a system of separate dictionaries by Panckoucke (1849) and by Agasse in the "encyclopédie méthodique ou par ordre des matières" (166 vols. of text and 51 vols. of illustrations; Paris, 1782–1839). In Germany the first encyclopedia modelled on Diderot's, by Köster and Roos, only reached K n o t (23 vols., Frankfort, 1778–1804); the third edition, however, made by Ersch and Gruber, proved a success. This is considered the most scientific German encyclopedia, "Allgemeine E n c y c l o p ä d i e Wissenschaften und K ü n s c h e n" begun by Professor Johann Samuel Ersch in 1813 and continued by Professors Hufeland, Gruber, Moser, Brockhaus, Müller, and Hoffmann. The work is divided into three sections: Section I, A to G, 99 vols. (1818–82); Section II, H to N, 43 vols. (1827–90); Section III, O to Z, 25 vols. (1830–50). Equally ambitious in scope is the "Oekonomisch-technolog. Encyk." (24 vols., Berlin, 1773–1838), planned by K r ü n i t z as a dictionary of economies and technology, but gradually enlarged by his successors Fr ö c k e, K o r t h, and C. O. Hoffmann into a general encyclopedia. Outside of the encyclopedia of Ersch and Gruber, the most ambitious encyclopedia work of the 19th century, the modern development, is the Brockhaus "Konversationslexikon" which took its name from H ü b e r, and from Bayle's "Dictionnaire" its arrangement and plan of presenting the results of scientific research and discovery in a popular form. H ü b e r gave as the reason for naming his work "Reale-Niels-Zeitungs-und Konversations-Lexikon" the fact that "it was to contain no professorial learning but all items of refined learning needed in daily intercourse with educated people." As it was printed chiefly to satisfy people of a curious turn of mind, it was confined principally to geography, while history was excluded as a special science. The first encyclopedia according to modern ideas was begun by L ö b el in 1796 (6 vols., Amsterdam, 1808; 2 supplementary vols., 1810). In 1800 the publishing rights were acquired by Friedrich Arnold Brockhaus; the firm of Brockhaus completely altered the original plan and is still engaged on the work (14th ed., 1901—abridged ed., 2 vols., 4th ed., 1888). Constructed on the same lines as the encyclopedia of Brockhaus is P i e r e r 's "Universallexikon" (26 vols., 1824–56; 7th ed., 12 vols., 1888–93), to which were added the P i e r e r "Jahrbiicher der Wissenschaften, K ü n s c h e n und Gewerbe" (1856–75); similar works are M e y e r 's "Konversations-Lexikon" (37 vols., Leipzig, 1840–52; 6th ed., 20 vols., 1902; 7th ed., abridged, 6 vols., 1907) and S p a m e r 's "Illustriertes Konversations-Lexikon" (24 vols., 1840–70; 2 supplementary volumes, 1879–82; 2nd ed., 1841–91). These works were inspired by a superficial rationalism, if not by conscious hostility to everything Catholic. Early attempts were made to counteract this propaganda of religious indifference by the publication of encyclopedias from the Catholic point of view, such as the "Allgemeine Religions-Lexikon für das katholische Deutschland" (13 vols., 1846–49; 4th ed., 1880–90); and Herder's "Konversations-Lexikon" (5 vols., Freiburg, 1853–57); neither proved a thorough success. The third edition of the latter (8 vols., 1901–08), through its preservation of Catholic interests, by its impartiality, thoroughness, and comprehensiveness gained general favor. Encyclopedias have since been compiled in all civilized countries. In France were published the "Encyclopédie des gens du monde" (22 vols., 1833–43); "Encyclopédie du XIX. siècle" (7 vols., 1837–59; 3rd ed., 1867–72; continued as "Annuaire encyclopédique moderne" (1846–51; new ed., 30 vols., 12 suppl. vols., atlas, 2 vols., 1856–62); "Dictionnaire de la conversation et de la lecture" (16 vols., 1851–58); "La Grande Encyclopédie" compiled by Bertholet, Derenbourg, and others (31 vols., 1855–1900); "Dict. univ. & Encycl." ed. Larousse (17 vols., 1885–90; new ed., 1915); "Nouveau Dictionnaire de la langue française" ed. Claude Augé (1898–1904); Larousse, "Dict. complet illustré" (129th ed., 1903). The chief Spanish encyclopedias are "Enciclopedia moderna", ed. Melados (34 vols., 3 vols. of charts, Madrid, 1848–51); "Dicionario universal enciclopédico", ed. Montt, Valparaiso (Barcelona, 1844–62); "Enciclopedia universal ilustrada europeo-americana" (Barcelona, 1907—), edited along Catholic lines; Portugal: "Dicionario popular hist. geogr. mytholog. biograph." (16 vols., Lisbon, 1876–90); "Dictionnaire universel encyclopédique", ed. Conti; "Enciclopedia portuguesa ilustrada", ed. Leite (254 nos. to 1903). Italy: "Nuova Enciclopedia popolare italiana" (14 vols., Turin, 1841–51; 6th ed., 25 vols., 1875–89; suppl., 1889–99); "Enciclopedia popolare economica", ed. Berri (Milan, 1871); "Dizionario universale di scienza, lettere ed arti", ed. Lessons and Valle (Milan, 1874–1883); "Piccola Enciclopedia" (Milan, 1891). Rumania: "Enciclop. Română" (3 vols., Hermannstadt, 1896–1903). England: "Encyclop. Britannica" (1771; 9th ed., 24 vols. and index, 1857–59, suppl., 11 vols. and atlas, 1902–1907); "New Encyclopedia of Universal Sciences" ed. of Rees, London, 1802–20); "Encyclopædia Metropolitana", ed. Smedley (30 vols., 1818–45); "English Cyclopaedia", ed. Knight (30 vols., 1840–73); "Chambers's Encyclopædia" (10 vols., London, 1800–68; new ed., 1901). France: "Encyclopédie Dictionnaire", ed. Hunter (7 vols., London, New York, 1879–88). United States: "The American Cyclopædia" (16 vols., New York, 1858–63; new ed., 1873–76); "Deutsch-Amerikanisches Konversations-Lex." ed. Schlem (New York, 1870–74); "Johnson's New Universal Enyc." (4 vols., New York, 1874–84; new ed., 1893–95); "Dictionary of the American Language" (New York, 1903–06); "The New International Encyclopædia" (17 vols., New York, 1902–04); "The Jewish Encyclopædia" (1906—). The Netherlands: "Nieuwenhuis' Woordenboek van kunsten en wetenschappen" (Leyden, 1851–68); "De algemene Nederlandse Encyclopedie" (15 vols., Zutphen, 1865–90); "Geïllustreerde Encyclopedie", ed. Winkler Prins (15 vols., 1868–82); "Woordenboek voor kennis en kunst", ed. Sijthoff (Leyden, 1891). Denmark and other northern countries: "Nordisk Konversations-leksikon", ed. Mollerup (3rd ed., Copenhagen, 1858–1903); "Store Illustreret Konversations-lexicon", ed. Blangert (12 vols., Copenhagen, 1891–1901); "Norsk Haandbog", ed. Johnsen (1879–88); "Nordisk Familjebog" (Stockholm, 1879–94); "Konversations-leksikon", ed. Meijer (1858–94); Russia: "Entziklopedicheskij Slovar"; ed. Brockhaus and Efron (55

Hungary: “Pallas Nagy Lexikona” (16 vols., Budapest, 1893–97; suppl., 1900); an Arabian encyclopedia was discontinued when it reached the ninth volume (Beirut, 1876–87).

In addition to these works, which were prepared for the sake of the people, there were three encyclopedias of great perfection during the nineteenth century. There is hardly a science or department of knowledge which is not fully covered in some work of this kind. In the province of general theology Migne has published in his “Encycl. théologique” (Paris, 1844–75), a series of over 100 special lexicons treating the different branches of theology: dogmas, heresies, liturgy, symbolism, archaology, councils, cardinals, etc.

Another comprehensive encyclopedia, dealing especially with theology and church history, is the “Dictionnaire d'érudition storioc-célestiastique de Gaspard Moreau (index vols., Paris, 1840–79).”

the mathematical sciences. Diderot (1713–84) had not yet written any original work except the "Pensées philosophiques" (1746), in which the foundations of Christianity are examined and undermined, revelation rejected, and reason proclaimed independent. The threat that the book had ordered Diderot to publish, "Promenade d'un sceptique" was written in 1747, but not published before the author's death. Diderot also had published a translation of Stanyan's "Grecian History" (1743) and an adaptation of Shaftesbury's Inquiry concerning Virtue and Merit under the title "Principes de la politique, ou Essai sur le mérite et la vertu" (1745). His main recommendation as editor of the new Encyclopédie, however, was the "Dictionnaire universel de médecine" (1746–1748), a translation of Dr. Robert James's "Medical Dictionary". D'Alembert (1717–83) was already famous as a mathematician. At the age of twenty-two he had presented two studies to the Académie des Sciences, "Sur la réfraction des corps solides" (1730), and "Sur le calcul intégral" (1740). The following year he was elected a member of the Académie. He had acquired a still greater reputation by his "Traité de dynamique" (1743) and the "Histoire et la générale des vents" (1747), the latter winning for him the prize the offer published by the Berlin Academy and membership in that body.

While the articles were being printed Diderot was imprisoned at Vincennes, 29 July, 1749, for his "Lettres sur les aveugles", of 1748, which he considered an immoral article, rather than a passage in it which had displeased Madame Dupré de Saint-Maur. After four months his publishers obtained his release; in November, 1750, the Encyclopédie was announced in a prospectus by Diderot, and, in July, 1751, the first volume was published. It opened with a "Discours préliminaire" by d'Alembert, in which the problem of the origin of ideas is solved according to Locke's sensationalism, and a classification of sciences is proposed which, except in a few minor points, is that of Bacon. In the prospectus Diderot had already said: "If we succeed in this vast enterprise our principal debt will be to Chancellor Bacon who sketched the plan of a universal dictionary of sciences and arts at a time when there were, so to say, neither sciences nor arts." D'Alembert acknowledges the same indebtedness. Thus, British influence was considerable both in shaping the doctrine of the "Encyclopédie" and in the "illumination" movement, and may be grouped together because of a certain community of opinions on philosophical, religious, moral, and social questions.

I. THE ENCYCLOPÉDIE AND THE ENCYCLOPÉDISTES.

The Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers, par une société de gens de lettres, mis en ordre et publié par M. Diderot... et quant à la partie mathématique par M. d'Alembert..." in the complete original edition comprises 35 volumes as follows: 17 vols. of text (Paris, 1751–1765); 11 vols. of plates (Paris, 1759–1772); 5 vols. of supplement, i.e. 4 of text and 1 of plates (Amsterdam and Paris, 1776–1777); 2 vols. of analytical index prepared by Pierre Mouchon (Amsterdam and Paris, 1780). In 1745, a French translation of Chambers's "Cyclopaedia", prepared by John Mills with the assistance of Gottfried Sellius, was to be published in Paris by the king's printer, Le Breton. After the necessary royal privilege had been obtained, a number of difficulties between Mills and Le Breton caused the failure of the enterprise, and Mills returned to England. Le Breton asked Jean-Paul de Gua, professor in the Collège de France, to assume the editorship. But again misunderstandings and disputes obliged de Gua to resign. Diderot was then called upon to complete the preparation of the manuscripts. At his suggestion, however, it was decided to undertake a more original and more comprehensive work. Diderot's friend, d'Alembert, agreed to edit the Encyclopédistes.
were to be published together. After Diderot had corrected the proof-sheets, Le Breton, fearing new vexations, suppressed passages likely to be objectionable and to cause friction with the authorities. Diderot noticed the changes too late to prevent them. The articles were mutilated to an extent which it was now next to determine by all manuscripts and proof-sheets were immediately destroyed. At last, in 1765, volumes VIII–XVII were published, completing the text of the Encyclopédie.

It is not possible to mention here all the contributors (about 160) to the work. Diderot himself wrote almost every one of the articles concerning religious, moral, or moral, but especially on the arts and trades. Great care was taken in the treatment of the mechanical arts. No trouble was spared to obtain minute descriptions of various machines and the means of using them. All this was explained in the text and illustrated in the plates. D'Alembert's articles, with few exceptions, are on the mathematical and physical sciences. From the beginning Rousseau (1712–1778), then known as the author of several musical works and compositions, agreed to write the articles on music. He also wrote the articles on mathematics and astronomy. The collaboration of Buffon (1707–88) who had promised to write on "Nature" is announced in the second volume, but it is doubtful if that article, as printed, is from him. Most of the topics in natural history were treated by Daubenton (1706–82). D'Alembert's articles on d'Holbach, Lavoisier, Fréron, Macart, Borda, are announced in the third volume. The fourth introduces Voltaire (1694–1778) as the author of some literary articles, and says of him: "The Encyclopédie, on account of the justice which it has rendered and which it will always continue to render him, was worthy of the interest which he now takes in it." In the "Discours préliminaire," d'Alembert had praised him as occupying a "distinguished place in the very small number of great poets," and extolled him for his qualities as a prose writer. Condorcet, Grinn, Quesnay, Turgot, Necker contributed articles or memos. D'Alembert furthered the cause of the Encyclopédie not only by his numerous articles and his constant interest, but also by his attitude and reputation. Far from sharing the materialistic and atheistic tendencies of many of his co-workers, he was at the same time friendly to the Encyclopédists and to plans of their enemies. Montesquieu at his death (1755) left an unfinished article on Taste (Goût); but his "Lettres persanes" (1721) and "Esprit des lois" (1748) inspired many of the social and political articles in the Encyclopédie.

SOURCE AND INFLUENCE OF THE ENCYCLOPÉDIE.—The expression spirit of the Encyclopédie may at first seem to be a misnomer. In that vast compilation, the profound knowledge of subjects and even of views on the same subjects. The writers of the articles belong to all professions and to all classes of society. Names of military men, lawyers, physicians, artists, clergymen, scientists, philosophers, theologians, statesmen, etc. appear on the lists of contributors given at the beginning of each volume. The articles are of unequal value; proportion is lacking, each contributor speaking with a bias in favor of what he thinks fit, obscurity is a prominent defect, and, at times, the authors indulge in endless digressions. Voltaire repeatedly asked for brevity and better method. (See Letters to d'Alembert, esp. in 1766.)

The articles seem to have been gathered together from sources without any preconceived plan, without any unity or sufficient supervision. Under these conditions the spirit of the Encyclopédie might denote merely one special tendency, or one group of tendencies, which, at first manifested along with many others, gradually became important and finally predominant. To some extent it is that, but it is also more than that. The Encyclopédie was not intended only as a great monument to record the progress realized in sciences, arts, civil and religious institutions, industry, commerce, and all other lines of human endeavour; the Encyclopédists purposed moreover to prepare the future and indicate the way to further progress. The Encyclopédie was birthed, but it would also be a standard; not a mere onlooker, but a leader. In fact, appearing as it did in the third quarter of the eighteenth century, it is a mirror in which the events of the whole century are focused.

At the time of the publication of the Encyclopédie, the French Government was, owing to many causes and influences, already considerably weakened, and still weakening. Dissatisfaction and unrest, though not yet well defined, were spreading among the people. Existing institutions and customs, both religious and political, had recently been denounced in several publications. The "philosophers" were favourably received in the salons of the aristocracy. On the other hand, Jansenism, with the endless discussions of which it had been the source or the occasion, and also with the lack of knowledge and looseness of morals among some members of the clergy, had prepared the way for a reaction. There were neither less direct, perhaps, and more remote, yet influential in bringing about a break with the past. In Descartes one may find unequivocal gorms of the neglect, contempt even, of tradition in philosophy, especially when immediate evidence, the idée claire, is made the criterion instead of the thing. The influence of these philosophers was far from tending to check the growth of rationalism. Nor can we overlook the influence of the famous "Querelle des Anciens et des Modernes," as it is known in the history of French literature. In the last two decades of the seventeenth century it was one of the main centres of attention. To this discussion, which resulted in a victory for those who favoured the "modern," Brunetière traces back three important consequences; first, the meaning of tradition becomes gradually identified with that of superstition; second, progress is conceived as an emancipation from, and an abjuration of, the past; finally, this is still more important, education in all its stages consists more and more in derision of the past. True, recent times everywhere offered masterpieces in art, literature, and science. Whatever side we may take of the old quarrel to-day the Encyclopédists and all critical and more impartial views may be, we can at least understand the attitude of those who succeeded the great men of the age of Louis XIV.

Another important factor was the scientific progress. After being too frequently confined to idle a priori conceptions, science was asserting its rights, and these rights soon came to be recognized, while it failed to recognize the rights of others. Reason gradually freed itself from the superstition of the past and claimed absolute independence. Ancient, or rather Christian, conceptions of God and the world were not even deemed worthy of the serious consideration of a "thinker." Efficient causes alone were recognized, final causes proscribed. In nature science always dealt with immutable laws: soon the possibility of miracles and revelation was denied, while mysteries were regarded as breaking the balance of nature. Thus, in the Encyclopédia, new ideas were introduced, tending to rationalism, materialism, naturalism, and desir. On positive points there was but little agreement; the tendency was primarily negative. It was an opposition to received dogmas and institutions, an effort to establish a new theoretical and practical system for the philosophy of life on naturalistic principles. Nothing is truer than d'Alembert's statement in the "Discours préliminaire," that "our century believed itself destined to change all kinds of laws". Towards the middle of the eighteenth century the representatives of this movement were the "philosophers," and they were about to centralize their efforts in the Encyclopédie. Great prominence
was necessary, and it was used. Some men who were known for their conservative opinions were asked to contribute articles, and the Encyclopédie contained some unexceptionable doctrines and moderate views on religious, ethical, and social problems; moreover, the authors of the articles themselves and those who shared their views frequently concealed or disguised their true convictions. As Voltaire says, they were in the sad necessity of "printing the contrary of what they believed" (Letter to d'Alembert, 9 October, 1756).

More was insinuated than was clearly expressed, and at times a sarcastic remark was used with better effect than a definite statement of belief. The main article to which one would naturally turn for information containing nothing objectionable, other articles, less likely to attract attention, expressed different and more "philosophic" views. That such was the condition of affairs is attested by a significant passage in a letter of d'Alembert to Voltaire (21 July, 1757).

To the latter's criticism of certain articles he replies: "No doubt we have had articles in theology and metaphysics; but with theologians for censors, and a privilege, I defy you to make them any better. There are other articles less exposed to the daylight in which all is repaired. Time will enable people to distinguish what we have thought from what we have said." Hence, although the Encyclopédie itself contains many articles in which anti-Christian principles are openly professed, the true, unrestrained encyclopédic spirit was found in the meetings of the "philosophers," and in its members, where they were recognizable. To-day it is to be found in the later works of the Encyclopédists and chiefly their letters and memoirs. In the impious and cynical d'Alembert, for instance, as known from his correspondence with Voltaire, one would fail to recognize the student and respectable gentleman. To a large extent undoubtedly it was not the source, but only the reflection, of the religious and social views of the time. Not the Encyclopédie so much as the Encyclopédists exerted a real influence. Since their spirit was antagonistic to the Church and, in many respects, also to the State, one may ask why its manifestations were not suppressed; why in particular its organ, the Encyclopédie, was allowed to proceed, notwithstanding the warnings of its adversaries and its repeated condemnation by the civil authorities. In a word, what was done to check its influence or to oppose its doctrines, it may be said little was done, and, under the circumstances, perhaps little could be done. The defenders of the Faith were not idle; they wrote books and articles in refutation of the "philosophers"; but their voice was not heard, and their scattered efforts were of little avail against the organized forces and the powerful protectors of their adversaries. The Jesuits, the secular clergy, especially Archbishop Christophe de Beaumont, of Paris, and Bishop Le Frére de Pompignan, of L.'Puy, who wrote pastoral on the subject, and several other writers and preachers denounced the Encyclopédie. With them they declared they had no objection to having its publication and sale prohibited by the Government. The suspensions were only temporary. The Encyclopédists were under the patronage of high personages at the Court; they were protected especially by Malesherbes, the director of the Libraire, who controlled, among other things, the granting of privileges for new publications and the censuring of books, and by Sartine, the chief of police, on whom depended the enforcement of laws and ordinances concerning the printing and sale of books. Malesherbes always showed himself to be not only of the Encyclopédie, but also of the Encyclopédists. Owing to this friendship, many works were published notwithstanding the official opposition of the Government.

In 1759, after the decision of the council had revoked the privilege formerly granted, it was Malesherbes who warned Diderot that his papers were to be seized the next day. As it was too late to look for a place of safety where they could be taken, Malesherbes had them sent to his own house.

Thus the Government secretly favored an enterprise which it officially censored, and, under this protection the Encyclopédie was begun and completed.

Partly for the same reason, partly also for deeper reasons concerning the religious and civil conditions in France, the efforts to combat the Encyclopédie were not rewarded with much success. Moreau in the "Mémoires pour servir à l'histoire des Caciques" (1757), Paleis, in his "Petites lettres sur le grand ordre aux philosophes" (1757-9), and "Les philosophes" (1760), tried to use the weapons of ridicule and satire which some of the "philosophers," especially Voltaire, wielded with greater skill. Fréron, in the "Anneau littéraire," was at times sarcastic, and always ready to give and take blows. Constantly at war with the Encyclopédie, he placed himself at a disadvantage, for they enjoyed Malesherbes' protection, whereas for him the censure was always very severe. Thus he was hardly allowed to write on Voltaire's "Écossaise" (1760), in which he had been publicly insulted on the stage. The Jansenists, in the "Nouveaux Jésuites," did little more than repeat the Encyclopédists. In the "Journal de Trévoux," the Jesuits, and among them especially Berthier (1704-82), who was director of the Journal from 1745 till the suppression of the Society of Jesus, wrote frequent criticisms. But notwithstanding all this opposition the spirit of irreligion was steadily gaining. Too often the criticism was weak, the attack unskilful. In some cases even, the anti-Encyclopédists, instead of harming their opponents, rather contributed to their success by giving them notoriety and affording them an opportunity for using their influence. The Jesuits were expelled from France in 1762; this gave a new victory and a new prestige to the "philosophers" D'Alembert, who wrote "La destruction des Jésuites en France" (1763), looks upon this expulsion as the just punishment of their hostility towards the Encyclopédie. Gradually the people were becoming accustomed to the new spirit, and thus it was that, whereas the first volumes had created a great stir in France, the appearance of the last volumes was scarcely noticed.

Unknown or little known in 1750, the "philosophers" had now won their battle, and were the recognized victors. Their success made them bolder in declaring openly what fear had frequently obliged them to veil in their former works and in the Encyclopédie. These doctrines had also been made more familiar by the publication of several works before the completion of the Encyclopédie, the most important being Diderot's "Pensées sur l'interprétation de la nature" (1754); Helvétius's "De l'esprit" (1758); Rousseau's "Discours sur l'origine et les fondements de l'inégalité parmi les hommes" (1753), "Contrat social" (1762), and "Emile" (1762); Voltaire's "Dictionnaire philosophique" (1753), "d'origine de la langue française" (1759), and "Dictionnaire de l'Académie" (1770). Hence, on 8 July, 1765, Voltaire could write to d'Alembert: "They clamour against the philosophers, and are right; for, if opinion is the ruler of the world, this ruler is governed by the philosophers. You can hardly imagine how their empire is spreading."
Steadily the new current of thought gained in volume and power, until nothing could stop its destructive course. The French Revolution, following closely upon the publication of the Encyclopédie and the other works of the Encyclopédistes, was the practical general spirit while that of the Botanists; the A. (Munich in dependence of Austria Wiener Folio the Botanists); the A. (London, 1826, 4, 51; Sachs, Geschichte der Botanik (Munich, 1872); Wurmbach in Abbildungen. Loco, des Kaisermanns (Vienna, 1858), IV, contains a list of his writings; Die botanischen (Leipzig, 1809-1810), a work: "Annalen des Naturwissenschaften" (Vienna, 1859), 4, contains a portrait of Endlicher.

Endowments. See MAN.

Endowment (Ger. Stiftungen, Fr. Fondation, It. Fondazioni, Lat. fundationes), a property, fund, or revenue permanently appropriated for the support of any person, institution, or object. A student, a hospital, school, hospital, the term is more frequently applied to the establishment of endowments for private endowment. In ecclesiastical circles the word is employed also in a more restricted sense, signifying a conditional donation, i.e., the establishment of a fund, by the provisions of a last will or otherwise, in order to secure permanently, or at least for a long time, some spiritual benefit, as, for instance, the offering and application of a monthly or annual Mass.

For the early Christians were lavish in their support of religion, and frequently turned their possessions over to the Church [Lallemand, "Hist. de la charité" (Paris, 1903), II; Uhlforn, "Hist. of Christ. Charity"; Hefele, "Christentum u. Wohlthätigkeith" in his "Zentralbegriffe", I, 175. The Emperor Justinian (Nov. 28, 528) was allowed to build churches to en- dow them; and about the same time, ecclesiastical legislation prescribed that no cleric was to be ordained for a church without proper provision for his maintenance (Coun. of Epaon, 517, c. xxv). Whoever desired to have a parish church on his estate was obliged to set aside a sufficient landed endowment for its clerics (IV Coun. of Arles, 541, c. xxxiii); while a bishop was forbidden to consecrate a church till the endowment had been properly secured by a deed or charter (II Coun. of Braga, 572, c. v). If one who was a fide from the king's estate to his churches, the bishop was required to procure the royal confirmation of the gift (III Coun. of Toledo, 589, c. xv). Ancient and noble Roman families, as well as others of less means, inspired by feelings of love and gratitude, made large bequests to the Church. In the fifth century, in countries inhabited by German tribes, the Church was endowed especially with lands. These possessions were lost during the political and social upheaval that followed the Germanic invasions, known as the Wanderings of Nations. Towards the end of Charlemagne's reign the regenerated peoples contributed once more with liberality and generously to the support of ecclesiastical institutions.
In England, both under Saxon and Norman domination the generous zeal of the faithful prompted them to secure by endowments a permanent priesthood, and to provide for the dignity and even splendour of Divine worship. A considerable portion of the privileges that existed in England were squandered or confiscated during the Reformation of Henry VIII and Queen Elizabeth, while the remainder, by virtue of the Acts of Uniformity and Supremacy, was transferred to the Anglican Church, which still retains it. The conditions of the Catholics of England since the Reformation in temporal matters, have been subjected to any extent to the re-establishment of endowments, though instances have not been wanting and are on the increase. In Ireland and Scotland likewise the old foundations of the Church have been lost or diverted from their purpose. In Ireland the Protestant Church, which had received during the Reformation the lands and monies of the Catholic Church, was disestablished and nominally disendowed by the Act of 1692, but so liberal were the compensations allowed that they amounted practically almost to a re-endowment. In Scotland the Presbyterians of the disestablished Church, owing to the immense influence of Knox in the sixteenth century, still possess what is left of the ancient endowments of the Catholic Church. Ecclesiastical endowments in France have undergone many vicissitudes, particularly from the year 1789, when a yearly income of about $14,000,000 was allowed to the clergy and unprofessed religious; but the revival of the French Revolution was felt elsewhere, especially in Germany, where by the fifty-fifth article of the Resolutions of the Deputation of the Empire (1803) “all property belonging to the foundations, abbeys and monasteries was committed to the free and full disposal of the respective rulers, who were to provide for the expense of public worship, of instruction, of founding useful public institutions, and of lightening their own financial embarrassments.” In Italy the annihilation of the States of the Church in 1539, 1800, and 1870 by the “King of United Italy” was also followed by the introduction of anti-ecclesiastical laws, the robbery of the Church, and the spoliation of her institutions. The endowments that remain are for the most part administered by the Government. Foundations in America are not numerous and are no special attention. Canon law lays down strict regulations regarding the acceptance and management of endowments as well as the observance of the obligation arising therefrom. They are to be accepted only by those whose interests are at stake, as, for instance, the rector of a church, the administrator of an institution. The consent of the ordinary, if they are presented to a diocesan institution, or of the competent religious superior, if given to regulars, is requisite. The superior in question should assure himself that the income accruing from the investment is a sufficient recompense for the service demanded. Once the conditions of acceptance have been established, they are unchangeable, and it is incumbent on the bishop or religious superior, as above, to procure the fulfilment of the obligation imposed. A catalogue or table of these obligations assumed by a church is to be posted conspicuously in the church and must be disposed of the revenue in the chancery office while among the parochial books is one in which the satisfaction of these obligations is noted. The supreme law to be observed in this matter is the will of the founder of an endowment, to fulfill which the zealous vigilance of the Church is ever directed. If, however, the funds of an endowment entirely disappear through no fault of the church, the latter is exempt from its part of the contract. If a disproportion arise between the service required and the recompense, a proportionate reduction of the obligation entailed is permitted, under certain conditions, by the Holy See. Bishops are not allowed to lessen the original obligation, e.g., to reduce the number of Misses to be offered annually, though where the mind of the donor is not sufficiently clear, they may determine minor details, such as the hour of the service, or the altar at which it is to take place. Founders of churches were reserved to themselves, with the approbation of Rome, the right to administer the temporal concerns of such foundations and to suggest candidates for vacant benefices in said churches (see PATRONAGE), though ordinarily these trusts are under the supervision of a corporation of board of trustees.

Energy. See DEMONICS.

Energy, the Law of the Conservation of.—Amongst the gravest objections raised by the progress of modern science against Theism, the possibility of miracles, free-will, the immateriality of the human soul, its creation and immortality, are, according to many thoughtful men, those based on the Law of the Conservation of Energy. Consequently, if a full treatment of this topic in its philosophical aspects as the limits of space will allow, is here attempted.

Explanation of the Doctrine.—The word energy comes from the Greek ἐργα, “action,” “activity,” and is itself a compound of αὐτός, “himself,” and ἐργα, “work.” In modern physical science the motion of energy is associated with mechanical work. It is commonly defined as “the capacity of an agent for doing work.” By “work” scientists understand the production of motion against resistance. Such energy, whilst existing in many forms, is considered especially in two generically distinct states known as kinetic energy, or energy of motion, and potential energy, or energy of position. The power of doing work in the former case is due to the actual motion possessed by the body, e. g., a cannon-ball on its course, or a swinging pendulum. Potential energy, on the other hand, is exemplified by a wound-up spring, or by the bob of a pendulum when at its highest point; as the bob swings upwards its velocity and kinetic energy continuously diminish, whilst its potential energy is increasing. When at its highest point its potential energy is at a maximum, and kinetic is nil; when, moving downwards, it reaches its lowest point, it will have recovered its maximum kinetic energy, whilst its potential will have vanished. Energy is also recognized in the heat of a furnace, or the fuel of the same, in explosives, in an electric current, in the radiations of the other which illuminates and warms the earth. Now, it has been found that these different forms of energy can be changed into one another. Further, the amount of a sum of energy in different forms can be measured by the quantity of work it can accomplish. A weight suspended over a pulley can be employed to lift a stone; the stone's potential energy is a measure of the energy of the stone. The heat of a metal spring as it expands, heat as it passes to a cooler body, electric current as it is expended, and chemical compounds in the course of decomposition. On the other hand, a corresponding amount of work will be required in order to restore the original condition of the agents. Perhaps the most fruitful and immediate achievement of modern physical science during the past century has been the establishment of a law of quantitative equivalence between these diverse forms of energy measured in terms of work. Thus a certain amount of heat will produce a definite amount of motion in a body, and conversely this quantity of motion may be made to...
reproduce the original amount of heat—assuming that in the actual process of transformation there were no waste. In other words, it is now accepted as established that, in any "conservative" or completely isolated system of energies, whatever changes or transformations take place among them, so long as no external agent intervenes, the sum of the energies will always remain constant. The Principle or Law of the Conservation of Energy has been thus formulated by Clerk Maxwell: "The total energy of any body or system of bodies is a quantity which can neither be increased nor diminished by any mutual action of those bodies through time, though it may be transformed into any of the forms of which energy is susceptible" (Theory of Heat, p. 93). Thus stated, the law may be admitted to hold the position of a fundamental axiom in modern physics; the nature of the evidence for it, we shall consider later. But there is further generalization, advancing a considerable way beyond the frontiers of positive science, which affirms that the total sum of such energy in the universe is a fixed amount "immutable in quantity from eternity to eternity" (Von Helmholtz). This is a proposition of a very different character; and to it also we shall return. But first a brief hint of the origin of the law of the doctrine of the Conserved Energy of Matter. The doctrine of the conservation of energy was long preceded by that of the Constancy of Matter. This was held vaguely as a metaphysical postulate by the ancient materialists and positively formulated as a philosophical principle by Galileo, and Francis Bacon. Descartes assumed in a somewhat similar a priori fashion that the total amount of motion (MV) in the universe is fixed—

*certain am tamen et determinatum habet quantitatem* (Princip. Philos., II, 36). But the effort to establish such an assumption by accurate experiment was later abandoned. According to many we have the principle of the conservation of energy virtually formulated for the first time in Newton's Scholion developing his third law of motion (action and reaction are equal and opposite), though his participation in the current erroneous conception of heat as a "caloric", or independent substance, prevented his clearly apprehending and explicitly formulating the principle. Others would connect it with his second law. Huyghens, in the seventeenth century, seems to have grasped, though somewhat vaguely, the notion of momentum, or *vis viva* (MV?). This was clearly enunciated by Leibniz later. The fundamental obstacle, however, to the recognition of the constancy of energy lay in the prevalent "caloric theory". Assuming heat to be some sort of substance, its origin and disappearance in connexion with friction, percussion, and the like, was explained by the law of conservation of energy, without any hypothesis of the constancy of energy. As early as 1789, Lavoisier and Laplace, in their "Mémoire sur la chaleur", show signs of approaching the modern doctrine, though Laplace subsequently committed himself more deeply to the caloric theory. Count Rumford's famous experiments in measuring the amount of heat generated by the boring of cannon and Sir Humphry Davy's analogous observations (1799) on the heat caused by the friction of ice, proved the death-blow to the caloric theory. For the view was now beginning to receive wide acceptance among scientists, that heat was "positive vibration of the corpuscles of bodies tending to separate them". Dr. Thomas Young, in 1807, employed the term *energy* to designate the *vis viva* or active force of a moving body, which is measured by its mass or weight multiplied by the square of its velocity (MV^2). Sadi Carnot (1824), though still labouring under the caloric theory, advanced the problem substantially in his remarkable paper, "Réflexions sur la puissance motrice du feu", by considering the question of the relation of quantity of heat to amount of work done, and by introducing the concept of a machine with a reversible cycle of operations. The great epoch, however, in the history of the doctrine occurred in 1812, when Julius Robert Mayer, a German physician, published his "Remarks on the Forces of Inanimate Nature", originally written in a series of letters to a friend. In this little work, "contemplatively presented by the leading journals of physics of that day" (Poinsot), Mayer explicitly enunciated the principle of the conservation of energy in its widest generality. His statement of the law was, however, in advance of the existing experimental evidence, and he was led to it partly by philosophical reasoning, partly by consideration of physiological questions, the nature of the heat, as discovered by the chemist, was engaged in determining by accurate experiments the dynamical equivalent of heat—the amount of work a unit of heat could accomplish, and vice versa; and "cooling was contributing important papers on the same subject to the Royal Scientific Society of Copenhagen, so that no particular man can be described as the Father of the doctrine of the Conservation of Energy" (Preston). Between 1848 and 1851, Lord Kelvin (then Sir William Thomson), Clausius, and Rankine developed the application of the doctrine to sundry important problems of the science of heat. About the same time, Carnot, Henry, and Auguste de La Place, Laplace, addressing the subject from the mathematical side, and starting from Newton's Laws of Motion, with certain other assumptions as to the constitution of matter, deduced the same principle, which he termed the "Conservation of Forces". Subsequently, Faraday and Gay-Lussac and others, in greater detail the extent and variety of the transformation and correlation of forces, not only heat being changed into work, but light occasioning chemical action, and this generating heat, and heat producing electricity, capable of being once more converted into motion, and so on round the cycle. Among the important results of this work, the total capacity for work diminishes owing to this dissi- pation or degradation of energy. This general fact is formulated in what has been called the principle of Carnot or of Clausius. It is also styled the second law of thermodynamics and has been made the basis of very important conclusions by the Frenchman and the Englishman. The last word on the rate of transformation of heat into work is Lord Kelvin. He thus enunciates the law: "It is impossible by means of inanimate material agency to derive a mechanical effect from a portion of matter by cooling it below the temperature of the earth's surface".

LIVING ORGANISMS.—The successful determination of the quantitative equivalent of one form of energy in some other form, obviously becomes a far more difficult problem when the subject of the experiment is not inanimate matter in the chemical or physical laboratory, but the consumption of substances in the living organism. Scientific research has, however, made some essays in this direction, endeavouring to establish by experiment that the principle of the constancy of energy holds also in vital processes. By the nature of the case the experimental evidence is of a rougher kind, more or less accurate chemical analysis, and the actual consumption of substances by the living body seems to have corresponded rather closely to that resulting in laboratory experiments; hence it is affirmed that the observations all point to the conclusion that "the sole cause of animal heat is a chemical process".
of motion. The principle of causality, according to others, is its parent. Mayer himself quotes ex nihilo nil fit, and argues that creation or annihilation of a force lies beyond human power. Even Joule, who laboured so diligently to establish an experimental law of energy, would reinforce the latter with the further argument that "it is manifestly absurd to suppose that the powers with which God has endowed matter can be destroyed." Preston judiciously observes: "The general principle of the conservation of energy is not to be proved by mathematical formulae. A law of nature must be founded on experiment and observation, and the general agreement of the law with facts leads to a general belief in its probable truth. Further, the conservation of energy cannot be absolutely proved even by experiment, for the proof of a law requires a universal experience. On the other hand, the law cannot be said to be untrue, even though it may seem to be contradicted by certain experiments; for in these cases energy may be dissipated in modes of which we are yet unaware" (p. 90). In view of the extravagant conclusions some writers have attempted to deduce from the doctrine, it is useful to note these serious divergencies of opinion as to what is its true foundation—whether this be in the whole universe or in the part of it that is subject to the hypothesis.

We shall best approximate to the truth by distinguishing three different parts of the doctrine of energy: the law of constancy; the law of transformation; and the law of dissipation or degradation of energy. The transformation, that all known forms of material energy may be transmuted into each other, and be convertible, is a general fact which can only be ascertained and proved by experience. There is no a priori reason requiring it. The law of dissipation, that as a matter of fact, in the course of the changes which take place in the present universe there is a constant tendency for portions of energy to become unusable, owing to the equal diffusion of heat through all parts of the system—this truth similarly seems to us to rest entirely on experience. Finally, with respect to the principle of quantitative constancy, the mean power must be experience—but experience in a broad sense. It has been shown by positive experiments with portions of inanimate matter that the more perfectly we can isolate a group of material agents from external interference, and the more accurately we can calculate the total quantity of energy possessed by the system at the beginning and end of a series of qualitative changes, the more perfectly our results agree. Further, modern physics constantly assumes this principle in most complex and elaborate calculations, and the agreement of its deductions with observed results verifies the assumption in a manner which would seem to be impossible were the principle not true. In fact, we may say that the assumption of the truth of the law, when correctly formulated, lies now at the basis of all modern physical and chemical theories, just as the assumption of inertia or the constancy of mass is fundamental to mechanics.

In this connection we must not forget the hypothetical character of the conditions postulated, and the limitations in its application to particular concrete problems. Bearing this in mind, even if there occurs some novel experience, as, e.g., the fact that radium seemed capable of sustaining itself at a higher temperature than surrounding objects and of emitting a constant supply of heat without any observable diminution of its own store of energy, science does not therefore immediately abandon its fundamental principle. Instead, it rightly seeks for some hypothesis by which this apparently rebellious law can be reconciled with the others. And this hypothesis is so simple that it seems almost as if the discovery of the law—as, for example, the hypothesis that this eccentric substance possesses a peculiar power of constantly collecting energy from the neighbouring ether and then dispensing it in the form of heat; or, that the high complexity of the molecular constitution of
radium enables it, while slowly breaking down into simpler substances, to continue expending itself in heat for an extraordinarily long time. Such an exception, however, is a useful reminder of the unwarranted rashness of those who, ignoring the true character and limitations of the law, would in all cases assume its unalloyed supremacy, rule out of existence, whether in living beings or in the universe as a whole, every agent or agency which may condition, control, or modify in any way the working of the law in the concrete. As we have before indicated in regard to some changes of a chemical and mechanical character in the living, into the principle of conservation may hold in the same way as in non-living matter; whilst, in regard to other physiological or psycho-physical processes, the necessary qualifications and limitations may be of a different order. The kind of evidence most cogent in regard to inanimate matter—both direct experiment and verified deduction—is wanting here; and many of the vital processes, especially those connected with consciousness, are so unlike mechanical changes in many respects that it would be scientifically unjustifiable to extend the generalization so as to include them. The possibility of reversion, for instance, applies to those changes in inanimate matter, is here unthinkable. We could conceivably recover the gaseous and solid products of exploded gunpowder and convert them into their original condition, but the effort to imagine the reversion of the process of the growth of a man or a nation brings us face to face with an absurdity.

**Philosophical Deductions.**—The philosophical conclusions which some writers have attempted to deduce from the law affect the question of God's existence and action in the world, the possibility of Divine intervention in the form of miracles, the nature of the human soul, its origin and relation to the body, and its moral freedom.

The Materialistic Mechanical Theory, which seeks to conceive the world as a vast self-moving machine, self-existing from all eternity, devoid of all freedom or purpose, perpetually going through a series of changes, each new state necessarily emerging out of the previous and passing into the subsequent state, claims to find its justification in this law of the conservation of energy. To this it may be replied in general, as in the case of the objections to the constructibility of matter, that the constancy of the total quantity of energy in the world or the convertibility of different forms of material energy, does not affect the arguments from the evidences of intelligent design in the world, the existence of self-conscious human minds, and the moral law. These things are realities of the first importance which every philosophical creed that pretends to be a rational system of thought must attempt to explain. But the mere fact that the sum of material energies, kinetic and potential, in any isolated system of bodies, or even in the physical universe as a whole, remains constant, if it be a fact, affords no rational account or explanation whatever of these realities.

**Herbert Spencer's Doctrines.**—As Spencer is the best-known writer who attempts to deduce a philosophy of the universe from the doctrine of energy, we shall take him as representing the school to which the term force is confined by physicists to a narrower and well-defined meaning—the rate of change of energy per distance—Spencer identifies it with energy, and styles the conservation or constancy of energy the "Law of Force." To this, he tells us, an ultimate analysis of all our sensible experience brings us down, and on this a rational synthesis must build up. Consequently, from this principle his "Synthetic Philosophy" seeks to deduce all the phenomena of the evolution of the universe. With respect to its proof he assures us that "the principle is deeper than demonstration, deeper than definite cognition, deep as the very nature of the mind. Its authority transcends all other whatever, for not only is it given in the constitution of our consciousness, but it is impossible to imagine a consciousness so constituted as not to give it." (First Principles, p. 162). The value of this assertion may be gauged from the fact that Newton and all the ablest scientists down to the middle of last century were ignorant of the principle, and that it required the labour of Mayer, Joule, Helmholtz, and others to convince the scientific world of its truth.

Evolution is an integration of matter and concomitant dissipation of which the living pass from an indefinite incoherent homogeneity to a definite heterogeneity, and during which the retained motion undergoes a parallel transformation. Owing to the ultimate principles the transformation among all kinds of existence cannot be other than we see it to be. The redistribution of matter and motion must everywhere take place in those ways and produce those traits which celestial bodies, organisms, societies alike display, and it has to be shown that this universality of process results from the same necessity which determines each simplest movement around us. In its great arena of evolution Spencer's principle "the fact deduced from the Persistence of Force!" Spencer's proof is merely a description of the changes which have taken place. He does not show, and it is impossible to show, from the mere fact that the quantity of energy has to remain constant, that the particular changes in which it has appeared—the Homeric process, Shakespeare's plays, and Mr. Spencer's philosophy—must have appeared. The principle can only tell us that a constant quantitative relation has been preserved amid all the qualitative transformations of the physical universe, and that it will be preserved in the future. But it furnishes no reason for the fact that a seemingly intelligent design which abounds, and it offers not the faintest suggestion of an explanation why the primitive nebula should have evolved into life, minds, art, literature, and science. To describe the process of building a cathedral is not to draw a masterpiece of architecture from so many tons of stone and mortar. To show even that the law of gravitation prevailed during every event in the history of England would not be a deduction of the history of England from the law of gravitation. Yet this is precisely what Spencer based on the "Law of Force." "Synthetic Philosophy" is committed to in seeking to deduce the present world from the conservation of energy, and so to dispense with an intelligent Creator. The same holds for every other project of a similar kind. A more remarkable feature still in Spencer's handling of the subject is the self-created "Pelagian Philosophy." This view is the very basis of his "Persistence of Force" in the Absolute itself. It really "means the persistence of some Power which transcends our knowledge and conception. . . the Unknown Cause of the phenomenal manifestations" of our ordinary experience. This is a complete misconception, misrepresentation, and misuse of the principle of conservation, as known to science. Mayer and Joule never attempted to establish that some numerical power or unknown cause behind the phenomena of the universe has a constant quantity of energy in itself. Nor is it a self-evident datum of our consciousness. Where there are processes, its phenomena must be always quantitatively the same "throughout all past and future time". The scientific principle merely affirms constant quantitative equivalence amid the actual transmutations of certain known and demonstrable general principles of body, and rest. This, however, would afford no help towards an explanation of the universe. Consequently, its law of conservation would still be $\sum_{\text{sum}}$ of $\sum_{\text{energy}}$ with the additional hypothesis of a Divine Creator, the rest. This, however, would afford no help towards an explanation of the universe. Consequently, it would have to be transformed into something very different to serve as the basis of the Synthetic Philosophy.

Professor Ostwald, on the other hand, apparently opposed to mechanical theories, carries us a little farther...
by his special doctrine of energy. Matter, the supposed vehicle or support of energy, he rejects as a useless hypothesis. Every object in the universe is merely some manifestation of energy of which the total amount retains a constant value. Energy itself is not capable of being anaerated, or converted back into work. It is the universal substance of the process of change in the world. Mass is merely capacity for energy of movement, density is volume-energy. All we can know of the universe may be expressed in terms of energy. To accomplish this is the purpose of the art. Hypotheses are to be abandoned as worthless crutches; and the aim of science is to catalogue objects as forms of energy. But surely this is merely to abandon all attempt at explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities. The simple truth is that the quantitative law of constancy supplies not the faintest clue to the fundamental problem, how and what generate the various a priori derived allographic forms of reality have come into existence.

THE LAW AND ITS CONSEQUENCES.—Not only does the modern scientific doctrine of energy fail to provide a foundation for a materialistic theory of a mechanical self-existing universe, but a most important part of the first law—the second law of thermodynamics—its consequences—presents us with the materials for a very powerful argument against that theory. Lord Kelvin, the most eminent authority on this point, working from data established by Carnot and Clausius, has shown that "although mechanical energy is in inexhaustible, there is a universal tendency to dissipation, which produces throughout the system a gradual augmentation and diffusion of heat, cessation of motion and exhaustion of the potential energy of the material universe" (Lectures, Vol. II, p. 536). The heat becoming thus diffused at an equally low temperature throughout the entire universe, all living organisms will perish of cold. In fact, the conclusion which Kelvin deduces from the modern scientific doctrine of energy is that the physical world, so far from being a self-existing machine endowed with perpetual motion, must more closely resemble a clock winded up at birth and left together and wound up at some definite date in the past and will run down to a point at which it will stop dead in the future.

CONSERVATION OF ENERGY AND THE HUMAN SOUL.—According to the ordinary Catholic doctrine, philosophic, and theological, the soul is a spiritual principle, distinct from matter, yet, by its union with the organism constituting one substantial being, the living man. It is the source of spiritual activities, thought, and volition. It is endowed with free will, originates and controls bodily movements. In its origin it has been created; at death it is separated from the body and passes away from the material universe. Now if the soul or mind, though itself not a form of material energy, acts on the body, originates, checks, or modifies bodily movements, then it seems to perform work and so to interfere with the constancy of the sum of work, or what arises out of work, or is converted energy individual souls are created and introduced into this material universe and subsequently pass out of it, then their irruptions seem to constitute a continuous infringement of the law. For clearance we will handle the subject under separate heads.

The soul or mind either modifies or modifies in any way movements of matter, or changes in the forms of energies of the material world? Yes, assuredly; the soul through its activities, does thus act on matter—Clifford, Huxley, Hodgson notwithstanding. The thoughts, feelings, and volitions of men have had some influence on the physical events which have constituted human history. All the movements of every material particle in the world would not have been precisely the same if there had been no sensation or thought. Art, literature, science, invention have had their origin in ideas, and they involve movements of the mental states. The feelings and desires have really influenced war and trade. If these feelings and ideas had been different, war, trade, art, literature, and invention would have been different. The movements of some portions of matter would have been other than they have been. The mind, the soul, therefore, act on the body.

II. Is the soul, or the activities by which it acts on the body, for instance its conscious states, merely a particular form of energy interconvertible with the other material forms of heat, motion, electricity, and the rest? Or is the soul and psychic activity something distinct in kind, not interchangeable with any form of material energy? Yes. That mental or psychical states and activities are realities, utterly distinct in kind from material energy, is the judgment of philosophers and scientists alike. These states are subjective phenomena perceptible only by the internal consciousness of the individual to whom they belong. Their existence depends on their being perceived. In fact, their esse is percipere. They are not transmutable into any material energy. As Tyndall says, "the chasm between the two orders of reality is intellectually impassable." The phenomena of consciousness, though equally amenable to some systematic and profound qualitative measurement, they seem to grow extensively and intensively and to rise in quality in the world. Wundt, indeed, embodies this in his contrasted principle of the increase of psychic energy, a law of qualitative value, which he attaches as the reverse or subjective condition of the quantitative law of physical energy. The psychical increase, being indefinite, holds only under the condition that the psychical processes are continuous. Mental states or activities are thus proved on the one hand to exert a real influence on the movements of matter, whilst on the other hand they are different in nature from all material energies and unconvertible with any of the latter. The soul, mind, or whatever we call the subject or source of these immaterial states or activities, must be therefore some kind of hyperphysical agent or power.

III. This brings us to the central crux of the subject. If the soul, or mind, or any of its activities causes or modifies the movement of any particle of matter, then it seems to have produced an effect equivalent to that of a material agent, to have performed "work", and thereby to have augmented or diminished the previously existing quantity of energy in the system within which the disturbance took place. The vital question then arises: Can this real influence of the soul, or of its activities, on matter be squared with the law of conservation? At all events, if it cannot, then so much the worse for the law. The law is a generalization from experience. If its present formulation conflicts with any established facts, we must accept the facts; we must either reformulate the law in more qualified terms. If our experience of radium seems to contradict the law of conservation, we are at liberty to deny the existence of radium, or to deny that it emits heat. We must either give up the universality of the law, or devise some hypothesis by means of which the law and the new fact may be reconciled. Now we are certain that volition and thought do modify the working of some material agents. Consequently, we must devise some hypothesis by which the new fact may be reconciled with the law, or else alter the expression of the law.

Diverse solutions, however, have been advanced.

1. Some writers simply deny the application of the law to living beings, or at least its rigorous accuracy, if referred to the entire collection of vital and psychical phenomena. They urge with much force that
the living, conscious organism, endowed with the power of self-direction, differs fundamentally in nature from a mere machine, and that it is therefore illegitimate to extend the application of the law to organisms in precisely the same sense as to inanimate matter until this extension is rigidly justified by experimental evidence. But evidence of this quantitative accuracy is not forthcoming—not at all likely to be. As a consequence, scientists of the first rank, such as Clerk Maxwell and Lord Kelvin, have always been careful to exclude living beings from their formulation of the law. Moreover, however, they observe that, in certain respects, the animal structure resembles a very delicate mechanism in which an extremely minute force may initiate or transform a relatively large store of latent energy preserved in a very unstable condition, as, e.g., the pressure of a hair-trigger may explode a powder magazine.

(2) Again, many physicists of high rank (Clerk Maxwell, Tait, Balfour Stewart, Lodge, Poynting), who suppose, for sake of argument, the strict application of the law even to living beings, claim to harmonize the real action of the soul on the body with the law by this action as a form of a guiding or directing force. They generally do so, moreover, in connexion with the established truth of physics that an agent may modify the direction of a force, or of a moving particle, without altering the intensity of its energy, or adding to the work done. Thus, a force acting at right angles to another force can alter the direction of the latter without affecting its intensity. The pressure of the rail on the side of the wheel guides the tram-car; the tension of gravitation keeps the earth in its elliptical course round the sun without affecting the quantity of energy possessed by the moving mass. If the enormous force of gravitation were suddenly extinguished, say, by the annihilation of the sun, the earth would fly away at a tangent with the same energy as before. The axiom of physics, that a deflecting force may do no work, is undoubtedly helpful towards conceiving a reconciliation, even if it does not go the whole way to meet the difficulty.

(3) At the same time, the philosophy of Aristotle and St. Thomas provides us with a clue which assists us farther than any modern theory towards the comprehension of the problem. For this, four distinct factors must be kept in mind:

(a) The entire quantity of the work done by the living being must in this view be accounted for by the material energies—mechanical, chemical, electrical, etc.—stored in the bodily organism. The soul, or mind, or vital power merely administers these, but does not increase or diminish them. The living organism is an extremely complex collection of chemical compounds stored in blood and cellular tissue. Many of these are in very unstable condition. A multitude of qualitative changes are constantly going on, but the quantity of the work done is always merely the result of the using up of the material energies of the organism. The soul, within limits, regulates the qualitative transformation of some of these material energies without altering the sum total.

(b) The action of the soul, whether through its conscious or its merely vegetative activities, must be conceived as primarily directive.

(c) But this is not all. The soul not only guides but initiates and checks movements. The most delicate hair-trigger, it is urged, requires some pressure to move it; this is work done by the trigger, too, presses with equal reactive force against the finger, and through this emits some of its energy back to another part of the universe. Consequently, any action of the soul upon the body, even if the pressure or tension be relatively small, involves, it is said, a double difficulty: the pressure communicated by the soul to the body and that returned by the body to the soul. In reply:

First, what is needed in order to originate, guide, or even inhibit a bodily movement is a transformation of the quality of some of the energy located in certain cells of the living organism. Whilst physics, which seeks to reduce the universe to atoms, is primarily interested in quantity, qualitative differences cannot be ignored or ultimately resolved into quantitative differences. Direction is the qualitative element in simple movement, and it is as important as velocity or duration. Now, although the initiation of movement, or of the or of the Scholastic theory the soul, as "form", determines the qualitative character of the material with which it coalesces, while it con-
serves the living being in its specific nature. A "form" endowed with consciousness exerts a control, partly voluntary, partly involuntary, over the qualitative character of the constituents of the organism, and in this way it would occasion qualitative changes in some of these by a merely liberative act, without adding to or taking from the quantity of physical energy contained in the material constituents of the organism. The illustration is of course imperfect, like all such analogies. It is given merely to aid towards a conception of the relations of mind and body in the Aristotelian view.

(d) Finally, in this theory, the action of the soul, or vital principle, upon the material energies of the living organism, must be conceived not as that of a foreign agent, but as of a co-principle uniting with the former to constitute one specific being. This most important factor in the solution is not sufficiently emphasized, or indeed realized, by many physiologists who seek to harmonize the law with the real action of the soul. Accepting the philosophy of Descartes, many of these adopt a very exaggerated view of the separateness and mutual independence of soul and body. In that point of view body and soul appear as two independent beings merely accidentally connected or joined. The action of either upon the other is that of an extrinsic agent. If an angel or a demon set a barrel rolling down a hill by even a slight push, the action of such a spirit would involve the invasion of the system of the material universe by a foreign energy. But this is not the way the souls act, according to the philosophy of St. Thomas and Aristotle. Here the soul is part of the living being, a component principle capable of liberating and guiding the transformation of energies stored up in the constituents of the material organism, and along with itself combines to form a complete individual being. This point is a vital element in the solution, whether the basis of the difficulty is the conservation of energy, the conservation of momentum, or Newton's third law. The directing influence of the soul is not exerted as the pressure of one material particle on another outside of it. The soul is in the body which it animates and in every part of it. Neither is "outside" the other.

This solution obviously provides an answer at the same time to the objections deduced from the conserving law of energy against the creation of human or the freedom of the will. If the souls were a fount of energy distinct from and added to the material energies of the organism, and if the freedom of the will involved incursions of a foreign physical force into the midst of existing material energies, then infringement of the law of constancy would seem inevitable. But if the soul merely directs the transformation of existing reserves of energy in the manner indicated, no violation of the law seems necessary. Similarly, the departure of such an immortal soul from the physical universe would not involve any withdrawal of material energy from the total sum. Finally, if human thought and volition can interfere in any degree with the movements of matter and exercise a guiding influence on any of the processes of the bodily organism, a fortiori must it be possible for an Infinite Intelligence to intervene and regulate the course of events in the material universe; and if the human mind can effect its purposes without infringement of the law of conservation of energy, assuredly this ought to be still more within the powers of a Divine Mind, which, according to the Scholastic philosophy, sustains all beings in existence and continuously co-operates with their activity.

The extensive literature of the subject may roughly be distinguished as scientific and philosophic, though the two grade into each other.

Among those of mainly scientific character are:—The Correlation and Conservation of Forces, ed. YOUNG (N.Y., 1884). This is a collection of the original papers of Helmholtz, Mayer, Grove, Faraday, Liebig, and Carpenter on the subject. Joule, Scientific Papers (2 vols., London, 1841, 1847); Helmholtz, Popular Lectures on Scientific Subjects (tr. London, 1875); Kytting, Popular Lectures and Addresses (2 vols., Ne. York and London, 1845); also Tatt, Recent Advances in Physical Science (London, 1875); Maxwell, ed. Rayleigh, The Theory of Heat (London, 1902); Stewart, The Conservation of Energy in Intermolecular Forces (London, 1890); also Tappan, Interfacing of Physical and Vital Forces in Quot. of Science (1850); Idem, Mutual Relations of the Vital and Physical Forces in Transactions of the Philosophical Society of New York, 1865); also Tappan, Interfacing of Physical and Vital Forces in Quot. of Science (1850); Idem, Mutual Relations of the Vital and Physical Forces in Transactions of the Philosophical Society of New York, 1865); also Tappan, Interfacing of Physical and Vital Forces in Quot. of Science (1850); Idem, Mutual Relations of the Vital and Physical Forces in Transactions of the Philosophical Society of New York, 1865).

Among the philosophical works on the subject are: Confucius, La Liberté et la conservation de l'énergie (Paris, 1827); Mercier, La Pensée et la loi de la conservation de l'énergie (Louvain, 1900); de Mennycke in Revue Thomiste (May, 1907), a useful article; Winder, Life (London and St. Louis, 1908); Lapin, Philosophy of Mind (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New York, 1905); V. Maior, Psychology (London and New Year...
Engel, Ludwig, canonist, b. at Castle Wagnerin, Austria, d. at Grillenberg, 22 April, 1674. He became a Benedictine in the monastery of Molk (Melk), 10 September, 1654, and, at the order of his abbot, applied himself to the study of law at the University of Salzburg, where theological studies were committed to the care of the Benedictines. He was proclaimed doctor of civil and canon law in 1657, ordained priest in the following year, and was soon professor of canon law at this university. His profound knowledge and personal qualities procured him the most honourable functions. In 1669 he was unanimously chosen vice-chancellor of the university. He left Salzburg in 1674 at the invitation of the Abbot of Molk, who was desirous that Engel should be known and appreciated by the religious of this monastery, in order to be chosen as his successor. The death of Engel, which occurred in the same year, prevented this plan from being realized. His principal works are: "Manuale procurationum" (Salzburg, 1661); "Forum competens" (Salzburg, 1663); "Tractatus de privilegiis et juriibus monasteriorum" (Salzburg, 1664); and especially his "Collegii universi juris canonici", etc. (Salzburg, 1671-1674), a work remarkable for its conciseness, clearness, and solidity. It has placed its author in the first rank among Benedictine canonists. The fifteenth edition appeared in 1770. A compendium or summary of this work was published in 1720 by Mainardus Schwartzs.

Engelberg, Abbey of, a Benedictine monastery in Switzerland, formerly the Diocese of Constance, but now in that of Chur. It is dedicated to Our Lady of the Angels and occupies a commanding position at the head of the Nidwalden valley in the Canton Unterwalden. It was founded in 892 by Blessed Conrad, Count of Seldenburg, the first abbot being Blessed Adalbert, a monk of the Abbey of St. Blasien in Germany. St. Black Forest, under whom the founder himself received the habit and ended his days there as a monk. Numerous and extensive rights and privileges were granted to the new monastery by various popes and emperors, amongst the earliest being Pope Callixtus II, in 1121, and the Emperor Henry IV. The abbey was placed under the immediate jurisdiction of the Holy See, which condition continued until the formation of the Swiss Confederation in 1492, when Engelberg united with the other monasteries of Switzerland and became subject to a president and general chapter. In spiritual matters the affairs of Engelberg exercised quasi-episcopal jurisdiction over all their vassals and dependents, including the town which sprang up around the walls of the abbey, and also enjoyed the right of collation to all the parishes of the Canton. In temporal matters they had supreme and absolute authority in a large territory embracing over two hundred and fifteen towns and villages, which were incorporated under the abbatial rule by a Bull of Pope Gregory IX in 1236. These and other rights they enjoyed until the French Revolution, in 1798, when most of them were taken away. The prominent position in Switzerland which the abbey occupied for so many centuries was seriously threatened by the religious and political disturbances of the Reformation period, especially by the rapid spread of the Zwinglian heresy, and for a time its privileges suffered some curtailment. The troubles and vicissitudes, however, through which it passed, were happily brought to an end by the wise rule of Abbot Benedict Sigrist, in the seventeenth century, who is justly called the restorer of his monastery. Alienated possessions and rights were recovered by him and the good work he began was continued by his successors, under whom monastic discipline and learning have flourished with renewed vigour. The library, which is said to have contained over twenty thousand volumes and two hundred choice MSS., was unfortunately pillaged by the French in 1798. The abbey buildings were almost entirely destroyed by fire in 1720 but were rebuilt in a substantial, if not very beautiful style and so remain to the present day. The monastery is now (1909) in a very flourishing state, having a community of about fifty and a school of over a hundred boys. The monks have charge of the parish of two thousand souls attached to the abbey and also minister to the needs of seven convents of nuns in the vicinity. In 1873 a colony from Engelberg founded the Abbey of New Engelberg, at Conception, Missouri, U. S. A. Abbot Leodegar Seherer, elected in 1901, was the fifty-third abbot of the monastery.

Engelbert of Cologne, Saint, archbishop of that city (1126-1225); b. at Berg, about 1155; d. near Schwellen, 7 November, 1225. His father was Engelbert, Count of Berg, his mother, Margaret, daughter of the Count of Gelderland. He studied at the cathedral school of Cologne and while still a boy was, according to an abuse of that time, made provost of the churches of St. George and St. Severin at Cologne, and of St. Mary's at Aachen. In 1199 he was elected provost of the cathedral at Cologne. He led a worldly life and in the conflict between Archbishops Adolf and Bruno sided with his cousin Adolf, and waged war for him. He was in consequence excommunicated by the pope together with his cousin and deposed in 1206. After his submission he was reinstated in 1208 and, to atone for his sins, joined the crusade against the Albighenses in 1212. On 29 Feb., 1216, the chapter of the cathedral elected him archbishop by an unanimous vote. In his appearance he was tall and handsome. He possessed a penetrating mind and keen discernment, was kind and clement; and loved justice and peace, but he was also ambitious and self-willed. His archiepiscopal see had passed through severe struggles and suffered heavily, and he worked strenuously to repair the damage and to restore order. He took care of its possessions and revenues and was on that account compelled to resort to arms. He defeated the Duke of Limburg and the Count of Cleves and defended against them also the Counts of Berg, which he had inherited in 1218 on the death of his brother. He
restrained the impetuous citizens of Cologne, broke the stubborness of the nobility, and erected strongholds for the defence of his territories. He did not spare even his own relations when guilty. In this way he gained the universal veneration of his people and increased the number of his vassals from year to year. Although in exterior bearing a sovereign rather than a bishop, for which he was blamed by pious persons, he did not disregard his duties to the Church, but strove to uplift the religious life of his people. The mendicant orders, which had been founded shortly before his accession, settled in Cologne during his administration, the Franciscans in 1219, the Dominicans in 1221. He was well disposed towards the monasteries and insisted on strict religious observance in them. Ecclesiastical affairs were regulated in provincial synods. Blameless in his own life, he was a friend of the clergy and a helper of the poor.

In the affairs of the empire Engelbert exerted a strong influence. Emperor Frederick II, who had taken up his residence permanently in Sicily, gave Germany to his son, Henry VII, then still a minor, and, in 1221 appointed Engelbert guardian of the king and administrator of the empire. When the young king reached the age of twelve, he was crowned on 8 May, 1222, by Engelbert, who loved him as his own son and honoured him as his sovereign. He watched over the king's education and governed the empire in his name, careful above all to secure peace both within and without the realm. At the Diet of Nordhausen (21 Sept., 1223) he made an important treaty with Denmark; in the rupture between England and France, he sided with England and broke off relations with France. The poet Walther von der Vogelweide extols him as "Master of sovereigns", and "True guardian of Cologne, they extol his virtue and call our imperial chancellor those like has never been".—Engelbert's devotion to duty, and his obedience to the pope and to the emperor were eventually the cause of his ruin. Many of the nobility feared rather than loved him, and he was obliged to surround himself with a body-guard. The greatest danger threatened him from among his relations. His cousin, Count Frederick of Isenberg, the secular administrator for the nuns of Essen, had grievously oppressed that abbey. Honorius III and the emperor urged Engelbert to protect the nuns in their rights. Frederick wished to forestall the archbishop, and his wife induced him to commit murder. Even his two brothers, the Bishops of Münster and Osnabrück, were suspected as privy to the matter. Engelbert was warned, commended himself to the protection of Divine Providence, and amid tears made a confession of his whole life to the Bishop of Minden. On 7 Nov., 1225, as he was journeying from Nesselau to Schwelm to consecrate a church, he was attacked on a dark even by Frederick and his associates in a narrow defile, was wounded in the thigh, torn from his horse and killed. His body was covered with forty-seven wounds. It was placed on a dung-cart and brought to Cologne on the fourth day. The young king was bitterly over the remains, put the murderer under the ban of the empire, and saw him broken on the wheel a year later at Cologne. He died contrite, having acknowledged and confessed his guilt. His associates also peri lud miserably within a short time. The crime, moreover, was disastrous for the German Empire, for the young king had now lost his best adviser and soon met a very sad fate, to the misfortune of his house and country.

Engelbert, by his martyrdom made amends for his human weaknesses. His body was placed in the old cathedral at Cologne. 24 Feb. 1226, by Conrad von Urach, Archbishop Ferdinand ordered that his feast be celebrated on 7 November and solemnly raised his remains in 1232. In the martyrlogy Engelbert is commemorated on 7 Nov. as a martyr. A conven for nuns was erected at the place of his death. By order of Engelbert's successor, Henry I, Casarius of Heisterbach, who possessed good information and a ready pen, wrote in 1226 the life of the saint in two hundred and forty-three verses and eight miracles. (See Suria, "Vita Sanctorum", 7 Nov.)

**Engelbert**

Engelbert, Abbot of the Benedictine monastery of Admont in Styria, b. of noble parents at Völkendorf in Styria, e. 1220; d. 12 May, 1331. He entered the monastery of Admont about 1267. Four years later he was sent to Prague to study grammar and logic. After devoting himself for two years to these studies he spent nine years at the University of Padua studying philosophy and theology. In 1297 he was elected Abbot of Admont, and after ruling thirty years he resigned this dignity when he was almost eighty years old, in order to spend the remainder of his life in prayer and study. Engelbert was one of the most learned men of his day, and there was scarcely any branch of knowledge to which his versatile pen did not contribute its share. His literary productions include works on moral and dogmatic theology, philosophy, history, political science, Holy Scripture, the natural sciences, pedagogy, and music. The Benedictine, Berhard Pez, mentions thirty-eight works, and says he published partly in his "Thesaurus ancius damorum novissimus" (Augsburg, 1721), partly in his "Bibliotheca ascetica antiquo nova" (Ratisbon, 1723-5). The best known of Engelbert's works is his historical treatise "De virtute regis et imperii", which was written during the reign of Henry VII (1308-1313). It puts forth the following political principles: a ruler must be a learned man; his sole aim must be the welfare of his subjects; no unjust ruler may be justly deposed; emperor and pope are, each in his sphere, independent of one another. The Holy Roman Empire is a Christian continuation of the pagan empire of ancient Rome; there should be only one supreme temporal ruler, the emperor, to whom all other temporal rulers should be subject. He bewails the gradual decline of both imperial and papal authority, prophesies the end of both, and wishes for the union of the Holy Roman Empire and a wholesale desertion of the Holy See. The work was published repeatedly, first according to the revision of Cluten (Offenbach, 1610); finally it was re-edited by Schott and printed in the Supplement to the "Bibliotheca Patrum" (Col-ogne, 1722) and in "Maxima Bibliotheca veterum Patrum" (Lyons, 1677). Following are the most important of the other works of Engelbert which have been printed: "De gratia et virtutibus beatae et gloriosae semper V. Marie" (Pez, "Thesaurus", I, pt. 1, 503-792); "De libero arbitrio" (ib., IV, pt. 2, 121-147); (ib., IV, pt. 1, 437-502); "De providentia Dei" (Pez, Bibliotheca ascetica, VI, 51-150); "De statu defunctorum" (ib., IX, 113-195); "Speculum virtutis pro Alberto et Ottone Austrie ductibus" (ib., III, entire); "Super passionem secundum Mathaum" (ib., VII, 67-112); "De regimine principum", a work on political science, containing sound suggestions on education in general, edited by Husnagel (Ratisbon, 1725); "De summo bono hominum in hac vita", "Dialogus concupiscientiae et rationis", "Utrum sapienti competat ducere uxorem" (the last three valuable works on ethics were done 1273-1275); "Clementissimi celeberrimi Engelberti", (Ratisbon, 1725); "De musice tractatus", a very interesting treatise on music, illustrating the great difficulties with which teachers of music were beset in consequence of the complicated system of the hexachord with its solmization and mu-
England.—This term is here restricted to one constituent, the largest and most populous, of the United Kingdom of Great Britain and Ireland. Thus understood, England (taken at the same time as including the counties of Wales) is the third part of the United Kingdom, and of Great Britain which lies south of the Solway Firth, the River Liddell, the Cheviot Hills, and the River Tweed; its area is 57,668 square miles, i.e. 10,048 sq. m. greater than that of the State of New York, but 11,067 sq. m. less than that of Missouri; its total resident population in 1901 was 22,386,593, or 78.2 per cent of the population of the United Kingdom. The history of England will be considered in the present article chiefly in its relations with the Catholic Church.—I. Before the Reformation; II. Since the Reformation. The concluding section will be III. English Literature.

Before the Reformation.—For the history of England down to the Norman Conquest the reader may be referred to the article Anglo-Saxon Church. We begin our present account of pre-Reformation England with the new order of things created by William the Conqueror.

Although the picture of the degradation of the English Church in the first half of the eleventh century which has been drawn by some authorities (notably by H. Boehmer, "Kirche und Staat", 79) is very exaggerated, there is nevertheless certain that even King Edward the Confessor, with all his saintliness, had not been able to repair the damage caused partly by the anarchy of the last ten years of Danish rule, but not less surely, if remotely, by the disorders which for many generations past had existed at the centre of Christendom. Of the prevalence of simoniacal practices, of a scandalous and widespread neglect of the liturgy, of a gross profanation of the sacred vessels, and even of a general subordination of the ecclesiastical order to secular influences, there is no room for doubt. These evils were at that time almost universal. In 1065, the year of St. Edward's death, things were no better in England than on the Continent of Europe. Probably they were rather worse. But the forces of reform, the forces to purify and renovate the Church were already at work. The monastic reform begun in the tenth century at Cluny had spread to many religious houses of France and among other places had been cordially taken up in the Norman Abbey of Fécamp, and later at Bec. On the other hand this same asceticism with all its rigour was much to form the character both of Brun, Bishop of Toul, who in 1049 became pope, and is known as St. Leo IX, and of Hildebrand his chief counsellor, afterwards still more famous as St. Gregory VII. Under the auspices of these two popes a new era dawned for the Church. Effective legislation was adopted to restrain clerical incontinence and avarice, while a great struggle began to secure the bishops from the imminent danger of becoming mere feudatories to the emperor and other secular princes. William the Conqueror had established relations of Ricel by the Holy See. He came to England armed with the direct authorization of a papal Bull, and his expedition, in the eyes of many earnest men, and probably even his own, was identified with the cause of ecclesiastical reform. The behaviour of Normans and Saxons on the night preceding the battle of Hastings, when the former prayed and prepared for Communion while the latter cursed, was in a measure significant of the spirit of the two parties. Taken as a whole, the Conqueror's dealings with the English Church were worthy of a great mission. All the best elements in the Saxon hierarchy he hasted and supported. The Wolstan was confirmed in the possession of the See of Worcester. Leofric of Exeter and Siward of Rochester, both Englishmen, as well as some half-dozen prelates of foreign birth who had been appointed in Edward's reign, were not interfered with. On the other hand, Stigand, the intriguing Archbishop of Canterbury, with the support of two other bishops, probably his supporters, were deposed. But in this there was no indecent haste. It was done at the great Council of Winchester (Easter, 1070), at which three papal legates were present. Strong legislation was adopted to secure celibacy among the clergy, though not without some temporary mitigation for the old rural priests, a mitigation which proves perhaps better than any thing else that in the existing generation a sudden and complete reform seemed hopeless. Further, several episcopal sees were removed, e.g. at Winchester, from the mere villages to more populous centres. Thus bishops were transferred from Sherborne to Salisbury, from Selsey to Chichester, from Lichfield to Chester, and not many years after from Dorchestcr to Lincoln, and from Thetford to Norwich. These and the like changes, and, not perhaps least of all, the drafting of Lanfranc's new constitutions for the Christ Church
ENGLAND

monks, were all significant of the improvement introduced by the new ecclesiastical regime. With regard to Rome, the Conqueror seems never to have been wanting in respect for the Holy See, and nothing like a breach with the pope ever took place during his lifetime. In 1071 the archbishops who went to Rome in order to receive their pallium, and when (c. 1078) a demand was made through the papal legate, Hubert, for the payment of arrears of Peter's pence, the claim was admitted, and the contribution was duly sent. Gregory, however, seems at the same time to have called upon the King of England to do homage for his kingdom, requests in the payment of which Edward was acting upon the precedent of vassalage, as in some cases, e.g. that of the Normans in Apulia (see Jensen, "Der englische Peterspfennig", p. 37), it undoubtedly was. But on this point William's reply was clear. "One claim [Peter's pence] I admit," he wrote, "the other I do not admit. To do so I have not been willing in the past, nor am I willing now, inasmuch as I have never promised it, nor do I discover that my predecessors ever did it to your predecessors." It is plain that all this had nothing whatever to do with the recognition of the pope's supramundane, and in fact the king says most explicitly in the concluding sentence of the letter: "Pray for us and for the good estate of our realm, for we have loved your predecessors and desire to love you sincerely and to hear you obediently before all" (et vos pre omnes omnibus sincere diligite et obedienter audire desideramus). Possibly the incident led to some slight difference of opinion, and was, for example, in the negative attitude of Lanfranc towards the antipope Wibert at a later date (see Liebermann in "Eng. Hist. Rev.", 1901, p. 328), but it is also likely that William and his archbishop were only careful not to get entangled in the strife between Gregory and the Emperor Henry IV. In any case, the more strictly ecclesiastical policy of the great pontiff was cordially furthered by them, so that St. Gregory, writing to Hugh, Bishop of York, remarked that although the King of England does not bear himself in all things as religiously as he might be wished, still, as much as he does not destroy or sell the churches, rules peacefully and justly, refuses to enter into alliance with the enemies of the Cross of Christ (the partisans of Henry IV), and has compelled the priests to give up their wives and laymen to pay arrears of tithe, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "Eng. under Normans and Angevins", p. 54) "Lanfranc's correspondence and career prove that he and his master conceded important powers to the Pope not only in matters of conscience and faith but also in administrative questions. They admitted for example the necessity of obtaining the pallium for an archbishop and the Pope's power to invalidate ecclesiastical elections. They were scrupulous in obtaining the Pope's consent when the deposition or resignation of a bishop was in question and they submitted the time-honoured quarrel of York and Canterbury to the decision of Rome. No doubt a strong centralized government was then specially needed in Church as well as State, and we need not too readily condemn Lanfranc as guilty of personal ambition because he insisted on the primacy of his own see and exacted a profession of obedience from the Archbishop of York. The recent attempt that has been made to fasten a charge of forgery upon Lanfranc in connexion with this incident (see Bohmer, "Falschungen Erzbischof Lanfranks") breaks down at the point where the personal responsibility of the great archbishop is involved. Undoubtedly many of the documents upon which Canterbury's claims to supremacy were based were forgeries, and forgeries of the precise period, but there is no proof that Lanfranc was the forger or that he acted otherwise than in good faith (see Walter in "Göttinger gelehrte Anzeigen", 1905, 52; and Salter in "Revue des Sciences Ecclesiées", 1907, p. 123). Well was it for England that William and Lanfranc, without any violent overthrow of the existing order of things, either in Church or State, had nevertheless introduced systematic reforms and had provided the country with good bishops. A struggle was now at last being openly and openly waged which probably more momentous than any other event in his reign down to the time of the Reformation. The struggle is known as that about Investitures, and we may note that it had already been going on in Central Europe for some years before the question, through the action of William II and Henry I, sons of the Conqueror, reached an acute phase. As a result of the eleventh century it may be said that, though the election of bishops always supposed the free choice, or at least the acceptance, of their flocks, the procedure was very variable. In these earlier ages bishops were normally chosen by an assembly of the clergy and people, the neighbouring bishops and the king or civil magnates exercising more or less of influence in the selection of a suitable candidate (see Imbert de la Tour, "Les élections épiscopales"). But from the seventh and eighth century onwards it became increasingly common for the local Churches to find themselves in some degree of dependence upon the central authority of the popes. The ancient principle of "no land without a lord" it was easy to pass to that of "no church without a lord", and whether the bishopric was situated upon the royal domain or within the sphere of influence of one of the great feudatories, men came to regard each episcopal see as a mere fief which the lord was free to bestow upon whom he would, and for which he duly exacted homage. This development was no doubt much helped by the fact that as the parochial system grew up, it was the oratory of the local magnate which in the great majority of cases became the parish church, and it was his private chapel which was transformed into the parish priest. Thus the great landowner became the patronus ecclesiae, claiming the right to present for ordination any cleric of his own choice. Now the relationship of a sovereign towards his bishops came in time to be regarded as precisely analogous. The king was held to be the lord of the lands from which the bishop derived his revenues. Instead of the possession of these lands being regarded as the appanage of the spiritual office, the acceptance of episcopal consecration was looked upon as the special condition or service upon which these lands had been bestowed from the king. Thus the temporal sovereign claimed to make the bishop, to show that he did so, he "invested" the new spiritual vassal with his fief by presenting to him the episcopal ring and crosier. The episcopal consecration was a subordinate matter which the king's nominee was left to arrange for himself with his metropolitan and the neighbouring bishops. Now, as long as the supreme authority was wielded by religiously-minded men, princes who took thought for the spiritual well-being of their kingdoms, no great harm necessarily resulted from this perversion of right order. But when, as too often happened during the iron age, the monarch was godless and unprincipled, he either kept the see vacant, in order to enjoy the revenues, or else sold the office to the highest bidder. It must be obvious that such a system, if allowed to develop unchecked could only lead in the course of a few generations to the utter demoralization of the Church. When the bishops, the shepherds of the flock, were themselves licentious and corrupt, it would have been a moral miracle if the rank and file of the clergy had not degenerated in an equal or even greater degree. Upon the bishop depended ultimately the admission of candidates to ordination, and he also was ultimately responsible for their education and for the maintenance of ecclesiastical discipline.

Now the fact cannot be disputed that in the tenth century a very terrible laxity had come to prevail almost everywhere throughout Western Christendom,
The great monastic reform of Cluny and many individual saints like Ulric, at Augsburg, and Dunstan and Æthelwold, in England, did much to stem the tide, but the times were very evil. Worldly minded men, often morally corrupt, were promoted by sovereigns and temporal magnates to the most important seats of the Church, many of them obtaining that promotion by the payment of money or by simoniacal compacts. The lower clergy as a rule were grossly ignorant and in many cases unchaste, but under such bishops they enjoyed almost complete immunity from punishment. No doubt the corruptions of the age were exaggerated by writers of the stamp of H. C. Lea, Michelet, and Gregorovius, but nothing could more conclusively prove the gravity of the evil than the fact that for two centuries the Church had to struggle with the abuse by which benefices threatened to become hereditary, descending from the priest to his children. Happily help was at hand. Many individual reformers strove to introduce higher religious ideals and met with partial success, but it was the merit of the great pontiff, St. Gregory VII, to go straight to the root of the evil. It was useless to institute decrees against bishops and priests and against their neglect of their spiritual functions if the great feudal lords could still nominate unworthy bishops, bestowing investiture by ring and crosier and enforcing their consecration at the hands of other bishops as unworthily as the candidates. Gregory was firm in the principle that no permanent jurisdiction could be exercised until the system of lay investitures was utterly overthrown. Those who have accused Gregory of insufferable arrogance, of a desire to exalt without measure the spiritual authority of the Church and to humble all secular rulers to the dust, make little allowance for the gravity of the evil he was fighting against. His desperate nature of the struggle. When feudalism seemed on the point of so completely swallowing up all ecclesiastical organization, it was pardonable that St. Gregory should have believed that the remedy lay not in any compromise or balance of power, but in the unqualified acceptance of the principle that the Church was above the State. If, on the one hand, he considered that it was the function of the Vicar of Christ to direct and, if need be, chastise the princes of the earth, it is also clear from the history of his life that he despaired of the power and justice of the State. In England the struggle over investitures developed somewhat later than on the Continent. If, in the matter of the election of bishops, Gregory VII forbore to press the claims of the Church to extremities under such a ruler as William the Conqueror, this was surely not for any lack of audacity. But bishops were appointed to the see and abbeys against the wishes of the abbot, with the result that bribery and the expenses of litigation became the order of the day. The Church was reduced to the condition of a great corporation, the members of which appointed its chief officers and lived at the expense of the State. The Pope's power was in danger. The result was that William Rufus, when he became king, had to be satisfied with the crown of England, and that the possession which belonged to the Church at the time of Lanfranc's death, the king soon returned to his evil ways. In particular he still clung to the theory that by accepting investiture Anselm had become his liege man (ligatus hominum), liable to all the incidents of vassalage. When Anselm died, he was rewarded with the war in Normandy, Anselm at first refused. Then, not wanting to provoke a conflict, he offered 500 marks; but when this sum was rejected as insufficient, he distributed the money to the poor. Early in 1085 the archbishop asked permission to go to Rome to receive the pallium. Rufus objected that, while the antipope Clement III was still disputing the title, it was for him and his Great Council to decide which pope should be recognized. When asked to recognize the jurisdiction of this council, Anselm replied: "In the case that I appeal, the king will tender obedience to the Vicar of St. Peter; in things of earthly dignity of my lord the King I will to the best of my ability give him faithful counsel and help." The other bishops seem to have been cowed by Rufus and to have supported the king's claim to decide which pope should be recognized. But Anselm refused in any way to surrender the allegiance of England, when Abbob of Bec, he had sworn to Urban. He recognized no right of king or bishops to interfere, and he declared he would give his answer "as he ought and where he ought". These words, writes Dean Stephens (History of The English Church, II, 99), were understood to mean, that, as Archbishop of Canter-
bury, Anselm "refused to be judged by any one save the pope himself, a doctrine which it seems no one was prepared to deny." Through the saint's firmness Urban was recognized, and the pallium brought from him to England; but a little later Anselm again asked leave of Rome, and when he was refused he declared in the plainest terms that he must go without leave, for God was to be obeyed rather than man. Pope Urban received him with all possible respect, and publicly spoke of him as "alterius orbis papa," a phrase much quoted by Anglicans, as though it implied the recognition in the Archbishop of Canterbury of a jurisdiction independent of Rome.

But the whole lesson of Anselm's life centred in his belief that it lay with the pope to decide what course was to be followed in matters affecting the Church even at the risk of the king's displeasure, and despite any pretended national customs. Neither does it appear that the rest of the English bishops maintained the contrary as a matter of principle, though they considered that Anselm's attitude was needlessly provocative and uncompromising. There are not wanting signs that Eadmer's desire to exalt his own beloved master had led him to be somewhat less than consistent, and Anselm's suffragans and to the Holy See itself. The archbishop remained in exile until after the death of Rufus, when Henry, who succeeded, made generous promises of freedom to the Church, explicitly renouncing any sort of payment or relief for the appointment of bishops or abbots, and promising that no revenues should not be seized during vacancies. He recalled Anselm to England, but came into conflict with him almost immediately over the same old question of investitures. At the Councils of Bari (1098) and Rome (1099), at which the saint had personally assisted, anathema had been pronounced on all bishops or abbots who received investiture at the hands of laymen. Anselm accordingly refused either to do homage himself for the restitution of the possessions of the archbishopric or to consecrate other bishops who had received ring and crosier from the king. Eventually, by the consent of both parties, the matter was referred to Rome. In three different embassies that were sent, the pope upheld Anselm's view, despite the efforts made by Henry's envoys to extort some concession. Then Anselm himself went to Rome (1108) while a fresh set of royal emissaries were dispatched to work against him at the papa. Nothing was settled, for Henry still held out, and Anselm accordingly remained abroad. But at last, when Anselm was on the point of launching an excommunication against the king, the latter, being in political straits, accepted such modified terms as his emissaries could obtain from the Holy See. Anselm was allowed to consecrate those who had previously received investiture, but the king at a great council (1107) renounced for the future the claim to invest bishop or abbot by ring and crosier. On the other hand it was tacitly admitted that bishops might make homage to the king for temporal provision of their see. The settlement of the investiture question in England was fifteen years earlier than that arrived at on very similar lines between Pope Calixtus II and the Emperor Henry V. The importance of the struggle can hardly be exaggerated, for, as already pointed out, the whole ecclesiastical order was in danger of being reduced to the status of vassals sharing all the vices of secular princes. Moreover this resolute stand made by St. Anselm and the popes was not without its political importance. The clergy as a body had now become sufficiently independent to take a leading part in that remarkable negotiation with the papacy during the next two centuries were to owe their most fundamental liberties. During all this time England as a whole was in no wise in sympathy with the monarch in his quarrel with the pope. As Dr. Gairdner writes of a later period, "It was a contest not of the English people, but of the King and his government with Rome."

As regards national feeling, the people evidently regarded the cause of the Church as the cause of liberty" (Lollards and the Reformation, i, 6). Nothing contributed so much to win the confidence of the nation as the independence shown by the Church in these struggles as those that are associated with the names of St. Anselm, St. Thomas Becket, and Cardinal Stephen Langton. St. Anselm died peacefully at Canterbury in 1109, but Henry I lived on until 1135. During the reign of his son, Stephen I, the struggle with Rome and the independence which prevailed under the rule of Stephen (1135-1154), good bishops were for the most part elected. The chapters were ostensibly left free in their choice, though they no doubt responded in some measure to the known preferences of the king. In any case simoniacal compacts are no longer heard of, while the Holy See had generally much to say to the formal acceptance of the archbishops and of the more important prelates. A certain impatience of dictation from Rome, shown, for example, in occasional unwillingness to receive a legate or to allow appeals to the pope, may be dated from this period, but the principle of papal authority was never questioned. For example, the pallium, "taken from the body of Blessed Peter," a symbol of archiepiscopal jurisdiction which still appears in the arms of the English Sees of Canterbury and York, was personally fetched from Rome or at any rate originally petitioned for by cardinal Langton in the Anglo-Saxon Church from the very beginning. In cases when the pall was brought to England instead of being conferred at the papal court, archbishops like St. Anselm and Ralph d'Escures went to meet it barefoot. To legates of the Holy See, notwithstanding the fact that their presence was not always desired, extreme deference was shown. Even a mere priest like Cardinal John of Crema, when he came to the country as papal legate, took precedence of the two archbishops in the Council of Westminster (1125). Moreover, when protests were made against the sending of legates, it was not so much that the presence of a papal representative in England was resented, as because men believed that such legatine powers, by old tradition, ought to be conferred on the Archbishop of Canterbury, as had been done, for example, in the case of Tewaine, Plegmund, and Dunstan. As Eadmer records (Hist., c. 88), "I, from an ambassado in Britannia... quemlibet hominem supra se vices apostolicea gerere nisolum archiepiscopum Cantuarias" (It was surely an unheard-of thing in Britain that any man should bear the Apostolic delegation over him except only the Archbishop of Canterbury). In the spirit of this protest Archbishop William de Corbeil almost immediately after Crema's departure eagerly sought the office of legate for himself, and from that time, though Henry, Bishop of Winchester, was made legate by Innocent II in 1129, the Archbishop of Canterbury was usually constituted to hold the legatus a latere position in their see. This term was used in contradistinction to the legatus a latere dispatched on extraordinary occasions "from the side" of the sovereign pontiff in Rome. But in any case the significance of the ordinary legatine appointment, first associated with the person of William de Corbeil (d. 1136), is unmistakable. It was, as Dean Stephens truly observes, "an acknowledgment of the supreme authority of the Pope. The primate shone with a reflected glory, his preeminence was not inherent but derivative" (Hist. of the Eng. Church, ii, 142).

Evil as were the times during the first half of the twelfth century the people of England were lacking in vivifying influences. This was the period of the chief development in England of the Cluniac Order (see Cluni, Congregation of), a great Benedictine reform already alluded to, of which the first English house, that of Lewes, had been established by
William de Warrenne and Gundrada his wife c. 1077. But the priory of Lewes later on became the mother of several other Cluniac priories, of which the best known are those of Wenlock, Thetford, Bermondsey, and Pontefract. Still more intimately associated with England was the Cistercian Order, another of the great centres of learning, more particularly in the collection and multiplication of books, and they were not only patrons of art but they provided in many cases the nearest approach to schools for architecture, painting, sculpture, embroidery, and other useful arts. If their works were now lost, another day, another time, they might be remembered, were their charities. Neither would it be easy to imagine a more worthy object upon which to expend the superfluous wealth of the country than in the erecting of those magnificent abbeys and churches which the monastic builders left to posterity. By this movement the order of religious houses grew, and it is said that no more misplaced charge was ever made than that which describes their members as idle and useless. Of all the sections of the community they alone almost in that day were profitably busy. The industrious man-at-arms, the industrious lawyer, the industrious forester, huntman, or jongleur were too often only a scrouge to the land in which they lived.

For this reason we conceive that a quite unnecessary outlay has been raised by a number of Anglican writers against a practice which undoubtedly became very prevalent in the twelfth century, namely that of making the canons of the parish church a religious house. It was a mistake if the saw that no more misplaced charge was ever made than that which describes their members as idle and useless. Of all the sections of the community they almost alone in that day were profitably busy. The industrious man-at-arms, the industrious lawyer, the industrious forester, huntman, or jongleur were too often only a scrouge to the land in which they lived. For this reason we conceive that quite an unnecessary outlay has been raised by a number of Anglican writers against a practice which undoubtedly became very prevalent in the twelfth century, namely that of making the canons of the parish church a religious house. It was a mistake if the saw that no more misplaced charge was ever made than that which describes their members as idle and useless. Of all the sections of the community they almost alone in that day were profitably busy. The industrious man-at-arms, the industrious lawyer, the industrious forester, huntman, or jongleur were too often only a scrouge to the land in which they lived.
With the accession of Henry II, in 1154, England, after years of strife, once more passed into the hands of a strong and capable ruler. Without being a whit less selfish or more patriotic than other princes of that age, Henry had the sense to see that good government must go hand in hand with legal reforms and the new machinery of justice which he brought into being are of the highest possible importance to the jurist and to the student of constitutional history, but they do not specially concern us here. Henry at the beginning of his reign seems to have been well viewed in Rome of his ability, and when, in 1153, his ambassador to the Council of their own accord declared the Bull ‘Laudabiliter’ is unquestionably genuine (see Adrian IV, and cf. ‘The Month’, May and June, 1906), the religious mission entrusted to the king, no doubt upon his own representations, in the proposed conquest of Ireland, bears a close resemblance to the pretense advanced for William the Conqueror’s invasion of Great Britain. In both cases also, the Roman pontiff seems to have claimed dominion, granting the land to the invader as a fief upon payment of a certain tribute. The fact, that, according to the Bull ‘Laudabiliter’, Henry himself had admitted (quod uerum et verba recognoscit) that ‘Ireland and the other islands upon which Christ, the Sun of Justice, has shown himself the prerogative of St. Peter and the Holy Roman Church’, deserves to be borne in mind in connexion with King John’s formal surrender of his kingdom to the Holy See at a later date.

More centrally interesting, however, is the dispute between the king and Thomas, his archbishop, culminating, in 1170, in the martyrdom of the latter. Thomas Becket, a clerk in the household of Theobald, Archbishop of Canterbury, having been strongly recommended to Henry, had been recommended to his intimate friend, and had been consecrated to the See of Canterbury, an office which he had discharged with splendid ability for seven years. After the death of Theobald, Thomas, at the instance of the king himself, was elected Archbishop of Canterbury. He vainly tried to escape from the proposed dignity, but, once appointed, his consecration marked the beginning of a complete change of life. He renounced the chancellorship and all secular pursuits, while he devoted himself to the practice of rigorous asceticism. It was not long before he found himself in conflict with the king, as indeed he had foreseen from the first. The opposition which he raised opened a breach between them of a purely secular nature. Henry demanded that a certain tax called ‘the sheriff’s aid’ should be paid directly into the Exchequer. Thomas, in a Great Council, declared that he was willing to make his contribution to the sheriff’s aid, if he had been customary, but absolutely refused to pay if the money was to be added to the revenue of the Crown. Whether this tax was really the Danegeld, as Bishop Stubbes supposed, is very questionable, but in any case we may share his admiration for this, ‘the first instance of any opposition to the King’s will in the matter of taxation which is recorded in our national history’, and, as he adds, ‘it would seem to have been, formally at least, successful’ (Const. Hist., I, 463). This incident, however, was soon thrown into the shade by the more serious quarrel over the Constitution of Clarendon. What was not to be surmounted by the king was the forefront of the dispute was the alleged inadequacy of the punishment meted out to clergies who were guilty of criminal offences. The statement then made that a hundred homicides had been committed by clergies within ten years rests on no adequate evidence, nor do the cases of which there are definite particulars much more satisfactory (see Morris, ‘Life of St. Thomas’, pp. 114 sqq.). It may be that the king was honestly intent on a scheme of judicial reform, and that he found that the growing jurisdiction of the ecclesiastical courts (the publication of the ‘Decretum Gratiani’ and the increased study of the canon law had made them very popular) was an obstacle in his way. But Becket, who knew him well, suspected that Henry was deliberately striking at the privileges of the Church, and the manner in which a promise was extorted from the bishops to observe the ‘avita consuetudines’ before the latter were made public, as well as the pretence that the Constitutions of Clarendon represented nothing but the customs said to have been observed in the time of Henry I, do not leave the impression of straightforward dealing. The general purport of the Constitutions, when they were last made public, was two main causes. For example, those regarding presentations to benefices, from the jurisdiction of the ecclesiastical to that of the King’s Courts, to restrain appeals to Rome, to prevent the excommunication of the king’s officers and great vassals, and to sanction the king’s appropriation of the revenues of bishops and abbacies. On one clause, that dealing with criminous clerks, much misconception has prevailed. It was formerly supposed that Henry wanted all clerks accused of crimes to be tried in the King’s Courts. But this impression, as F. W. Maitland has shown (Roman Canon Law, pp. 132-3), is quite wrong. Rather every ecclesiastical establishment was to be attacked so that any new form of ecclesiastical jurisdiction which the king might desire could be introduced. A principle of clerical privilege, to degrade a man first and to hang him afterwards was to punish him twice for the same offence. Once degraded, he lost all his rights, and if he committed another crime he might then be punished with death like any other felon. And here also it must not be forgotten that ‘the forces of the state were at St. Thomas represented not only the respect which men feel for a bold fight for principle, but also that blind struggle against the hideous punishments of the age, of which the assertion of ecclesiastical privilege, covering widows and orphans as well as clerks and laity, was a natural expression’ (W. H. Hutton in "Social England", I, 394). After a moment of weakness in the earlier stage of the discussion, St. Thomas, in spite of Henry’s fury, refused to have anything to say to the Constitutions. Among the rest of the bishops he met with little help, but the pope, Alexander III, loyally supported him. The rest of the story is well known. The archbishop soon found himself compelled to leave the kingdom. For nearly six years he remained abroad, an exile and bereft of his revenues. In 1170 a hollow reconciliation was patched up with the king, and Becket returned to Canterbury. But in a few years Canterbury had become a place of pilgrimage throughout Europe. No one who studies carefully the history of the time can escape the immense moral force which such an example lent to the cause of the weak and to the liberties both of the Church and the people, against all forms of absolutism and tyranny. The precise quarrel for which St. Thomas gave his life was relatively a small matter.
What was of supreme importance was the lesson that there was something higher, stronger, and more enduring than the will of the most powerful earthly despot.

The life of the Carthusian, St. Hugh, whom Henry II himself caused to be elected Bishop of Lincoln in 1186, forms an admirable pendant to that of St. Thomas. It may be noted in the first place, in view of the outcry raised a little later against the provision of foreigners to English sees, that St. Hugh was a Burgundian, who even at the end of his life hardly understood the language of the people. But no such rules his diocese better, no man was more beloved alike by his own secular canons of Lincoln and by the numerous religious in his diocese; while, owing to his holiness, his fearlessmness, and his merry humour, he was the only bishop who without yielding an inch of his high prerogatives, preserved his respect and enjoyed the friendship of three such monarchs as Henry II, Richard Cœur de Lion, and John. Very memorable was his firm refusal in the national council to grant Richard an aid in knights and money for foreign warfare. Though the reign of Richard, like that of his predecessors, was still continued to be a period of compromise in law, it was also a period of unparalleled exactions in money. In this case the great Justiciar, Hubert Walter, who was also Archbishop of Canterbury, had made himself the instrument of the king’s designs. Though all the temporal lords submitted, St. Hugh refused. Taken as a whole, these refusal’s “for the convenience sake may be called the national element, was less homogeneous. It comprised the king, the new nobility which represented mainly the great officials of the Crown appointed under Henry I and Henry II, and with these the bishops and clergy almost to a man. Taken as a whole, the two put the advantage of a centralized government and sympathized with the native population, wishing their rights to be respected and justice to be done. Now it was the work of John’s lawful and despotic rule, especially after the restraining influences of Hubert Walter’s withdrawal and death, to break up this combination and to unite all parties against himself. In this the action of Pope Innocent III, culminating in the Interdict and the sentence of deposition pronounced against John, played a most vital part. It is needless to recapitulate the story of the election of Stephen Langton as Archbishop of Canterbury, over which John’s quarrel with the Holy See practically began. But it is well to recall that Langton, who rendered such splendid service to the liberties of his country, and whose name is impossibly associated with Magna Charta, was the pope’s own nominee, and was invested with the episcopal consistory before his death, and would have been consecrated with the full Christ Church monks who had been dispatched to Rome. Under stress of the Interdict and of John’s exactions, the old feudal lords, the clergy, and the new “ministerial” nobility gradually drew together. John found that he had more enemies than he had expected at his investiture. He placed them upon whom he could count, and Philip of France with a great following threatened invasion to enforce the pope’s sentence of deposition. Under these circumstances John made his submission to the legate, Pandulf, promising to receive all the exiled bishops and to make restitution for the injuries and losses the Church had sustained. A few days later, on 13 May, the vigil of the Ascension, 1213, he went even further, for he surrendered his crown and kingdom into the hands of the legate to be received back from him as a fief which he and his successors were to hold of the pope for an annual rent of one thousand marks. It is not unnatural, perhaps, that this transaction should have been denounced by historians in the language of unmeasured indignation. Even Lingard in his day described it as “heaping everlasting infamy on the memory of John”, but the considerations he puts forward in explanation of the act have not been without weight with later students. It may be said to be now generally acknowledged that the idea of such a surrender probably did not originate with the pope, but with John himself (see Davis, England under the Normans and Angevins, p. 190, 1905; 369; Norgate, “Jehan Lackland” 1902, p. 181). As the second of these two writers explains, there is a quite intelligible motive for
ENGLAND

The execution of the Charter, but they were far from retaining the sympathy of all. "Before the conference at Runnymede came to an end," says Mackechnie, "confidence in the good intentions of the 25 executors, drawn it must be remembered entirely from the section of the barony of England, whom a papal fetif (Lingard, II, 333; Rymer, I, 185), and it was certainly contrary to feudal usage for a vassal to contract obligations of this serious kind without reference to the overlord.

That the papal condemnation was not directed in principle against English popular liberties, may be inferred from the fact that the Charter was confirmed in November, 1216, upon the accession of the child king, Henry III, at a time when the papal legate Guazo was all-powerful, and was strongly supported by the new pope, Honorius III. The long reign which began, despite the death of Henry, was a period of much distress in England. The king's weakness and his partiality for foreign favourites involved him in a vast expenditure, while, on the other hand, the taxation thus necessitated could only have been carried through without discontent among the barons, and the latter was entirely lacking. Tales and intrigues of all kinds abounded, and the situation was complicated by constant demands for money made by the Holy See. The exactions of the various legates and the never ending "provisions" of papal nominees to canonries and minor benefices, and the strong feeling at the time, and have formed the favourite theme of historians ever since. It would be useless to deny the existence of very serious abuses, more especially the fact that a large number of French and Italian clergy provided to English barons never visited the country at all, and were content with simply drawing the revenues. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the selectivity of the sources. English chronicler, Matthew Paris. How much Paris's judgment was warped by his prejudices, may be clearly seen in his unfriendly references to the friars, though they were then, at least relatively, in their first fervour. Lingard says of him that he seems to have collected and preserved every scandalous anecdote that would gratify his censorious disposition, and he adds a very strong personal expression of opinion regarding Paris's untrustworthiness (Hist. of Eng., II, 479). It is not wonderful that in that outspoken age Matthew Paris and others like him, finding their pockets touched by the papal demands, should have raised an outcry which went a good deal beyond the actual damage inflicted. This very period, when England, it is alleged, was ground under the heel of papal tyranny, "was in all other fields of action, except the political, an epoch of unexampled progress" (Tout in "Polit. Hist. of England", III, 81). Again, the pope's need of money, owing to the life-and-death struggle with the Hohenstaufen, was real enough. In the eyes of Gregory IX and Innocent IV the wars with the excommunicated German emperor were as genuine a crusade in behalf of the Church of God as that undertaken against the Turks. Moreover, with regard to foreign rulers, to foreigners to English benefices, even after making all allowances for the bitter feeling against aliens which manifested itself so often in the reign of Henry III, it is impossible to deny that the world in the thirteenth and fourteenth centuries, and especially the ecclesiastical world, was cosmopolitan to a degree of which we
can now form no conception. In the early part of the thirteenth century nearly all the oldest and most influential men in England had made at least part of their studies in Paris. The two Archbishops of Canterbury, Stephen Langton and St. Edmund Rich, both men of pure English birth, might be instanced as conspicuous examples, and if Englishmen, had been familiar with the names of many foreign ecclesiastics provided for in England, it must not be forgotten that there was quite a considerable number of Englishmen occupying foreign sees and other positions of emolument on the Continent. This fact is indisputable, and it is produced as Englishmen formed a large proportion of the freebooters who roamed through Italy a century later and accepted the pay of anyone who would hire them—but it is interesting to find it proudly insisted upon by Matthew Paris, who in his indignation at the nomination of foreign ecclesiastics to English benefices, declares that England has no occasion to go abroad to beg for suitable candidates, seeing that she herself was rather accustomed to supply dignitaries for other distant lands ( 44. See ed. Anglia extra fines suis in remotis regionibus personas regiminii ecclesiastrum idoneas, quas debuit alios sequi suas ministrationem.—Historia Major, I, 61).

The cosmopolitan tendencies just alluded to were very much increased in the thirteenth century by one of the greatest religious revivals which the world has seen, viz., that resulting from the foundation and rise of mendicant orders. The reason is no reason to suppose that the effects produced by the preaching of the Franciscan and Dominican friars, who first came to England in 1224 and 1221 respectively, were more remarkable in this country than abroad, but all historians are agreed that the impressions made by this populace of religious mendicants were very marked. The work of spiritual regeneration which they performed at the first was wonderful, and they were warmly encouraged by such holy men and patriotic prelates as the great Bishop Grosseste. It is perhaps more important to note that, despite the accusations of that age, and whatever moral meaning it may be said that at a later date, their zeal was not extinguished, even if it flagged. An impartial historian who has given special attention to the subject says: “For more than three hundred years the mendicant Friars in England were on the whole a power for good up and down the land, the friends of the poor and the evangelisers of the masses. During all that long time they were supported only by the voluntary offerings of the people at large—just as the hospitals for the sick and mireable are supported now,—and when they were driven out of their houses and the churches were looted in common with those of the monks and nuns, the Friars had no broad acres and no manors, no real property to seize, and very little was gained by the spoiling of their goods, but inasmuch as they were at all times the most devoted servants and subjects of the Pope of Rome, they had to go at last, when Henry VIII had made up his mind to rule over his own kingdom and to be supreme head over State and Church” (Jesopp, “History of England”, 34).

It was during the thirteenth and fourteenth centuries that the relations between the medieval English Church and the Holy See assumed their final shape. At least this was the period when with such an outstanding champion as the great Bishop Robert of Lincoln (Grosssteote), or later, under so masterful a ruler as Edward I, or, again, under the growing independence of Parliament, encouraged by such promoters of ecclesiastical action as Wykeford and John of Gaunt in the reign of Edward III, the “Ecclesia Anglicana”, according to the theory recently most prevalent, began to assert herself and resolutely set out to work to put the pope in his place. And here it may be said once for all that not the unnatural impatience of papal supervision and papal interference which was often shown by strong kings like Edward I, and also at times by the clergy themselves, proves absolutely nothing against the acceptance of the pope’s supreme authority as head of the Church. That subordinates should wish to be left free to enjoy a large measure of independence than the ancient Englishmen’s example, may be, for example, may be quite loyal. They may fully recognize in principle the supreme right of the imperial Government, and yet any dictation from home which goes beyond what is customary, and especially when it is of a kind which touches the colonial pocket, provoke resistance and even disobedience. Even a fervent religious order a proposed visitation of some outlying house or province may be met with remonstrance and an appeal to precedent on the part of those who, however doyle, are doubtful of the ability of a foreign authority to understand local conditions. An entire acceptance of the spiritual supremacy of the Holy See is not the least inconsistent with the belief that an individual pontiff, and still more the officials who form the entourage of that pontiff, may be influenced by mercenary or unworthy motives. There is not any form of authority in the world which has not been disobeyed and defied under more or less specious pretexts by those who fully recognize in principle their own subordination. Thus it happens that the supporters of Anglican Continuity theories are able to quote many utterances of medieval writers that sound on one tone, they appeal to many individual acts of disobedience, but they fail altogether in producing any, even the faintest, repudiation in principle of the pope’s spiritual supremacy by the accredited representatives of the pre-Reformation Church. By no historian has this truth been more clearly recognized than the distinguished jurist, F. W. Maitland. Challenging the statement of the Ecclesiastical Courts Commission of 1883, which, largely under the guidance of the eminent historian, Bishop Stubbs, reported that “papal law was not binding in [medieval] England even in questions of faith and morals unless it had been accepted by the national authorities”, Professor Maitland, with an irrefragable array of illustrations drawn mainly from the classical canon-law book of the English pre-Reformation Church, the “Ponvincia” of Bishop Lyndwood (1435), maintains the exact contrary. According to Lyndwood, as Dr. Maitland clearly proves, “The Pope is above the law, . . . to dispute the authority of a papal decretal is to be guilty of heresy, at a time when deliberate heresy was a capital crime”. “The last”, Dr. Maitland continues, “is no private opinion of a glossator, it is a principle to which all bishops, bishops and clergy of the province of Canterbury have adhered by solemn words” (Roman Canon Law, 17). As the same authority goes on to show, not only did the pope claim and obtain recognition of his right to take into his own hands the judgment of every ecclesiastical cause over the head of the bishop, but it was largely through the questions and appeals of English bishops to Rome, asking for decisions, that the fabric of Roman canon law was built up (loc. cit., 53, 66, etc.). In full accord with this we find Archbishop Peckham telling such a monarch as Edward I that the laws given authority in the persons of the popes, and that all kings are bound by those decrees. So we find the Archbishop of Canterbury with all his suffragans writing a joint letter to the pope and telling him that all bishops derived their authority from him as rivulets from the fountainhead (Sandby’s Register). We find the pope carving a big slice from the jurisdiction of English bishoprics, as in the case of the Abbey of St. Albans or of Bury St. Edmunds, and making it absolutely and entirely exempt from episcopal authority. We find the very kings who are supposed by their Statutes of Provisors and Premonastrie to have
ENGLAND

ENGLAND

440

shaken off their allegiance to Rome, begging the sovereign pontiff in most respectful language to issue letters of provision or Bulls of confirmation in favour of such and such an ecclesiastic who enjoys the royal favour. No doubt these statutes of Provisors and Provosts do in some measure carry an important word in the history of the English Church during the fourteenth century, though it is admitted that they were so continually set aside that the permanent result of the legislation was greatly to strengthen the development of the king's dispensing power. The Statutes of Provisors, of which the first was passed in 1351, claimed for the existing bodies and persons the right to elect to prevent freely to the benefices in their gift, and moreover declared invalid all appointments brought about by way of papal "provision", i.e. nomination. Two years later this legislation was supplemented by the first Statute of Praemunire, which enacted that those who brought matters cognizable in the King's Courts before foreign courts should be liable to forfeiture and outlawry. It has been maintained that these acts prove that the English Church did not acknowledge any providing power in the Holy See. To this we may reply (1) that, like all the other English bishops, Grosseteste, like Grosseteste, who is so constantly represented as the champion of English resistance to papal authority, in this matter fully recognized the right in principle, though he protested against abuses in the use of it; (2) that the legislation at least professed to be passed not in a spirit of hostility to Rome, but as a remedy against abuses caused by benefice-providers.—priests thronging to Rome and importing the Holy See for benefits. It was the lay patrons of livings whose interests suffered by the papal provisions who were the chief promoters of the Acts. (3) That the bishops refused to consent to the Acts (Stubbs, "Corr. Hist.", III, 340) and contended to be entered on the rolls of Parliament; (4) that the bishops and clergy petitioned spontaneously and repeatedly for their repeal (ibid., 342), that the universities, in 1399, declared that the Acts operated to the injury of the Church, and that in 1415 the Commons also petitioned the king for the abolition of the Statute of Provisors; (5) that the kings themselves disregarded the Acts and constantly asked the popes to provide to the sees; (6) that it is universally admitted that papal provisions were more numerous after the passing of the Acts than before. In 1302, preceding the Reformation 313 bishops are known to have been provided by the popes; of these 47 were before the passing of the Statute, 266 after it (see Moyes in "The Tablet", 2 Dec., 1893). One thing is certain, that England in several instances owed some of its best and holiest prelates to the action of the popes in providing to English sees in opposition to the known wishes of the king. Stephen Langton, in 1205, St. Edmund Rich, in 1232, and John Peckham, in 1279, are conspicuous examples. We have already said above that a reaction against current Anglican theories regarding the position of the pope in the medieval English Church has been steadily growing during the last quarter of a century. The complete agreement of such writers as Professor F. M. Maitland, Dr. James Gairdner, and Mr. H. Rashdall, approaching the subject along quite different lines of research, is very remarkable. The following passage from one of the most distinguished of the younger school of English historians, Prof. Tout, of Manchester, states the case as frankly as it could have been stated by Lingard himself. After insisting that the Statutes of Provisors and Praemunire, like that of Labourers, or the statutes of bodies and persons in the same regal practice, and after declaring that to the average clergyman or theologian of the day the pope was the one Divinely appointed source of ecclesiastical authority, the shepherd to whom the Lord had given commission to feed His sheep, Prof. Tout continues: "The anti-papal laws of the fourteenth century were the acts of the secular not of the ecclesiastical power. They were not simply antipapal, they were also anti clerical in their tendency, since to the man of the age an attack on the Pope was an attack on the Church. . . . The Englishman, though at no time an important advocate of the curialists, still believed that the Pope was the divinely appointed autocrat of the Church universal. Being a man, a Pope might be a bad Pope; but the faithful Christian, though he might lament and protest, could not but obey in the last resort. The papacy was so essentially interwoven with the whole Church of the Middle Ages, that few ignorant people have less historical basis than the notion that there was an antipapal Anglican Church in the days of the Edwards" (Polit. Hist. of Eng., III, 379). No one who carefully studies the language and acts of such a man as Grosseteste can fail to realize the truth that in spite of all his fearless criticism of the Roman Curia, his attitude of mind is thoroughly reverential to papal authority. The most famous, as being the least temperately worded, of all his pronouncements is now known to have been addressed, not, as formerly thought, to Pope Innocent IV himself, but to one of his subordinates. On the other hand, as Mr. Maitland points out, Grosseteste throughout his life proclaimed in the strongest terms his belief in the plenitude of the papal power. "I know", he says, "and I affirm without any reserve that there belongs to our lord the Pope, and to the Holy Roman Church, the power of disposing freely of the ecclesiastical benefices bestowed by benefactors." And language, acknowledging, for example, the pope to be the sun from which other bishops, like the moon and stars, receive whatever powers they have to illuminate and fructify the Church, was not only maintained by Grosseteste to the end (see "The Month", March, 1896), but re-echoed by Bishop Arundel nearly two centuries afterwards.

So again the occurrences which followed the publication by Boniface VIII of the Bull "Clerici laicos", in the days of Edward I and Archbishop Winchelsea, tend to show that even when the attitude of a position which was too extreme and from which he was forced ultimately to retire, the English Church was not less, but more, loyal to the Apostolic See than other, Continental nations. Nothing could be less true to the facts of history than the idea that England stood apart from the rest of Christendom, with an ecclesiastical law, a theology, or in any essential matter even a ritual, of her own. The cosmopolitanism of the religious orders, especially the mendicants, and of the universities, would alone have sufficed to render this isolation impossible. England's isolation began when she broke away from the Roman obedience, suppressed the religious orders, banished every Catholic priest, and adopted a pronunciation of Latin which no Continental scholar could understand.

The great disturbing force in the ecclesiastical life of England during the fourteenth century, much more than the Statutes of Provisors or even the Black Death, was the rise and spread of Lollardy. We may perhaps doubt if the significance of the movement in this country was by any means as great as that which historians, partly on account of the Bohemian upheaval under John Hus which grew out of Wyclif's doctrines, partly through the favourite modern theory that Lollardy produced the Reformation, have generally attributed to it. Dr. James Gairdner, however, who has recently investigated the whole movement and its sequel with a thoroughness and knowledge of original materials to which no previous historian could lay claim, has brought into light views which tend very seriously to modify the views hitherto very commonly received. In his idea the novelty and the socialistic tendency of the opinions so boldly proclaimed by Wyclif did constitute a grave political danger, a danger which was not, perhaps, so acute in
the reformer’s lifetime because the most startling of his views developed late, only ten years or less before his death (1384), but which were eagerly caught up and even exaggerated by ignorant disciples at a time of weak rule and political unrest. The fact that the Great Schism followed upon the death of the pope before Wyclif’s death added to the complications by leaving the greater part of Christendom in a state of uncertainty as to which of the rival popes had the better claim to men’s allegiance, and to this cause most probably is due the fact that Wyclif was left during his last years to propagate his doctrines entirely undisturbed. That his doctrines were utterly revolutionary, as judged by any standard of opinion tolerated up to that time it would be absurd to deny. No one can fail to see the danger of teaching that there was no real dominion, no real authority, no real ownership of property without the grace of God. From this he deduced the conclusions that a man in mortal sin had no right to anything at all, that among Christians there ought to be community of goods, and that, as to the clergy having property of their own, it was a gross abuse. Similarly he held that every layman had created rights for priest, bishop, and pope; that the pope was only to be obeyed when he taught according to Scripture, and that a king might take away all the endowments of the Church. With these were combined in his later years theological opinions regarding the sacraments and Transubstantiation which were offered at the council and in the Litany of the exiles of the year of the great Peasants’ War of 1381. Wyclif, no doubt, in his philosophical teaching provided safeguards which mitigated the practical consequences of the principles he held, but these were subtleties which were lost upon the more ignorant and fastening on his followers, more or less, on their master’s death. The points that they clearly understood were that tithes were pure alms, and that if the parish priests were not good men the tithes need not be paid; that a priest receiving any annual allowance by compact was simoniacal and excommunicated; that a priest who said Mass in mortal sin did not validly consecrate, but rather committed idolatry; that any priest could hear confessions (without faculties), and in fact that any holy layman proclaimed by God was competent to administer the sacraments without ordination. Such opinions as these, debated among learned men, were not, in the true sense of the word, religious opinions, nor were they primarily intended as such, but based on a constant railing against devotional practices, such as pilgrimages, and against the Roman Court, the fiefs and all ecclesiastical authority, were obviously full of danger to social order at a time when the Black Death was at its height, and the question of villegaigne which resulted from it, had already provided many elements of disturbance.

Speaking of the proceedings against the foremost representative of Lollard opinions, Sir John Oldcastle, in 1413, Dr. Gairdner says: “It seems to have been a life-and-death struggle between established order and heresy”; and Bishop Stubbs, while doing too much honour by far to the fanatic creed of the Wycliffite leader, remarks: “Perhaps we shall most safely conclude from the tenor of history that his doctrinal creed was far sounder than the principles which guided either his moral or his political engagements, and which really sum up the situation. The Wycliffite heresy became for a while a real danger to the peace of the country, as Oldcastle’s insurrection proved. On the other hand, there was very little that was either sane or inspiring in the dreams which inspired the leaders, and which were imparted to their often very ignorant followers. Given the ideas then, and long after, universally prevalent in regard to heresy and the measures of repression necessary to prevent infection from spreading, there was nothing exceptionally cruel or intolerant about the statute “De hereticis ordin predictis” of 1401, which provided that heretics convicted before a spiritual court, and refusing to recant, were to be handed over to the secular arm and burnt. There can be no doubt that before this extreme measure was resorted to much provocation had been given by the preaching of doctrines which all Christians then deemed blasphemous, and which were not confined to Lollardy. Perhaps the greatest of the clerical party saw in the insurrection of the clergy, but touched upon the sanctity of marriage and the observance of Sunday as a day of rest. Dr. Gairdner, after a very careful survey of all the evidence, is satisfied that Archbishop Arundel and his suffragans acted in the interests of public order and discipline. There was a strong temptation to prosecute the leaders of such a movement as Wyclif’s heresy with the greatest possible severity; but the statement is somewhat surprising that there is no evidence of the movement being either supinely or tyrannically. In point of fact after the suppression of Oldcastle’s insurrection and his execution at the stake, Lollardy was no longer to be feared as a political power. Wyclif’s ideas had little hold in England among men of any weight or consideration. They lingered on for a while and perhaps never entirely died down, though prosecutions for heresy became very rare long before the end of the fifteenth century, but they certainly cannot be regarded as a direct and primary cause of the religious changes which took place in the reign of Henry VIII. Perhaps the most important in its practical consequences of all Wyclif’s tenets was the supreme importance which he attributed to Holy Scripture. In his treatise “De Veritate Sacrae Scripturae”, written about 1378, he practically adopts the position that Scripture is the sole rule of faith. It followed in his mind that the word of God, as he understood it, was not accessible to all, and that all men were free to interpret it for themselves. We are told, moreover, by a contemporary and hostile authority, the chronicler Knighton, that Wyclif himself translated the Gospel into English. Upon this and other evidence it is commonly supposed that Wyclif was the first to bring the Bible to the knowledge of English readers and that the medieval Church uniformly adopted the practice of withholding the Scriptures from the laity. It is to the credit of modern students of medieval history that the grave misrepresentations involved in this traditional Protestant view are now generally abandoned (see e.g. Gairdner, “Lollardy“, 1, 100–17; “Cambridge Hist. of Eng. Literature”, i, 56–82). We may summarize from the former of these writers the following conclusions, which represent what is best worth recalling upon this subject. The English Church was not opposed to all principles of the use of vernacular translations. Undoubtedly, translations into English of separate books of Scripture existed as far back as in the days of Bede. It is improbable, however, that a whole Bible in English, as distinct from Anglo-Saxon, was translated into English by Wyclif’s time; neither was it much required, for nearly all who could read, could read the Bible either in the Latin of the Vulgate, which the Church preferred, or in French. There was, however, no express prohibition to translate the Scriptures into English until the publication of the Provincial Synod of Oxford, which was published in 1409. This prohibition was not seemingly occasioned by corrupt renderings or anything liable to censure in the text, but simply by the fact that it was composed for the general use of the laity, who were encouraged to interpret it in their own way without the aid of the Church. These engagements were not to the advantage of the Church and were to be condemned. In fine, Dr. Gairdner concludes: “To the possession by worthy laymen of licensed translations the Church was never opposed, but to place such a weapon as an English Bible in the hands of men who had no regard for authority, and who could use it, without being instructed to use it properly, was dangerous not only to the souls of those who read, but to the peace and order of the Church."
ity and existing probably before Wycli's time. There are not wanting arguments in support of such a contention, but the difficulties are also serious, and the theory cannot be said to have found general acceptance.

The fifteenth century, owing mainly to the long minority of King Henry VI, and to the Wars of the Roses, was a period of political disturbance, and it does not add much to the ecclesiastical history of the country. We shall do well, however, to note that the invention of printing in England, as elsewhere, was cordially welcomed by the Church, and that it was under the shadow of the English Abbeys of Westminster and St. Albans that the earliest presses were erected. Despite the religious indifference which is supposed to have heralded the Reformation, the tone of the literature given to the world at these presses seems to bear witness to the prevalence of a very genuine spirit of piety.

As the story of the English Reformation is more fully told in the second part of this article, while many separate articles are to be found in The Catholic Encyclopedia dealing with particular phases and leading personalities, it is well here to put the general outline of the change as it will suffice to conclude this sketch of pre-Reformation England. Catholic historians and all others, except a small minority representing a particular school of Anglicanism, are agreed that, so far as England was concerned, even after the Wycli movement, the spirit of the dispensation of the Church was rendered impossible by the stirrings of the revival of learning which had done its worst, the position of the Church under the jurisdiction of Rome remained as secure as it had ever been. Lollardry no doubt had inculcated a certain section of the nation, and there were here and there stirrings indicative of a doctrine of spiritualism and of a desire for a reversion to the early days of the Church of St. Peter, but with an episcopate thoroughly loyal to the Holy See and with the support of the king, the strong government, these tremblings threatened no danger to the religious peace of the kingdom at large. Neither does there seem to have been any great decay of moral standards, even during the latter part of the reign of Henry VIII, but with an episcopate thoroughly loyal to the Holy See and with the support of the king, the strong government of the Church, the Church in England was able to maintain itself and to set up the foundation of its future greatness.

The public opinion of the learned world has in all substantial respects endorsed Abbot Gasquet's vindication of the doctrine of the Roman Church as being the true Church, and the decisions of the Church in England during the reign of Henry VIII are indicative of this. The Church of England was able to maintain itself and to set up the foundation of its future greatness.

ENGLAND ENGLAND

many minds. A great part of Germany was already in revolt, and England was not so isolated but that the echoes of controversy reached her shores. All these things had made Henry's task easier, but for the severance of England from the obedience of the pope he, and he alone, was responsible. So far as Parliament had any share in the matter, the Parliament was Henry's to rule. This estimate of the situation, which was long ago put forward by such writers as Dodd and Lingard, has impressed itself of late years with ever-increasing force upon Anglican opinion and will nowhere be found in the writings of Dr. Brewer and Dr. James Gairdner, who, on the contrary, have written on the other side of the question. It is true that the first-hand acquaintance with all the manuscript materials for the reign of Henry VIII, are entitled to speak with supreme authority.

The fact that Henry was himself an amateur theologian and had vindicated against Luther the Catholic doctrine of the sacraments, thereby earning from Leo X the title of "Defender of the Faith," was probably fraught with tremendous consequences in the situation created by his attempted divorce from Queen Catherine. Profoundly impressed with his own dialectical abilities, and with that keen sense of the immense sound of law, and this probably carried him, almost without his being aware of it, into positions from which no retreat was possible to a man of his temperament. It was in 1529 that the papal commission to Wolsey and Campeggio, to pronounce upon the validity of the dispensation granted to Henry, and the humane and practical reform of learning which he was Freemason and Thomas Cranmer and Thomas Cromwell, were ready at hand to second his designs, skilfully anticipating and furthering the king's wishes. To Cranmer is undoubtedly due the suggestion that Henry might obtain sufficient authority for treating his marriage as null if only he procured a number of opinions to that effect from the universities of Christendom. This was acted upon, and, by various arts and after the expenditure of a good deal of money, a collection of highly favourable answers was obtained. From Cromwell, on the other hand, the idea came that the king should make the charge of the most grievous charge, the Church in England and thus get rid of the imperium in imperio. This was ingeniously contrived by the outgoing pretence that the clergy had collectively incurred the penalties of Pramunire by recognizing Wolsey's legislative jurisdiction; though this, of course, had been exercised with the royal knowledge and authority. Upon this preposterous pretext the clergy in convocation were compelled to make a huge grant of money and to insert a clause in the preamble of the vote acknowledging the king as "Protector and Supreme Head of the Church of England, as far as the law of Christ allows." This last clause was only inserted after much debate, though it seems that at that time Henry was willing that the phrase "Supreme Head" should be understood in a way that was not inconsistent with the supremacy of the pope. At any rate, even after this, bishops still continued to receive their Bulls from Rome, and the royal divorce still continued to be pleaded there. Early in 1532 another move was made. The Commons were persuaded to frame a supplication against the clergy of which drafts remain in the handwriting of Cromwell, showing from whom it emanated. This, after various negotiations and a certain number of clauses in the "Submission of the Clergy," by which they promised not to legislate for the future without submitting their enactments for the approval of the king and a mixed committee of Parliament. To bring pressure to bear on the pope, the king caused Parlia-
ment to leave it in Henry’s power to withhold from the Holy See altogether the payment of annates, or first-fruits of bishoprics, which consisted in the amount of the first year’s revenue. By such gradual steps the breach with Rome was brought about, though even as late as January, 1533, application in a form most discreditably insincere was still made to Rome for the Bull of the new Archbishop of Canterbury, Cranmer, who had been elected on Warham’s death, and who took the oaths of obedience to the pope, though he had previously declared that he regarded them as null and void. Almost immediately afterwards Cranmer pronounced sentence of divorce between Henry and Catherine. The king then had Anne Boleyn crowned, and an Act of Succession was passed next year with a preamble and an oath to be taken by every person of lawful age. Parliament all submitted and took the oath, but More and Fisher refused and were sent to the Tower. The climax of the whole work of disruption may be considered to have been reached in November, 1534, by the passing of the Act of Supremacy, which declared the king Supreme Head of the Church of England, this time without any qualification, and which annexed the title to his imperial crown.

A reign of terror now began for all who were unwilling to accept exactly that measure of teaching about matters religious and political which the king thought fit to impose. Fisher and More had been sent to the block, and others, like the Carthusians, who rallied themselves under Cranmer, were dispatched by that ghastly and more ignominious death-penalty assigned to cases of high treason. In virtue of this martyrdom these and many more are now venerated upon our altars as beatified servants of God. The rising in the Midlands known as the Pilgrimage of Grace followed; and, when this dangerous movement had been frustrated by the astuteness and unscrupulous perjury of the king’s representatives, fresh horrors were witnessed in a repression which knew no mercy. Previous to this had taken place the suppression of the smaller monasteries; and that of the larger houses soon followed, while an Act for the dissolution of chantries and free hospitals was passed in 1545, which there was not time to carry entirely into execution before the king’s death. Probably all these things, even the destruction of shrines and images, reflect a certain incapacity in the king’s nature rather than hostility to what would now be called popish practices. In his sacramental theology he still clung to the positions of the “Assertio septem sacramentorum,” the book he had written to refute Luther. Both in the Six Articles and in the “Necessary Doctrine” the dogma of Transubstantiation is insisted upon; and indeed more than one unfortunate reformer who denied the Real Presence was sent to the stake. It was on this side that Henry’s task was hardest. Against the Papalist sympathizers amongst his own subjects he consistently maintained a resolute policy, neither did nor permitted to be cowed into submission. Towards men of Calvinist and Lutheran tendencies, who were represented in high places by Cranmer, Cromwell, and many more, the king had intermittently shown favour. He had used them to do his work. They had been of the greatest assistance in prejudicing the cause of the pope, and even the most violent and scurrilous had rendered him service. True, the railing translation of the New Testament by Tyndale, which had been printed and brought to England as early as 1526, was prohibited, as was Coverdale’s Bible later on, in 1546, very near the close of his reign. It is plain that the security of the maples was not regarded by him as dangerous to public order. Very remarkable are the words used by Henry in his last speech in Parliament, when he deplored the results of promiscuous Bible-reading: “I am very sorry to know how that most precious jewel, the Word of God, is disputed, rhymed, sung and jangled in every alehouse. I am equally sorry that readers of the same follow it so faintly and coldly in living; of this I am sure, that charity was never so faint among you, and virtuous and godly living was never less used, and God Himself among Christians was never less revered, and served.”

If ever a moral and religious cataclysm was the work of one man, most assuredly the first stage of the Reformation in England was the work of Henry VIII. One could wish we knew that the sense of his own personal responsibility for the evils he had done or carried home to him before the hour, when, on 28 January, 1547, he was summoned to his account.

Perhaps the most remarkable feature in the religious condition of England during the last year of Henry’s reign was the fact that besides the king himself, there were probably not a score of persons who were contented with the existing settlement. One large section of the nation was in complete sympathy with the doctrines of the German reformers, and to them the Mass, confession, communion in one kind, etc., which had been preserved untouched throughout all the changes, were simply as gall and wormwood. The greatest advantage, on the other hand, was remarka-

ble in the more remote and thinly populated districts, longed for the restoration of the old order of things. They wished to see the monks back, St. Thomas of Canterbury and the shrines of Our Lady once more in honour, and the pope recognized as the common father of Christendom. During the two short reigns which then intervened before Elizabeth came to the throne each of these parties alternately gained the ascendant. Under Edward VI, the Protector Somerset, and after him the Duke of Northumberland, in full harmony with Cranmer, Hooper, and other bishops even more Calvinistically minded, abolished all remnants of popery. Chantry and guilds were suppressed, and their revenues confiscated, images in the churches, and then altars and vestments were removed and destroyed, while the material desecration was only typical of the outrages done to the ancient liturgy of Catholic worship in the first and second Books of Common Prayer. (See Anglicanism; Anglican Orders; Book of Common Prayer.) The bishops who were more Catholic-minded, like Bonner and Gardiner, were sent to the Tower. Princess Mary was subjected to the meanest and most petty forms of persecution. But it can be maintained that those in power were anointed by any disinterested devotion to Reformation principles. Spoliation in its most vulgar form was the order of the day. It is only of late years that fuller historical research has done justice to what seemed the one redeeming feature in the general work of destruction—the foundation of the grammar.
schools which are known by the name of King Edward VI. We have now learned that not one of these schools was originally of Edwardian creation (see Leach, "English Schools at the Reformation"). Educational resources had already been seriously impaired under Henry VIII, and the death of the King left the name of Edward VI owe nothing to him or his government but a more economic establishment. A good many of them had been chantry schools, for if the chantry priest of old wasted his time in singing for souls he not infrequently did good work as a schoolmaster. So says a judicious summarizer of Mr. Leach's researches.

There can be no doubt that these violent measures provoked a reaction. Already in 1549 there had been serious insurrections all over the country, and more particularly in Devonshire and in Norfolk. On the death of the boy king, in June, 1553, an attempt was made by Northumberland to secure the succession for Lady Jane Grey, but Mary, at least for the time, had the people completely with her, and now it was the turn of Bonner, Gardiner, and the Catholic reaction. Overtures were made to the reigning pope, Julius III, and to the Cardinal Pole, whose mission as envoy to England was unfortunately delayed by the Emperor Charles V for diplomatic reasons connected with the marriage of Queen Mary to his son Philip II, reached England in November, 1554, where he was warmly received. After the Houses of Parliament through the king and queen, and appointed humbly to the reconciliation with the Holy See, Pole, on St. Andrew's day, 30 November, 1554, formally pronounced absolom, the king and queen and all present kneeling to receive it. The restoration of ecclesiastical property confiscated during the previous reign was not insisted upon, so that Mary himself, chiefly remebered by the severity with which the statutes against heresy, now revived by Parliament, were put into force. Crammer had been previously sentenced to death for high treason, and the sentence seems to have been politically just, but it was not of one extended. There seems to have been no desire upon the part of Mary or any of her chief advisers for cruel reprisals, but the reactionary forces always at work seem to have frightened them into sterner measures, and, as a result, Crammer, Latimer, Ridley, and a multitude of lesser Protestant prelates and clergymen, and would not of their own accord have refused to recant their heresies, were condemned and executed at the stake. No one has judged this miserable epoch of persecution more leniently than the historian who of all others has made himself alive in the spirit of the times. Dr. James Gasquet, stanch Anglican as he is, in his latest work, "Lollardy and the Reformation", seems only to press farther the apology which he has previously offered for their terrible measures of repression. Thus he says: "With all this one might imagine that it was not easy for Mary to be tolerant of the new religion, and yet tolerant she was at first, as far as she well could be. The case was simply that there were a number of persons determined not to demand mere toleration for themselves, but to pluck down what they called idolatry everywhere and to keep the Edwaridine service in the parish churches in defiance of all authority, and even the sentences of their fellow parishioners. In short, there was a spirit of rebellion still in the land which had its root in religious bitterness; and if Mary was to reign in peace, and order to be upheld, that spirit must be repressed. Two hundred and seventy-seven persons are recorded to have been burnt in various counties during the first nine months, from the time the persecution began to the death of Mary. But the appalling number of the sufferers must not blind us altogether to the provocation. Nor must it be forgotten that if it be once judged right to pass an Act of Parliament it is right to put it in force." And as the same authority elsewhere says, "Amongst the victims no doubt, there were many true heroes and really honest men, but many of them would have been persecutors if they had had their way." Queen Mary died 17 November, 1558, and Cardinal Pole passed away on the same day twelve hours later.

Todidactic at any length the monastic chronicles, the charters, rolls, and other records which constitute the ultimate sources of our information regarding the medieval history of England in this particular article can in any case be made of the many serviceable works which have been published in recent years. It will be convenient then to follow first the names of some Catholic authors in which the reader is likely to find generally useful, and then to select a section of miscellaneous works, from a standpoint which is at any rate not distinguishedly Catholic.

Non-Catholic Works.—Of general histories, three different series produced within the last few years may be recommended as representative of the best modern scholarship and as conscientiously impartial in the treatment of religious questions: The Political History of England, of which the five volumes reaching from 54 B.C. to A.D. 1547 are written respectively by T. Horne, G. B. Adams, T. E. Tout, C. Oman, H. A. L. Fisher (London, 1904—1955).—Mr. Tout's volume in particular is excellent. A History of Religion in Six Volumes.—The first four volumes, reaching from the beginning to the age of Elizabeth, are written respectively by C. M. Davis, Owen Edwards, and A. D. Innes (London, 1960—1966). By far the best contribution in this series is that of Mr. Davis. The first history on which extend to the death of Queen Mary, have respectively for authors W. H. Hunt, Dean Stanley, A. F. Pollard, and G. A. Gardiner (London, 1901—1902). Dr. Gardiner's work is indispensable to the student of the Reformation period.—The works of the late Bishop Stubbs have a large influence on historical study in England. The most noteworthy are the Constitutional History (5 vols.); the Select Charters, and the histories of the relations to various communities; to which Mr. Hodge, W. E. H. Lecky, W. H. St. John Hope, and C. A. M. Huse, among others, have added their comments. Of these, most published separately, the years during the Norman period are now somewhat out of date, but the chief defect of his work from a Catholic point of view is adherenee to the fiction of a national English Church independent of Rome.—Freeman, Norman Conquest (5 vols.) and William Rufus (2 vols.) show an immense command of detail, but are biased by the author's rather eclectic and imperialist, many of the less reliable conclusions of Stubbe and Freeman will be found corrected in the works of Tailleurs.

which are of primary importance in more than one field. His 
Roman Canon Law in the Church of England (1898) is of 
the very high value as correctly stating the position of the 
Church in regard to the Holy See. His History of English Law 
(1896), Domestic Book and Beyond (1897), and various con-
tributions to Past and Present, Social Studies and Journal 
(1901), are of great importance. His book, especially from a 
legal and constitutional point of view. For the later period ending in the reign of Henry VIII or Mary, the work 
of S. Brading, particularly the Prefaces to the Calendars 
treated under the title of The Reign of Henry VIII (to the 
Death of Wolsey) (1896), is a valuable and important, es-
pecially as correcting the inaccurate uncorrectness of 
Froude. Dr. Gardiner in particular has recently published 
works on the Reformations (2 vols., 1900), which do 
juest full justice to the Catholic position.

Among other works of note may be mentioned: Böhmer, 
Kings and their Last in England and in the Normandie (Leipzig, 
1890); Id., Die Fälschungen Erzbischof Lanfranks (Leipzig, 
1890), and others have shown; Hallam’s Feudal England (London, 1895); Norgate, England under the 
Anglo-Saxon Kings (2 vols., London, 1897); Id., John Lackland (London, 1895); Stevenson, Robert Grosseteste (London, 1899); 
Bliss and Tawney, Calendars of Entries in Papal Registers 
Relating to Great Britain and Ireland (8 vols., already published); 
Jennings, Dr. englisch-Petersburg (Heidelberg, 1903); 
Chadwick, Historical Essays (London, 1903); Id., Historical 
Lectures (London, 1903)—both these able works are much biased by 
the writer’s Anglican standpoint; Jevons, The Coming of the 
Froats (London, 1899); Brewer, Preface to the Monuments 
Franciscans in R. S., and to the works of Geraldus Cambren-
isis; Makower, Constitutional History of the Church of England 
(Leipzig, 1896). While, History of England under the Tudor 
(4 vols. 1892–96); Workman, John Wyclif (London, 1902); 
Dr. Gasquet and the Old English Bible in the Church Quarterly 
Review, 1894; Id., The Maid of France (London, 1906); 
Gardiner, The Poston Letters (3 vols., London, 1872–75); 
Inson, History of the Church of England from 1529 to 1660; 
Lond., 1892); Id., Essex, Rom. Doh., zur Geschichte der 
Reformation in England (2 vols., 1903); Id., Heinrichs VIII (Padborn, 1902)—a Cath. work. Of the 
Dissolution of the Monasteries, there is a study 
Tyttler, England under Edward VI and Mary (2 vols., London, 1899); Leigh, 
English Schools at the Reformations (London, 1898); Pocock, on 
The Reign of Edward VI in English Historical Review, July, 1895.

For social and economic condition of England, see Ashley, 
An Economic History of England (1898); Arnold, Social Studies 
(1902); Id. Economic History of England (1902); Brown, 
(2 vols., Camb. 1898); Tawney, Religious History of 
England, Agriculture and Prices (6 vols., London, 1866–87); Id., Six 
Centuries of Work and Wages (2 vols., 1891); Rashdall,

HERBERT THURSTON.

ENGLAND SINCE THE REFORMATION—The Protestant 
Reformation is the great dividing line in the 
history of England, as of Europe generally. This 
monumental Revolution, the outcome of many causes, 
assumed varying shapes in different countries. The 
Anglican Church sits on which no one has ventured to 
remove, and the Church of England, as it stood in the 
time of the Reformation, is the Anglican Church today, 
with the same important, the same peculiarities, 
the same ecclesiastical and civil government, 
the same authority, the same organization. Lord Macaulay is well warranted in 
saying in his essay on Hallam’s “Constitutional His-
tory”, that “of those who had any important share 
in bringing it about, Ridley was, perhaps, the only 
man who did not consider it a mere political job”, 
and that the Archbishops did not play a part. 
We shall now proceed, first, to trace the 
history of the so-called Reformation in England, 
and then to indicate some of its results.

It was not until the twenty-sixth year of the reign of 
Henry the Eighth—the year 1535—that the Eng-
lish Schism was consummated. The instrument by 
which that consummation was effected was the “Act 
concerning the King’s Highness to be the Supreme 
Head of the Church of England, and to have authority 
to reform and redress all errors, heresies and abuses in 
the same.” The Act was not, as Shakespeare 
has it, that which makes her a whole, is the right of the 
civil power to be the supreme judge of her doctrine.” 
(Allies, “See of S. Peter”, 3rd ed., p. 54.) The Act of 
Supremacy was the outcome of a struggle between 
Henry VIII and the pope, extending over six years. 
Assuredly no such measure was originally contem-
plated. The narrow reformist spirit of Wolsey 
manifested a devotion to the Holy See which Sir 
Thomas More thought excessive (Roper’s Life of 
More, p. 66). The sole cause of his quarrel with 
the See of Rome was supplied by the affair of the 
socalled Divorce. On 22 April, 1530, he ascended the 
English throne, being then eighteen years old; and on 3 June 
the following he was wedded, by dispensation of 
Pope Julius, to the Spanish princess, Catherine, who 
had previously gone through the form of marriage with his 
e Elder brother Arthur. That prince had died in 1502, 
at the age of sixteen, five months after this marriage, 
which was held not to have been consummated; and 
so Catherine, at her nuptials with Henry, was arrayed 
not as a widow, but as a virgin, in a white robe, with 
her hair falling over her shoulders. Henry cohabited 
with her for sixteen years, and had issue three sons, 
who died at their birth or shortly afterwards, as well 
as a daughter, Mary, who survived him. In that 
time, and until several years after the death of his 
wife, Henry, never a model of conjugal fidelity, 
conceived a personal repulsion for his wife, who was 
six years older than himself, whose physical charms 
had faded, and whose health was impaired; he also 
began to entertain scruples as to his union with her. 
Whether, as an old prude, he did not suspect that 
her scruples were suggested to him by Cardinal Wolsey, 
or whether his personal repulsion prepared the way for 
them, or merely seconded them, is uncertain. But 
certain it is that about this time, to use Shakespeare’s 
phrase, “the King’s upon some errant too tender 
body”, that lady being Anne Boleyn. Here, again, 
each chronololgy is impossible. We know that in 
1532 Cardinal Wolsey repelled Lord Percy from a 
project of marriage with Anne on the ground that “the 
King intended to prefer her to another”. But there is 
no evidence that Henry then desired her for himself. 
However that may have been, several years elapsed 
befre his passion for her, whatever the date of its 
origin, gathered that overmastering force which led 
him to resolve with fixed determination to put away 
Catherine in order to possess her. For marriage was 
now almost generally considered as a fruitless 
enterprise by experienced persons. Henry’s relations with her family had been 
scandalous. There is evidence, strong if not abso-
lutely conclusive—it is summed up in the Introduction 
to Lewis’ translation of Sander’s work, “De 
Schismate Anglicano” (London, 1877)—that he had 
had an intrigue with another ghost, fastened on the 
royal crest, at one time widely credited, that she was his own 
daughter. It is certain that her sister Mary had been his mistress, and had been very poorly provided for 
by him when the liaison came to an end, a fact which 
doubtless put Anne in a very unpleasant position. 
That the king had contrived precisely the same affinity with her, 
by reason of this intrigue, as that which he alleged to be the 
cause of his conscientious scruples with regard to Cath-
tine, did not in the least weigh with her, or with him. 
The first formal step towards the putting away of 
Catherine appears to have been taken in 1537, when 
Henry caused himself to be cited before Cardinal Wol-
sey and Archbishop Warham on the charge of living 
incestuously with his brother’s widow. The pro-
cedings were secret, and the Court held three sessions, 
then adjourning sine die for the purpose of consulting 
with the pope; but the matter was not referred to the 
church courts, and the question whether marriage with a deceased brother’s wife was lawful. The majority of the replies were in the affirmative, with the proviso that a papal dispensation 
had been obtained. Henry, thus baffled, then deter-
mined to proceed in common form of law, and Sir 
Francis Gurry in his learned work, “Marrige, and 
Family Relations”, has summed up the proceedings as
follows: "By a process well known to Ecclesiastical Law, the King wished to institute his suit in the Appeal Court for this purpose given original jurisdiction. With this object, instead of, as originally intended, suing in an English Consistory or Arches Court, from which he had to Rome, otherwise called the Roman Curia, occupied by the armies of Charles V, a commission from Pope Clement, dated June 9, and confirmed by a pollicitatio dated July 13, 1528, was obtained constituting the two cardinals a Legata Papal Court of both original supreme and ultimate jurisdiction and to proceed judicially. The Court opened July 21, 1528, there followed citation, advocates, examination, and publication, and on Friday, July 23, 1529, the cause was ripe for judgment. At that day Campejus [Campeggio] adjourned his October, on the ground that the Roman vacation, which he was bound to observe, had already begun. But in September the advocate of the cause to Rome, and inhibition of the Legata Court, given by Clement contrary to his written promise on the word of a Pope, had arrived in England, and the Court never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment till last, in November, 1532, the
ried Act, 1532, and, in the following year, May, 1533, Cranmer, Archbishop of Canterbury, gave sentence of nullity. At Rome the cause dragged on,
there is a gap at this epoch in the report of the Rota, and it does not appear if there was any argument of the side of the Norman, or 'answer' of the defendant. At any rate, the defence by the defendant, - till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage with Katherine valid, and ordered restitution of conjugal rights.

The Act of 1535 (26 Hen. VIII, c. 1) above quoted - it is commonly called the Act of Supremacy - which transferred to the king the authority over the Church in England hitherto exercised by the pope, may be regarded as Henry's answer to the papal sentence of 1534. But, as Professor Brewer remarks, "to this result the king was brought by slow and silent steps". The Act of Supremacy was in truth simply the last of a series of enactments whereby, during the whole progress of the matrimonial cause, the king sought to intimidate the pontiff and to obtain a decision favourable to himself. Seven statutes in particular may be noted as preparatory or leading up to the Act of Supremacy. The 21 Hen. VIII, c. 13, prohibited, under pecuniary penalties, the obtaining from the Holy See of licences for pluralities or non-residence. The 23 Hen. VIII, c. 9, forbade the citation of a person out of the diocese wherein he dwelt, except in certain specified cases. The 23 Hen. VIII, c. 6, which is entitled "Concerning the restraint of payment of annates to the See of Rome", was not only an attempt to intimidate, but also to bribe the pope. It forbade, under penalties, the payment of firstfruits to Rome, provided that, if the Bulls for a bishop's consecration were in consequence denied, he might be consecrated without them, and authorized the king to disregard any consequent ecclesiastical censure of "our Holy Father the Pope" and to cause Divine service to be continued in spite of the same; and further empowered the King by letters patent, or of商 his assent to the Act, and at his pleasure to suspend, modify, annul and enforce it. The Act was in
fact what Dr. Lingard has called it, "a political experiment to try the resolution of the Pontiff". The experiment failed, and in the next year the royal assent was given to the Act by letters patent. In the same year a Bill passed the Statute, 24 Hen. VIII, c. 12, prohibiting appeals to Rome in testamentary, matrimonial, and certain other causes, and requiring the clergy to continue their ministrations in spite of ecclesiastical censures from Rome. The next year witnessed the passing of the Act (25 Hen. VIII, c. 19) "for the submission of the clergy to the King's Majesty", which prohibited all appeals to Rome. The Act following this in the Statute Book abolished annates, forbade, under the penalties of prenunire, the presentation of bishops and archbishops to "the Bishop of Rome", and the procuring from him of Bulls for their consecration, and established the method still existing in the Anglican Church (of which more will be said later on) of electing, confirming, and consecrating bishops. It was immediately followed by an Act forbidding, under the same penalties as above, the holding of Bulls to the Pope, or the Roman see, for "licenses, dispensations, faculties, grants, rescripts, depositions or other instruments or writings", to go abroad for any visitations, congregations, or assembly for religion, or to maintain, allow, admit, or obey any process from Rome. The net effect of these enactments was to take away from the pope the headship of the Church of England. That headship the Act of Supremacy conferred on the king.

This sudden falling away of a whole nation from Catholic unity, is an event so strange and so terrible as to require some further explanation than Macaulay's, who refers to it as the "brutal passion of Boleyn", and "the policy" of Henry VIII. In fact the struggle between that monarch and the pope was the last phase of a contest between the papal and the royal power which had been waged, longer or briefer truces, from the late middle ages to the conquest. The Second Henry was no less desirous than the Eighth to emancipate himself from the jurisdiction of the supreme pontiff, and the destruction and pillage of the shrine of St. Thomas a Becket was not merely a manifestation of uncontrollable fury and unscrupulous greed; it was also Henry VIII's way of redressing a passage of nearly four hundred years' standing. The reason why Henry VIII succeeded where Henry II, a greater man, had failed must be sought in the political and religious conditions of the times. Von Ranke has pointed out that the state of the world in the sixteenth century was "directly hostile to the papal domination. The civil power would no longer acknowledge any higher authority" (Die römischen Päpste, I, 39). In England the monarch was virtually a tyrant. The Wars of the Roses had destroyed the old nobility, formerly an effective check upon regal despotism. Brewer writes, "Thus opened the way for Henry, in theory as well, was absolute both in theory and practice. Government was identified with the will of the Sovereign; his word was law for the conscience as well as for the conduct of his subjects. He was the only representative of the nation. Parliament was little more than an institution for granting subsidies" (Brewer, Letters and State Papers, II, Part I, p. excii, Introduct.). The lax lives led by too many of the clergy, the abuses of pluralities, the scandals of the Consistorial Courts, had tended to weaken the influence of the priesthood; "the papal authority", to quote again Brewer, "had ceased to be more than a mere form in observation."

The influence of the ecclesiastical order as a check upon arbitrary power was extinct at the death of Wolsey. "Thus it was that the royal supremacy was now to triumph after years of effort, apparently fruitless and often purposeless. That which had been present to the English mind was now to come forth in a distinct consciousness, armed with the power that nothing could resist. Yet that it should come forth in such a form is marvellous. All events had prepared the way for the King's temporal supremacy: opposition to Papal authority was familiar to men; but a spiritual supremacy, and the ecclesiastical headship of England, separated Henry VIII from all his predecessors by an immeasurable interval, so was it without precedent and at variance with all tradition" (Brewer, Letters and State Papers, I, cvii, Introduct.). Henry VIII made full proof of his ecclesiastical
ministry. In 1535 he appointed Thomas Cromwell his vicegerent, vicar-general, and principal official, with full power to exercise all and every that authority appertaining to himself as head of the Church. The vicar-general's function was, however, confined to ecclesiastical discipline. The settlement of doctrine Henry took under his own care and, as is related in the preamble to the "Act abolishing diversity of opinions" (31 Hen. VIII, c. 14), "most graciously vouchsafed, in his own princesly person, to descend and come into his High Court of Parliament" and there expounded his theological views, which were embodied in that Statute, commonly called "The Statute of the Six Articles". It was in 1539 that this Act was passed. It asserted Transubstantiation, the sufficiency of communion under one kind, the obligation of clerical celibacy, the validity "by the law of God" of vows of chastity, the excellence of private masses, the necessity of the sacrament of penance. The penalty for denial of the first article was the stake; of the rest imprisonment and forfeiture as of felony. But while thus upholding, after his own fashion, Catholic doctrine, Henry had possessed himself of a vast amount of ecclesiastical property by the suppression first of the smaller and then of the larger religious houses, thus laying the foundation of English pauperism.

After the death of Henry (1547) the direction of ecclesiastical affairs passed chiefly into the hands of Thomas Cranmer. Lord Macaulay has described him accurately as "a supple, timid, interested courtier, who rose into favour by serving Henry in the disgraceful affair of his first divorce", who was "equally false to political and religious obligations", and who had been drawn up by the aid of ecclesiastical property by the suppression first of the smaller and then of the larger religious houses, thus laying the foundation of English pauperism.

of the Holy Ghost.” Notwithstanding this encomium, it was superseded, within four years, by a second Cranmerian Prayer Book, not similarly commended in the Act prescribing it, in which the slight outward similarity to the Mass, preserved in the Communion Service of the 1549 First Prayer Book, was obliterated. The Ordinal underwent similar treatment; the sacrificing priest, like the Sacrifice, was abolished. Another of Cranmer’s exploits was the compilation of Forty-two Articles of Religion which, reduced to Thirty-nine and slightly recast, still form the Confession of Faith of the Anglican Communion. In 1556, under Mary, he modified the Act, taking with the stake, after various by copious recantations—Sander avers that “he signed them seventeen times with his own hand”—to save his life. This severity, though doubtless impolitic, can hardly be deemed unjust if his career be carefully considered. But his work lived after him and formed the basis of the ecclesiastical legislation of Elizabeth, when Mary’s brief reign came to an end, and with it the ineffectual endeavour to destroy the new religion by the fagot. Mary’s fiery zeal for the Catholic Faith failed to undo the work of her two predecessors, and unquestionably did ill service to the Catholic cause. It would be foolish to blame her for not practicing a toleration utterly alien from the temper of the times. But there can be no question that Green is well warranted in writing that to her is due “the bitter remembrance of the blood shed in the cause of Rome which, had she tolerated and respected, or must lawfully have used and exercised, by authority of his supremacy, before that date”. Elizabeth, by the first Act of Parliament of her reign, repealed this Statute, and revived the last six of the seven Acts against the Roman pontiff passed between the 21st and 26th year of Henry VIII of which she had given an account, and also certain other anti-papal Statutes passed subsequently to the enactment of Henry’s Act of Supremacy. That Act was not revived, doubtless because Elizabeth, as a woman, shrank from assuming the title of Supreme Head of the Church bestowed by it on the sovereign. But, although she did not take to herself that title, she took all the authority implied therein by this first Act of her reign. It vests the plenitude of ecclesiastical jurisdiction in the Crown and the Queen's Highness, who is described as “the only Supreme Governor of this realm as well in all spiritual and ecclesiastical things as temporal, and it prescribes the oath recognizing her to be so for all holding office in Church and State. The next Act on the Statute Book is the Act of Uniformity. It orders the use in the churches of the second Prayer Book of Edward VI, in the place of the Catholic rites, and provides penalties for ministers disobeying this injunction. It also enforces the attendance of the laity at the parish church on Sundays and holidays, for the new service. This was the definite establishment of the new religion in England, the consummation of the revolution initiated by Henry VIII. The bishop of Kitchen of Llandaff, refused to accept it, as did about half the clergy. The majority of the laity passively acquiesced in it, just as they had acquiesced in the ecclesiastical changes of Henry, and Edward, and Mary. Its effect was, virtually, to reduce the Church of England to a department of the State. The Anglican bishops became, and are still, nominees of the Crown, election by the dean and chapter, where it exists—in some of the newer dioceses there are no chapters, and the bishops are appointed by Letters Patent—a mere formalism of which Emerson writes: “An Act of the Dean and Canons a congé d’élire, or leave to elect, but also sends them the name of the person whom they are to elect. They go into the Cathedral, chant and pray; and after these invocations invariably find that the dictates of the Holy Ghost agree with the recommendation of the King.” If they arrived at any other conclusion, they would be involved in the ruinous results of a prelature. The Convocations of York and Canterbury are similarly fettered. They cannot proceed so much as to discuss any project of ecclesiastical legislation without “Letters of Business” from the Crown. The sovereign is the ultimate arbiter in causes, whether of faith or morals, within the Anglican Church, and his decisions of them given by the voice of his Privy Council, are irrefutable. But of course in these days the sovereign practically means the Legislature. “The National Church”, Cardinal Newman writes in his “Anglo-Catholicism”, “is part of the Nation, just as the Law or the Parliament is part of the Nation.” “It is simply an organ or department of the State, all ecclesiastical acts really proceeding from the civil government.” “The Nation itself is the sovereign Lord and Master of the Prayer Book, its interpreter.”

Queen Elizabeth’s Acts of Supremacy and Uniformity form, in the words of Hallam, “the basis of that restrictive code of laws which pressed so heavily, for more than two centuries, upon the adherents of the Roman church”. It is not necessary here to describe in detail that “restrictive code”. An account of it will be found in the first chapter of “A Manual of the Law specially affecting Catholics”, by W. S. Lilly and J. P. Wallis (London, 1893). But we may observe that the queen who originated it was animated by very different motives from those which influenced her father in his revolt against Rome. Sander has correctly said, “he gave up the Catholic faith for no other reason in the world than that which came from his lust and wickedness”; and, indeed, while severing himself from Catholic unity, and pillaging the possessions of the Church, he was as far as possible from sympathising with the doctrines of Protestantism and savagely repressed them. Elizabeth, by the very necessity of her position, was driven—we speak ex humano die—to espouse the Protestant cause. No doubt, as Lingard writes, “it is pretty evident that she had no settled notions of religion”; and she freely exhibited her contempt for her clergy on many occasions—notably on her death-bed, when she drove away from her presence the Archbishop of Canterbury and certain other Protestant prelates of her own making, telling them “she knew full well that they were hedge priests, and took it for an indignity that they should speak to her” (Dissenting Church History). But, like Cranmer, if she had no religious convictions, she had the conviction of her interests. Her lot was plainly cast in with the Protestant party. Rome had declared her mother’s marriage null, and her own birth illegitimate. Catholics, in general, looked upon Mary Queen of Scots as the rightful claimant to the throne which she occupied. Throughout her reign Church policy and State policy are conjoint: But Janus-faces, looking different ways.

The Anglican Church, as established by her, was a mere instrument for political ends; in her own phrase, she “tuned her pulpit, but the stake which was religio, was currently accepted in her time. It seemed according to the natural order of things that the people should profess the creed of the prince. Elizabeth is not open to the charges made against her sister of religious fanaticism. But she was given up to that
“self will and self worship” which Bishop Stubbs justly attributes to her father. And, in the well-weighed words of Hallam, “she was too deeply imbued with arbitrary principles to endure any deviation from the mode of worship she should prescribe.”

It was the Feast of St. John Baptist, 1559, that this statute took effect which abolished throughout England the old worship, and set up the new. Thenceforth Catholic rites could be performed only by stealth, and at the risk of severe punishment. But during the first decade of the queen’s reign Catholics were treated with comparative lenity, occasional fines, and imprisonment being the severest penalties employed against them. Camden and others assert that they enjoyed “a pretty free use of their religion”; but this is too strongly put. The truth is that a vast number were Catholic at heart temporized, resorting to the new worship more or less regularly, and attending secretly, when opportunity offered, Catholic rites celebrated by the Marian clergy commonly called “the old priests.” Of these a considerable number remained scattered up and down the country, being generally found as chaplains in private houses. These occasions of worship were supported by the vague hope of political change which might give relief to their consciences. Elizabeth and her councillors calculated that when the old priests dropped off, through death and other causes, people generally would be won over to the new religion. But it did not turn out as was expected. As the occasions of the supply of Catholic clergy began to engage the minds of those to whom they had ministered. Moreover, stricter conceptions of their duty in respect of heretical worship were gaining ground among English Catholics, partly on account of the decision on the question of the temporal powers of the Church in Trent, that attendance at it was “grievously sinful,” inasmuch as it was “the offspring of schism, the badge of hatred of the Church.” Then a man appeared whom Father Bridgett rightly describes as “the father, under God, of the Catholic Church in England after the destruction of the ancient hierarchy,” to whom “principally, we owe the continuation of the priesthood, and the succession of the secular clergy.” That man was William Allen, afterwards cardinal. He conceived the idea of an apostolate having for its object the perpetuation of the Faith in England, and in 1568 he founded the seminary at Douai, then belonging to Spanish Flanders, which was for so many generations to minister to the wants of English Catholics. It is notable as the first college organized according to the rules and constitution of the Council of Trent. They were missionaries, full of zeal, and not counting their lives dear, who were sent out from this institution, revived the drooping spirituals of the faith in England and maintained the standard of orthodoxy. Elizabeth viewed with much displeasure this frustration of her hopes, nor was the Bull “Regnans in excelsis,” by which, in 1570, St. Pius V declared her deposed and her Catholic subjects released from their allegiance, calculated to mollify her. Increased severity of the penal laws marks the rest of Elizabeth’s reign. By the Act of Supremacy Catholics offending against that statute had been made liable to capital punishment or to the banishment of priests and clerks. Thus they were forced to escape the odium attaching to the infection of death for religion. Few will now dissent from the words of Green in his “Short History”: “There is something even more revolting than open persecution in the pernicious brands every Catholic priest as a traitor, and all Catholic worship as disloyalty.” But during the time, the policy succeeded, and the martyrs who suffered for no other cause than that their Catholic faith were commonly believed to have been put to death for treason. In 1581 this offence of spiritual treason was the subject of a far more comprehensive enactment (23 Eliz., c. 1). It qualified as traitors all who should absolutely or reconcile others to the See of Rome, or willingly be so absolved or reconciled. Many English historians (Hume is the most considerable of them) have affirmed that “sedition, revolt, even assassination were the means by which seminary priests sought to compel their adherents to adhere to the new religion.” This sweeping accusation is not true. No doubt Cardinal Allen, the Jesuit Persons [see PERSONS (PARSONS), ROBERT], and other Catholic exiles were cognizant of, and involved in, plots which had for their end the overthrow, not would some of the conspirators have shrunk from taking her life any more than the queen’s? But the relation of a vast number of the exiles, the whole Society of which Persons was a foremost representative, and desired the exclusion of Jesuits from English Colleges and from the English mission. When the Armada was expected they repaired in every county to the standard of the Lord Lieutenant, and being now not be suspected of plotting against the national independence for their religious belief. They received from Elizabeth a characteristic reward. “The Queen,” writes Lingard, “whether she sought to satisfy the religious animosities of her subjects, or to display her gratitude to the Almighty by removing remnants of His enemies, reconciled her triumph with the immolation of human victims” (History of England, VI, 255). In the four months between 22 July and 27 November, of 1588, twenty-one seminary priests, eleven laymen, and one woman were put to death for their Catholic faith. In the second year of Elizabeth’s reign twenty-eight of her subjects groaned under persecuting, in which one special note was the systematic use of torture. “The rack seldom stood idle in the Tower during the latter part of her reign,” Hallam remarks. The total number of Catholics who suffered under her was one hundred and eighty-nine, one hundred and twenty-eight of them being priests, fifty-eight laymen, and three women. To them should be added, as Law remarks in his “Calendar of English Martyrs” (London, 1870), thirty-two Franciscans who were starved to death.

Notwithstanding the severities of Elizabeth, the number of Catholic clergy on the English missions in her time was considerable. It has been estimated that at the end of the sixteenth century they amounted to three hundred and sixty-six, fifty being survivors of the old Marian priests, three hundred priests from Douai and the other foreign seminaries, and sixteen priests of the Society of Jesus. On the queen’s death the eyes of the persecuted remnant of the old faith turned hopefully towards James. Their hopes were doomed to disappointment. That prince took himself seriously as head of the English Church. He chose rather to be the successor of Elizabeth than the avenger of Mary Stuart, and continued the savage policy of the late queen. The year after his accession an Act was passed “for the due execution of the Statutes against Jesuits, Seminary priests and other Dissenters”, which took their effect by compelling Catholics of sending their children to be educated abroad, and of providing schools for them at home. In the course of the same year a proclamation was issued banning all missionary priests out of the kingdom. The next year is marked by the Gunpowder Plot, “the conspiracy”, as Tierney but, for the observant persons of desperate fortunes, who, by that means, brought an odium upon the body of Catholics, who have ever since laboured under the weight of the calumny, though no way concerned.” Soon afterwards a new oath of allegiance was devised, rather for the purpose of dividing than of relieving Catholics. It
was incorporated in "An Act for the better discovery and repression of Popish recusants" (a recusant Catholic was simply one who refused to be present at the new service of the Protestant religion in the parish church), and was directed against the depressing power. Then, and dispersal in the course of time, some Catholics had among them being Blackwell the Archpriest. Twenty-eight Catholics, of whom eight were laymen, suffered under James I, but that prince was more concerned to exact money from his Catholic subjects than to slay them. According to his own account he received a net income of £26,000 a year from the fines of recusants. But "Let not virtue seek remuneration for the thing it was" is a lesson written on every page of the history of the Stuart's Catholics. Hume, in a paper presented to the House of Lords by Lord Arundell of Wardour, that they might receive the benefit of the Declaration of Breda. Charles was inclined to give them "liberty of conscience", but Lord Chancellor Hyde, afterwards Earl of Clarendon, we read in Kenneth's "Register and Chartulary", was of the point, that His Majesty was obliged to yield rather to his importunities than his reasons". The king, who, as himself expressed it, was not minded to set out again on his travels, recognized that there was in the nation a strong anti-Catholic feeling, and bowed to it, though himself intellectually convinced of the truth of the Catholic religion. The laws against Papists remained on the statute book, and, from time to time, proclamations—they were, it is true, for the most part brutum fulmen—were issued requiring Jesuits and other priests to quit the kingdom under the penalty of expulsion. A singular instance of over masterying anti-Catholic prejudice prevailing in the nation is supplied by the monument erected by the Corporation of London to commemorate the Great Fire of 1666. It bore an inscription in which Catholics were accused of being the authors of that calamity, a monstrous assertion to which no shrive of evidence was ever adduced. Where London's column pointing to the skies, Like a tall bully lifts its head and lies, Pope had the courage to write. But not until the nineteenth century was well advanced was the column erased. It is not possible here to follow, even in briefest outline, the course of Charles II's reign. We may, however, point out that two things are necessary to a right view of it: to understand the character and aims of Charles II, and to recognise the calamity that befell the English nation. Idle, voluptuous, and good-humoured edly cynical, Charles certainly was; but he possessed deep knowledge of human nature, great political tact, and remarkable tenacity of purpose. That he preferred the Catholic religion to any other, is certain; and it is only fair to him to say that he sincerely believed in the Church of Rome. But he recognized the strong Protestant feeling of the people over whom he ruled, and was not prepared to imperil his crown by defying it. He was, however, really desirous to do what he could, without risk to himself, for the relief of Catholics; and this was the motive of his Declaration of Indulgence in 1672, by which he ordered "that all manner of penal laws on matters ecclesiastical against whatever sort of Non-conformist or recusants" should be suspended, and gave liberty of public worship to all dissentents, except Catholics, who were allowed to celebrate the rites of religion in private houses only. This declaration was sovereignly displeasing to all parties in the House of Commons, who answered it by a resolution "that penal statutes in matters ecclesiastical cannot be suspended except by consent of Parliament", and refused supplies until the declaration was recalled. That was a convincing argument to Charles. He recalled the declaration forthwith. Parliament then proceeded to pass a bill—it went through both Houses without opposition, and Charles dared not refuse his royal ascent to it—which required every one in the civil and military employment of the Crown to take the oaths of allegiance and supremacy, and to receive the Eucharist according to the rites of the Church of England. One effect of this Act (13 Car, II, St. 2, c. 1) was to deprive James, Duke of York, who had become a Catholic, of his office of Lord High Admiral.
During the next nine years the struggle between the king and the Parliament continued. The popular leader was Ashley, Earl of Shaftesbury—for some time Chancellor—whose character has been delineated
by Daniel Defoe with merciless severity, but with substantial accuracy, in "Abraham the Achipothel". Ashley's statesman's own Protestantism was of the holiest kind, but he was zealous, from political motives, for the national religion, and for that reason was bent upon excluding the Duke of York from the succession to the throne. To accomplish this end, he fought strenuously and unremittingly, and was any weapon too vile for his use. The Second Test Act, passed through his exertions in 1678, rendered Catholics incapable of sitting in Parliament, and thus deprived twenty-one Catholic peers of their seats in the House of Lords; but the king contrived to procure the insertion of a clause exempting the Duke of York from the operation of the Statute. It was in this same year that Titus Oates appeared on the scene with his pretended Popish Plot. There is no evidence that Ashley was the instigator of the colossal villainy, but he did not scruple to employ it for his own purposes. "The origin of the Popish Plot," says a recent well-informed writer, "is clouded with mystery. "Blackwood's Magazine" (May, 1908), "is a mystery. We know no more than that the English people, being mad, interrupted the course of justice, insisted that the judges should condemn every man brought before them, suspected of papistry, and easily believed the falsehoods of a hired perjurer, and that Oates himself contrived the death of Sir Edmund Godfrey." However that may have been, certain it is that the calumnies of Oates and his confederates and imitators awakened the Elizabethan Statutes into fresh activity. The king was not too shrewd to give evidence of his connivance. Macaulay has well called "a hideous romance resembling rather the dream of a sick man than any transaction which ever took place in this world." But he was powerless to save the victims of popular fanaticism; "I cannot pardon them," he said, in a letter of June 1678. And so, in 1679, the horrors of 1688 were repeated, eight priests of the Society of Jesus, two Franciscans, five secular priests, and seven laymen being put to death, while many more died in their foul prisons. The next year witnessed the judicial murder of Lord Stafford, his peers being unable to withstand the madness of the people. In 1681, the Earl of Plunket, the Archbishop of Armagh, was executed at Tyburn, after a mock trial. His was the last blood shed for the Catholic religion in England. The persecution, which had begun with the execution of the three saintly Carthusian friars in the twenty-sixth year of Henry VIII, had lasted, with intermissions, for a century and a half. Three hundred and forty-two martyrs had sealed their faith with their blood, while some fifty confessors, in the reign of Elizabeth and her successors, ended their lives in prison. The king's long struggle with the popular party ended in his complete victory. No more consummate master of political strategy ever perhaps existed; and the violence of the party led by Shaftesbury played into his hands. Shaftesbury himself was arrested on a charge of suborning false witnesses to the Plot; although the Grand Jury of Middlesex ignored the bill of his indictment, he saw that the tide of popular feeling, which had begun to ebb with the execution of Lord Stafford, was now turned completely against him, and at the end of 1682 he fled to Holland, where, two months afterwards, he died.

Charles II was the most pugnacious of kings during the last years of his reign, and he was careful not to mar his popularity by illegal acts or by measures opposed to the feeling of the nation. The statute for the regulation of printing, passed immediately after the Restoration, had expired in 1679; Charles made no attempt for its renewal. In the same year the Habeas Corpus Act—that great charter of the liberty of the subject—was passed; Charles acquiesced in it. He did indeed infringe the Test Act by the Duke of York's readmission to the Council and restoration to the office of lord high admiral. But, in the recrudescence of loyalty, this tribute to fraternal affection was forgotten; and when the king was thronged with crowds praying that God would raise him up again to be a father to his people; and on his death, in February, 1685, all sorts and conditions of his subjects made great lamentation over him.

In the first year of the reign of James II Dr. Leyburn was appointed to the Holy See as vicar Apostolic. In the next year Dr. Giffard received a like appointment, as did Dr. Ellis and Dr. Smith the year after that, England being divided into four districts: the London, the Midland, the Western, and the Northern, in each of which the papal vicar exercised all the authority possessed by an ordinary. The new king came to the throne with advantages which he could hardly have hoped for. He inherited, in some sort, the popularity of his brother, and his religion was forgotten in his blood. He began his reign by a solemn pledge to keep the laws inviolate and to protect the liberty of the nation, but it was hard to believe "We have the word of a king", it was said, "and of a king who was never worse than his word." The saying, whoever was its author, went abroad. It expressed the general conviction, and his first Parliament made proof of exuberant loyalty, granting to the nation, without a division, a revenue of two millions for life. Argyll's rebellion in the North and Monmouth's in the West but served to bring out the devotion of the nation at large to the sovereign. But the cruelties of Kirke and the savageries of Jeffreys in the "Bloody Circuit" caused a change in the general feeling. The king's popularity cooled, and the measures to which he now resorted soon put an end to it. Monmouth's revolt was made the pretext for raising the army to twenty thousand men, and it soon appeared that James supposed himself able, with that force at his command, to place himself above the law. He attempted to nullify the provisions of statutes by the exercise of his dispensing powers. Judges who refused to fall in with his plans were dismissed; and it was held by a bench packed with his creatures that his dispensation could be pleaded in bar of an act of Parliament. In 1681, the Earl of Clarendon, almost the king proceeded to set aside the disabilities of Catholics and the restraints upon the exercise of their religion. They were admitted to civil and military offices closed to them by the law; members of religious orders appeared in the streets of London in their habit; the Jesuits, with little interference, were allowed to reside; the king, for raising the army to twenty thousand men, and it soon appeared that James supposed himself able, with that force at his command, to place himself above the law. He attempted to nullify the provisions of statutes by the exercise of his dispensing powers. Judges who refused to fall in with his plans were dismissed; and it was held by a bench packed with his creatures that his dispensation could be pleaded in bar of an act of Parliament. In 1681, the Earl of Clarendon, almost the
see that if James attempted to promote the interests of his religion by illegal and unpopular measures, his attempt would fail: the hatred with which the heretical islanders regarded the true faith would become fiercer and stronger than ever; and an indissoluble association would be created in men's minds between Protestantism and civil freedom, between Popery and arbitrary power. This is precisely what happened. And indeed it is not too much to say that British Catholics have, in great measure, to thank the two last Catholic sovereigns for the strong feeling which so long existed against them throughout the nation, and which, even now, has not wholly disappeared. The severities of Mary appeared to give countenance to the popular Protestant opinion that Catholics rely chiefly on the argument from fire and are always ready, if they can, to burn dissenters from their religious belief. The conduct of James II seemed an object less confirming of the vulgar belief that Catholics are not bound to keep faith with heretics, and that any violation of law, any "crooked and indirect bye-ways," are justifiable means to the end of advancing the Catholic religion.

The reign of James II lasted only three years. It is not too much to say that before two of them were out he had succeeded in alienating the devotion of the entire nation. The famous Declaration of Indulgence supplied the supreme proof of his folly and was the immediate occasion of his downfall. The gist of it was that by the royal authority all laws against all dissenters, or Nonconformists, were to be suspended, but religious tests imposed upon them by statute as a qualification for office were abrogated. Only an absolute monarch could claim to exercise such a prerogative. It is true that the Declaration was full of professions of love of liberty of conscience—professions which came oddity from a monarch with James's record. Moreover, as we now know, upon the very eve of publishing it he had written to congratulate Louis XIV upon his revocation of the Edict of Nantes, an example which B питания, a very competent judge, thought would have only too gladly followed if he had been able. Those hollow and palpably false professions deceived no one, and the failure of the Declaration to conciliate the support of those who would have chiefly benefited by it, might have suggested caution to a wiser man. But James would brook no opposition; and on 27 April, 1688, he ordered the Anglican clergy to read his Declaration of Indulgence during divine service on two successive Sundays. Nearly all the clergy refused to obey, and Sancroft, the Archbishop of Canterbury, with six of his suffragans, addressed to the king a respectful and temperate protest. The document was treated as a libel, and the famous trial of the seven bishops was the result. The acquittal of the prelates was greeted throughout the country with a tumult of acclaim, which was the signal for the Revolution, whereby the ancient liberties of England were vindicated, and a Parliamentary title to the crown was substituted for an hereditary one.

The disfavour with which Catholics were viewed when William and Mary were placed on the throne vacated by James II, was natural enough. They shared in the hatred inspired by the perfidy, cruelty, and tyranny of the desponded sovereign. William, indeed, would have gladly extended to them the same measure of toleration which, in spite of Tory opposition, he was able to secure for Protestant Nonconformists. He was under great obligations not only to the emperor, but also to the pope, whose sympathy and diplomatic support had been of much help to him in his perilous enterprise. He was, by temperament, averse from religious persecution. Moreover, as Hallam justly observes, "no measure would have been more politic, for it would have dealt to the Jacobite cause a more deadly wound than any which double taxation or penal laws were able to effect."

And this, no doubt, was one of the reasons why the High Tories persistently opposed it. But the Legislature did not content itself with leaving on the statute book the former statutes against Catholics; it enacted new disqualifications and penalties. The Bill of Rights provides that no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, and that the sovereign, on becoming a Catholic, or marrying a Catholic, thereby forfeits the crown. This article of the constitution was confirmed by the Act of Settlement (12 & 13 Will. III, c. 5, s. 2), which conferred the succession on the Electress Sophia, a daughter of James I, being Protestants. Another statute, of the first year of William and Mary, prohibited Catholics from residing within ten miles of London and empowered justices to tender to reputed Papists "the oath appointed by law," providing that any who refused it, and yet remained within ten miles of London, was to be seized and suffer as a Papist recusant convict. A third Act of the same year (1 W. & M., c. 15) provides that no suspected Papist who shall neglect to take the oath appointed by law, when tendered to him by two justices of the peace, and who shall not appear before them upon notice from one authorized under their hands and seals, shall keep any arms, ammunition, or horse above the value of five pounds in his possession, and in that of any other person to his use (other than such as shall be allowed him by the sessions for defence of his house and person); that any person who shall conceal such arms, ammunition, or horse, he shall be imprisoned for three months and shall forfeit to the king the value of such arms, ammunition, or horse. The 7 & 8 Will. III, c. 24, closed to Catholics the professions of counsellor-at-law, barrister, attorney, and solicitor; and the 7 & 8 Will. III, c. 27, declared that no person who refuses to take the oaths of allegiance and supremacy, when lawfully tendered, should be liable to suffer as a Papist recusant convict; and that no person who should refuse the said oath should be admitted to give a vote at the elections of any member of Parliament. In 1700 an Act was passed which, "in Burke's words, "cannot be read without astonishment." It incapacitated every Roman Catholic from inheriting or purchasing land, unless he abjured his religion upon oath; and on his refusal it vested his property, during his life, in his next of kin being a Protestant. He was even prohibited from sending his children abroad, to be educated in his own faith. And while his religion was thus proscribed, his civil rights were further restrained by the oath of abjuration. It prescribed imprisonment for life for all Catholic priests, and enacted that an informer, in the event of their being convicted of saying Mass, was to receive a hundred pounds as one of his wages. Concerning this Act of William III Hallam remarks, "So unprovoked, so unjust a persecution is the disgrace of the Parliament that passed it." But he goes on to add, "The spirit of Liberty and tolerance was too strong for the tyranny of the law and this statute was not executed according to its purpose. The Catholic landholders neither renounced their religion nor abandoned their inheritance. The judges put such constructions upon the clause of forfeiture as eluded its efficiency."

No doubt this is generally true. But, as Charles Butler tells us in his Historical Memoirs of London, 1819–21, "the many prosecutions which deprived Catholics of their landed property were enforced." He adds that "in other respects they were subject to great vexation and contumely. They were a very small and very unpopular minority in an age when a common creed was regarded, in every
European country, as the chief bond of civil polity and dissidents from it were more or less rigorously repressed. As a matter of fact, it is to a great English magistrate that we owe the ruling which placed an almost insuperable difficulty in the way of the tribe of informers. At the trial of the Rev. John Wesley, in the 25th of June, 1768, at Westminster, at the suit of a notorious common informer named Payne, Lord Mansfield told the jury that the defendant could not be condemned "unless there were sufficient proof of his ordination." Such proofs, of course, were not forthcoming. Lord Mansfield, as Charles Butler relates in his above-mentioned "Historical Memoirs," discon- tented with the prosecution of Catholic priests and took care that the accused should have every advantage that the form of proceedings, or the letter or spirit of the law, could allow. And at that period the same temper animated English judges generally.

As the second half of the eighteenth century wore on, English Catholics ceased to be regarded by the Government as politically dangerous. A certain number of them had taken part in the rising of 1715, and in the far more serious rising of 1745, and had in some cases been executed for their guilt. In 1758 the Old Pretender died, and the Young Pretender, upon whom his claim devolved, had ceased to excite either dread or enthusiasm. Men no longer took him seriously, and English Catholics in time—it was no very long time—acquiesced in the Revolution of 1782. But they did some thing more than quiesce. In 1778 an address was presented to George III, bearing the signatures of the Duke of Norfolk and nine other peers, and of one hundred and sixty-three commoners, on behalf of the Catholic body. It represents to the sovereign their "true attachment to the civil constitution of the country which has been perpetuated through all changes of religious opinions and establishments, has been at length perfected by that Revolution which has placed your Majesty's illustrious house on the throne of these kingdoms, and inestimably united your titles with the crown of the law and liberties of your people." In this year, 1778, the first Catholic Relief Act was passed. It repealed the worst portions of the Statute of 1699 above mentioned, and set forth a new oath of allegiance which a Catholic could take without denying his religion. The word "Pretenders" was struck out of the oath, and the word "relief" was added. This was a measure extremely distasteful to some bigoted Protestants, among whom it is distressing to find the name of John Wesley. But in truth Wesley—it is not a rare case—was no less ignorant and narrow-minded than zealous and devout, as is sufficiently evident from his "Letter concerning the Principles of Roman Catholics." In this document, besides other equally foolish assertions, he alleges that they hold an oath not binding if administered by heretics, and that they believe in the remission of future sins through the Sacrament of Penance. The conclusion he draws is that no government "ought to tolerate men of the Roman Catholic persuasion." There can be no doubt that the dis- likes of Wesley and his followers largely swelled the agitation for the repeal of the Act of 1778, which was conducted by the Protestant Association, and which issued in the Bill of 1780. Lord George Gordon, "the Catholic Committee was utterly discarded, the inoffensive Irish oath of 1778, with slight variations, being substituted for it. Catholics taking this oath were relieved from the penalties of the Statutes of Recusancy and from the obligation of taking the oath in the form prescribed by the Statute of William and Mary. Various disabilities were removed, and toleration was extended to Catholic schools and worship. Shortly after this Act was passed the Catholic Committee turned itself into the Cisalpine Club and continued under that name, for thirty years, to trouble more or less the vicars Apostolic.

There can be little doubt that the passing of the Relief Act was facilitated by the outbreak of the Revolution in France. Another result, at first extremely prejudicial to the Catholic Church in England, was that great upheaval of the civil servitudes on the Continent, which had furnished to that country a supply of priests. Drouin was seized by the French Revolutionary Government in 1793. The English Benedictine houses in France also disappeared. The closing of the English Catholic colleges was to some extent compensated by the influx of clergy from that country. No less than eight thousand of these confessors of the Christian Faith sought the hospitality of Protestant England, and it was ungrudgingly given. The King's House at Winchester sheltered a thousand of them, and for several years a considerable sum was voted for their relief by Parliament and was largely supple-
mented by voluntary subscriptions. A certain number of these priests sought and found work on the English Mission. By far the greater part of them returned home when Napoleon had concluded his Concordat with the Holy See and re-established Christian worship in France. Those who remained a few were conciliably dissatisfied with the new ecclesiastical arrangements in their country. They were known as Clericalists, from their leader Blanchardi, and were a source of much annoyance to the vicars Apostolic. The heroic Milner was especially prominent in combating them, and in asserting the rights of the Holy See. The Roman Catholic majority of the Board of Education at the same time, to contend with Catholics of his own nationality. The spirit which had animated the Catholic Committee and the Cisalpine Club was by no means extinct, and led to the formation, in 1828, of what was called a "Select Board," which professed as its object the organization of an association for the "general advantage of the Catholic body." That "general advantage" turned out to be the further removal of Catholic disabilities, and the price which the Select Board was prepared to pay for such removal was the vesting in the Crown of an effectual negative upon the appointment of any bishop, commonly called the Veto. The Irish episcopate unanimously opposed this arrangement, and passed a vote of thanks to Dr. Milner for his "apostolic constancy" in withstanding it. On 30 April, 1831, Gratian brought forward a Catholic relief bill in the House of Lords, which substantially repeated the veto. It was thrown out on the third reading. Eight years later a similar bill passed the House of Commons, but was rejected by the House of Lords. Of the eventual emancipation of Catholics Dr. Milner had no doubt. Twelve years before his death, which he always confessed, he assured the pope that it was certain to come. But he would not purchase it by the slightest sacrifice of Catholic principle. In 1829 a declaration was put forward by all the vicars Apostolic of England explanatory of various articles of the Catholic Faith great majority of which were expressed in the veto. It was widely read and doubtless helped to remove prejudice. In the same year Sydney Smith published his masterly "Letter on the Catholic Question." Not, however, till March, 1830, was the long desired boon conceded to Catholics. It was wrung, so to speak, from statesmen who had long been opposed to it. The Clare election convinced Peel and the Duke of Wellington, who were then in power, that the settlement of the Irish question was a political necessity. The Duke reminded the House of Lords that when the Irish Rebellion of 1798 had been suppressed the Legislative Union had been proposed in the next year mainly for the purposes of introducing this very measure of concession, and not obscurely intimated his opinion that further to refuse it must lead to civil war. This relief bill passed both Houses by large majorities. The king's consent was reluctantly given, and the Emancipation Act became law. It should be noted that before the passing of the Emancipation Act the friction of which we have been obliged to speak between certain prominent members of the Catholic laity and the vicars Apostolic, was virtually at an end. The Cisalpine Club still existed; but, as Monsignor Ward remarks (Catholic London: A Century Ago, p. 381), "there was very little Cisalpinism in it." This was largely due to the personal influence of Dr. Powley, Vicar Apostolic of the London District, whose gentleness and meekness triumphed where the fiery zeal of Milner failed.

When the nineteenth century opened, the Catholics of Great Britain were, to quote Cardinal Newman's words, "a gens lucifuga, found in corners and alleys and cellars and the house-tops, or in the recesses of the country." Their chapels were few and far between, and were purposely placed in quarters where they were unlikely to attract observation. It was common to locate them in news, and in their exterior they were hardly distinguishable from the adjoining stables. George Eliot has well remarked in Felix Holt, "Tell the agitation about the Catholics in '98, rural Englishman, is that they are very much afraid that the Catholics of England than of the fossil marmots." Their political emancipation was the beginning of a great change in their social condition. "The steps were higher that men took;" their ostracism began to pass away. Moreover, the reaction which had followed the French Revolution had told in favour of Catholicism even in England. Chateaubriand's "Génie du christianisme" had world-wide influence, and some of the historical novels of Sir Walter Scott, however deficient in accuracy, presented a much kinder view of the ancient faith than it had been commonly taken in Protestant countries. In the history of the Catholic Church in England since 1829 two events require special notice. One was the rise of what is called "The Oxford Movement." Cardinal Newman used to date that movement from the year 1833, when Keble preached at Oxford his famous assize sermon on "National Apostacy." But indeed it was simply the body forth of tendencies which had been long in the air. The old notion of the medieval period as a "millennium of darkness" had passed away; and from the contemplation of its masterpieces in architecture and painting men proceeded to study its intellectual and spiritual life. They were also led to investigate, in the light of facts and first principles, the claims of Anglicanism. No doubt the "Essay on the History and Structure of the Prayer Book of the Church of England" delivered by Dr. Lloyd, the Regius Professor of Divinity at Oxford, set many of his hearers thinking, Newman among them. The defence of the Oxford Movement by its originators at its beginning was not to examine, but to defend, the Anglican Church. This was the intention of the "Tracts for the Times," begun in 1833. It is not here possible, or indeed necessary, to follow the course of the movement, which, as it went on, departed ever more and more widely from the standards—ever the highest—of Anglicanism, and approached ever more and more closely to the Catholic ideal. It culminated in the famous "Tract XC," the theme of which was that the Thirty-nine Articles were susceptible of a Catholic interpretation and could be accepted by one who held all the dogmas of the Council of Trent. Of course the movement greatly interested Catholics, and by no one was it more closely and anxiously followed than by Dr. Wiseman, who had made the acquaintance of Newman and Froude upon the occasion of their visiting Rome in 1833. In September, 1840, Wiseman arrived at Oscott from Rome—where almost all his previous life had been spent—to take up his residence as president of that college and Vicar Apostolic of the Midland District. He felt from the day of his arrival there, as he wrote in a memorandum eight years afterwards, that a new era had commenced in England. A new era was certainly the Oxford movement, to which his great gifts and his large heart were utterly devoted. The majority of hereditary English Catholics were much prejudiced against the Tractarians. Dr. Lingard warned Bishop Wiseman not to trust them. Dr. Griffiths, the Vicar Apostolic of the London District, used similar language. But Wiseman did trust them. He held that Catholic principles, if honestly entertained, must lead to the Catholic Church, and he fully believed in the honesty of Newman and Newman's followers. How Newman was influenced by a paper of his on the Donatists, published in the Dublin Review in 1839, is well known. It had been directed to the impossible aim of unprotesting the Anglican Church. Newman and many of his friends came gradually to see that the aim was impossible. The kindly light which they had so faithfully followed step by step led them to Rome.
Wiseman testified: "The Church has not received at any time a convert who has joined her in more docility and simplicity of faith than Newman."

Wiseman had earnestly desired "an influx of fresh blood" into the Catholic Church in England. The accession of the converts due to the Oxford Movement brought it. And no doubt it accelerated the restoration of the hierarchy which had been so strongly desired by generations of Catholics. In 1840 Gregory VI had increased the number of English vicars Apostolic from four to eight. Ten years afterwards Pius IX decreed that "the hierarchy of Bishops ordinary, taking their titles from their sees, should, according to the usual rules of the Church, again flourish in the Kingdom of England". The whole of the country was divided into four provinces consisting of the metropolitan See of Westminster, and the twelve suffragan sees of Southwark, Plymouth, Clifton, Newport and Menevia, Shrewsbury, Liverpool, Salford, Hexham and Newcastle, Beverley, Nottingham, Birmingham, Northampton. This restoration of the hierarchy was certainly not designed as an act of war; it was indeed "unattended by any suspicion that it would give offence to others". But it did give dire offence, and the country resounded with denunciations of what was called "The Papal Aggression". An "insolent and insidious aggression", Lord John Russell, the premier, pronounced it to be, and shortly afterwards it was introduced into the House of Commons a bill by which the Catholic bishops were prohibited, under penalties, from assuming the territorial titles conferred upon them by the pope. The bill became law after long and angry debates, but was, from the first, a dead letter. There can be no question that Cardinal Wiseman's appeal to the people of England largely contributed to allay the popular passion which his pastoral letter "From without the Flaminian Gate" had had no small share in exciting. Though a somewhat lengthy pamphlet, it was printed in extenso in "The Times" and in four other London newspapers, and its circulation was immense. The cardinal appealed to the "manly sense and honest heart" of his countrymen, to "the love of honourable dealing and fair play, which is the instinct of an Englishman", and he did not appeal in vain.

Cardinal Wiseman filled the metropolitan See of Westminster from 1850 to 1886, and it would be hard to overrate the greatness of his services to the Catholic cause in England. Manning truly said in the sermon preached at his funeral: "When he closed his eyes he had already seen the work he had begun expanding everywhere, and the traditions of three hundred years everywhere dissolving before it." When he began that work, there were less than five hundred priests in England; when he ceased from it there were some fifteen hundred. The number of converts during these fifteen years had increased tenfold, and fifty-five monasteries had come into being. But more statistics give no sufficient notion of the progress made by the Catholic Church under Wiseman's rule, a progress directly due to him in large measure. Not the least important item of his service to religion was the way in which he presented the Church to his countrymen.

Mr. Wilfrid Ward is well warranted when he writes: "Wiseman may claim to have been the first effectively to remind Englishmen in our own day of the historical significance of the Catholic Church, which so much impressed Macaulay, and which affected permanently such a man as Comte, which kindled the historical enthusiasm of a De Maistre, a Gobres and a Frederick Schlegel." The organization of the Catholic Church, as it now exists in England, may be said to be due to him. He himself drew up, almost entirely, the decrees regarding it for the First Provincial Synod, held at Oscott (1852). His work, indeed, was not done in the tranquility which he loved. "Without were fightings, within were fears." Some of the converts did not fuse with the hereditary Catholics, "the little remnant of Catholic England", whom they judged to be ill-educated and behind the times, and this prejudice Wiseman regarded as ungenerous, even if, to some extent, it was not unfounded. He deprecated strongly the spirit of party and sought in all gentleness, to put it down and to guide his flock into the way of peace. On the other hand, some of the old clergy, taking their stand upon the ancient ways, regarded with distrust certain innovations of discipline and devotion introduced by the more zealous of the converts. They looked upon the Oratorians as extravagant. They viewed Monsignor Manning with suspicion. It is unnecessary to enter into the dissensions which embittered Wiseman's declining years. The last two, indeed, were passed in comparative quiet, but amid much physical suffering. Not long before he died he said: "I have never cared for anything but the Church. My sole delight has been in everything connected with her."

Cardinal Wiseman's successor in the See of Westminster—the successor he desired—was the provost of his chapter, Monsignor Manning, whose episcopate lasted until 1892. They were twenty-seven years of fruitful activity, through evil report and through good report. For some time he was certainly unpopular, not only among his Protestant fellow countrymen but among his own clergy, who did not like his strict discipline and some of whom by no means sympathized with what was called his "ultra-papalisn". But gradually the prejudice against him wore off, and his great qualities obtained general recognition. It was the victory of his faith unfeigned, his deep devotion, his spotless integrity, his indomitable courage, his singleness of aim, his entire devotion to the cause which, in his heart of hearts, he believed to be the only cause worth living for. One who knew him well said of him: "He was an Archbishop who lived among his people", "the door-steps of his house were worn with
the footsteps of the fatherless and the widow, the poor, the forlorn, the tempted and the disgraced, who came to him in their hours of trouble and sorrow." No doubt he made mistakes, some of them grave enough—as, for example, his persistent opposition to the frequentation of scholastic reform, what he not only as a great philanthropist and a great churchman, but also as a statesman of no mean order. It was said by an able writer, upon the occasion of the twenty-fifth anniversary of his consecration: "To him, more than to any man, it is due that English Catholics have at last outgrown the narrow cramped life of their past of persecution, and stand in all things upon a footing of equality with their fellow countrymen." No doubt this happy result was largely due to Manning; but perhaps it was more largely due to another. The revelation of his inner life which John Henry Newman through himself obliged to put in order to vindicate himself from the wanton attacks of Charles Kingsley, in 1864, came like a revelation to multitudes of what Catholicism as a religion really is. The "Apologia pro Vita Sua" was like a burst of sunlight putting to flight the densest mists of Protestant prejudice, and the "Letter to the Duke of Norfolk" (1854), in reply to Gladstone's pamphlet on the Vatican Decrees which appeared in 1854, may be said to have made an end of the old error that a loyal Catholic cannot be a loyal Englishman. It may be said for Newman to affirm that there was no incompatibility between the two character. His countrymen believed him on his word. Lord Morley of Blackburn, a very competent judge, writes: "Newman raised his Church to what would, not so long before, have seemed a strange and incredible rank in the mind of Protestant England." (Miscellanies, Fourth Series, p. 161.)

Herbert Vaughan, who succeeded Cardinal Manning in the See of Westminster, ruled the diocese as archbishop, and the province as metropolitan for nearly eleven years. It was reserved for him to take up a work which his predecessor had put aside—the erection of a cathedral for Westminster. No act which Manning had to perform after his nomination to the archbishopric—it was even before his consecration—was to preside over a meeting summoned to promote the building of a cathedral in memory of Cardinal Wiseman. He declared on that occasion: "It is a work which I will take up and will to the utmost of my power promote—when the work of the poor children in London is accomplished, and not till then." This work for the poor children of London—provision for their education in their religion—was Manning’s life work, and before he passed away, as bishop of Oxford, he had consented to the building in the city of Oxford. When he died, he left his diocese, as he announced in 1874, to his successor. The magnificent fabric conceived by the genius of John Francis Bentley may, in some sort, be considered as Cardinal Vaughan’s monument, as being the outcome of his energy and zeal. It is a memorial of him, as well as of Cardinal Wiseman.

So much must suffice regarding the history of Catholicism in England from the so-called Reformation to the present day. We now proceed to give some account of the actual position of the Church in that country. We have already seen that in 1830 Pope Pius V restored the dignity of the English see, and placed the three ecclesiastical provinces under the metropolitan See of Westminster, with the twelve suffragan sees of Southwark, Hexham and Newcastle, Beverley, Liverpool, Salisbury, Newport and Menevia, Clifton, Plymouth, Nottingham, Birmingham, and Northampton.

In 1878 the Diocese of Beverley was divided into the Dioceses of Leeds and Middleborough; in 1882 the Diocese of Southwark was divided into the Dioceses of Southwark and Portsmouth, and in 1895 Wales, excepting Glamorganshire, was separated from the Diocese of Shrewsbury, and the Vicariate Apostolic of Wales. Three years later this vicariate was erected into the Diocese of Menevia, so that the Archbishop of Westminster now has fifteen suffragans. Hitherto, since the Reformation, England had been regarded as a missionary country and had been immediately subject to the Congregation of Propaganda. But Pius X, by his Constitution "Spontani Consilii", transferred (1908) England from that state of tutelage to the common law of the Church.

The number of priests, secular and regular, in England, according to the most recent list, is three thousand five hundred and twenty-four, and the number of churches, chapels, and institutes, one thousand seven hundred and thirty-six. Of the regulars who are over a thousand in number, many are French exiles, and a considerable number of them are not engaged in parochial or missionary work. There are two monasteries for monks and one monastery for nuns, but some hundred and eighty-three convents, a great increase during the half-century which has passed away since 1851, when there were only seventeen monasteries and fifty-three convents. During the same period many churches of imposing proportions, adorned with marble and glass, have been erected. Among them is the cathedral of Westminster of which mention has been already made. It is in the Byzantine style and is certainly one of the noblest of modern religious edifices. Nearly two hundred and fifty thousand pounds have already been expended on it, and, although still unfinished, it has been open for daily use since Christmas, 1903.

Catholics in England are still subject to various legal disabilities. We have already seen that by the Bill of Rights (11 Will. and Mary, sec. 2, c. 2) no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, the sovereign, on becoming a Catholic, or marrying a Catholic, thereby forfeits the crown, and that the Act of Settlement (12 and 13 Will. III, c. 2, c. 2), by which the succession was confined to the descendants of the Electress Sophia, being Protestants, confirms this article of the Test-Acts. The first-mentioned statute further enacts "that whosoever shall after this time come to the possession of the Crown of England shall join in communion with the Church of England as by law established". The Emancipation Act (10 Geo. IV, c. 7), which was largely a disabling Act, provides that nothing contained in it "shall extend or be construed to enable any person otherwise than he is now by law entitled, to hold the office of Lord Chancellor of England or Lord Lieutenant of Ireland", and the common opinion is that Catholics cannot now fill these great positions, but this view appears questionable. The question is discussed at length in Lilly and Wallis's "Manual of the Law specially affecting Catholics", pp. 36-43. The Emancipation Act also contains sections imposing fresh disabilities upon "Jesuits and members of other religious orders, communities or Societies of the Church of Rome, bound by monastic or religious vows". These sections have never been put in force; still, as they remain on the statute book, they have the serious effect of disabling religious orders of men from holding property. An Act of 1860 (23 and 24 Vict., c. 134) has, however, somewhat mitigated this hardship, as also a late Act of 1877, making English law for the dead. Such bequests are held by English law to be void, but the Irish courts do not follow the English on this point. It should be noted that up to the passing of the Emancipation Act, trusts for the promotion of Catholic charities were held to be illegal.
Nor did that enactment expressly refer to them, so that three years later, in order to remove all doubts concerning them, the Roman Catholic Charities Act was passed, by which such charities were made subject to the same laws as Protestant Dissenting charities. The English law as to the status of all orders of the Church of Rome is capable of being elected to serve in Parliament as a Member of the House of Commons. This disability is shared by the clergy of the Church of England, who, however, can escape from it by the legal process vulgarly, though incorrectly, called renouncing their orders, but not by Protestant Dissenting ministers.

It should be noticed that in England provision is made for securing religious liberty for pauper and criminal Catholics. In every workhouse a creed register is kept in which the religion of every inmate is entered; and the master, upon the application of the Guardians of the Poor, may be empowered to appoint Catholic clergymen, suitable salaries, to minister to the Catholic paupers. Similarly, Catholic chaplains may be appointed in public lunatic asylums. Catholic pauper children may be transferred from the workhouse to schools of religious purposes, and these boarded out, provision is made for their attending the Catholic church. Catholic ministers to prisons are appointed by the Home Secretary, and are duly remunerated. There are sixteen commissioned army chaplains paid by the State. In the Navy there are twenty-two Catholic chaplains, and a hundred and thirty priests receive capitation allowances.

We go on to say some words on Catholic education in England since the Reformation. Of course it hardly existed when the penal laws were enforced in their full rigour. The clergy, as we have seen, were trained abroad at Rome, at Douai, at Liége, at Valladolid. The young laity benefited in intermittent and uncertain fashion by the teaching of the priests. Shakespeare, whom there is strong reason for accounting a Catholic (see Lilley's "Studies in Religion and Drama", 1919), was "for the most part reared in an old tradition, by an old Benedictine monk, Dom Thomas Combe, or Coombes. In Pope's time a few Catholic schools were found here and there, and he was sent to one of them, a "Roman Catholic seminary", it is called, at Twyford, kept by Thomas Deane, an ex-fellow of Magdalen College, Oxford. But these "seminaries" were carried on with difficulty, being illegal, and it was not until the outbreak of the French Revolution that much was effected for the cause of Catholic education in England. The professors and pupils of the University of Douai, after enduring many hardships, returned to England in 1795, some going to Herefordshire, in the South, and some to Tudiéo, in the North. The Herefordshire establishment developed in time into St. Edmund's College. The school founded at Tudiéo, and removed first to Crook Hall, and then to Edgbaston, was expanded into the great college of Ushaw. For the first thirty years, it was in danger of being suppressed at any moment, and was only saved by the personal intervention of the Bishop of Durham, and of the Prince of Wales, who had been educated there. This school, which is now known as St. John's College, Ushaw, was founded in 1798. The first headmaster was Rev. Thomas Corbitt, a Jesuit. The second was Rev. Joseph Fothergill, a Jesuit. The third was Rev. James H. Fothergill, and the fourth was Rev. Edward Bagshaw, a Jesuit. The school was opened in 1798. The first pupils were 210, and the latter were 300. The school was closed in 1847. The present buildings were completed in 1881. The school is now called St. John's College, Ushaw.

The school was founded by the Jesuits, who were expelled from their country in 1603. The monks fleeing from the fury of the French Revolution were received at Acton Burnell in Shropshire by Sir Edward Smith who had been one of their pupils. It was in 1814 that they settled at Downside. The great college of Oscott is now a seminary in which priests are trained for the southern dioceses and is under the joint direction of the Archbishop of Westminster and the Bishops of Birmingham, Coventry, Liverpool, Manchester, Menevia, Newport, Northampton, and Portsmouth. St. Joseph's Missionary College was founded by Cardinal Vaughan, who ever took the deepest interest in it, and who is buried in the grounds. Of Catholic higher schools two deserve special mention; at Edgbaston, founded by Cardinal Newman, and that at Beaumont, established by the Jesuits. Until 1895 Catholic young men were discouraged—nay were inhibited, without special permission of the ecclesiastical authorities—from frequenting the Universities of Oxford and Cambridge, but in that year a letter from the Congregation of Propaganda to Cardinal Vaughan announced that the Holy See had removed this restriction, the bishops, however, being enjoined to make proper provision for Catholic worship and instruction for Catholic young men resorting to these ancient seats of learning. Elementary education has also been largely provided by the Catholic Church. Before the Protestant Reformation all the great monasteries had, attached to them, primary schools for poor children. These of course disappeared with the monasteries. In the eighteenth century a number of Protestant charity schools were founded, but it was not until the first quarter of the nineteenth century that provision for elementary public instruction began to be recognized as a public duty. In 1833 a Parliamentary grant was first made "for the purpose of education." It was divided between two Protestant societies, the British and Foreign School Society, which ignored Catholicism, and the National, which represented the Church of England. In 1847 Catholic elementary schools, which had much increased in numbers, were admitted to share in the government grant, and the Catholic Poor School Committee was founded to supervise and direct them, on duty which this body, now called the Catholic Education Council, still fulfils.

Catholic journalism in England is zealously represented by "The Tablet," newspaper, which was founded so long ago as 1840. It is published weekly. The "Catholic Journal," the "Catholic Weekly," the "Catholic Herald," the "Catholic News," and the "Universe." The chief Catholic review is the "Dublin Review," founded by Cardinal Wiseman, long edited by W. G. Ward, and now by his son Mr. Wilfrid Ward. It is published quarterly. The "Monthly" is the "Monthly Magazine of General Literature," edited by the Fathers of the Society of Jesus, is issued monthly, as its name denotes. An extremely important publication is the "Catholic Directory," which in its present form dates from the year 1838. But for nearly a century previously there had been a Directory which, however, in its earliest issues was not only an Ordo, or Calendar, for the use of priests reciting Office. It remains now to speak of certain Catholic societies existing in England. In the first place, mention must be made of the Catholic Union of Great Britain, founded in 1871. It has the object of securing for Catholics, and particularly for British Catholics, as far as possible, the rights of British citizens. The establishment of the society was sanctioned by the archbishops and bishops of England and by the vicars Apostolic of Scotland (the hierarchy in that country was not restored until 1878), and was emphatically approved by Pius IX. In the rules of the Catholic Union the following means of effecting its objects are specified: "1. By meetings of
the Union and of the Council; 2. By public meetings; 3. By petitions or memorials, or deputations to the Authorities; 4. By local branches; 5. By correspondence with similar societies in other countries; 6. By procuring and publishing information on subjects of interest to Catholics; 7. By cooperation with approved Confraterritutes, Institutions, and Charitable Associations, for the furtherance of their respective objects; which cooperation shall, in each case, be sanctioned by the Bishop of the Diocese; 8. By any other mode approved of by the Council and the Bishop. Over the thirty-seven years the Catholic press has worked steadily and successfully on the lines thus indicated. It has also been of great utility in affording advice and assistance to Catholics, especially the clergy, in matters of doubt and difficulty, legal and administrative. It is governed by a president and council elected by the general body of members. From the first the office of president has been held by the Duke of Norfolk, and for many years the Marquis of Ripon has been the vice-president. On its list of members will be found most British Catholics of position and influence.

The Catholic Truth Society was founded in 1884 by the late Cardinal Vaughan, then rector of the Foreign Missionary College at Mill Hill, and has since had a career of much usefulness. Its main objects are to disseminate among Catholics small and cheap devotional works; to assist the uneducated poor to a better knowledge of their religion; to spread among Protestants information about Catholic truth; to promote the circulation of good, cheap, and popular Catholic books. It holds every year a Conference for the elucidation and discussion of questions affecting the work of the Catholic Church in England. During the twenty years of its existence it has issued publications cheap and small, at the rate of about a million a year. It has formed a lending library of books for the blind; and it has a collection of about forty sets of pamphlets, with accompanying readings on subjects connected with Catholic faith and history. It has been copied by societies bearing the same names in Scotland and Ireland, in the United States, Canada, Bombay, and Australia.

The Catholic Association was originally founded in 1891. Its objects are stated in its Rules as being "(I) To promote unity and good fellowship among Catholics by organizing concerts, excursions, whist tournaments, excursions, and other gatherings of a social character, and (II) to assist, whenever possible, in the work of Catholic organization, and in the protection and advancement of Catholic interests. It has been particularly successful in the organization of pilgrimages to Rome and other places of Catholic interest.

We cannot better bring to an end this brief survey of the career of Catholicism in England since the Protestant Reformation than in some eloquent and touching words with which Abbot Gasquet concludes his "Short History of the Catholic Church in England":—"When we recall the state to which the long years of persecution had reduced the Catholic body at the dawn of the nineteenth century, we may well wonder at what has been accomplished since then. We are told how it has converted our poverty, for example, have been found the sums of money for all our innumerable needs! Churches and colleges and schools, monastic buildings and convents, have all had to be built and supported; how, the Providence of God can alone explain. . . . From this the great century of books, when the principle 'suffer it to be' was applied to the English Catholic Church, there have been signs of the dawn of the brighter, happier days for the old religion. Slight indeed were the signs at first, slight but significant, and precious memories to us now, of the workings of the Spirit, of the rising of the sap again in the old trunk, and of the bursting of bud and bloom in manifestation of that life which, during the long winter of persecution, had been but dormant. Succeedia virescit. Cut down almost to the ground, the tree planted by Augustine has manifested again the divine life within it. It has put forth again more roots and leaves, and gives promise of abundant fruit."

W. S. LILLY.

English Literature.—It is not unfruitful to compare English Literature to a great tree whose far spreading and ever fruitful branches have their roots deep down in the soil of the past. Over such a tree, since the small beginnings of its growth, many vicissitudes of climate have passed; periods of calm, of sunshine, and of rain; of bitter winds and of genial life-bearing breezes; each change leaving its trace behind in the growth and development of the living plant. It is obvious, then, that to present the complete history of such an organism in a few pages is impossible; all that can be attempted in this article is to describe the main lines of its life.

It should not be forgotten, at the outset, that English literature has been no isolated growth. It has sprung from the common Aryan root, has branched off from the primal stem, and has received, and continues to receive, influences from other literatures growing up around it, as well as from those of an earlier time. Yet, as Freeman said, "We are ourselves, and not somebody else," and one of the most remarkable things about English literature is its power of assimilating all that is the fruit of the following scenes, the discussions, the writings, of the world. Latin, French, and Spanish, Greek, Spanish, and French literatures, to name only a few, have poured their influences upon us, not once only, but time after time leaving their trace, and yet our character, our language, our literature, remain unmistakably English. The ancestors of the English (the Teutonic tribes of Angles, Saxons, Jutes, and some Frisians) spent nearly
one hundred and fifty years (455 to 600) in the conquest of the island from the British tribes who had been abandoned by the Roman colonizers nearly fifty years earlier, in 410. Little by little these fierce and hardly heathen tribes, after much fighting among themselves for the supremacy, settled down, and a slow process of civilization made itself felt among them. Christianity, preached by St. Augustine in 597, bringing in its train education, science, and the arts, was the main factor in this refining change. Such British tribes as had escaped the English destroyer remained for a time almost entirely apart, though they and their literature were afterwards to have no small influence upon the literary development of England.

It is not unlikely that the written literature may have begun as early as the sixth century, but at any rate, by the middle of the seventh century the traces of it are clear in the work of Cædmon, according to the testimony of Bede. Between this date and the Norman Conquest, Anglo-Saxon or Old English writers (recent scholars often prefer the latter term as preserving the idea of continuity) produce a body of literature in prose and verse such as was furnished by no other Teutonic nation either in amount or quality during the same centuries. There are extant at least 20,000 lines of verse, and of prose somewhat more. It is almost certain, too, that a good deal has been lost. The language in which we possess it is English of the oldest form, before any notable foreign admixture had taken place. This work, with rare exceptions, is of the Teutonic alliterative type. Speaking generally, this body of literature may be classified under two great periods; the first, when the monasteries of Northumbria were the homes of learning, between about 670 and 800, when, according to the legend, Cædmon, a lay brother of Whitby, received the gift of poetry and passed it on to not unworthy followers; and the second, from the time of King Alfred (871), with some spaces of interruption, to the early part of the eleventh century, when literature, driven from the North by the Danes, came South and spoke in prose of the vernacular. In all this work, more particularly in the verse, there is great variety. Growth may be traced and changes of style.

Putting aside minor verse we come first upon the “Beowulf”, a narrative poem which, together with a few other fragments, is all we have of the old English epic. It seems clear that the matter of it is much older than its present form. It is a storehouse of the thinking and feeling of the forefathers of the English people when they were still heathen and before they came to Britain, even though the poem may not have been actually put together in its present form until the next century. It gives a picture of a very great interest of certain aspects of the actual life of the people. The English temper of mind at its best, enduring and heroic, pervades it throughout.

But this was before Christianity and the monasteries. After the introduction of the new religion the first important record of literature comes under the patriarchal name of Cædmon. It is clear from recent research that Cædmon himself only wrote a very small portion of the so-called Cædmonian poems, but the story of his vision, given by Bede, even if only legend, testifies clearly that the first poetry produced in England began among the people and in religion. The chief interest of the work lies, not only in the actual subject-matter, Scriptural paraphrase, but in the way the matter is treated, a Teutonic aspect being frequently given to the narrative. The craving for freedom, the exultation in war, the longing for moral goodness, the respect for women, all these and many other things come out in the rendering of the “Fall of the Angels”, the “Temptation of Man”, and elsewhere. It is quite clear that several hands have worked at the Cædmonian poems, but in the next great group, a hundred years later, we come upon one individual poet who has signed at least four poems with his name, Cynewulf, and he insists upon his knowing him as the Ancient Mariner constrained the Wedding Guest. He reveals his personality, he becomes real to us. His poems are religious, and among them the finest is the “Christ”. He is a poet of high order. Among the rest of Old English poetry the elegies and the war poems stand out as the most original.

Old English prose, if we except St. Bede’s lost translation of St. John’s Gospel, groups itself round two names, those of Alfred and Ælfric. Alfred (849-901) was eager for his people’s education, and his literary work consists chiefly of translations of important books of his time—Gregory the Great’s “Pastoral Care”, Orosius’s “History of the World”, Boethius’s “Consolation of Philosophy”, and (probably done under his supervision) Bede’s “Ecclesiastical History” and Bishop Wærfrith’s “Dialogues”. To some of these he added prefaces and notes in simple, unaffected English, which make us realize his remarkable and lovable character, both as man and king.

Many years after, Ælfric (c. 955-1025), Abbot of Eynsham, a much more cultivated scholar, and a more finished, though not more attractive, prose writer than Alfred, put forth volumes of homilies, saints’ lives, translations of books of the Old Testament, and other works, which were greatly and justly prized by his hearers and readers.

The “Old English Chronicle”, of which there are seven MSS., a record of events in England from the sixth century to 1154, was meanwhile being written in the monasteries, undisturbed by the many changes passing over England. It is almost certain that Alfred encouraged this work and set it on a surer foundation, perhaps himself adding portions of the record where it concerned his own reign. One other piece of prose literature must be mentioned. In Wulfstan’s “Address to the English” we find there a touch of the suffering of the people from the Danes, the author is often as impassioned as an English reformer might be over the abuses of present-day society. It brings us up in date to the last half-century before the Norman Conquest.

The Norman Conquest is as important in the history of English literature as in that of England's political
and social life. It brought a new and invigorating influence to bear upon the English genius, though in the immediate present of the eleventh century it seemed a crushing disaster for the nation. For nearly one hundred and fifty years the race, the language, and the literature of the people were, so far as external appearance went, it seemed as if everything became Norman-French. But as long as the down-trodgen English kept life in them the springs of poetry and art could not dry up; and though Robert of Gloucester says that only "low men" held to English at this time, yet there were a good many of these "low men", and we have proof that the native population had still their songs and their wandering bards, while in certain of the monasteries the monks went on chronicling events in their mother tongue as much as they had done when a Saxon king had ruled England. The continuity of native verse and prose was never really broken, and just as the English race was at last to absorb its foreign conquerors, and to gain infinitely more than it had suffered from them, so English language and literature were by the same means to be enriched and ennobled to an extent no one then looking on could have dreamed of.

Yet at first literature was apparently silenced, and until the beginning of the thirteenth century there is no writing of much importance except the "Old English Chronicle", which ends in 1154. There were, of course, writings in Latin and in French, and the French was even looked upon by some as likely to be more enduring than the Latin. But the Latin writing was in reality no enemy to English; it was the tongue, then as now, of the Church, and it was the medium for communication between scholars and the language of nearly all books of scholarship. The native work, however, never quite disappearing, revives unmistakably at the beginning of the thirteenth century, and between that date and the death of Chaucer in 1400 there is produced a great mass of literature of endless variety but of varying value.

We come then to the Middle Ages, called "of Faith"; the age of the Crusades, "of cathedrals, tournaments, old coloured glass, and other splendid things" — the age to which, in times of dryness, artists, lovers of romance, as well as pious souls of all kinds, have often looked back and have drawn from it fresh inspiration. It has stimulated in modern times new and noble movements in art and in poetry, and its power of inspiration is not yet exhausted. It was an age of contrasts, of faith and of unbelief, of extraordinary saintliness and of strange wickedness, of reverence and of ribaldry. It was the great Catholic age, when the sacred robe of the Church, spotted though it might be in places through human frailty, was still unrent, whole, and she herself was everywhere acknowledged in Europe as the Divinely appointed mother of men. The history of English literature from the beginning of the thirteenth century onward is the history of the transition (up to about 1250), then of development for about eighty years, in which the work is largely anonymous, finally, a period of achievement, the second half of the fourteenth century, in which individual writers of power begin to emerge, and among them one supreme artist, Geoffrey Chaucer. We trace, too, during these ages the rise of the drama in the miracle and morality-plays.

On the threshold of the revival stand two works: "The Brut" (1265), a poem of 30,000 lines concerning the history of Britain, written by Layamon, an alliterative poet; and "The Four Champions of the World", an alliterative romance, apparently written between 1200 and 1230, and translated into English in the thirteenth century. The latter is marked by a strong assertion of the national spirit, and in literature there is a curious reappearance of the Old English alliterative verse after 300 years of apparent neglect. Amongst other poems in this metre there are four by an anonymous writer of high
poetic power, one of them, "The Pearl", of great beauty and of deep religious feeling. To this alliterative class belongs too the well-known "Piers the Plowman". Chaucer's work, coming almost at the same time, has to some extent overshadowed this poem, but an analysis of the society and ideals of the time it forms a complement to Chaucer's "Canterbury Tales". In "Piers the Plowman" we have that grave outlook upon life which marks the English character at its best, carried almost to excess. The author (or authors, we ought now to say, for it has been recently proved that at least three of the writers must have had a hand in its making) looks upon the society of his time as a "realist". He describes the world almost entirely upon its dark side, and though the remedies he offers are good ("Love is the physician of Life"), and though he never altogether loses his belief in a Divine over-ruling order, yet there is an accent of uncertainty and sometimes of despair in his voice. Chaucer (1340-1400), on the other hand, does not care for problems of life or dark thinking. His picture of society is, on the whole, from its bright side, when men are out on holiday, and when over-seriousness would seem out of place. Poetically, and in its structure, "Piers the Plowman" is much below Chaucer's work, but its forcefulness, its power, its originality, its grim humour, its realistic descriptiveness, and its dramatic moments make it a great poem. Chaucer's work marks the full flowering of English literature in the Middle Ages, and it was he who first raised English poetry to a European position. It is the custom of historians of literature to divide the literary life of Chaucer into a French, an Italian, and an English period, according as his work was influenced by the maturer national literature. This division represents a fact if it be remembered that he carried on, all through his career, certain of the lessons he had learned from the foreign source in the earlier time. There is little doubt that the impulse to write verse came to Chaucer from France. Old English literature was practically unknown to him, but he was saturated with French poetry, for the literature of France was then, outside the classics, the most influential in Europe. Among many shorter poems of this early time, the very first of which is a hymn to the Blessed Virgin, the translation (in part) of the long French allegorical poem of the "Romance of the Rose", and his original and most interesting elegy on the "Death of Blanche the Duchess", are the most important. It is, however, after he has come upon the literature of Italy—Dante, Petrarch, and Boccaccio—that his true genius begins to show itself. "The Parliament of Fowles", "The House of Fame", and "The Legend of Good Women" (the two last unfinished), as well as some of the "Canterbury Tales", belong to this time. They show him as a true artist, feeling his way through experiment to greater perfection of work and developing his unique sense of humour. Then, in the later years of his life, he strikes upon the fruitful idea of the Canterbury pilgrimage as a framework in which to show the full power of his art in his picture of the life of his own, and, to some extent of all, time; and into this frame he fitted tales he had already written, as well as new ones. But, of it all, nothing exceeds the power and truth of the "Prologue" to the "Tales". His picture of life and the commentary upon it comes straight out of his own observation and character. As he saw men so he fearlessly portrays them, the good, the bad, the indifferent. A few of his tales reflect the coarseness of the time, and it is just possible that the apology placed at the end of the MS. of "The Parson's Tale" is written by himself at the close of his life. But, however that may be, over all he writes he throws his own sunny humour and wide charity, and in this as in the width of his sympathies he is not unworthy to be named with Shakespeare. He is the one supreme literary artist before Spenser, and the best brief summary of him and his work is given in that proverb quoted by Dryden in his criticism of Chaucer, "Here is God's plenty". The name of John Gower (1330-1408) is linked by custom with that of Chaucer, but we recognize now what his contemporaries did not, that Gower's lengthy books in verse are the work rather of an expert journeyman than of a genius. But we may legitimately class together the two writers in the influence on the language. Both being widely read, they helped to make the East Midland dialect in which they wrote the literary language of England, and their choice or rejection of French words welded the language into greater stability and unity. The English language, at the end of the fourteenth century, had to assume nearly that modern form we know. People, language, and literature had now become wholly English. After reviewing this brilliant half-century of poetry, the prose of the same time seems a poor matter. There is no great progress to record, nothing really original of importance was written, and the style follows Latin models rather than the simpler natural manner of the Old English prose. Chaucer wrote prose which in its mediocrity is a curious contrast to his poetry. Sir John Mandeville's "Travels" was a translation of an amusing book, and Wyclif's translation or paraphrase of the Vulgate (in which, however, several other hands than his own had a share), together with his vigorous but heretical tracts and sermons, form the chief prose of this period. After the death of Chaucer, poetry declined in quality with strange swiftness. For the next one hundred and fifty years there is no great poet; the art of poetry, chiefly owing to the scarcity of native poetical genius, but also partly to the swift change the language was undergoing and to the careless attention to the task of the poet, became careless and neglected. The tradition of Chaucer almost disappeared. In the earlier part of the fifteenth century Lydgate (1370-1431?) and Hoccleve (1370-1450?) tried to follow in the footsteps of the master they revered, but frankly recognized their own failure. Their voluminous and mediocre work, especially Lydgate's, is not without
interest to the student, but certain anonymous poets, such as the authors of "The Flower and the Leaf" and "London Lickpenny" (formerly given to Lydgate), succeeded better than they, and the latter poet shows that Chaucer's power of social satire had not disappeared, and in their place a rich imaginative period of verse, came to the front as subject-matter for verse, and later in the century the scathing verse of John Skelton (1460?-1529), though poor as art, is of interest in the light it throws upon the social life of the times. This poet and Stephen Hawes (d. 1519), who tried the "Pastime of Pleasure" to revive the old allegorical style, are the only English names of any note in verse in the latter part of the century. In Scotland, however, the followers of Chaucer, of whom the chief were King James I, Dunbar, Henryson, and Gawain Douglas, were producing and continued to produce poetry worthy of immortality.

Fifteenth-century prose was less barren than the poetry of the age. Since the Conquest, nearly all serious subject-matter, with few exceptions, had been written of in Latin, but with the invention of printing and as the power to read and write spread downwards, English prose became more widely recognized as a medium for the expression of men varied as well as more popular kinds of matter. Four names—Peckock, Fortescue, Caxton, Malory—are recognized as leaders of this movement, but out of their work only Sir Thomas Malory's has become classic. His "Morte D'Arthur", which draws together as many stories and series of stories about King Arthur as he could lay hands upon, is a work of genius, and remains a living book. Its matter is of great intrinsic value and interest, but it is the beauty of its strange childlike style, its un-self-conscious appreciation of lovely and noble things in man and nature, and its underlying religious mysticism, which make it a book of the first order.

The medieval drama, which grew up during these centuries, was, with one or two exceptions, not the work of poets or literary artists, yet it was one of the most educative influences of the time. Beginning in connexion with the liturgy of the Church, there gradually developed a whole cycle of religious plays, showing forth the history of the world from the Creation to the Last Judgment. These, acted in a series, in public places of the towns, at certain great church festivals, provided as much instruction as amusement. There is no doubt that, in spite of passages in them which may now seem to us materialistic or irreverent, these simple and rude dramatic representations, both miracle-plays and the later developed moralities, pressed home great religious truths upon the people. From the point of view of the development of drama, we may say that English tragedy and comedy have, at least to some extent, their roots in these crude plays in doggerel verse.

Leaving the Middle Ages behind us, we come now to the threshold of the most fateful epoch in the history of the English people—the disruption of the Church, or the so-called "Reformation". This was preceded and accompanied by the earlier movement called the "Renaissance", which, having opened up fresh branches of classical learning, more especially that of Greek poetry and philosophy, awakened and stimulated the human mind both to good and to evil. In England the "New Learning" movement, in the hands of men like More and Colet tended to enlightenment and true learning. The "Utopia" of Sir Thomas More, a book of the noblest ideals, represents its spirit at the best. But the effect of the Reformation on the manners and morals of those Englishmen who came back imbued with its intoxication from Italy, was much lamented by contemporary writers, as we find in Ascham's "Schoolmaster". Yet it is to this acquaintance with Italy and its literature that we owe the revival of English poetry after its long relapse since the death of Chaucer. In the work of Sir Thomas Wyatt and of the Earl of Surrey, young men who had studied and felt the beauty and power of the great Italian poets, we discover a new beginning, a new poetic art. It was yet uncertain of itself, experimental, hesitating, and not engaged with deep or very noble subject-matter, but, while observing certain common laws of scansion and diction which the last one hundred years had ignored, attempted new and better melodies.

The publication of Tottel's "Miscellany" in 1557, which contains the work of these two poets, marks an epoch in literature. It set up a standard of poetic art below which no future work could sink. The literary field of that age was known as the aesthetic expectation looking for a new poet who should embody still more fully the poetic ideals of the time.

The new poet came in Edmund Spenser (1552-1599). Selden has a young writer been so immediately recognized and acclaimed by the accredited literary judges of his own time as Spenser was. And posterity has agreed with their judgment. He forms the second great landmark in English poetry after Chaucer, from whom he received inspiration. He had been bred in the stimulating atmosphere of the new learning and was greatly influenced by classic and Italian literature, but he also appreciated earlier English literature, and the only master he openly acknowledged was Chaucer. Spenser's poetry is throughout of wonderful beauty in its art, and is marked by nobility of aim, purity of spirit, and reverence for religion. His "minor poems" are many, and as Professor Saintsbury remarks, would be "major poems" for any smaller poet. He was, for example, a satirist of no mean order and a sonneteer, but in the general judgment, and rightly, Spenser is the poet of the "Faerie Queene". All his special powers are shown there, and all his character, one might almost say all his history. The large allegorical ground-plan of the "Faerie Queene", not half completed, interesting as it is, does not form the great attraction of the poem. That lies in the pure and appealing beauty of the Latin translation, in the varied and glorious description, often minutely detailed, in the wealth of imagination, and in the impassioned love of everything beautiful which enthralls the reader as it did the poet. That there are flaws in the poem goes without saying, more especially as Spenser died leaving it half finished.

The complete plan of the work cannot be gathered from the poem itself. Spenser's letter to Sir Walter Raleigh, prefixed to all editions, is necessary to make it clear. "The centre falls outside the circle." For Catholics, too, the historical allegory is seriously marred by the anti-Catholic bias of the poet's time.
In places, the Church is bitterly assailed, though in other passages Spenser clearly deprecates the desecration of monasteries, churches, altars, and images as the work of the "Blatant Beast of Calumny". Nor does he give by any means undiluted approval to the Anglican Church or the Puritans. Modern criticism, however, places little emphasis upon any portion of the historical allegory, regarding it as an antiquated hindrance rather than a living help to the true appreciation of the poem. The most purely spiritual elements of the allegory, such as the struggles of the human will against evil, aided by Divine power, are those which are valued by discerning readers. Considered in its essential aspect, the "Faerie Queene" is "the poem of the noble powers of the human soul struggling towards union with God". Spenser holds the supreme place among a multitude of other poets of as real though of less genius than his in the sixteenth century, and the work of these, outside the drama, is perhaps seen at its best in the song and the sonnet, two forms which had now an extraordinary vogue. Nearly a dozen anthologies of Elizabethan lyrics, of which the finest is England's "Helicon" (1600), remain to show us the sweetness and rarity of these songs. The sonnet, one of the new Italian poetic forms, introduced by Surrey and Wyatt, are less original, and many of them are translations from foreign sources, but those of Sidney and Shakespeare, at least, stand out by their exceptional force and beauty.

Among the many lesser poets of the time Michael Drayton (1563-1631) has been singled out as especially representative of the general character of Elizabethan genius. He wrote every sort of poetry that was the fashion except moral allegory. His work deserves more notice than is often given to it, and his name is sometimes only associated with his long historical poem of the "Polyhymnia". This type of poetry reflects the patriotism of the age, and Samuel Daniel and William Warner, both poets of some genius, also worked at it. The huge "Mirror for Magistrates," begun in 1555, and not in its final edition until James I's reign, had encouraged this kind of verse. Poetry of an argumentative and philosophic type was produced towards the end of the century, but very little of value that was religious, except the work of Robert Southwell. This heroic young Jesuit and martyr wrote with a high object: to show to the brilliant young poets of his time, whose love poems often expressed unworthy passion, "how well verse and virtue sort together". And he did this by using the literary manner of the age, "weaving", as he himself says, "a new web in their old loom". His book had a distinct influence on contemporary and later poetry, touching even Ben Jonson and perhaps Milton himself. Its quaintness of wit (allying it somewhat to the "metaphysical" school of the next generation) are shot through with warm human feeling which makes its direct appeal to the reader. And sincerity is the very root of it all.

But it is, of course, in the drama that we find all the well-known poets—with the one exception of Spenser—putting forth their greatest force. The sudden rise of the drama in the latter half of the sixteenth century is the most remarkable phenomenon of this supremely remarkable literary age. It has never been fully accounted for. Many of the contemporary records concerning plays and the theatre have been lost, so that we have to form our own judgment of Elizabethan dramatic literature and its causes, upon comparatively speaking, insufficient grounds. Out of some 2000 plays known to have been acted, only about 500 exist, as far as we know, and discoveries of new contemporary testimony or work might revolutionize our judgment on the history of Elizabethan drama. However that may be, the facts, as we have them, are that in the earlier half of the sixteenth century we find scarcely any dramatic work that would enable us to foresee the rise of the great romantic drama. Miracle-plays were acted up to 1579, but clearly no great development could come from these, and still less, perhaps, from the scholarly movement towards a so-called classical drama, imitations of the Latin comedies of Plautus and Terence, such as "Ralph Roister Doister", named the "first English comedy", or of the dramas of Seneca, or of "Pyramus and Thisbe" in the "Midsummer Night's Dream"), but this was no more prophetic than the others.

Then suddenly there appear between 1580 and 1590 plays with life, invention, and imagination in them, often faulty enough, but living. The predecessors of Shakespeare were, Greene, Kyd, and others, but most of all that wild and poetic genius, Marlowe, whose raptures were all fire and air", and who practically created our dramatic blank verse, prepare the way for Shakespeare. Rejecting, gradually, by a sort of instinct, those elements in the drama of the past that were alien to the English genius, they struck out, little by little, the now well-known type of Elizabethan romantic drama which in Shakespeare's hands was to attain its highest perfection. And Shakespeare's genius made of it not only a vehicle for the expression of Elizabethan ideals of drama and of life, but a mouthpiece of humanity itself.

Shakespeare belongs not to England but to the whole world, and most modern nations have vied with each other in acute and wondering appreciation of his genius. A mass of critical literature has grown up round his name, discussing problems literary, artistic, personal, of every kind, and continues to grow. Shakespeare and his work furnish inexhaustible matter for meditation upon almost every human interest and problem. After his time there are some fine dramatists, but none can approach him in completeness and height of genius. Ben Jonson, Chapman, Webster, Ford, Massinger, and Shirley—the two last Catholic converts—with others, carry on the line of dramatic writing, with genius, skill, and the glory gradually departs until one is led to think that if the theatres had not been closed in 1641 on account of
the civil war they would have ceased of themselves for want of good plays. Not only had the technical skill in versification, dialogue, and plot decayed, but the moral tone had so much degenerated that most of the hard charges brought against the drama by the Puritans at the time seem well justified.

When we turn to Elizabethan prose we find it a much inferior and less practised form of art than verse. No standard of good prose towards which writers might aim was recognized, and the masterpieces of the Elizabethan age are few. Hooker's "Ecclesiastical Polity," thus rightly, by its weighty argument and its grave eloquence, won a place among classics. Lyly in his two volumes of "Euphues" was the first, perhaps, to treat prose as equally worthy with poetry of artistic elaboration, and his book, a medley of story-telling and modifying, often most excellent as well as interesting in its ethical museing, instituted a fashion of speech and writing from which for some years few writers stood aloof. Sir Philip Sidney's "Arcadia," a long pastoral romance of sentiment, however, broke the spell and in its turn created a vogue. The novels of this time follow the "Euphues" or the "Arcadia" in most examples, but there is also a third type in the work of the novel of the wildest and reckless adventure, which was afterwards to be the fame of the age. This we find in greater work of Smollet. Criticism of poetry, history, often in the form of chronicles, geography, and adventure, such as in Hakluyt's collection of "Voyages," which is innumerable translations from classical and modern authors, were some of the matters treated in prose. In the novel, as in the drama, the foreign influences, especially those of Spain and Italy, are easy to trace. Though not of the first order of art, the Elizabethan prose is yet most attractive, for it reflects the varied interests of the complex character of the strange and wonderful time of the sixteenth century, and it exhibits in its early stages certain forms of literature, such as criticism and the novel, which were afterwards to develop into orders of the first importance. It is scarcely needful to say that Catholics, of necessity, in this epoch, for them, of disaster and persecution, took little part in the great output of literature.

From one point of view the history of English poetry would seem to be a record of action and reaction, of a struggle between one type of poetry and another, between that in which the matter delivered is all important, and that where correctness of form is the chief end at which the poets aim—between, in fact, the romantic and the classical schools. This general trend may be most clearly seen in the work of the crowd of secondary poets in any age, but the few who excel will be found to combine self-consciousness in themselves, more or less, the opposing elements; though, naturally, both small and great poets will exhibit some individual bias, however slight, towards one type of work or another. This statement is practically true of the seventeenth century. In the very heart of the romantic poets the immediate successors of the Elizabethans, there arose, in the early years of the century, a few young men who began to write verse of another kind altogether, whose work was not developed to its full meaning; however, until Dryden took it up. Meanwhile, one matchless poet, John Milton, living through the greater part of the century, went his own way ("his soul was like a star and dwelt apart"), taking little notice of prevailing types or subject-matter, fusing romantic and classical elements into one splendid kind of work that we can find no name for but "Miltonic.

Before looking in any detail at seventeenth-century verse, it is well to glance at the general character of the age. It is a contrast to that which had preceded it. The Elizabethan time had been exuberant almost to intoxication, rejoicing in the great range of possibilities for human life that new knowledge, exploration, and learning seemed to open out before it. But over this mood at the end of the century there passed a change. Questioning succeeded the brilliant joy in things as they had appeared; self-consciousness followed with the almost impersonal delight in life; the very foundations of religion, politics, and social life were called up for investigation. There had in reality always been a good deal of unrest beneath the surface, even after the settlement of these matters attempted and apparently in part accomplished by Elizabeth. Now the unrest increased, and a sceptical spirit, light or dark, according to the author's temperament, pervaded much of the most capable writing. At the same time there are religious writers who express both in prose and verse the best spirit of the age. When, for instance, under the sway of Archbishop Laud, and now there rises also to its full height the great Puritan movement (already, however, split up into a growing number of sects), strongly and narrowly affirmative of certain views concerning Divine and human things, passing oftener than not into intolerance and wild fanaticism. Milton, on the whole, represents this movement at its best, though his weaknesses may be discovered, especially in his prose work, even in his religious works.

At the beginning of the reign of James I we find the group of poets whose inspiration was Spenser, amongst whom the chief are the two Fletchers, William Browne, and George Wither. All have a sweetness and fullness in their work which links them to the Elizabethans. Passing on to the reign of Charles I, we are struck by a more widely spread order of poets, men who, at their best, are all more or less touched by the desire to find behind material objects an imaginative idea, "the search for the after-sense," and who in trying to express that which they thought they found used an over-abundance of imagery, sometimes beautiful, but often pedantic and fantastic to the point of absurdity. To these Dr. Johnson gave the name of "metaphysical", and to see them at their worst one should look at his quotations from them in his "Life of Cowley." The movement was not confined to England: Italy, France, and Spain had authors of the same order. John Donne (whose verse belongs in date to the reign of Elizabeth) is reckoned as the founder of this school in England. Herrick and the amours known as "Cavalier Lyristes" form one group in it, and Crashaw, Herbert, and Vaughan, religious poets, together with Herrick, are the only ones still held fast in earlier years. Crashaw, a fervent Catholic convert, whose religious verses are often very beautiful, shows in a marked degree the great strength and the great weakness of this school. Professor Saintsbury, the most discerning critic of this poetical group, has said that if Crashaw "could but have kept himself at
his best he would have been the greatest of English poets.” Of another Catholic poet, William Habington, Crashaw’s contemporary, but less than he, though occasionally writing fine passages, the same critic remarks that he is “creditably distinguished” from too many other shakers by a very serious and remarkable decency of thought and language.

But this was poetry which could not develop; it was a kind of second crop from the Elizabethan field, and it gradually withered away. Some time before its end, certain young poets, several of whom had been in France, exiled with the Queen Henrietta Maria, and had caught a new spirit, turned to fresh ways of verse. Edmund Waller (1605–1687) led the way as early as 1620. Denham, Cowley, and Davenant (a Catholic and romantic, brought up in the house of Lord Brooke, Sir Philip Sidney’s friend) followed him in varying degrees. These young poets initiated a change of far-reaching effect. In their hands poetry took on another aspect. It discarded nearly all forms of metre except the heroic couplet, refused to use any but rather commonplace imagery, and turning away from all passionate emotion, tended to treat of subjects which belonged to the intellect rather than to imagination or feeling. Satire or didactic poetry gradually underwent such a change in taste. But this was not accomplished in full until Dryden came. It was he who stamped this school with its leading marks, and gave the couplet its “long resounding march and energy divine.” Yet the restricted and prosaic subject-matter of this verse—satire, didactic, and argumentative work on religion (“The Hind and the Panther” was written in the cause of the Church) and politics—and has made some critics deny it, unjustly, the name of poetry. It is poetry of a certain restricted kind.

John Dryden (1631–1700), had he lived in a time more favourable to imaginative work, would have written verse more purely poetic. He had about him something of the amplitude, inventiveness, and freedom of the Elizabethans, and the history of his poetic development shows him passing from stage to stage of excellence. Though he was the crown and chief of the so-called “classical school,” he was indeed deeply tinged with romantic feeling, and he himself knew and acknowledged that poetry was capable of a higher flight and wider range than it had ever taken in his own day. He was, moreover, a man of many powers. He was a prolific dramatist, and his critical writings have made an epoch in the history of English prose. In the course of his life he changed his politics and his religion; and though doubts have been cast upon his good faith in this respect, the most recent criticism is of opinion that he had nothing but spiritual ends to gain by his conversion to Catholicism. It is unfortunate that we cannot exonerate him as an author from the charge of that sensuality which mars a good deal of his dramatic writing—it is no better and sometimes worse than the immoral by the religious, and often brilliantly witty drama of his time. He himself at the close of his life wrote a full apology for this trait in his work.

Dryden’s lines on Milton show the exalted estimate he had formed of his greater and earlier contemporary, and time has proved the general truth of it. The poetry of Milton (1608–1674) has become an English classic, and “Paradise Lost” has been translated into many tongues. It is regarded as the one great epic in English, and its fame has somewhat overshadowed that of Milton’s earlier work—“L’Allegro,” “Il Penseroso,” “Comus,” and “Lycidas”—poems within their own limits as perfect as anything he ever did. It is when we turn to his prose that the amazing contrast; the incomparable difference between it and his verse, how comparatively low the received standard of prose must have been. “Milton, the great architect of the paragraph and the sentence in verse, seems to be utterly ignorant of the laws of both in prose, or at least utterly incapable or careless of obeying the laws.” Yet it is the splendid passages more like poetry than prose, but the controversial matter which is the subject of most of it—to say nothing of its often violent manner—is scarcely interesting to the present generation. Prose in the seventeenth century had an eventful history, and in spite of the lack of a high devotional works appeared among the which the sermons of Jeremy Taylor stand high, and John Bunyan in “The Pilgrim’s Progress” produced a master-piece of English. Nor must we forget the Author of the Bible, in 1611—a work of a wonderful prose style, eclectic, drawn from many sources, and yet having the appearance of absolute naturalness and simplicity. Preaching was a notable feature of the time, and the very long sermons of Tillotson, Barrow, Stillingfleet, and others make good literature. Presumably Archbishop Tillotson as his master in prose, and it is when we come to Dryden’s own work in the latter half of the century that we find prose beginning to take its place as “the other harmony” of verbal artistic expression. On the whole, it is the mark of Restoration prose to become conversational, and we may say that modern prose, easy, flexible, and fitted for general use, arose in Dryden’s critical prefaces.

Dryden died in 1700, and with the opening of the eighteenth century we pass into an age of strongly marked characteristics. The Revolution by which the Stuart dynasty was displaced had been accomplished, involving, naturally, great changes in the fortunes of religious and political life, particularly disastrous to the Catholic Faith in England. In its earlier stages the century is filled by the party strife of Whigs and Tories, and the trivialities by the religious, and is known as Methodism and Deism—two strange opposites. In the upper classes there was a general lowering of spiritual and emotional temperature—to be enthusiastic was “bad form”—and religion and literature equally suffered. The growing middle class seems to some extent to have escaped this tendency, and the preaching of Methodism touched their hearts.
The “Church of England,” now the State “established” Church, was, however, in a state of spiritual poverty—many of her best clergy having left her for conscience’ sake at the time of the Act of Uniformity. As far as the current stream of poetry was concerned, it was still an affair of a circle of leisurely and fashionable people. A great admiration prevailed for the classics and classical principles, seen generally through the eyes of French critics.

The century opened badly for literature. For years there had not been such a barren literary time. Dr. Johnson first died, and though much verse was being written, it was mostly poor. In prose, there were few men of any mark. The only work showing power was the drama, in the brilliant and immoral comedies of Congreve, Vanburgh, and Farquhar. But within ten years there was a remarkable change. Pope came to the front in verse, and for many years poetry was to be almost synonymous with his name. In prose there was a galaxy of genius, Swift (1667–1746), Addison (1672–1719), Steele (1672–1729), Berkeley (1685–1753), to mention only a few, in whose hands modern prose—mature, varied, capable, combining, when at its best, strength, sweetness, grace, and magnificence—becomes henceforth a secure possession of English literature. But this was not all the change. Pope had first to go through a discipline from the hands not only of writers just mentioned, together with the great novelists in the first half of the century, but from Johnson and those who followed him, especially the historians Gibbon and Robertson. It thus took on a certain formality and stateliness unknown before.

Pope and Johnson are the two names that dominate almost tyrannically the first and second half respectively of the eighteenth century. Most of the elements of his age are more or less represented in the work of Alexander Pope (1688–1744), though, as a Catholic, his religious sympathies lay in another direction than those of his day. His first important poem, the “Essay on Criticism,” lays down rules for the guidance of critics according to the prevalent classical ideals; his “Rape of the Lock,” perhaps his best poem, gives a brilliant and witty picture of the high society of his time; his translation of Homer is a Greek story told in an eighteenth-century manner; his “Essay on Man” is a versifying of Shaftesbury’s philosophy; and the “Essays and Epistles” and the “Dunciad” are didactic and satiric. Dryden and Pope share between them the chief honours of English satire. Pope’s picture of Atticus (Addison) and Dryden’s of Zimri (Buckingham) have no equals in our satirical literature. The subject-matter of Pope’s poetry may sometimes fail to interested, but the ver-sification always claims attention. Pope refined and polished and super-refined the heroic couplet until it became the most perfect instrument for satiric verse. It has not the original vigour and variety of Dryden’s couplet, but it has a finer finish and a more subtle thrust.

Percy Bysshe Shelley, after painting by Amelia Curran at Boscobel.

The structure of the Southerners, however, at this time went into prose, and the prose writers contemporary with Pope are men of genius, with Swift by far the greatest of them. His “Tale of a Tub” and “Gulliver’s Travels”—to mention only the two greatest of his writings—show a power of intellect and imagination worthy to be employed upon much finer subjects—always prevent their becoming household companions as Scott and Dickens have become. Smollett and Sterne continue the life of the novel, and Goldsmith, in his masterpiece, “The Vicar of Wakefield”, has earned the gratitude of all readers. Biography, philosophy, and history have a large and distinguished place in the prose of this time. Samuel Johnson (1709–1784) accomplished many kinds of literature. His earliest attempt as well as his latest is biography; of essays he wrote many, but his genius is not best suited to that form, and the work is too often ponderous and mannered; novel and ethical treatise are combined in the delightful pages of “Rasselas”. His great dictionary is philology with an autobiographical flavour; his lives of the poets are partly biographical, but mainly critical, while criticism fills a good space in his edition of Shakespeare. But it is not only the range and value of all this work which makes it so attractive, but—in spite of its limitations—the sincere, strong, kindly character that animates every line of it.

“That fellow calls forth all my powers,” said Johnson of Burke. Edmund Burke (1729–1797) is now looked upon as England’s greatest political philosopher, and his writings belong in subject-matter to history and politics, rather than to literature. Their style, however, rich, imaginative, full of energy, varied to suit its theme, moving among worlds of knowledge, and selecting just the right word and illustration in each place, puts him among the great liter-
ary writers of the century. Both Johnson and Burke are touched with the romantic spirit, but Johnson would have vigorously repudiated any charge of romanticism in his work, and indeed he stood as a great bulwark against the flood of new thought and feeling which, becoming apparent after the death of Pope, had been rising little by little, especially in poetry, ever since the twenties. The great romantic movement was so difficult to define, and yet so easy to trace, becomes the supreme point of interest for the literary historian in the later eighteenth century. There is no class of poetry written during this time that stands in some relation to it, and its influence, as we have said, may be seen, though less clearly, in many of the prose writings. This movement was for the widening and deepening of literature. New fields of subject-matter were taken in hand, and the treatment of these gradually became more imaginative and emotional than it had been since the Elizabethan age. Nature and human life, after suffering from somewhat frigid treatment at the hands of the classical school, seemed to un sist and to become warm, living, and natural with the romantic writers. But this was a very gradual process, and began in the very heart of the classical movement; we may even see traces of it in the unrealized longings of Pope himself, of Spenser, and of who wished he could write a fairy tale. We see the change coming in the gradual rise of fresh metres, and especially of blank verse, in opposition to the heroic couplet; in the struggle of romantic against classic centred to some extent round these two forms.

But just as marked is the change of literary subject-matter. “Nature for her own sake”—natural description imbedded in other matter, or even forming the sole subject of poems—now occupy the writer. An aspect of life neglected by the school of Pope, begins to assert itself. And all this new matter, treated first in a melancholy moralizing spirit, gradually grows in imaginative strength, simplicity, and naturality, until we reach the poetry of Wordsworth and Coleridge, in which the movement is brought to its height and at the same time takes on a new freshness and impetus. James Thomson (1700–1748) published his blank-verse poem of “The Seasons” in 1726–30, and, even though there are many traces in it of the school of Pope, it sounds the first clear note of revolt. It is the first blank-verse poem of importance in the century, and the first important poem devoted to natural description. Many new elements are found in it, too, such as the interest in the poor and the labouring class, and in lands beyond England, as well as a new feeling and affection for animals. In 1748, the year of his death, Thomson published his “Castle of Indolence”, the best imitation of Spenser’s verse and manner that exists, and this was another sign of change. There were many poems written in blank verse or in Spenserian stanza between this poet and the first, whose contribution to the romantic movement is seen perhaps most clearly in his translations from the Icelandic and Gaelic, where he opened up a new field of subject-matter for the interest of readers and the use of poets. And Gray’s poems, small in quantity, but exquisitely finished, were not his only work; as a prose writer he gives us in his letters and journals first-hand and beautiful descriptions of nature in unaffected English. But his poetry is less simple, and, with its restraint of manner, might in some aspects be claimed by the classical school. It is in the decade after his death that we find the movement towards the more natural style expressing itself unmistakably in the half-romantic prose of Macpherson’s rhetorical prose “translations” of the Celtaic poetry of Ossian, in the poems of the unhappy boy-genius (hatterton), and in the collection of “Percy Bulleid”.

Following on these, however, there is a strong attempt at reaction in the poetry of Dr. Johnson, Churchill, and Goldsmith—though Goldsmith’s charming poems are more romantic than he knew. But in the next few years the battle is quickly won for romance by four poets: Burns, Cowper, Crabbe, and Blake, whose significance in the movement is more fully recognized now than it was then. Burns, who wrote the best of his poetry in a mixed Scottish dialect, had been nourished on the best English poets of the past, and the clearness and precision of his verse as well as its satirical and didactic subject-matter belongs to the school of Pope at its best. But, on the other hand, the essential spirit of his satire, in contrast with the detached coldness of Pope’s, is a consuming fire, as Swinburne has pointed out. His early verse, Ossian, and unfulfilled dreams, full of melody and passionate feeling, though all in the line of previous Scottish poetry, were new as regards England, and were truly romantic in tone and manner. Here are poems and passages of verse that we wish Burns had never written, but the largest part of his work belongs to our great literary stock of things noble and humane.

In William Cowper (1731–1800) we come to a poet whose influence is more and more recognized as of first importance in the reaction of eighteenth-century poetry. Living the most retired of lives, and not writing much until over fifty years of age, he has left a body of poetry marked with his own gentle, affectionate, humorous, and sometimes tragic genius, much of which has become classic in English. His best long poem, “The Task”, in blank verse, contains his most original work in the clear and simple descriptions of natural scenery. He also, like Gray, was one of the best of our letter-writers. George Crabbe (1754–1832) wrote nearly all his poetry in the heroic couplet, but used that form with more freedom than his contemporaries. Much of his work is of the story kind, and some of his poems are like novels in verse. Though he chose a hackneyed form for his work, and though all his sketches and stories tend to edification in a didactic way, he is never dull, and his analysis of motive and temperament and his realism are strangely modern in the antiquated setting of the heroic couplet. His work deserves more notice than English readers as a rule give it. William Blake (1757–1827), the fourth of these poets, is one of those geniuses who belong to no one time or place. Some of his most beautiful and charming poems in his two best-known little volumes, “Songs of Innocence” and “Songs of Experience”, might have been written by an Elizabethan, while his long mystical works in verse, not truly poetical, show him in the light of a dreamer whose dreams are rooted in some spiritual reality which only a very few readers can discern with him. But his poetry, as a whole,
though scarcely heeded at all by the public of his own
day, has been found, as it has received more attention
recently, to contain within itself the germ of many
later developments of thought and feeling in society
and literature. He was an engraver and painter as
well as a poet, and his work in these capacities
ought not to be neglected if one wishes to understand the character
of this genius.

Crabbe and Blake carry us on into the nineteenth
century, but before their death Wordsworth and Cole-
ridge accomplished the first of their epoch-making
work. With these three names we enter upon the story
of our modern literature. Wordsworth and Coleridge
are still in some sense with us, as their predecessors of
the seventeenth and eighteenth centuries are not. All
English modern poets are directly or indirectly influ-
cenced by them. They deliberately determined to be
missionaries in poetry, and they accomplished a mis-
sion in the face of great discouragement and opposi-
tion. The small volume of "Lyrical Ballads" pub-
lished in 1798, when they were young men together
under thirty, made a revolution in poetry and was the
fulfillment of nearly all that the romantic writers had
been trying half unconsciously to bring about. The
"Lyrical Ballads" of 1800, which opened the book, and the
"Tintern Abbey Lines", which closed it, to say nothing
of the many successes and few failures which fill up
the space between, were alone enough to set up a poetic
standard of high and peculiar significance. In these
poems Wordsworth gave accurate nature-description of the best kind, shot through with the poet's own imagina-
tion and feeling; there was love of, and interest in,
vivid human life, regardless of class or country; there
was weighty ethical matter without dullness. It is
perhaps in this seriousness with which life is viewed
that we find one of the key-notes of the romantic litera-
ture of the later Victorian age. It has been said of
William Wordsworth (1770-1850) that he wrote of
"what is in all men", and the leading ideas of his poetry
are indeed those in which all natural and sane
human beings can join. The healing and joy-giving
poetry of nature, the earth, beauty, and paths of the
simplest human affections, more especially, as seen
in the less sophisticated men and women of the poorer
classes in the country, may be realized by all. But
Wordsworth had also a philosophy of nature and her
relationship to human beings which was the foundation
of all his teaching, and which he expanded after poem
in poem, in passages of very great beauty, and in
much variety of style. It may be here noticed that
Wordsworth's style varies more than the ordinary
judgment gives him credit for. In his eagerness for
freedom from conventional phrasing, he strove, as he
himself tells us in his prose critical prefaces to the
poems, for utter simplicity of language which to us
at times seems bare and even puerile in its effect; but
he is capable more than most of a richness of style and
diction, especially in his blank verse, that is the very
opposite of his own theory. He has many styles, and
not only the making up of his manner is ever quite satisfactory to the Wordsworthian who realizes this.

The poetry of Samuel Taylor Coleridge (1772-1834)
does not represent the poet with anything like the
same fullness as does that of Wordsworth. Those of
Coleridge's poems which are of the first order of poet-
ical art are few, but they are inimitable and perfect of
their kind, and have a melody of peculiar witchery. Cole-
ridge was a greater, wider genius than Wordsworth,
and his deepest thoughts went into pedantic prose.
He has left only fragmentary work on philosophy and
criticism behind him, but even that has affected and
still affects the thought of our own time. Had Cole-
ridge possessed the will-power and endurance of
Wordsworth in addition to his own genius, no one can
tell to what heights he might have attained. His
career is a tragedy of character.

On these two poets when young men, as well as on
Southey and others, the altruistic philosophy of the
French revolutionary movement had a profound
effect, and in Wordsworth's "Prelude" we may see to
some extent the extraordinary and stimulating influ-
ence of these ideas upon some of the young and gener-
ous spirits of the English mind. But in spite of much
that was true in it, the elements of error, inadequacy
and crudeness in this philosophy became apparent,
especially in the course of the French Revolution, and
a revulsion from it fell upon both Coleridge and Words-
worth. Wordsworth alone of the two emerged from
the trial unscathed, and, thanks to nature, and to his
sister Dorothy—though how much to his life this
crisis was has himself told us. No one can properly
understand the poetry of this time, nor of the follow-
ing age of Shelley, Byron, and Keats, if he does not to
some extent realize the high and generous hopes raised
by the ideas of the Revolution in certain ardent minds
in England. They saw countless evils and oppression in
the social life of the time, and, in the working out of
the ideas of Liberty, Equality, and Fraternity, seemed
a full remedy. The three poets just mentioned lived
in the reaction from these hopes. Byron was embittered,
partly from personal causes, partly because of the
state of the society in which he lived, and he found
no redemption at hand. Shelley was fired by the
revolutionary principles as he found them interpreted
by the rationalism of Godwin, even while he shared,
too, in the reaction caused by the excesses of France.
But Wordsworth never entered into these matters at all, but turned by a sort of instinct away from the dreaminess of
life, as he saw it around him, to nature and beauty.

But there is one great writer who was untouched
either by the action or reaction of the revolutionary
ferment. Sir Walter Scott (1771-1832) loved the
poet and believed in it, and to the end of his lite he
was conservative in religion and politics. In his novels
and in much of his poetry he made popular those
romantic elements in the life of the past which are
more particularly associated with the Ages of Faith.
His close and affectionate description of the Scottish
seenery he loved so much was a strength in develop-
ing the care for natural scenery which has become
one of the leading marks of the nineteenth century.
His poetry at its very best is found in many of his short
songs and ballads, and in detached passages of his
longer poems, and it is verse not unworthy to be
comparatively fine work of the time. But his best-known
narrative poems—"The Lay of the Last Minstrel", "Marmion", and "The Lady of the Lake"—have all
taken through a great and special charm, and their
dream, clear, rapid, full of energy, together with their
almost faultless diction, make them worthy of their place among our classics. The popular-
ity of Scott's narrative poetry was overshadowed,
however, by the narrative work of Lord Byron, but to
our gain, since this led Scott to turn to another form
of art and to produce "The Waverley Novels".

Of the three young poets of genius whose short lives
accomplished such reception—Wordsworth, Lord
Byron (1788-1824) is now perhaps the least influen-
tial, though at the time his fame overshadowed every
other writer of verse. His extraordinarily vigorous
satires, marked by his study of Pope, whose poetry he
championed in a literary controversy of the time, is
unique in the energy of their style and the strength
and sting of their wit. It is unfortunate that a large
part of them are marred, for the ordinary reader, by
their extreme voluptrousness. His verse tales of
romantic adventure are imaginative, but pall upon us by
their tendency to sentimentality. His songs and oc-
casional pieces, together with his stock of capital
pieces, of which have fine nature-description—show him in a
more agreeable poetic light. His many dramas are
not truly dramatic, but are rather the outpouring of
his own powerful mind seeking an outlet. If we are
inclined to take an anti-Byronic attitude, it is well to

remember, first, that his brilliant, undisciplined, passionate work, though it never reached the height of the noblest art, yet taught a lesson of force, vitality, and sincerity to an age which, in spite of its good, was marked by much artificiality, callousness, and insincerity in both life and literature. He did this in a rude and melodramatic way, but he did it. And secondly, let those who judge Byron's wild private career not forget to read the last poem that he wrote, and realize that a change of temper, aspiration towards nobler things, was awakening in him before he died.

Keats and Shelley invite our comparison; their difference and their likeness are equally striking. They lived the same length of time, did all their work before thirty, dying young and with tragedy. They left behind them poetry of the highest order—their lyrics are masterpieces—containing the promise of still finer work. They were the devoted lovers of beauty, believing in it as the supreme reality, and were in earnest over their art, both of them leaving behind great poems expressing their unfinished, and therefore often unsatisfactory and misleading, philosophy of life. Each poet also has written remarkable prose. It is a great fault to consider Percy Bysshe Shelley (1822) as the "ineffable angel" sketched by Matthew Arnold. He was quite half human, and not at all ineffective. His most ethereal lyrics will be found to possess a basis of logical thought, while his prose writings show him as a thinker quite capable of keeping the highest place in her place. We are justified in claiming that the development of his work was that he was growing more and more capable of preserving the balance of the intellect and the imagination. The work that he accomplished in his short life is much and varied. Putting aside his early poems, there is the almost perfect "Adonais," the grave and beautiful lyrical ode to "Prometheus Unbound," in which he states his hopes (not always well grounded and apparently anti-Christian, though he revered certain elements in Christianity) for the future of the world; there is a crowning of short and exquisite lyrics—the highest watermark of English poetry of this kind—as well as the fateful and mystic "Triumph of Life," to say nothing of many others, and amongst them some fine dramatic work in blank verse. And he was only twenty-eight when he was drowned. Upon his errors of thought and style we need not particularize. They are but to be excused, if excusable, as mistakes of youth. Outside his literary work, and, now and then intruding into it, a certain crudity of youth appears. But all he does and says is in good faith, and for his errors he suffered bitterly during his short life. One of the noblest and most discerning of the "thieves" ever paid to his genius has been lately published from the pen of the now well-known Catholic poet, Francis Thompson. John Keats (1795–1821) accomplished less actual work, but had in him, it is generally allowed, greater potentiality of genius. He started life handicapped in circumstance and physical health, while he had no influence or following in his own short lifetime, and "it is the copious perfection of work accomplished so early and under so many disadvantages which is the wonder of biographers." His odes on "The Nightingale," "A Grecian Urn," and "An Ode on a Grecian Urn," are supreme art. Some of his narrative poems are among the best of their kind and his fragment of "Hyperion" shows what he might have accomplished had he lived to practise this graver type of poetry. His fame, however, is now established, and his poetic influence has been one of the strongest in the nineteenth century.

After the death of Keats poetry seems for a time to have exhausted itself. There is little to chronicle except the chirping of small poets until the great age of Victorian poetry opens with Tennyson and Browning.

But, to fill up the early years of the century, there is fine work in prose. The great series of Sir Walter Scott's novels extend from 1814 to 1831, and many smaller efficient writers are ranged round this central figure. The wild enthusiasm with which the Waverley novels were received can perhaps never be renewed. A multitude of causes have tended to divert and disturb the public taste for these great books; and it now lies with the public to decide whether they have yet grown as great as they appeared to be. Amongst these, Francis Thompson (1859–1907), in the opinion of most, takes the commanding place. The appreciation of him by well-known and most able critics has been extraordinarily unanimous and unstinted. He seems to have reached the peaks of Parnassus at a bound."

ENGLAND 469 ENGLAND
with almost every great previous English poet, and whatever may be the more balanced verdict of the future, his poetic immortality is assured. And his Catholic religion was his deepest inspiration.

The prose which grew up around the greatest Victorian epoch was, however, of the highest quality. A brilliant group of writers, as well as of thinkers in many spheres of knowledge and art appeared, and in this respect the age has surpassed the Elizabethan. The development of the novel is the most distinguishing mark of Victorian prose literature. Dickens and Thackeray followed in Scott's footsteps, with a host of other novelists, men, and women, of varying grades of power, who come up to our own day. Greater forms of literature also have been many and splendid. There are the essayists, with Lamb and Hazlitt as the chief; the historians with Macaulay and Carlyle; Froude, Freeman, and Green; Ruskin, with his immense and varied work upon art, economics, and the conduct of life, and whose influence, all for good, in spite of the vagaries of literary taste, is still strong and growing. The enormous extent and range of theological literature is a remarkable feature of the last fifty years, and here the writings of John Henry Newman (q. v. stand out as a supreme "literary masterpiece." Newman touched poetry with imagination, grace, and skill, but it is by his prose that he is recognized as a great master of English style. While all critics agree that the "Apologia" is a masterpiece, and that "nothing he wrote in prose or verse is superluous," there is some difference of opinion as to the reserve literary value of his earlier and later work. R. H. Hutton, however, one of his acutest non-Catholic critics, considers that "in irony, in humour, in imaginative force, the writings of the later portions of his career far surpass those of his theological apprenticeship."

Catholic writers are now many. After long years of repression they have their full freedom in the arena of literature, and there is more than a promise that when the history of the twentieth century comes to be written many Catholic names will be found in the highest places on the roll of honour.

K. M. WARRIN.

ENGLAND, Established Church of, Sec Anglican.

England, John, first Bishop of Charleston, South Carolina. U. S. A.; b. 22 September, 1788, in Cork, Ireland; d. at Charleston, 11 April, 1842. He was educated in Cork until his fifteenth year, was then taught privately for two years, and entered Carlow College, 31 August, 1803. In his nineteenth year he began to deliver catechetical instructions in the parish church and zealously instructed the soldiers in garrison at Cork. He also established a female reformatory together with male and female poor schools. Out of these schools grew the Presentation Convent. He was ordained priest in Cork, 10 October, 1809, and was appointed lecturer at the cathedral. Wherever he preached people thronged to hear him. Pending the opening of the Magdalen Asylum he maintained and ministered to many applicants. In the same year he published the "Religious Repository," established a circulating library in the parish of St. Mary, Shandon, and attended the city jail. In the elections of 1812 he fearlessly exerted his influence, maintaining that, "in vindicating the political rights of his countrymen, he was but asserting their liberty of conscience." In the same year he was appointed president of the new diocesan College of St. Mary, where he taught theology. In 1814 he vigorously and successfully assailed what was termed the impostor measure which threatened disaster to the Church in Ireland. Next to O'Connell's influence was the greatest in the agitation which culminated in Catholic Emancipation. To help this cause he founded "The Chronicle" which he continued to edit until he left Ireland. In 1817 he was appointed parish priest of Bandon. (The bigotry and prejudice of this city at that time may be conjectured from the inscription over its gates: "Turk, Jew or Atheist may enter here, but not a Papist.")

In spite of the prejudices which he found there, he soon conciliated men of every sect and party.

He was consecrated Bishop of Charleston at Cork, 21 Sept., 1820, and refused to take the customary oath of allegiance to the British Government, declaring his intention to become a citizen of the United States as soon as possible. He arrived in Charleston 30 Dec., 1820. Conditions were most uninviting and unpromising in the new diocese, which consisted of the three States of South Carolina, North Carolina, and Georgia. The Catholics were scattered in little groups over these States. The meagre number in Charleston consisted of very poor immigrants from Ireland and ruined refugees from San Domingo and their servants. In 1822, after twelve years of labour, Bishop England estimated the Catholics of his diocese at eleven thousand souls: 7500 in South Carolina, 3000 in Georgia, and 500 in North Carolina. South Carolina was settled as a royal province by the Lords Proprietors, who brought with them the religion of the Established Church, and it was only in 1790 that the enactments imposing religious disabilities were expunged from the constitution of the new State. Religious and social antecedents and traditions, and the resultant public opinion, were unfavourable, if not antagonistic, to the growth of Catholicism. The greatest need was a sufficient number of Catholic clergy. This sparsely settled section, with scattered and impoverished congregations, had not hitherto attracted many men of signal merit and ability. Bishop England faced these unfavourable conditions in a brave and determined spirit. The day after his arrival he assumed formal charge of his see, and almost immediately issued a pastoral and set out on his first visitation of the three States comprising his diocese. No bishop could be more regular and constant in these visitations. He went wherever he heard there was a Catholic, organized the scattered little flocks, ministered to their spiritual needs, appointed persons to teach catechism, and wherever possible urged the building of a church. During these visitations he preached in halls, court houses, State houses, and in chapels and churches of Protestant sects, sometimes at the invitation of the pastors. When in Charleston he preached at least twice every Sunday and delivered several courses of lectures besides various addresses on special occasions. He successfully advocated before the Legislature of South Carolina the granting of a charter for his diocesan corporation, which had been strongly opposed through the machinations of the disaffected trustees. In 1826 he delivered, by invitation, an eloquent discourse before the Congress of the United States. It was the first time a Catholic priest was so honoured. He was chiefly instrumental in having the First Provincial Council of Baltimore convened, and pending this, formulated a constitution for his diocese defining its relations to civil and canon law. This was incorporated by the State and adopted by the several congregations. He
also organized conventions of representative clergy and laity in each of the States in his diocese, to meet annually. In 1840 these were merged into one general convention. He held a synod of the clergy, 21 Nov., 1831, and in 1832 established a seminary and college under the name of "Philosophical and Classical Seminary of Charleston", hoping with the income from the collegiate department to maintain the seminary. Notwithstanding his many and varied duties he devoted himself to this institution as teacher of classics and professor of theology. Organized bigotry soon assailed it, reducing the attendance from one hundred and thirty to thirty; but he continued and it became the alma mater of many eminent laymen and apostolic priests.

In the words of Chancellor Kent, "Bishop Englefield revived classical learning in South Carolina". In 1832 he organized and incorporated a Book Society to be established in each congregation, and in the same year his indefatigable energy and zeal led him to establish the "United States Catholic Miscellany", the first distinctively Catholic newspaper published in the United States. It continued to be published until 1851 and is a treasury of instructive and edifying reading. He compiled a catechism and prepared a new edition of the Missal in English with an explanation of the Mass. He was an active member of the Philosophical Society of Charleston, assisted in organizing the Anti-duelling Society, and strenuously opposed Nullification in a controversy where it was vehemently advocated. His intense loyalty to his faith led him into several controversies which he conducted with a dignity and charity that commanded the respect of his opponents and elicited touching tributes from some of them at his death.

In 1830 he established in Charleston the Sisters of Our Lady of Mercy "to educate females of the middle class of society; also to have a school for free colored girls, and to give religious instruction to female slaves; they will also devote themselves to the service of the sick". Subsequently their scope was enlarged, and branch houses were established at Savannah, Wilmington, and Santee. In 1834 he further promoted education and charity by the introduction of the Ursulines. In 1835 Rev. William Clancy arrived from Ireland as the coadjutor of Bishop England, but, after a year during which he requested and obtained a transfer to another field, Bishop England had originally asked for the appointment of the Rev. Dr. Paul Cullen, then rector of the Irish College, Rome (afterwards the first Irish cardinal), as his coadjutor.

A striking phase of Bishop England's apostolic character was manifested in his spiritual care of the negroes. He celebrated an early Mass in the cathedral for them every Sunday and preached to them at this Mass and at a Vesper service. He was accustomed to deliver two afternoon sermons; if unable to deliver both, he would dispatch the rich and cultured who flocked to hear him, and preach to the poor ignorant Africans. In the epidemics of those days he exhibited great devotion to the sick, while his priests and the Sisters of Mercy volunteered their services in the visitations of cholera and yellow fever. His personal poverty was pitiable. He was known to have walked the streets of Charleston with the bare soles of his feet to the ground. Several times the excessive fatigue and exposure incurred in his visitations and ministrations prostrated him, and more than once he was in danger of death. Twice he visited Hayti as Apostolic Delegate. In 1827 he was asked to take charge of East Florida and, having been given the powers of vicar-general, made a visitation of that territory.

In the interests of his impoverished diocese he visited the chief towns and cities of the Union, crossed the ocean four times, sought aid from the Holy Father, the Papaganda, the Leopoldine Society of Vienna, and made appeals in Ireland, England, France, Italy, wherever he could obtain money, vestments, or books. After Easter, in 1841, he visited Europe for the last time. On the long and boisterous return voyage there was much sickness, and he became seriously ill through exposure to the weather. Though not well, notwithstanding, on his arrival in Philadelphia, he preached seventeen nights consecutively, also four nights in Baltimore. With his health broken and his strength almost exhausted, he promptly resumed his duties on his return to Charleston, where he died, sinecured and loved by every race and every party. His apostolic zeal, saintly life, exalted character, profound learning, and matchless eloquence made him a model for Catholics and an ornament of his order.

Most of his writings were given to the public through the columns of the "United States Catholic Miscellany", in the publication of which he was aided by his sister, a woman of many-sided ability and talents. His successor, Bishop Reynolds, collected his various writings, which were published in five volumes at Baltimore, in 1849. A new edition, edited by Bishop England, Archbishop S. B. Healy of Milwaukee, was published at Cleveland in 1908.

P. L. DUFFY.

Englefield, FELIX, a Franciscan friar, d. 1767. He was the younger son of Henry Englefield of White Knights, Reading, and Catherine, daughter of Benjamin Poole of London. His elder brother, Henry, succeeded their cousin Charles as sixth baronet in 1765. It is uncertain whether his own baptismal name was Charles or Francis. He joined the Franciscans at Douai and was ordained there, probably about 1732, when he was approved for preaching and hearing confessions. He had been teaching philosophy there before ordination, and from 1734 to 1740 he taught theology. In 1744 and 1745 he was titular guardian of York, but remained in residence at Douai. From 1746 to 1749 he acted as definator, and at the end of that period he was in England, for in March, 1749, he was sent to Rome on behalf of his own order and other regulars to procure the repeal of the papal decree of 1744 dissolving the relations between the vicars Apostolic and the regulars. In this he failed, as Benedict XIV supported the vicars Apostolic by the "Rules of the English Mission", issued in 1758. In 1749 Father Felix was titular guardian of Oxford, and in the following year he attended the general chapter at Rome in place of the provincial, Father Thomas Holmes, who was too infirm to undertake the journey. In 1750-1751 he was titular guardian of Greenwich; custos 1752-1755, and finally, on 19 Aug., 1755, he was elected provincial, and held that office till 1758, living at Horton in Gloucestershire. While provincial he drew up a valuable list of all the Franciscans then (1758) in England, with their addresses. Father Thaddeus, O.F.M. (op. cit. inf., p. 14) states that he was the reputed author of the "Miraculous Powers of the Cross of Christ", published in 1808. But this was really written by William Walton, afterwards Vicar Apostolic of the Northern District, whose name appears on the title-page of a subsequent issue. Father Englefield died probably at Douai, though one account says he was on the English mission at the time.

ENGWIN BUTON.
ENGELFIELD

ENGELFIELD, Sir Henry Charles, Bart., antiquary and scientist, b. 1752; d. 21 March, 1822. He was the eldest son of Sir Henry Englefield, sixth baronet, by his second wife, Catherine, daughter of Sir Charles Bucke, Bart. His father, who was the son of Henry Englefield, 5th Viscount White Knights, by Sarah Reading, his 17th son, succeeded to the title and the Englefield estates at Wootton Basset, Wilts; so that Henry Charles inherited both White Knights and Wootton Basset on the death of his father, 25 May, 1780. He was never married and devoted his entire life to study. In 1778 at the age of twenty-six he was elected a Fellow of the Royal Society, and in the following year Fellow of the Society of Antiquaries. For many years he was vice-president of the latter, and succeeded the Marquess Townshend as President. Owing, however, to his being a Catholic, objection was taken to his re-election, and he was replaced by the Earl of Aberdeen. Under his direction the society produced between 1797 and 1818 the series of engravings of English cathedrals, to which series he contributed the dissertations on Durham, Gloucester, and Exeter. In 1781 Englefield joined the Dilettanti Society and acted as its secretary for fourteen years. Besides his antiquarian studies, which resulted in many contributions to "Antiquologia," he carried on research in chemistry, mathematics, astronomy, and geology. His "Discovery of a Lake from Madder" won him the gold medal of the Society of Arts. He took no part in public life, owing to Catholic disabilities, but was intimate with Charles Jenkin's, and his cheerful conversation won him many friends. His portrait was painted by Sir Thomas Lawrence, and two bronze medals were struck bearing his likeness.

In Catholic affairs Englefield took a prominent part. In 1782 a member of the Catholic Committee, he served by the duty for the Southampton Catholic interests, a body which subsequently found itself in conflict with the Vicars Apostolic. In the early stages of this dispute he was one of the moving spirits and contributed the pamphlet, mentioned below, in answer to Dr. Horsley's Anglican attack. The latter afterwards became the friend of the Catholics, and it was through his influence that the Catholic Relief Bill of 1791 was modified to suit the requirements of the bishops. Throughout the dispute Englefield took an independent line, and at times went rather far in his opposition to the Vicars Apostolic, as in 1792, when he was prepared to move a strong resolution at the general meeting of English Catholics. He was dissuaded at the last moment by the three who undertook to act as "Gentlemen Mediators" between the two parties. During his latter years his eyesight failed; he died at his house, Tinley St., London, the barometer thereupon becoming extinct. His works are: "Tables of the Apparent Places of the Comet of 1661" (London, 1788); "Letter to the Author of "The Review of the Case of the Protestant Dissenters"" (London, 1790); "On the Determination of the Orbits of Comets" (London, 1793); "A Walk Through the Southampton (Southampton, 1801); "Description of a New Transit Instrument, Improved by Sir H. Englefield" (London, 1814); "The Andrian, a Verse Translation from Terence" (London, 1814); "Description of the Principal Beauties, Antiquities and Geological Phenomena of the Isle of Wight," with engravings from his own drawings, and a portrait (London, 1816); "Observations on the Probable Consequences of the Demolition of London Bridge." (London, 1821). Gillow has printed (op. cit. infra) a list of papers contributed to the transactions of the Society of Antiquaries, Royal Society, Royal Institution, Society of Physicians, and the Royal Geographical Society, as well as "Nicholson's Journal" and "Tillock's Philosophical Magazine".

---

ENGLISH

ENGLISH College, The, in Rome.—I. FOUNDATION.

The English College, like other Colleges of missionaries (e.g. Douai, II, 168, following Polydore Virgilius Harradine, Spain, 1549), have traced the origin of the English College back to the Saxon school founded in Rome by Ina, King of the West Saxons, in 727. To an antiquity so great, however, the college, venerable though it be, has no just claim. It dates from about the middle of the fourteenth century, when the Savoy of St. Thomas of Canterbury was founded. This hospice owed its establishment to the jubilee, which brought pilgrims to the Holy City from every country of Europe. Those who arrived from England in 1350 to perform their devotions, found it difficult to obtain suitable accommodation and hospitality. The archives of the English College seem to point to the establishment of a guild of laymen, which acquired certain property in the Via Monserrato, the principal persons who took part in the transactions being members of the Worshipful Company of Goldsmiths, who devoted themselves and their fortunes to the service of the pilgrims in the hospice, and William Chandler, chamberlain, Robert de Pina, syndic, and John Williams, officials of the community and society of the English of the city. The deeds show that the property acquired in which therefore may be taken as the date of the foundation of the hospice. But from the time of Henry VIII the hospice began to decline. After the persecution had broken out anew under Elizabeth, many of the clergy went into exile. Some of these, who found their way to Rome, were received into the hospice, and formed a permanent community therein. During Dr. William Allen's visit to Rome in 1576, it was arranged with Pope Gregory XIII that a college should be founded there for the education of priests for the English Mission. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college: six more went in 1577, and again six in 1578. Dr. Gregory Martin, writing on 26 May, 1578, to Father Campion, tells him that twenty-six students are living either in the hospice itself, or in the house next door, which has internal communication with the hospice (Douai Diaries, Appendix, p. 316). Indeed, the Pope had already determined to convert the hospice into a seminary; and at Christmas, 1578, "There came out a Breve from the Popes Holines commanding all the old Chaplains to depart within 15 days, and assigning all the rents of the Hospital unto the use of the Seminary, which was presently obeyed by the said Priests" (Father Persons's Memoirs: Catholic Record Society, II, 144). Unfortunately, however, Cardinal Morone, the Protector of England, and therefore also of the College, appointed as its rector Dr. Clenock, the warden of the hospice, who was assisted by two Jesuit Fathers as prefect of Studies and procurator. Dr. Gregory Martin, again writing to Father Campion, 18 Feb., 1579 (from Reims), informs him that there are in the college in Rome "at the present moment forty-two of our students, most of whom are divines, one rector, three fathers of your Society, and six servants. They live in the hospital and the adjoining house. The revenues of the hospital have been transferred to the seminary, except what is required for the entertainment of the pilgrims" (Douai Diaries, ivii, and Appendix, p. 319). For some years, internal dissensions arose. Most of the students of the college were, of course, English; but there were also seven or eight Welshmen, for no national distinction was made between the Cambrian and the Saxon, all being considered as English for the purposes of the institution.
The Welsh rector was accused of favouring his fellow-countrymen; and finally the English students broke out into open mutiny. They petitioned the Holy Father that the college should be entrusted to the Fathers of the Society of Jesus, and declared that they would rather leave the college than remain under Dr. Clenock.

The students were ordered by the Cardinal Protector to submit under pain of expulsion; but they preferred to go, and began to make preparations for the journey back to Douai and Reims, or to England. Meanwhile, however, was shown for them in Rome, and, intercession being made with the Pope on their behalf, they were reinstated in the college after two days, and their petition was granted. Dr. Clenock was removed from the rectorship and the government of the college handed over to the Jesuits, the famous Father Robert Persons being given temporary charge till the appointment of the first permanent Rector, Father Alphonse Agazzari, on 23 April, 1579.

This day is the real birthday of the English College in Rome; for on this day the Bull of Foundation was signed by Pope Gregory XIII; on this day the students were restored to the administration of their college by the Pope. Thus the academic life of the college was to proceed to England when it should seem good to their superiors; and on this day the College Register begins. The Bull, however, was not published till 23 Dec., 1580. Under this date, the entry occurs in the College Annals (Liber Ruber), II, 12, of which the following is a translation: "A.D. 1580, Dec., to the praise and glory of the most Holy Trinity and of St. Thomas the Martyr, was expedited the Bull of the Foundation of this College, which, though it was granted by Pope Gregory XIII in April last year, did not reach our hands before the above date, and in which, as besides many faculties and spiritual and temporal favours all the goods of the English Hospice were united with the College, we received possession of it on the 29th, Dec., which is dedicated to St. Thomas the Martyr, and which, although it does not explicitly appear in the Bull what the Pope declared by word of mouth that this College was bound to receive and maintain the English pilgrims according to the statutes of the said Hospice. This Bull has been deposited in the College Archives." Thus the English College, the oldest but one of all the Colleges of Rome, (as the Colleges of Rhetorics are antedates it by a few years), was launched on its career, the number of students at the time in the college being fifty, a number which later rose to seventy-five. That the college did its work efficiently, and fulfilled the purpose for which it was founded, is abundantly attested by the lists of names of the priests sent into the mission-field, and especially by the roll of its martyrs. During the period 1632-1695, under the Cardinal Protector Howard, O.P., the greater part of the college was rebuilt.

The eighteenth century was a period of decline. Contrary to the original constitutions of the college, boys were admitted for the course of humanities, and some even, of very tender years, for more elementary studies. In August, 1773, the Society of Jesus was suppressed, and the administration of the college was handed over to Italian secular priests. During this period the students were ill-treated, the college was mismanaged, and a large portion of the archives sold for waste-paper. "At the time of the suppression, the number of Students was reduced to four divines, three philosophers, and three grammarians... Of these, four were Jesuits, six have been Bishop, and thirty-six declared Venerable. The former are: Ralph Vaughan, John Short, Luke Kirby, Laurence Richardson (vere Johnson), William Laey, and William Hart. Short was the first missionary priest from the college to enter England. The Venerables are: George Haylock, Thomas Hemerford, John Milford, John Lowe, Robert Morton, Richard Leigh, Christopher Burton.

The famous Father Robert Persons was rector of the college in 1598, and again from 1598 till his death in 1610. Father Muzio Vitelleschi, afterwards General of the Society of Jesus, held the rectorship from 1592 to 1594, and again from 1594 to 1598. Cardinal Wall, who came to the college in 1597, became rector in 1598, and was made bishop in 1610. The English College may claim as teachers the great Jesuit theologians of the Roman College: Bellarmine, Suarez, Vasquez, in the distant past; and in modern times Perrone, Franzen, Ballerini, Billot.

The Society of Jesus in England.—The college shares with Douai and the other continental seminaries, the honour of having kept alive the lamp of the Faith in England during the dark days of persecution. Without these colleges the supply of priests for the English Mission would have entirely failed. Moreover, the college in Rome was for English Catholics a connecting link with the centre and Head of Christendom, and the missionaries sent thence formed a visible and tangible bond of union with the Holy See for the supremacy of which the faithful in England were suffering too much. When we turn to the nineteenth century, it suffices to mention the name of Cardinal Nicholas Wiseman, the "Man of Providence," who had the greatest share in the work of the re-establishment of the Catholic hierarchy in England in 1850, and, as his head, by his genius reconciled the English Catholics to the Pope, and thus they lost the first reason for their "Papal Aggression." It was he who put the Church in England on a firm basis, and, under God, whom we have to thank for the "Second Spring." But Wiseman was not alone. Of the rectors of the nineteenth century, all but two were made bishops, and in every part of the country the English College alumni may be found in positions of responsibility, vicars-general, canons, and especially professors of the ecclesiastical colleges and seminaries, whence the purity of the Roman Faith is diffused throughout the length and breadth of the land.

CHARLES J. CROTTY.

English Confessors and Martyrs (1534-1739).—Though the resistance of the English as a people to the Reformation compares very badly with the resistance offered by several other nations, the example given by those who did stand firm is remarkably interesting and instructive. (1) They suffered the extreme penalty for maintaining the unity of the Church and the supremacy of the Apostolic See, the doctrine which was repudiated by the Reformation in all lands and at all times. (2) They maintained their faith almost entirely by the most modern methods, and they were the first to maintain it, i.e. by education of the clergy in seminaries, and of Catholic youth in colleges, at the risk, and often at the cost, of life. (3) The tyrants, they had to withstand was, as a rule, not the sudden violence of a tyrant, but the continuous oppression of laws, sanctioned by the people in Parliament, passed on the specious plea of political and national necessity, and operating for centuries with that almost irresistible force which the law acquires when acting for generations in conservative and law-abiding countries. (4) The study of their causes and their acts is easy. The number of martyrs is many; their trials are spread over a long time. We have in many cases the papers of the prosecution as well as those of the defense, and the voice of the Roman Curia is England of Rome.

The Cause of the Beatification of the English Martyrs is important not only for England, but for all missionary countries, where its precedents may possibly be followed. The English cause is a very ancient one. Pope Gregory XIII, between 1580 and 1585, made several important vicissitudes. Rules of these martyrs might, in default of others, be used for the consecration of altars, a Te Deum might be publicly sung on the receipt of the news of their martyrdoms, and their pictures with their names attached might be placed in the church of the English College, Rome. These permissions were given with the condition that we keep the name of Urban VIII, in 1642, commenced an inquiry, and though the outbreak of the Civil War in 1642 postponed indefinitely the public progress of the cause, a list of martyrs was drawn up by the then vicar Apostolic, Dr. Richard Brook, Bishop of Chalcedon, which was subsequently amplified and published by Dr. Richard Challoner. It was not till 1853 that the cause was revived, when Canon John Morris (a Jesuit after 1809) became its apostle. After several unsuccessful petitions, as that of the Third Synod of Westminster in 1839, to obtain an immediate sanction of their cultus by a papal decree, a formal "ordinary process" was held in London, June to September, 1874. The work was one of much difficulty, firstly because nothing of the sort had been attempted in England before, and secondly because of the multitude of the martyrs. Largely, however, through the public spirit of the Fathers of the London Oratory, who devoted themselves to it untiringly, success was achieved both in gathering together a large body of evidence and in fulfilling the multifarious ceremonial preliminaries on which the Roman jurists so strongly insist. After the cause had been for twelve years in the Roman courts, two depositions by Dr. Challoner, who repeatedly speaking, gave full force and efficacy to the two ancient papal ordinances before mentioned (see Beatification and Canonization).

Thus Pope Gregory's concession resulted in the equivalent beatification of sixty-three martyrs mentioned by name in the pictures (at first, in 1858, fifty-
four were admitted: in 1895 six more were added, with one not in the Roman pictures), while the lists drawn up by Bishops Smith and Challoner led to the "admission of the cause" of 241 martyrs (all but twelve post-Gregorian), who are therefore called "Venerables." They are left with their state still in suspense and are called Dilati. Except seven, these are all "Confessors," who certainly died in prison for their faith, though it is not yet proven that they died precisely because of their imprisonment. There is yet another class to be described. While the foregoing cause was pending, great progress was being made with the arrangement of papers in the Public Record Office of London, so that we now know immeasurably more of the persecution and its victims than before the cause began. In short, over 230 additional sufferers seemed possibly worthy of being declared martyrs. They are called the Proterum, because they were passed over in the first cause. A new cause was thereupon held at Westminster (September, 1888, to August, 1889), and the proceedings have been sent to Rome. For reasons which it is not necessary to touch upon here, it was thought best to include every possible detail, and even those of which there has been no definite information, and the far-reaching cause of Queen Mary Stuart. This, however, proved a tactical mistake. An obscure cause needs much attention as a clear cause, or more. Moreover, the Roman courts are, on the one hand, so short-handed that they give much to a work to which much will lead to little result, and, on the other hand, they are overwhelmed with causes which certainly need attention. In order to facilitate progress, therefore, the cause has been split up: the case of Queen Mary has been handed over to the hierarchy of Scotland, and other simplifications have been attempted; nevertheless, the cause of the Proterum so far hangs fire. Apostolic letters for a Processus de Scriptis were issued by the Sacred Congregation of Rites on 21 March, 1899, ordering the then Archbishop of Westminster to gather up copies of all the relevant writings of the men so declared Venerable. This proved a lengthy task, and when complete the collection comprised nearly 500 scriptis, and over 2000 pages. It was not completed till 17 June, 1901. Then, by special concession, four censors were appointed to draw up a preliminary censura in English which was forwarded to Rome. However, further consideration, a decree was drawn up and confirmed by the pope on 2 March, 1906, declaring that none of the writings produced would hinder the cause of the martyrs now under discussion. In the course of the same year a further decree was obtained, allowing the cause for the beat; but not without many restrictions.

I. BEATI.—The sixty-three Blessed will be noticed in detail elsewhere, and the principal authorities will be there noted. Their names are here arranged in companies when they were tried or died together.

II. VENERABLES.—Separate notices will be given of the more notable martyrs and groups of martyrs. But, though they all died heroically, their lives were so retired and obscure that there is generally little about them. However, it is certain that, being educated in most cases in the same seminaries, engaged in the same work, and suffering under the same procedure and laws, the details which we know about some of the more notable martyrs (of whom special biographies are given) are generally also true for the more obscure. The authorities, too, will be the same in both cases.

(1) Under King Henry VIII. (12.)—1537-38: Anthony Brookby, Thomas Belcham, Thomas Cort, Franciscans, thrown into prison for preaching against the royal supremacy. Brookby was strangled with his own girdle, the others died of ill treatment. 1539: Friar Waire, O.S.F., and John Griffith p. (generally known as Griffith Clarke), Vicar of Wandsford, for supporting the papal legate, Cardinal Pole, drawn and quartered (8 July) at St. Thomas Watersings; Sir Thomas Dingley, hanged and quartered, 7 July, with Bl. Adrian Fortescue, q. v. John Travers, Irish Augustinian, who had written against the supremacy; before execution his hand was cut off and burnt, but the writing fingers were not consumed, 30 July. 1540: Edmund Brindolme p., of London, and Clement Philp p., of Calais, attainted for having "adhered to the Pope of Rome," hanged and quartered at Tyburn, 4 Aug., 1540; Sir David Gonsen (also Genson and Gunston), Knight of St. John, son of Vice-Admiral Gonsen, attainted for "adhering" to Cardinal Pole, hanged and quartered at St. Thomas Watersings, 1 July, 1541; John Ireland p. once a chaplain to More, condemned and executed with Bl. John Larke, 1544; Thomas Ashby l. q. v., 29 March, 1544.

May, Tyburn. 1654: John Southworth p., q.v. 28 June, Tyburn.

III. The Forty-four Dilators.—These, as has been explained above, are those "put off" for further proof. Of these the majority were confessors, who probably suffered a comparatively short period of imprisonment, though definite proof of their death ex armenias is not forthcoming. (1) Under Queen Elizabeth (18).—Robert Dimock, hereditary champion of England, was arrested at Mass, and perished after a few weeks' imprisonment at Lincoln, 11 Sept., 1580; John Cooper a young man, by the breath of the air, Dr. Nicholas Harpsfield, and probably a distributor of Catholic books, arrested at Dover, and sent to the Tower, died of "hunger, cold and stench," 1580; Mr. Allworth (Aylward), probably of Passage Castle, Waterford, who admitted himself to Mass at his house, was arrested, and died after eight days, 1580: William Chaplin p., Thomas Cotemore p., Robert Holmes p., Roger Wakeman p., James Lomax p., perished in 1584. Cotemore was a bachelor of Oxford in 1536; of Wakeman's sufferings several harrowing details are obtainable. Thomas Crowther p., John Jetter p., and Laurence Vaux p., q.v., perished in 1585; John Harrison p., 1586; Martin Sherson p., and Gabriel Thimbelby p., 1587; Thomas Metham, S.J., 1592; Eleanor Hunt and Mrs. Wells, gentlewomen, on unknown days in 1600 and 1602. (2) Under the Commonwealth (8).—Edward Wilkes p., died in York Castle before execution in 1642; Boniface Kempe (or Francis Kipton) and Ildophene Hesketh (or William Hanson), O.S.B., professed of Montserrat, seized by Puritan soldiery in Yorkshire, and warned to disband, 26 July (7), 1644; Richard Bradley, S.J., b. at Burying Hall, Lancs., 1605, of a well-known Catholic family, seized and imprisoned, but died before trial at Manchester, 20 Jan., 1645; John Felton, S.J., visiting another Father in Lincoln, was seized and so badly used that, when released (for no one appeared against him), he died within a month, 17 Feb., 1645; Thomas Manby, O.S.B., of Courtfield p., and Thomas Blount p., imprisoned at Shrewsbury, d. at unknown dates; Robert Cox, O.S.B., d. in the Clink Prison, 1650. (3) During the Oates Plot (10).—Thomas Jesson, S.J., d. after twelve months' imprisonment, 27 Sept., 1678. He had renounced a handsome inheritance, and had been living apostatized, turning king's evidence against him. William Lloyd, d. under sentence of death at Brecknock, 1679. Plaice Alidham or John Adland (O.S.B.), a convert clergyman, chaplain to Queen Catherine of Braganza, d. under sentence in 1679. William Atkinson, S.J., condemned at Stafford, was too deaf to hear the sentence. When it was shouted in his ear, he turned and thanked the judge; he was reprimed and d. in bonds, 7 March, 1681. Richard Birkett p., d. 1680 under sentence in Lancaster Castle; but our martyrlogists seem to have made some confusion between him and John Richardson, and John Birkett (see Gillow, Catholic Rec. Soc., IV, pp. 431-40). Richard Lacey (Prince), S.J., Newgate, 11 March, 1680; William Allison p., York Castle, 1681; Edward Turner, S.J., 19 March, 1681, Gatehouse; Benedict Constable, O.S.B., probably at Lamspring, 1689, 11 Feb.; Richard Mason, 1683, Durham; John Beale, S.J., 30 October, 1692, Liecester Gaol under William III. (1) Others Put off for Various Causes. (8).—John Mawson, assigned to 1614, is not yet sufficiently distinguished from John Mason, 1601; there is a similar difficulty between Matthias Harrison, assigned to 1599, and James Harrison, 1602; William Tyrwhitt, named by error for his brother Robert; likewise the identity of Thomas Dyer, O.S.B., has not been fully proved; James Atkinson, killed under torture by Topcliffe, but evidence is wanted of his constancy to the end. Father Henry Garnett, S.J., q.v.; was he really used ex oculo fidei, or was he advanced in the Powder Plot, by merely human misjudgment, not through religious prejudice? The case of Lawrence Hill and Robert Green at the time of the Oates Plot is similar. Was it due to odium fidei, or an unprejudiced error?

Various Years (2) Thomas Gabbyt. P. Cist. 1575; William Hambleton p. 1583; Roger Martin p. 1582; Christopher Dixon, O. S. A. 1616; James Laburne, 1683; Edward Arden, 1594.

V. The Eleven Bishops.—Since the process of the Prætermittis has been held, strong reasons have been shown for including on our list of sufferers, whose causes ought to be considered, the eleven bishops whom Queen Mary had expelled under certain conditions. Sir Edmund Bonner, or under some form of confinement. Their names are: Cuthbert Turnstall, b. Durham, died 18 Nov., 1559; Ralph Boyle, b. Lichfield, d. 18 Nov., 1559; Owen Golethorpe, b. Carlisle, d. 31 Dec., 1559; John White, b. Winchester, d. 12 Jan., 1560; Richard Pate, b. Worcester, d. 23 Nov., 1565; David Poole, b. Peterborough, d. May, 1568; Edmund Bonner, b. London, d. 5 Sept., 1568; Gilbert Bourne, b. Bath and Wells, d. 10 Sept., 1599; Thomas Thirlby, b. Ely, d. 20 Aug., 1570; James Turbervile, b. Exeter, d. Nov., 1570; Nicholas Heath, Archbishop of York, d. Dec., 1578.

Ennodius. MAGNUS FELIX, rhetorician and bishop, b. probably at Arles, in France, d. at Pavia, Italy, 17 July, 521. When quite young he went to Pavia, where he was educated, was betrothed, and eventually became a priest, his fiancee at the same time becoming a nun. It does not appear certain that he ever married. Shortly after the death of his benefactor, Epiphanes (106), he moved to Antwerp, where he was bishop of that city. Soon he was ordained deacon and taught in the schools. About this time (529) two popes were elected simultaneously, the decan Symmachus and the archpriest Laurentius. King Thoericius was in favour of the former, and convened a council at Rome in 501, the famous Synod of Pavia, to settle this question and put an end to much scandal. On this occasion Ennodius acted as secretary to Laurentius of Milan, who was the first to sign the decrees of the council. The adherents of the archpriest Laurentius, who was rejected by the council, wrote against the decisions of the latter. Ennodius answered them and defended the synod in a still extant work entitled "Libellus adversus qui contra synodum scribere pressumpsissent". After returning to the objections urged against the incompetency and irregularity of the council, he attacks the enemies of Symmachus and proclaims the inability of human judges to decide matters pertaining to popes: "God no doubt consorted to the affairs of men being settled by men; He reserved to Himself the passing of judgment upon the pontiff of the supreme see" (Libellus, 98). In 513 Ennodius was still at Milan, but shortly afterwards he was made Bishop of Pavia. In 513 and 517 he headed two successive embassies which Pope Hormisdas sent to Emperor Anastasius at Constantinople, both of which, however, were barren of results. The unrelenting enmity of the emperor endangered the lives of the envoys, and a message was sent to the Emperor in 517. Of the remaining years of his life nothing is known. His epitaph, found by accident, gives the date of his death.

The works of Ennodius comprise poems for special occasions and epigrams, particularly inscriptions for churches or other religious monuments. His defence of the synod of 502, often known as "Libellus pro Synodo", his autobiography (Enchasticium), his panegyric on King Theoricus, and the biographies of his predecessor Epiphanius of Milan, and a monk, Antonius of Lerins, are interesting from an historical point of view; the first four especially. As much can be said of his numerals as his addresses and epigrams to contemporaries. Notwithstanding their verbosity, they contain much useful information concerning the addresses and the customs of the time. Ennodius is the last representative of the ancient school of rhetoric. His "Farenisia didascalía" (511) celebrates
Enthronization—A superstructure which lies horizontally upon the columns in classic architecture. It is divided into three parts: the architrave (the supporting member carried from column to column); the frieze (the decorative portion); and the cornice (the crowning and projecting member). Each of the orders has its appropriate entablature, of which both the general height and the subdivisions are regulated by a scale of proportion derived from the thickness of the column. It is occasionally used to complete, architecturally, the upper portion of a wall, even when there are no columns, and in the case of pilasters or detached or engaged columns is sometimes profiled round them.

Paul Lejay.

Ensignen (Ensinien), Ulrich, belonged to a family of architects who came from Eisingen near Ulm, Württemberg, and who shared as master-builders in the construction of the most important Gothic buildings of the fifteenth century in Southern Germany. Ulrich, the founder of the family, is known from the year 1391; d. at Strasbourg, 10 Feb., 1419. Apparently he learned his craft in the stonemason's guild of Ulm, and was also, perhaps, a pupil of Master Heinrich Fugger, who was well acquainted with the work of the Ulm cathedral, and must have taken charge of the work on the Ulm cathedral, which was begun in 1391. Ulrich seems to have been a man of great ability, and his work is marked by a careful and precise execution.

(2) Kaspar Ensingen was the eldest son; very little is known of him.

(3) Matthias Ensingen, another son, d. 1398.

(4) Matthias Ensingen, the youngest and most gifted son, was trained as a master-builder for life, and received the title of Master of the Cathedral. He was appointed master-builder for life in 1420 and at Eisingen in 1436. He was younger brother of Caspar Ensingen, and was placed in the cathedral of Ulm in 1427. He was appointed master-builder for life in 1436.

Minster at Berne. The cornerstone of this was laid in 1421, and Matthias conducted the work until 1449. In addition he had his father's position as architect at Eisingen (1419-1463). It can be proved that he was engaged on the cathedral of Ulm from 1446, but it was not until 1451 that he had charge of its construction as master-builder; before this last appointment he worked (1449-51) on the cathedral at Strasbourg without occupying any well-defined position. On the Ulm cathedral he completed the vaulting of the choir and built the tower as high as the nave. During his last years he was for a short time again at Eisingen (1452-60) with Vincenz Ensingen, son of Matthias, employed at Berne from 1418; during 1462-66 he worked at Constance, and in 1472 he built the small cloister at Basle.

Joseph Sauer.

Enthronization (Greek ἐνθρώνισμος, to place on a throne).—This word has been employed in different meanings: (1) formerly, it meant the solemn placing of the relics upon the altar of a church which was to be consecrated; hence a newly consecrated church was called naos enthronismenon ( ναὸς ἐνθρωνίσμενος). (2) In the Middle Ages we find the inthronizatio matrimonii, or enthronization of marriage, which was the taking of the nuptial Mass (beneficio nuptiarum). (3) In the East it was employed, but seldom, to denote the induction into a parochial benefice. (4) It was used especially to designate the ceremony of enthronization which accompanies the consecration of a bishop. After receiving episcopal consecration, the newly consecrated bishop was solemnly conducted to the episcopal throne, of which he took possession. He received the kiss of peace and listened to the reading of a passage of Holy Scripture, whereupon he pronounced an address or sermo enthronisticus. The letters which it was customary for him to send to the other bishops in token of his being in communion with them in the same faith, were called litterae inthronisticæ, or syllabae enthronisticæ (συλλαβάς ἐνθρώνιστικῆς), and the gifts which it was customary for him to present to the bishops with whom he had consecrated himself and to those who had taken part in the ceremonies were called the inthronisticæ (ἐνθρώνιστικαὶ). At present, after the consecration has taken place, the new bishop is conducted by the consecrating bishop and one of the assistants to the throne occupied by the consecrator during the ceremony, or to the seat usually taken by the bishop if the consecration has taken place in the cathedral church. The enthronization can also take place independently of the consecration; in this case, the bishop, after taking his seat upon the throne, receives there the homage of all ecclesiastics present in the cathedral. These ceremonies have no longer the
slightest juridical importance (see Bishop). (5) The enthronization of the pope in the Chair of St. Peter, Cathedral Petri, was formerly a very important ceremony, which took place at St. Peter’s in Rome, or, exceptionally, in the church of St. Peter ad Vincula, where there was also a Cathedral Petri. This ceremony was performed immediately after the election, if the latter had taken place in the church of St. Peter, or before the coronation. It was an object to proclaim to the Christian world that the newly elected pope was the lawful successor of St. Peter. Before this ceremony had taken place, he was forbidden to take part in the administration of the Church. In 1059 Pope Nicholas II declared that the omission of the enthronization did not prevent the pope from administering the Church. This custom disappeared in the thirteenth century, owing to the fact that in that period the popes seldom resided in Rome. Equivalent to enthronization is the abdication of the pope by the cardinals, which is performed in St. Peter’s after the election of the pontiff. It does not differ from the slightest right. (6) The Roman Pontifical mentions enthronement amongst the ceremonies which accompany the solemn consecration of a king. It is still practised in the Anglican Episcopal Church at the coronation of the King of England (see enthronization).

**Enthusiasts.** See Messiahs.

**Eoghan, Saints.** (1) Eoghan of Ardsraw was a native of Leinster, and, after presiding over the Abbey of Kilmanagh (Co. Wicklow) for fifteen years, settled in the valley of Mourne (Co. Tyrone), his mother’s country, about the year 756. He was followed by many disciples including St. Kevin of Glendalough, who completed his studies under this saint. As a boy he had been carried off to Britain, and subsequently he was taken captive to Brittany, together with St. Thaumaturgus. He is best known for his foundation of the Abbey of Clones, Co. Monaghan. So great was the fame of the sanctity and learning of St. Eoghan, at Mourne, that he was consecrated first Bishop of Ardsraw about the year 811. It is difficult to give his chronology with any degree of exactness, but the Irish annals place the date of his consecration in the year 811. His name is generally latinized as Eugenius, but the Irish form is Eoghan (Owen), hence Tir Eoghan, or Tyrone.

Ardsraw continued as an episcopal see until 1150, when it was translated to Rathmole and subsequently to Maghery, but in 1254 it was definitely removed to Derry. In all these changes St. Eoghan was regarded as the clan patron, and hence he is the tutelary guardian of the See of Derry to this day. His feast is celebrated on 23 August.

(2) Eoghan of Cloncullen, Co. Tipperary, has been identified with Eoghan, son of Sarin of Cloncullen, for whom St. Ailbe of Emly composed a rule. He is mentioned in the Martyrologies of Tallaght and Donegal, and is venerated on 15 March.

(3) Eoghan, Bishop, is commemorated in the Martyrology of Tallaght on 18 April, and is included by the Bollandists under that date, but the particulars of his life are scanty in the extreme.

(4) Eoghan the Sage (Sapiens) finds a place in the Irish martyrologies, and he is also included in the "Acta Sanctorum," but no reliable data as to his life is forthcoming. His feast is celebrated on 28 May.

(5) Eoghan of Cranfield (Co. Antrim) has been described as Abbot of Moville, but there is reason to believe that he is to be identified with the saint of the same name, especially as the Bollandists style him *Episcopus et Sapientes de Mogh-crnechaille.* A St. Erman of Crennae (Cranfield) is honoured on 21 May, but this is also the feast day of St. Eoghan. However, "Erman" may be a scribal error for "Eoghan," and this would account for the sending misapplying of name in regard to the patron of Cranfield.

There are other Irish saints of this name, but their history is somewhat obscure, and it is not easy to reconcile their chronology.

*Acta Sanct. Hb. (Louvain, 1845); Todd and Reeves, Martyrology of Donegal (Dublin, 1864); O’HANLON, Lives of the Irish Saints (Dublin, s. d.); O’LAVERTY, Down and Connor (Dublin, 1884), III.

W. H. GRATTAN-FLOOD.

**Epact.** (Gr. έπαξ, English *epact: Lat. dies adjecti,* the solstitial days of the solar year relative to the lunar year; hence, more freely, the number of days in the age of the moon on 1 January of any given year. The whole system of epacts is based on the Metonic Lunar Cycle (otherwise known as the Cycle of Golden Numbers), and serves to indicate the days of the year on which to commence new moons occurring in the so-called paschal moon. It is evident, then, that an exact anniversary of Easter is impossible except in years in which the seventeenth day of the paschal moon falls on Sunday. In the early days of Christianity there existed a difference of opinion between the Eastern and Western Churches as to the day on which Easter ought to be kept, the former keeping it on the fourteenth day of the month, and the latter on the Sunday following. To secure uniformity of practice, the Council of Nicaea in 325 decreed that the first seven days of the month following the eastern new moon were to be counted from Easter on the Sunday after the fourteenth day of the month should be adopted throughout the Church, believing no doubt that this mode fitted better with the historical facts and wishing to give a lasting proof that the Jewish Passover was not, as the Quarte-deciman heretics believed, an ordinance of Christianity.

As in the Julian calendar the months had lost all their original reference to the month, the early Christians were compelled to use the Metonic Lunar Cycle of the Greeks to find the fourteenth day of the paschal moon. This cycle in its original form continued to be used until 582, when it was revised and embodied in the Gregorian calendar. The Church claims no astronomical exactness for her lunar calendar; we shall show presently the confusion which would necessarily result from an extreme adherence to precise astronomical data in determining the date of Easter. She wishes merely to ensure that the fourteenth day of the calendar moon shall fall on or shortly after the real fourteenth day but never before it, since it would be chronologically absurd to keep Easter on or before the Passover. Otherwise, as Clavius plainly states (Romani Calendarii a Gregorio XIII P.M. restitutio, cap. V, § 13), the Church wishes merely to ensure that the fourteenth day of the moon be kept, without regard for the exactness of the moon's occurrence on the day before or after their proper seats and cares much more for peace and uniformity than for the equinox and the new moon. It may be mentioned here that Clavius's estimate of the accuracy of the calendar, in the compilation of which he took such a leading role,
part, is extremely modest, and the seats assigned by him to the new moons tally with strict astronomical findings in a degree which he seems never to have anticipated. The impossibility of taking the astronomical moons as our sole guide in finding the date of Easter will be best understood from an example: let us suppose that Easter is to be kept (as is at least implied by the British Act of Parliament regulating its date) on the Sunday after the astronomical full moon, and that this full moon, as sometimes happens, occurs just before midnight on Saturday evening in the western districts of the United States of New York. Then this moon will therefore happen a little after midnight in the eastern districts, so that Easter, if regulated strictly by the paschal full moon, must be kept on one Sunday in the western and on the following Sunday in the eastern districts of the same city. Lest it be thought that this is carrying astronomical exactness to extremes, we may say that, if Easter was dependent on the astronomical moons, the feast could not always be kept on the same Sunday in England and America. Seeing, therefore, that astronomical accuracy must at some point give way to convenience and that an arbitrary decision on this point is necessary, the Church has been drawn up a lunar calendar which maintains as close a relation with the astronomical moons as is practicable, and has decreed that Easter is to be kept on the Sunday after the fourteenth day of the paschal moon as indicated by this calendar.

LUNAR CYCLE OR CYCLE OF GOLDEN NUMBERS.—In the year now known as 432 B.C. Meton, an Athenian astronomer, discovered that 235 lunations (i.e. lunar months) correspond with 19 solar years, or, as we might express it, that after a period of 19 solar years the new moons occur again on the same days of the solar year. He therefore drew up the calendar into periods of 19 years, which he numbered 1, 2, 3, etc. to 19, and assumed that the new moons would always fall on the same days in the years indicated by the same number. This discovery found such favour among the Athenians that the number assigned to the current year in the Metonic Cycle was henceforth written in golden characters on a pillar in the temple, and, whether owing to this circumstance or to the importance of the discovery itself, was known as the Golden Number of the year. As the 19 years of the Metonic Cycle closely approximate (i.e. 235 exact number of lunar months) and contained in the aggregate 235 lunations, it was clearly impossible that all the years should be of equal length. To twelve of the 19 years 12 lunations were assigned, and to the other seven 13 lunations, the thirteenth lunation being known as an embolismic or intercalary month.

Length of the Lunations.—The latest calculations have shown that the average duration of the lunar month is 29 days, 12 hours, 44 minutes, 3 seconds. To avoid the difficulty of reckoning fractions of a day in the calendar, all computors, ancient and modern, have assigned 30 and 29 days alternatively to the lunations of the year, and regarded the ordinary lunar year of 12 lunations as lasting 354 days, whereas it really lasts some 8 hours and 46 minutes longer. This under-estimation of the year is compensated for in two ways: (1) by the insertion of one extra day in the lunar year (as in the solar calendar) every fourth year, and (2) by assigning 29 days to six of the seven embolismic lunations, although the average lunation lasts only about 294 days. A comparison of the solar and lunar calendars for 76 years (one cycle of 19 years is unsuitable in this case, since it contains sometimes 4, sometimes 5, less years) will make this clearer:—76 solar years=2,365+19, i.e. 2,384 days. Therefore 940 calendar lunations (since 19 years equal 235 lunations) contain 27,759 days (29 days, 12 hours, 44 minutes, 3 seconds). But 940 lunations averaging 294 days equal only 27,730 days. Consequently, if we assign 30 and 29 days uninterruptedly to alternate lunations, the lunar calendar will, after 76 years, anticipate the solar by 29 days. The intercalation of the extra day every fourth year in the lunar calendar reduces the divergence to 10 days in 76 years, i.e. 23 days in 19 years. The divergence is removed by assigning to the seven embolismic months, only the former is spoken of here. It has just been said that seven of the 19 years of the lunar cycle contain a thirteenth, or embolismic, month, consisting in six cases of 30 days and in the seventh of 29 days. Granted that the first solar and lunar years begin on the same day (i.e. that the new moon occurs on 1 January), it is evident that, as the ordinary lunar year of 12 lunations is 11 days shorter than the solar, the lunar calendar will, after three years, anticipate the solar by 33 days. To the third lunar year, then, is added the first embolismic month of 30 days, reducing the divergence between the calendars to 20 days. After three further years, i.e. at the end of the sixth year, the divergence will have mounted to 36 (5×11+3) days, but, by the insertion of the second embolismic lunation, will be reduced to six days. Whenever, then, the divergence between the calendars amounts to more than 30 days, an embolismic month is added to the lunar year.

The length of the thirteenth, or embolismic, month is kept the same in the nineteen years of the solar cycle. This is done by allowing the moon to gain 1 day on the sun from the second to the last year of the cycle, and by deducting 1 day from the lunations in the remaining years. The average length of the lunations, therefore, is 29 days, and the length of the year averages 354 days, or 365+1/4. Days.

MANNER OF INSERTION OF THE EMBOLISTIC MONTHS.—As the Gregorian and Metonic calendars differ in the manner of inserting the embolistic months, only the former is spoken of here. It has just been said that seven of the 19 years of the lunar cycle contain a thirteenth, or embolismic, month, consisting in six cases of 30 days and in the seventh of 29 days. Granted that the first solar and lunar years begin on the same day (i.e. that the new moon occurs on 1 January), it is evident that, as the ordinary lunar year of 12 lunations is 11 days shorter than the solar, the lunar calendar will, after three years, anticipate the solar by 33 days. To the third lunar year, then, is added the first embolismic month of 30 days, reducing the divergence between the calendars to 20 days. After three further years, i.e. at the end of the sixth year, the divergence will have mounted to 36 (5×11+3) days, but, by the insertion of the second embolismic lunation, will be reduced to six days. Whenever, then, the divergence between the calendars amounts to more than 30 days, an embolismic month is added to the lunar year.

The length of the thirteenth, or embolismic, month is kept the same in the nineteen years of the solar cycle. This is done by allowing the moon to gain 1 day on the sun from the second to the last year of the cycle, and by deducting 1 day from the lunations in the remaining years. The average length of the lunations, therefore, is 29 days, and the length of the year averages 354 days, or 365+1/4. Days.
19 solar years averaging 365^{1/4} days equal 6093^{1/4} days. But later computators found that the average lunation lasts 29 days, 12 hours, 44 minutes, 3 seconds, consequently:

255 calendar lunations (one Lunar Cycle) equal \[ \frac{6093^{1/4} \times 16.5 \times 31.5 \times 15}{28.5 \times 15} \] days. 

We thus see that the average Lunar Cycle is about 1\frac{1}{4} hour too long, and that, though the new moons occur on the same dates in successive cycles, they occur, on an average, 1\frac{1}{4} hour earlier in the day. The astronomers entrusted with the reformation of the calendar calculated that after a period of 3124 years (310 years is according to our figures a closer approximation) the new moons occur on the day preceding that indicated by the Lunar Cycle, that is, that the moon is one day older at the beginning of the year than the Metonic Cycle, if left unaltered, would show, and they removed this inaccuracy by adding one day to the age of the moon (i.e., the Epaets) every 300 years seven times in succession and then one day after 400 years (i.e., eight days in 8\times3124 or 2500 years). The addition of one to the Epaets is known as the Lunar Equation and occurs at the beginning of the years 1500, 2100, 2400, 2700, 3000, 3300, 3600, 3900, 4500, 4600, etc. A second disturbance of the Epaets is caused by the occurrence of the non-bissextile centurial years. We have seen above that the assigning of 6093^{1/4} days to 19 lunar years leads to an error of one day every 3124 years, and that within these limits the lunar calendar must not be disturbed; but the assigning of 6093^{1/4} days to every 19 solar years amounts to an error of 3 days every 400 years, and it is therefore necessary to omit one day from the solar calendar in every centurial year not divisible by 400. Consequently, since this extra day in February every fourth year is an essential part of the lunar calendar, the new moons will occur one day later in the non-bissextile centurial years than indicated by the Lunar Cycle (e.g., a new moon which under ordinary circumstances would have occurred on 20 February will occur on 1 March), and the age of the moon will, after the omission of the day, be one day less on all succeeding days of the solar year. As the fact that the January and February moons are not properly indicated is immaterial in a system whose sole object is to indicate as nearly as practicable the following month on the first day of March, the subtraction of one from the Epaets takes place at the beginning of all non-bissextile centurial years and is known as the Solar Equation. In the following table, +1 is written after the years which have the Lunar Equation, and -1 after those which have the Solar:

</table>

Clavius continued this table as far as the year 300,000, inserting the Lunar Equation eight times every 2500 years and the Solar three times every 400 years. As he thus treats the year 3200 as a leap year his table is untrustworthy after 5199.

**Indication of New Moons.**—Before proceeding further, it will be convenient to consider the method devised by Lilius of indicating the new moons of the year in the Gregorian calendar. As the first lunation of the year consists of 30 days, he wrote the Epaets *XXIX, XXVIII, ..., I* opposite the first thirty days of January; then continuing, he wrote *opposite the thirty-first, XXIX opposite the first of February and so on to the end of the year*, except that in the case of the lunations of 29 days he wrote the two Epaets XXV, XXIV opposite the same day (cf. 5 Feb., 4 April, etc. in the Church calendar). From this arrangement it is evident that if, for example, the Epaet of a year is X, the new moons will occur in that year on the days before which the Epaet X is placed in the calendar. One qualification must be made to this statement. According to the Metonic Cycle, the new moon can never occur twice on the same date in the same nineteen years (the case is exceedingly rare even in the purely astronomical calendar); consequently, whenever the two Epaets XXV and XXIV occur in the same nineteen years, the new moons of the year whose Epaet is XXV are indicated in the months of 29 days by Epaet XXVI, with which the number 23 is for this object associated in the Church calendar.

**How to Find the Epaet.**—We have already seen that the Church used the Metonic Cycle until the year 1582 as the only practical means of determining the date of the fourteenth day of the paschal moon. Now, this cycle has always been regarded as starting from the year 1 B.C., and not from the year of its introduction (432 B.C.), probably (although all the authors we have seen appear to have overlooked the point) because such a change was found necessary if the leading characteristic of the Metonic Cycle were to be retained in changing from a lunar to a solar calendar, viz., that the first lunar and solar years of the cycle should begin on the same day. That two nations with calendars so fundamentally different as those of the Greeks and the Romans should regard the solar year as beginning with the same phases of the sun would be highly improbable, even if there were no direct evidence that such was not the case. But we have shown that when the solar and lunar years begin on the same day, the Epaets of the successive years of the cycle are:

Consequently, if we divide the calendar into cycles of 19 years from 1 B.C., the first year of each cycle will have the Epaet *, the second the Epaet XI and so on, or, in other words, the Epaet of any year before 1582 depends solely on its Golden Number. The Golden Number of any year may be found by adding 1 to the year and dividing by 19, the quotient showing the number of complete cycles elapsed since 1 B.C. and the remainder (or, if there be no remainder, 19) being the Golden Number of the year. Thus, for example, the Golden Number of 1484 is 3, since 1484 + 1 = 78, with 3 as remainder; therefore the Epaet of the year 1484 is XXII.

In the course of time it was found that the pasehal moon of the Metonic Cycle was losing all relation to the real paschal moon, and in the sixteenth century (c. 1576) Gregory XIII entrusted the task of reforming the calendar to a small body of astronomers, of whom Lilius and Clavius are the most renowned. These astronomers having drawn up the table of equations to show the changes in the Epaets necessary to preserve the relations between the ecclesiastical and astronomical calendars, proceeded to calculate the
propers Epacts for the years of the Lunar Cycle after 1502. These they found to be as follows:—

Golden Numbers: 1 2 3 4
Epacts: XII XXIII 1V 2V 3V 4V 5V 6V 7V 8V 9V 10V

Golden Numbers: 11 12 13 14
Epacts: XXI XXII XXIII XXIV

Now the essential difference between the Metonic Cycle and the Gregorian system of Epacts lies in this, that whereas the sphere of application of the former was held to be unlimited, that of the latter is bounded by the Lunar and Solar Equations. Since, then, a Solar Equation occurs in 1700, the Cycle of Epacts just given holds only for the period 1502–1699, after which a new cycle must be formed. To understand the reason of the changes we must remember (1) that by treating 365 days as equivalent to one solar year and to 12 lunations plus 11 days, we under-estimate the solar year by about 5½ hours and the lunations by 8½ hours; (2) that in consequence of this under-estimation of the solar year, one day must be inserted in every fourth solar year except in the case of the centurial years not divisible by 400; and (3) that the under-estimation of the lunations by 6 hours every year (the additional 2 hours are compensated for in the embolismic months and by the Lunar Equation) necessitates the insertion of one extra day in the lunar calendar every fourth year without exception. To take an example: the Epact of 1696 (its Golden Number being 6) is XXVI, and since this Epact is found opposite 4 February in the Church calendar we know that in 1696 the new moon happened on that date and that consequently 23 February was the twentieth day of the calendar moon. But, since the under-estimation of the lunations amounts to one day in every four years, the following day (our 24 Feb.) was only nominally the twenty-first day of the moon and the proper twenty-first was our 25 February. The Church therefore inserted an extra day after 23 February and treated this as the real 24 Feb. (our 24 and 25) as one continuous day in both the solar and lunar calendars, and consequently 25 February (our 26) was again legitimately regarded as the twenty-second day of the moon and the fifty-sixth day of the solar year. Coming now to the year 1700, we find its Epact to be X; consequently the new moon occurred on 19 February and 25 February was the fifth day of the calendar moon. But, since no extra day could be inserted in February, 1700, the twenty-fourth and twenty-fifth of this month had to be treated as the sixth day of the moon, and the age of the moon on every subsequent day of the year 1700 was one day less than indicated by the Epact X. As the moons of January and February are of very secondary importance in the Church calendar, we may say that the age of the moon in 1700 and all subsequent years was one day less than indicated by the above Cycle of Epacts, and thus the Epacts for the years of the Lunar Cycle after 1700 are:—

Golden Numbers: 1 2 3 4
Epacts: XI XXII XXIII XXIV

<td></td>
</tr>
</tbody>
</table>

This table may, with the help of the table of equations, be continued to 5199.

Examples.—(1) To find the Epact of the year 3007. Golden Number is 1, since 3007 + 1 = 163, with 1 as remainder. Epact corresponding to Golden Number 1 after 2000 is XXV; therefore the Epact of 3007 is XXV.

(2) On what Sunday will Easter fall in the year 2459? Golden Number of 2459 is 9, and Epact of ninth year of Lunar Cycle after 2400 is XXVI. Since the Epact of 2459 is XXVI, the new moons of this year will occur on the days before which XXVI is placed in the Church calendar (e.g. in the Breviary). Now, since the paschal moon is that whose fourteenth day falls on or next after 21 March, the paschal new moon can never happen before 8 March. The first day after 8 March to which the Epact XXVI is prefixed in the Church calendar is 4 April; consequently the paschal new moon in the year 2459 will occur on 4 April,
Counting 14 days from 1 April, which we include in our reckoning, we find the fourteenth day of the paschal moon to be 17 April. In 2459, therefore, Easter will be kept on the Sunday after 17 April, which with the help of the Dominical Letters is found to be 20 April. (See DOMINICAL LETTER.)

For bibliography see DOMINICAL LETTER.

THOMAS KENNEDY.

Eparchy (ἐπαρχία) was originally the name of one of the divisions of the Roman Empire. Diocletian (284–305) and Maximian divided the empire into four great Prefectures (Gaul, Italy, Illyricum, and the East). Each was subdivided into (civil) Dioceses, and these again into Eparchies under governors (presides, ἑγεμόνες). The Church accepted this division as a convenient one for her use. The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate; the Prefecture of the East was divided (in the fourth century) between the Patriarchs of Alexandria and Antioch and three exarchates. The Diocese of Egypt was the Patriarchate of Alexandria, the Diocese of the East (not to be confused with the Prefecture of the East) became that of Antioch. Asia was under the Exarch of Ephesus, Pontus under Capadocia, and Thrace under Heraclia. Under these patriarchates and exarchates came the eparchies under metropolitans;

they had under them the bishops of the various cities. The original ecclesiastical eparchies then were provinces, each under a metropolitan. The First Council of Nicaea (325) accepts this arrangement and orders that: "the authority of appointing bishops shall belong to the metropolitans in each eparchy" (can. iv). That is to say that in each such civil eparchy there shall be a metropolitan bishop who shall have authority over the others. This is the origin of our provinces. Later in Eastern Christendom the use of the word was gradually modified and now it means generally the diocese of a simple bishop. The name Eparchy is, however, not commonly used except in Russia. There it is the usual one for a diocese. The Russian Church now counts eighty-six eparchies, of which three (Kiev, Moscow, and St. Petersburg) are ruled by bishops who always bear the title "Metropolitan," and fourteen others are under archbishops.

Épée, CHARLES-MICHEL DE L', a philanthropic priest and inventor of the sign alphabet for the instruction of the deaf and dumb; was b. at Versailles, 25 November, 1712; d. at Paris, 23 December, 1789. He studied theology; but, having refused to sign a condemnation of Jansenism, was denied ordination by Christophe de Beaumont, Archbishop of Paris. He then studied law, but no sooner had he been admitted to the Bar than the Bishop of Troyes consented to ordain him. This bishop died shortly afterwards, whereupon the Abbé de l'Épée returned to Paris, and began to occupy himself with the education of two deaf and dumb sisters who had been recommended to him by Father Vanin, of the Congregation of the Christian Doctrine. He endeavored to develop the mind of his pupils by means of certain conventional signs constituting a complete alphabet. Succeeding in this attempt, he resolved to devote himself to the education of the deaf and dumb, and founded a school for their instruction at his own expense. His method is based on the principle that "the education of deaf mutes must teach them through the eye the way what other people acquire through the ear." Several other methods had been tried, previous to this time, to enable the deaf and dumb to communicate with one another and with the rest of mankind, but there can be no doubt that he attained far greater success than Pereira, Bulver, Dalgarino, Dr. John Wallis, or any of his predecessors, and that the whole system now followed in the instruction of deaf mutes virtually owes its origin to his ingenuity and devotion. His own system has, in its turn, been replaced by a newer method, which teaches the pupils to recognize words and, in time, to utter them, by closely watching, and afterwards imitating, the motions of the lips and tongue in speech, the different portions of the vocal organs being shown by means of dia-

Epérie, Diocese of (Ephriennsis Ruthenorum), of the Greek Ruthenian Rite, suffragan to Gran. De-
tached in 1818 from the Diocese of Munkács, this diocese has had the following bishops: Gregory Tarkovics (1818–41); Joseph Garganees (1843–75); Nicholas Toth (1876–81); John Vályi (1882). The city of Eperies, called by the Slovaks Pressova, was founded by a German colony in the 13th century; by all accounts Tárca, a tributary of the Danube, and is now the capital of the county of Sáros, Hungary, with a population of 11,000. It is famous for its sugar factories, its mineral waters, and its rock salt mine situated at Sóvar, several miles distant. The diocese contains 187,000 Austrian Catholics; 22 priests (nine married); 190 parishes scattered over the territory of six counties; 190 churches, 25 chapels, 24 parochial schools, with 28,000 pupils, a college for boys, 2 convents of Basilians, and a theological seminary with 40 students. The episcopal residence, the seminary, and most of the diocesan institutions are situated at Eperies.

S. VALHÉ.

Ephesians, Epistle to the.—This article will be treated under the following heads: I. Analysis of the Epistle; II. Special Characteristics: (1) Form; (a) Vocabulary; (b) Style; (2) Doctrines; III. Object; IV. To Whom Addressed; V. Date and Place of Composition; Occasion; VI. Authenticity: (1) Relation to other writings of the New Testament; (2) External factors; (3) Tradition. I. ANALYSIS OF THE EPSTELE.—The letter which, in the MSS. containing the Epistles of St. Paul, bears the title "To the Ephesians" comprises two parts distinctly separated by a doxology (Eph., iii, 20 sq.). The address in which the apostle introduces himself, therefore, is not followed by a prologue; in fact, the entire dogmatic part develops the idea which is usually the subject of the prologue in the letters of St. Paul. In a long sentence that reads like a hymn (Eph., i, 3–14), Paul praises God for the blessings which He has bestowed upon all the faithful in accordance with the eternal plan of His will, the sublime plan by which all are to be united under one head, Christ, a plan which, although heretofore secret and mysterious, is now made manifest to believers. Those to whom the Epistle is addressed, having heard it in their turn, been made partners of these blessings, and the Apostle, having recently learned of their conversion and their faith, assures them that He ceases not to give thanks to Heaven for the same (Eph., i, 15, 16) and that, above all, He prays for them. The explanation of this prayer, of its object and motives, constitutes the remainder of the dogmatic part (cf. Eph., iii, 1, 14). Paul asks God that His readers may have a complete knowledge of the hope of their calling, that they may be fully aware both of the riches of their inheritance and the greatness of the Divine power which guarantees the inheritance. This Divine power manifests itself first in Christ, Whom it raised from the dead and Whom it exalted in glory above all creatures and established head of the Church, which is His body. Next, this power and goodness of God was evidenced in the readers, whom it rescued from their sins and raised and exalted with Christ. But it shone forth, above all, in the establishment of a community of salvation welcoming within itself both Jews and Gentiles without distinction, the Death of Christ having broken down the middle wall of partition, i.e. the Law, and both sections of the human race have been reconciled and united with Christ. But it shone forth to form but one body, one house, one temple, of which the apostles and Christian prophets are the foundation and Christ Himself is the chief cornerstone. (Eph., i, 16–li, 20.) Paul, as his readers must have heard, was the minister chosen to preach to the Gentiles of this sublime mystery of God, hidden from all eternity and not revealed even to the angels, according to which the Gentiles are made coheirs with the Jews, constitute a part of the same body, and are joint partakers in the same promises (Eph., iii, 1–13). Deeply imbued with this mystery, the Apostle implores the Father to contribute to the perfection of the Christian state and the complete knowledge of Divine charity (Eph., iii, 14–19), continuing the same prayer with which he had begun (Eph., i, 16 sq.).

Having praised God anew in the solemn doxology (Eph., iii, 20 sq.), Paul passes on to the moral part of his letter. His exhortations, which he bases more than is his wont on dogmatic considerations, revert to that of chapter iv, verse 1, wherein he entreats his readers to show themselves in all things worthy of their vocation. First of all, they must labour to preserve the unity described by the author in the first three chapters and here again brought into prominence; One Spirit, one Lord, one faith, one baptism, one God. There is, of course, a diversity of ministries, but the respective offices of apostles, prophets, etc. have all been instituted by the same Christ exalted in glory and all tend to the perfection of the society of saints in Christ. From these social duties, Paul proceeds to the consideration of individual ones. He contrasts the Christian life that his readers are to lead, with their pagan life, insisting above all on the avoidance of two vices, immodesty and covetousness (Eph., iv, 17–v, 3). Then, in treating of the details of this life, the apostle, in keeping with the plan of his epistle, proceeds through the persons and functions of husbands and wives, whose union he likens to that of Christ with His Church, and the duties of children and servants (v, 21–vi, 9). In order to fulfil these duties and to combat adverse powers, the readers must put on the armour of God (vi, 10–20). The Epistle closes with a special mention of the holy apostles and prophets, wherein the Apostle tells his correspondents that he has sent Tychicus to give them news of him and that he wishes them peace, charity, and grace.

II. SPECIAL CHARACTERS.— (1) Form.—(a) Vocabulary.—This letter, like all those written by St. Paul, contains hapax legomena (αραξ λεγώμενα), about seventy-five words which are not found in the Apostile's other writings; however, it was a mistake to make this fact the basis of an argument against Pauline authenticity. Of these words nine occur in the quotations from the New Testament and only five of them, in current language or else designate things which Paul elsewhere had had no occasion to mention. Others, again, are derived from roots used by the Apostle and besides, in comparing these hapax legomena (αραξ λεγώμενα) one with another, it is impossible to receive in them a characteristic vocabulary that would reveal a distinct personality. (Cf. Brunet, "De l'authenticité de l'Epître aux Ephésiens; preuves philologiques", Lyons, 1897; Nägele, "Der Wort-schatz des Apostels Paulus", Göttingen, 1905.)

(b) Style.—This Epistle, even more than that to the Colossians, is remarkable for the length of its periods. The first three chapters contain hardly more than three sentences and these are overlaid with relative or participial clauses that are simply strung together, frequently without being connected by the logical particles that occur so frequently in St. Paul's style. Such participle clauses are particularly encumbered with numerous prepositional modifiers (especially with ἐπί and ἐν) of which it is difficult to state the exact meaning. Often, too, several synonyms are in juxtaposition and in very many cases a noun has an explanatory genitive, the sense of which differs but very little from the meaning of the noun itself. For all of these reasons the language of the Epistle, heavy, diffuse, and languid, seems very different from the dialectical, animated, and vigorous style of the Apostle's uncontestted letters. It is important to note that in the moral part of the Epistle these peculiarities of style do not appear and hence they would seem to depend more on the matter...
treated rather than on the author himself; in fact, even in the dogmatic expositions in the great Epistles, St. Paul’s language is frequently involved (cf. Rom., ii, 13 sq.; iv, 16 sq.; v, 12 sq.; etc.). Moreover, it must be observed that all these peculiarities spring from the same source, viz., they all indicate a certain inducement or idea surging in upon a deep and tranquil meditation on a subjicite subject, the various aspects of which simultaneously appear to the author’s mind and evoke his admiration. Hence also the lyric tone that pervades the first three chapters, which constitute a series of prayers, benedictions, thanksgivings, and prayers; a sort of rhythmic composition has been pointed out in chapter i (cf. T. Innitzer, “Der Hymnus im Eph., i, 3-14” in “Zeitschrift für katholische Theologie,” 1904, 612 sq.), and in chapter ii traces of liturgical hymnology have been observed (Eph., iii, 20), but they are no more striking than in I Cor. and are not to be compared with the liturgical language of I Clement.

(2) Doctrines.—The doctrines on justification, the Law, faith, the flesh, etc., that are characteristic of the great Pauline Epistles, are not totally lacking in the Epistle to the Ephesians, being recognizable in chapters ii and iii. However, the apostle is careful to lead him to develop these particular doctrines. On the other hand, he clearly indicates, especially in chapter i, the supreme place which, in the order of nature and grace, is allotted to Christ, the author and centre of creation, the point towards which all things converge, and the source of all grace, even through his great Epistles, St. Paul sometimes touches upon these doctrines (cf. I Cor., viii, 6; xv, 45 sq.; II Cor., v, 18 sq.), they constitute the special object of his letter to the Colossians, where he develops them to a much greater extent than in that to the Ephesians. In fact, this Epistle treats more of the Church than of Christ. (On the doctrine of the Church in the Epistle to the Ephesians see W. L. Meirian in “Revue biblique,” 1898, pp. 343 sq., and W. H. Griffith Thomas in the “Expositor,” Oct., 1906, pp. 318 sq.) The word church no longer means, as is usual in the great Epistles of St. Paul (see, however, Gal., i, 13; I Cor., xii, 28; xv, 9), some local church or other, but the one universal Church, an organic whole uniting all Christians in one body of which Christ is the head. Here we find the systematized development of elements insinuated from time to time in the letters to the Galatians, Corinthians, and Romans. Thus it appears that there is now neither Jew nor Greek but that all are one in Christ Jesus (Gal., iii, 28); that in each Christian the life of Christ is made manifest (Gal., ii, 20; II Cor., iv, 11 sq.); that all are led by the Spirit of God and of Christ (Rom., viii, 2-14); that each one of the faithful has Christ for head (I Cor., xi, 3), could, by combining these elements, easily come to consider all Christians as forming but one body (Rom., xii, 5; I Cor., xii, 27), animated by one spirit (Eph., iv, 4), a single body having Christ for head. To this body the Gentiles belong by the same right as the Jews. Only they are more justified of sin than the Jews were, according to the Epistle to the Ephesians, made manifest to all the Apostles, a declaration which, moreover, the Epistle to the Galatians does not contradict (Gal., ii, 3-9); however, this revelation remains, as it were, the special gift of St. Paul (Eph., iii, 3-9). The right of pagans seems to be no longer questioned, which is easily understood at the close of the Apostle’s life. At the death of Christ the wall of separation was broken down (cf. Gal., iii, 13), and all have since had access to the Father in the same spirit. They do not meet on the Jewish ground of the abolished Law but on the ground of the transaction in the Church established by Christ. The Church being thus constituted, the author contemplates it just as it appears to him. Besides, if in the extension of the Church he beholds the realization of the eternal decree by which all men have been predestined to the same salvation, he is not obliged to repeat the religious history of mankind in the way he had occasion to describe it in the Epistle to the Romans; neither is he constrained to explain the historical privileges of the Jews, to which he nevertheless alludes (Eph., ii, 12), nor to connect the new economic with the old (see Eph., iii, 8), nor indeed to introduce, at least into the dogmatical expositions, the sins of the pagans, whom he is obliged to accuse of having lacked intimate communion with God (Eph., ii, 12). For the time being all these points are not his main subject of meditation. It is rather the recent and subjective facts of the life in the Church, the body of Christ, that he brings into prominence (I Cor., the Apostle contemplates Christ Himself in His actual influence over this body and over each of its members; hence it is only occasionally that he recalls the tokens of the God’s power of Christ’s Death. (Eph., i, 7; ii, 5, 6). From heaven, where He has been exalted, Christ bestows His gifts on all the faithful without distinction, commanding, however, that in His Church certain offices be held for the common welfare. The hierarchical terms used so constantly later on (πρεσβυτέροι, ἐπίσκοποι, διάκονοι) are not met with in the letters of St. Paul, those who have seen Christ and who bear His name are not held to occupy a position different from those who are not (cf. Eph., v, 15). However, it is for the same purpose that the prophets in the Epistle to the Ephesians used the charisma, or spiritual gifts described in I Cor., xii-XIV. The evangelists, who are not noticed in Eph., ii, 20, or iii, 5, are inferior in dignity to the apostles and prophets in connexion with whom they are, nevertheless, mentioned (Eph., xi, 11). In his first letters St. Paul had no occasion to allude to them, but they belong to the Apostolic age, as at a later epoch they are never referred to. Finally the “pastors and doctors” (A. V., pastors and teachers), who are clearly distinguished (Eph., iv, 11) from the apostles and prophets, founders of the church, seem to be those local authorities already indicated in I Thess., v, 12; I Cor., xvi, 15 sq.; Acts, xx, 28. While the attention given to these different ministers forms a distinctive note in the Epistle to the Ephesians, we cannot therefore admit (with Klopper, for example) that the Church is in process of degeneration, or that the jurisdiction of the hierarchy as such. The unity of the Church, a point that he clearly emphasizes, is not so much the juridical unity of an organized society as the vital unity that binds all the members of the body to its head, the glorified Christ. Nor is it true that the author already predicts centuries of future existence for this Church (Klopper) as, properly speaking, the ages to come, referred to in the Epistle to the Ephesians (ii, 7), are to come in the Kingdom of Heaven (cf. ii, 6). On the other hand we know that St. Paul’s hope of soon witnessing Christ’s second coming kept constantly diminishing, and therefore the vision of a Church still progressive with the Christ, he might well define (Eph., v, 22 sq.) the laws of Christian marriage, which at an earlier period (I Cor., vii, 37 sq.) he regarded only in the light of the approaching advent of Christ.

The exposition that we have given of the doctrines proper to the Epistle to the Ephesians has been so made as to show that none of these doctrines taken separately contradict the theology of the great Pauline Epistles and that each one individually can be connected with certain elements disseminated in these Epistles. It is nevertheless true that, taken in its entirety, this letter contains in the doctrinal system, the Pauline authenticity of which can only be critically defended by pointing out circumstances in consequence of which the Apostle was able thus to develop his first theology and profoundly to modify his manner of setting it forth. Naturally
this leads us first of all to try to ascertain the object of the letter to the Ephesians.

III. OBJECT.—It has been said that St. Paul combated immoral doctrines and an antinomian propaganda that especially endangered those to whom the letter was addressed (Pfeiffer). But this might not explain the dogmatic part of the Epistle, and even in the hortatory part nothing betokens polemical preoccupation. All the warnings administered are called forth by the pagan origin of the readers, and when the author addresses his prayers to Heaven in their behalf (Eph., i, 17 sqq.; iii, 14 sqq.) his whole aim is that his readers, or the persons to which he has addressed these prayers, or persons to whose church he would have God deliver their Christian life. Köppler thought that the author had Judeo-Christian in view, still denying converted pagans their full right in the Church, and Jaquier gives this as an additional motive. Others have said that the Gentile-Christians of the Epistle had to be reminded of the privileges of the Jews. But not one word in the letter, even in the section containing exhortations to unity (Eph., iv, 2 sqq.), reveals the existence of any antagonism among those to whom the Apostle writes, and there is no question of the old order or re-establishment of unity. The author never addresses himself to any save converted pagans, and all his considerations tend solely to provide them with a full knowledge of the blessings which, despite their pagan origin, they have acquired in Christ and of the greatness of the love that God has showered on them. Apart from the general assumption, or personal hypothesis, it is not by way of defending it against attacks but of expressing all his gratitude for having been called, in spite of his unworthiness, to announce the great mystery of which he had sung the praises. Briefly, nothing in the letter allows us to suppose that it responds to any particular need of those to whom it is addressed, nor that they, on their side, had given the author any particular occasion for writing it. In so far as either its dogmatic or moral part is concerned, it might have been addressed to any churches whatever founded in the pagan world.

IV. TO WHOM ADDRESSED.—To whom, then, was the Epistle addressed? This question has evoked a variety of answers. There are critics who maintain the traditional opinion that the Epistle was written to the Ephesians (Dahl, Cornely), but the greater number consider it in the light of Paul’s letter. Some maintain that it was addressed to Ephesus and the churches of which this city was, so to speak, the metropolis (Michelis, Harless, and Hendl), while others hold that it was sent to the Seven Churches of the Apocalypse (H. Holtzmann) or to the circle of Christian communities within and around Colossae and Laodicea (Goelet, Haupt, Zahn, and Belser): or again to the faithful of Asia Minor (B. Weiss) or to all the Gentile-Christian Churches (Von Soeden). The question can only be solved by comparing the Epistle with the knowledge possessed of the life and literary activity of the Apostle. Those who deny the authenticity of the letter must certainly grant that the Pseudo-Paul (i, 1) was careful to conform to literary and historical probabilities; and if not, since the letter vouchsafes no direct indication as to the correspondents whom he supposed the Apostle to be addressing, it would be idle to imagine who they were.

The words εν Εφέσω, in the first verse of the Epistle, do not belong to the primitive text. St. Basil attests that, even in his day, they were not met with in the ancient MSS; in fact they are missing from the Codices B and M (first hand). Moreover, the examination of the Epistle does not warrant the belief that it was addressed to the church in which the Apostle had sojourned longest. When St. Paul writes to one of his churches, he constantly alludes to his former relations with it (see Thess., Gal., Cor.), but here there is nothing personal, no greeting, no special recommendation, no allusion to the author’s past. Paul is unacquainted with his correspondents, although he has heard them spoken of (Eph., i, 15), and they have heard of him (Eph., iii, 2; cf. iv, 21). When addressing himself to any particular church, even be it at the time still a stranger to him as, for instance, Rome or Colossae, the Apostle always assumes a personal tone; hence the abstract and general manner in which he treats his subject from the beginning to the end of the Epistle to the Ephesians can best be accounted for by beholding in this Epistle a circular letter to a group of churches equally unknown to Paul. But the explication founded on the encyclical character of the Epistle, loses its value if the Church of Ephesus is numbered among those addressed; for, during his three years’ sojourn in this city, the Apostle had frequent intercourse with the neighbouring Christian communities, and in this case he would have had Ephesus especially in view, just as in writing to all the faithful of Achaia (II Cor., i, 1) it was chiefly to the Church of Corinth that he addressed himself.

Nevertheless, it was to a rather restricted circle of Christian communities that Paul sent this letter, as we infer both from the all and bring them all and bring him (Eph., vi, 21 sqq.), which fact precludes the idea of all the churches of Asia Minor or of all the Gentile-Christian churches. Moreover, since Tychicus was bearer of the Epistle to the Colossians and that to the Ephesians at one and the same time (Col., iv, 7 sqq.), the letter was addressed to persons who had been far from Colossae, and we have every reason to suppose them in Asia Minor. However, we do not believe that the Epistle in question was addressed to the churches immediately surrounding Colosse, as the perils which threatened the faith of the Colossians virtually precludes the notion that the apostolic communities, and wherefore, then, two letters differing in tone and object? Having had no personal intercourse with the Colossians, the Apostle would have been satisfied to address to them and their Christian neighbours an encyclical letter embodying all the matter treated in both Epistles. Hence it behooves us to seek elsewhere in Asia Minor, towards the year 60, a rather limited group of churches still unknown to St. Paul. Now, in the course of his three journeys, Paul had traversed all parts of Asia Minor except the northern provinces along the Black Sea, territory which he did not reach prior to a later visit. Notwithstanding, the First Epistle of St. Peter shows us that the Faith had already penetrated these regions; hence, with the historical data at our disposal, it is in this vicinity that we may reasonably seek the church to whom the Epistle was addressed. These Christians must have been named in the authentic text of the inscription of this Epistle, as they are in all of St. Paul’s letters. Now, whenever the substantive participle appears in one of these inscriptions, it serves the sole purpose of introducing the mention of locality. We are therefore authorized to believe that, in the address of the Epistle to the Ephesians (Eph., i, 1: τοῖς ἀγίας σοιν καὶ πατοῖν ἐν Χριστῷ Ἰησοῦ), this participle, so difficult to understand in the received text, originally preceded the designation of the place inhabited by the readers. One might assume that the line containing this ascription was omitted from the text, but at any rate the connection on the part of the first copyist; however, it would then be necessary to admit that the mention of locality, now in question, occurred in the midst of qualifying adjectives applied by the Apostle to his readers (ἀγίας τοῖς ἀγίας καὶ πατοῖν ἐν Χριστῷ Ἰησοῦ), and this is something that has never been verified by the editors of the text. What may have been, or may be supposed, is, in this address, the indication of place was corrupted rather than omitted, and this paves the way for conjectural restorations. We ourselves have proposed the following: τοῖς ἀγίας τοῖς ἀγίαις καὶ "Προς τοῖς ἐν Χριστῷ Ἰησοῦ. (Laduee in Revue biblique, 1902, pp. 573 sq.) Grammat-
 Ephesians 488

Ephesians 488

ally, this phrase corresponds perfectly with the Apostle's style (cf. Gal. i, 22; I Cor., i, 2; Phil., i, 1) and palaeographically, if transcribed in ancient capitals, it readily accounts for the corruption that has certainly been produced in the text. The Epistle to the Ephesians was written in the second place to distant churches located perhaps in various provinces [Pontus, Galatia, Polemonium (the kingdom of Polemon)] and, for this reason, requiring to be designated by a general term, but all situated along the River Iris.

These churches of the north-east of Asia Minor are mentioned in the obscure part in the first century. When we first collect the churches of the second, a collection on which the entire textual tradition of these letters depends (cf. Zahn, Geschichte des N. T. Kanons, I, ii, p. 229), it was Ephesus that furnished the copy of this Epistle, having obtained it when Tychicus landed at that port, thence to set out for Colossae and in the direction of Pontus, and in this copy the text of the address had already been corrupted. Having come from Ephesus, this letter quickly passed for one to the Ephesians, the more so as there was no other letter by the Apostle to the most celebrated of churches. This explains why, from the beginning, all except Marcion, even those who do not read the words to Ephesians in the first verse (Origen, Tertullian), look upon this letter as an Epistle to the Ephesians, and why, in all MSS., it is transcribed under this title.

The Second Place of Composition; Occasion.—Like the Epistles to the Colossians, to the Philippians, and to Philemon, that to the Ephesians was written during the leisure hours of one of the Apostle's imprisonments (Eph., iii, 1; iv, 1; vi, 20), when he had little reason to resort to the services of a disciple to write in his name (De Wette, Ewald, and Revis). Lisco (Vinuela Sancetorum, Berlin, 1900) is the only one nowadays who claims that these letters antedate the great captivity of St. Paul, maintaining that the Apostle must have written them while a prisoner in Ephesus in 57 and prior to those which he sent to the Corinthians and Romans. But we are not acquainted with any of the details of this captivity at Ephesus. Moreover, the doctrine set forth in the letters in question belongs to an epoch subsequent to the composition of the Epistle to the Romans (58); hence they were not written previously to the captivity in Cæsarea (60). On the other hand, the author is not the first persecution, to which the author makes no allusion when describing the armour and combats of the faithful; wherefore they cannot be assigned to the last captivity. It consequently remains for them to be ascribed to a period between 58 and 63, but whether they were produced in Cæsarea or in Rome (61-63) is still a much mooted question. The information gleaned here and there is very vague and the arguments brought forward are very doubtful. However, the freedom allowed Paul, and the evangelical activity he displays at the time of writing these letters, when he is retaining and of his head-quarters and his line of work, and we behold him at Rome and Cæsarea connected with new Christian centres. It is, therefore, easy to understand why his style should savour of the Christian language used in these later books, when we recall that their object has so much in common with the matter treated in the Epistle to the Ephesians. Whatever may now and then have been said on the subject, the same phenomenon is noticeable in the Epistle to the Colossians. If, indeed, the Epistle to the Ephesians agrees with the Acts in more instances than does the Epistle to the Colossians, it is because the former has the apostolic object, namely, the constitution of the Church by the calling of the Jews and Gentiles. The relationship between the Epistle to the Ephesians and 1 Peter is much closer. The letter to the Ephesians, unlike most of the Pauline Epistles, does
not begin with an act of thanksgiving but with a hymn similar, even in its wording, to that which opens I Peter. Besides, both letters agree in certain typical expressions and in the description of the duties of the domestic life, which terminates in both with the same exhortation to the multitude. With the majority of critics, we maintain the relationship between these letters to be literary. But I Peter was written last and consequently depends on the Epistle to the Ephesians; for instance, it alludes already to the persecution, at least as impending. Sylvanus, the Apostle’s faithful companion, was St. Peter’s secretary (cf. I Peter v, 12), and it is but natural that he should make use of a letter, recently written by St. Paul, on questions analogous to those which he himself had to treat, especially as according to us, those addressed in both of these Epistles are, for the greater part, identical (cf. I Peter, i, 1).

The attacks made upon the authenticity of the Epistle to the Ephesians have been based mainly on its similarity to the Epistle to the Colossians, although some have maintained that the latter depends upon the former (Mayerhoff). In the opinion of Hitzig and Harnack, the letters are thoroughly living efforts, and already imbued with Gnosticism used an authentic letter, written by Paul to the Colossians against the Judæo-Christians of the Apostolic Age, in composing the Epistle to the Ephesians, in conformity to which he himself subsequently revised the letter to the Colossians and put it in the form it now bears. Wette and Ewald looked upon the Epistle to the Ephesians as a verbose amplification of the uncontroversial parts of the letter to the Colossians. However, it is only necessary to read first one of these documents and then the other, in order to see how exaggerated is this view. Von Mohl finds a great similarity between the two letters but nevertheless holds that several sections of the Epistle to the Ephesians are but a servile paraphrase of passages from the letter to the Colossians (Eph. iii, 1–9 and Col., i, 23–27; Eph. v, 21–vi, 9 and Col., iii, 18–iv, 1) and that still more frequently the later author follows a purely mechanical process by taking a single verse from the letter to the Colossians and using it to introduce and conclude, and serve as a frame, so to speak, for a statement of his own. Thus, he maintains that in Eph. iv, 25–31, the first words of verse 8 of Col., iii, have served as an introduction (Eph. iv, 25) and the last words of the same verse as a conclusion (Eph. iv, 31). Evidently such methods could not be attributed to the Apostle himself. But, neither are we justified in ascribing them to the author of the Epistle to the Ephesians. For instance, the duties of husband and wife are well set forth in Col., iii, 18, 19, but in these verses there is no comparison whatever between Christian marriage and that union of Christ with His Church such as characterizes the same exhortation in Eph., v, 22 sqq.; consequently, it would be very arbitrary to maintain the latter text to be a vulgar paraphrase of the former. In comparing the texts quoted, the phenomenon of framing, to which von Soden called attention, can be verified in a single passage (Eph., iv, 2–16, where verse 2 resembles Col., iii, 12 sq. and where verses 13, 16, are like Col., ii, 19). In fact, throughout his entire exposition, the author of the Epistle to the Ephesians has no more profound meditation on his ideas and even particular expressions that occur in the letter to the Colossians, and yet neither a servile imitation nor any one of the well-known offenses to which plagiarists are liable, can be proved against him.

Moreover, it is chiefly in their hortatory part that these two letters are so remarkably alike and this is only natural if, at intervals of a few days or hours, the same author had to remind two distinct circles of readers of the same common duties of the Christian life. In the dogmatic part of these two Epistles there is a change of subject, treated with a different intention and in another tone. In the one instance we have a hymn running through three chapters and celebrating the call of both Jews and Gentiles and the union of all in the Church of Christ; and in the other, an exposition of Christ’s dignity and of the adequacy of the means He vouchsafes us for the obtaining of our salvation, as also thanksgiving and exhortation. Besides, if in his letter to the Ephesians, St. Paul reproduces the ideas set forth in that to the Colossians, this is certainly less astonishing than to find a like phenomenon in the Epistles to the Galatians and to the Romans, as it is very natural that the characteristic expressions used by the Apostle in the Epistle to the Colossians should appear in the letter to the Ephesians, since both of these were written at the same time. In fact it has been remarked that he is prone to repeat typical expressions he has once coined (cf. Zahn, Einleitung, I, p. 363 sq.). Briefly, we conclude with Sablat that: ‘These two letters come to us from one and the same author who, when writing the one, had the other in mind and, when composing the second, had not forgotten the first.” The vague allusions made in the latter to the Epistles to the Ephesians to some of the doctrinal questions treated in the Epistle to the Colossians, can be accounted for in this manner, even though these questions were never proposed by those to whom the former Epistle was addressed.

**Difficulties Arising from the Form and Doctrines.**—The denial of the Pauline authenticity of the Epistle to the Ephesians is based on the special characteristics of the Epistle from the viewpoint of style as well as of doctrine, and, while differing from those of the great Pauline Epistles, these characteristics allow those passages to resemble those of the letter to the Colossians. But we have already dwelt upon them at sufficient length.

The circumstances under which the Apostle must have written the Epistle to the Ephesians seem to account for the development of the doctrine and the remarkable change of style. During his two years’ captivity in Caesarea, Paul could not exercise his Apostolic functions, and in Rome, although allowed more liberty, he could not preach the Gospel outside of the house in which he was held prisoner. Hence he must have made up for his want of external activity by a more profound meditation on his theology of justification, of the Law, and of the conditions essential to salvation, he had already brought to perfection, having systematized it in the Epistle to the Romans and, although keeping it in view, did not require to develop it any further. In his letter to the Romans (viii–x, xvi, 25–27) he had come to the investigation of the eternal counsels of Providence concerning the salvation of men and had expounded, as it were, a philosophy of the religious history of mankind of which Christ was the centre, as indeed He had always been the central object of St. Paul’s faith.

Thus, it was on Christ Himself that the solitary meditations of the Apostle were concentrated; in the quiet of his prison he was to develop, by dint of personal intellectual labour and with the aid of new revelations, this first revelation received when “it pleased God to manifest His Son in him.” He was, indeed, to announce the news brought him from time to time by some of his disciples, as, for instance, by Epaphras, that, in certain churches, errors were being propagated which tended to lessen the role and the dignity of Christ, by setting up against Him other intermediaries in the affairs of the other half; and to combat the vulgar and especially popular ideas which had grown from the faithful and having no longer to travel constantly from one church to another, the Apostle was able to embrace in one sweeping glance all the Christians scattered throughout the world. While he resided in the centre of the immense Roman Empire which, in its unity, comprised the world, it was the one
universal Church of Christ, the fulfilment of the mysterious decree revealed to him, the Church in which it had been his privilege to bring together Jews and pagans, that presented itself to him for contemplation. These subjects of habitual meditation are naturally introduced in the letters that he had to write at that time. To the Colossians he speaks of Christ's dignity; to the Ephesians, and we have seen why, of the unity of the Church. But in these Epistles, Paul addresses those who are unknown to him; he no longer speaks as in preceding letters, to convert theories which undermined the very foundation of the work and to refute enemies who, in their hatred, attacked him personally. Accordingly, there is no further occasion to use the serried argumentation with which he not only outweighed the arguments of his adversaries but turned them to the latter's confusion. There is more question of setting forth the sublime considerations with which he is filled than of discussions. Then, ideas so crowd upon him that his pen is overtaxed; his sentences teem with synonyms and qualifying epithets and keep taking on new propositional formations, as in preceding letters, to combat theories which undermined the very foundation of the work and to refute enemies who, in their hatred, attacked him personally. Hence we can understand why, in these letters, Paul's style grows dull and sluggish and why the literary composition differs so widely from that of the first Epistles. When writing to the Colossians, he had one part, and certain errors to refute, whereas, in the Epistle to the Ephesians, he addressed himself at one and the same time to a group of unknown churches of which he had received but vague information. There was nothing concrete in this and the Apostle was left entirely to his own devices and to his own proposal. This is the reason why the special characteristics already indicated in the Epistle to the Colossians appear even more pronounced in that to the Ephesians, particularly in the dogmatic part.

(3) Traditions. If we wish to keep in mind the circumstances under which Paul wrote both of these letters, their peculiar character seems no obstacle to their Pauline authenticity. Therefore, the testimony which, in their inscriptions (Col., i, 1; Eph., i, 1), they themselves render to this authenticity and the very anecdotage which unmanfully attributes to the Apostle preserve all their force. From the traditional viewpoint the Epistle to the Ephesians is in the same class as the best attested letters of St. Paul. Used in the First Epistle of St. Peter, in the Epistle of St. Polycarp, in the works of St. Justin, perhaps also in the Didache and Clement, it appears to have been really well known towards the end of the first century. Marcion and St. Irenaeus ascribe it to St. Paul, and it seems that St. Ignatius, when writing to the Ephesians, had already made use of it as Pauline. It is also to be noted that if the authenticity of this Epistle has been denied by most of the liberal critics since Schleiermacher's day, it is nevertheless conceded by many modern critics, Protostants among them, and held at least as probable by Harnack and Jülicher. In fact the day seems to be approaching when the whole world will recognize as the work of St. Paul, this Epistle to the Ephesians, of which St. John Chrysostom admired the sublime sentences and doctrines: "νομοθέτην μουσῆι. . . θησαυρόν και δομάτων." Consult Introductions to the New Testament. We shall content ourselves here with indicating the latest commentaries, in which the subject is more extensively treated.

P. Ladeuze

Ephesus, a titular archiepiscopal see in Asia Minor, said to have been founded in the eleventh century B.C. by Androcles, son of the Athenian King Codrus, with the aid of Ionian colonists. Its coinage dates back to 700 B.C., the period when the first money was struck. After belonging successively to the kings of Lydia, the Persians, and the Syrian successors of Alexander the Great, it passed, after the battle of Magnesia (190 B.C.), to the kings of Pergamum, the last of whom, Attalus III, bequeathed his kingdom to the Roman people (133 B.C.). It was at Ephesus that Mithridates (88 B.C.) signed the decree ordering all the Romans in Asia to put to death, in which situation 100,000 persons perished. Four years later Sulla, again master of the territory, slaughtered at Ephesus all the leaders of the rebellion. From 27 B.C. till a little after A. D. 286, Ephesus was the capital of the proconsular province of Asia, a direct dependency of the Roman Senate. This is of the utmost importance for Ephesus was noted for its extensive commerce. Many illustrious persons were born at Ephesus, e.g., the philosophers Heraclitus and Hermodorus, the poet Hippox, the painter Parrhasius (all in the sixth or fifth century B.C.), the geographer Antimandros, the astronomers Aratus and charlatan, both in the second century of the Christian Era, and the historian and essayist, Xenophon. Ephesus owed its chief renown to its temple of Artemis (Diana), which attracted multitudes of visitors. Its first architect was the Cretan Ephasius (seventh to sixth centuries B.C.) but it was afterwards enlarged. It was situated on the bank of the River Selinus and its precincts had the right of asylum. This building, which was looked upon in antiquity as one of the marvels of the world, was burnt by Herodatus (386 B.C.) the night of the birth of Alexander the Great; and it was after this event that it was, almost in the same proportions, by the architect Diocletians. Its construction is said to have lasted 120 years, according to some historians 220. It was over 400 feet in length and 200 in breadth, and rested upon 128 pillars of about sixty feet in height. It was stripped of all its pillars by Nero and was finally destroyed by the Goths (A. D. 262).

It was through the Jews that Christianity was first introduced into Ephesus. The original community was under the leadership of Apollo (1 Cor., i, 12). They were disciples of St. John the Baptist, and were converted by Aquila and Priscilla. Then came St. Paul, who lived three years at Ephesus to establish and organize the new church; he was wont to teach in the schola or lecture-hall of the rhetorician Tyranus (Acts, xix, 9) and performed there many miracles. Eventually he was obliged to depart, in consequence of a sedition stirred up by the goldsmith Demetrius and other makers of ex-voto for the temple of Diana (Acts, xviii, 24 sqq.; xix, 1 sqq.). A little later, on his way to Jerusalem, he sent for the elders of the community of Ephesus to come to Miletus and bid them there a touching farewell (Acts, xx, 17-35). The Church of Ephesus was almost completely ruined by the invasion of the Goths and the Vandals. After the withdrawal of the Goths, Timothy, a native of the city (1 Tim., i, 3; II Tim., i, 18; iv, 12), the Epistle of St. Paul to the Ephesians was not perhaps addressed directly to them; it may be only a circular letter sent by him to several churches. The sojourn and death of the Apostle St. John at Ephesus are not mentioned in the New Testament.
but both are attested as early as the latter part of the second century by St. Ireneus (Adv. Haer., III, iii, 4), Polycrates, Bishop of Ephesus (Eusebius, Hist. Eccl., V, xxii), Clement of Alexandria, the "Acta Ioannis", and a little earlier by St. Justin and the Montanists. Byzantine tradition has always shown at Ephesus the tomb of the Apostle. Another tradition, which may be trustworthy, though less ancient, makes Ephesus the scene of the death of St. Mary Magdalen. On the other hand, the opinion that the Blessed Virgin died there rests on no ancient testimony; the opinion is, but ambiguous text of the Council of Ephesus (431), means only that there was at that time at Ephesus a church of the Virgin. (See Ramsay in "Expositor", June, 1906, also his "Seven Cities of Asia"). We learn, moreover, from Eusebius (Hist. Eccl., V, xxiv) that the three daughters of the Apostle St. Philip were buried at Ephesus.

About 110 St. Ignatius of Antioch, having been greeted at Smyrna by messengers of the Church of Ephesus, sent to it one of his seven famous epistles. During the first three centuries, Ephesus was, next to Antioch, the chief centre of Christianity in Asia Minor. In 293, when its bishop, St. Bishop, was called to consider the paschal controversy and declared himself in favour of the Quartenodean practice; nevertheless the Ephesian Church soon confirmed in this particular to the practice of all the other Churches. It seems certain that the sixth canon of the Council of Nicea, confirmed for Ephesus its ecclesiastical jurisdiction over the whole "diocese" or civil territory of Asia Minor, i.e. over eleven ecclesiastical provinces; at all events, the second canon of the Council of Constantinople (381) formally recognized this authority. But Constantinople was already claiming the first rank among the Churches. The Church of Ephesus was thus trying to annex the Churches of Thrace, Asia, and Pontus. To resist these encroachments, Ephesus made common cause with Alexandria. We therefore find Bishop Menon of Ephesus siding with St. Cyril at the Third Ecumenical Council, held at Ephesus in 431 in condemnation of Nestorianism, and another bishop, Stephen, supporting Dioscorus at the so-called Robber Council (Lactacianum Ephesinum) of 449, which approved the heresy of Eutychus. But the resistance of Ephesus was overcome at the Council of Chalcedon (451), when a council at Ephesus in 431 placed the twenty-eighth ecclesiastical provinces of Pontus, Asia, and Thrace under the jurisdiction of the Patriarch of Constantinople. Henceforth Ephesus was but the second metropolis of the Patriarchate of Constantinople, nor did it ever recover its former standing, despite a council of 475 in which Paul, the Monophysite Patriarch of Alexandria restored its ancient rights. Egyptian influence was responsible for the hold which Monophysitism gained at Ephesus during the sixth century; the famous ecclesiastical historian, John of Asia, was then one of its bishops. The metropolis of Ephesus in those days ruled over thirty-six suffragan sees. Justinius, who imitated Constantine in stripping the city of many works of art to adorn Constantinople, built there a magnificent church consecrated to St. John; this was set a famous place of pilgrimage.

Ephesus was taken in 655 and 717 by the Arabs. Later it became the capital of the theme of the Thracians. During the Iconoclastic period two bishops of Ephesus suffered martyrdom, Hypatius in 735 and Theophilius in the ninth century. In the same period a number of religious houses were founded, providing monks, or monastic churches were converted into monasteries for monks and nun's, or into convents for both men and women. During the Middle Ages, Ephesus, or Aya Sofia, as it was called, was one of the most magnificent churches in the world. It was 150 m. long and 100 m. wide, with a central dome 40 m. in diameter and 39 m. high, supported on four double columns. The interior was covered with mosaics representing the life of Christ and the Virgin Mary, and the exterior was decorated with marble and gold. The church was destroyed in 1204 by the Seljuk Turks, but it was later restored. In 1861, the site of the church was excavated by the German archaeologist F. von Bissing, who found remains of the original structure. In 1862, the site was purchased by the British government and excavations were carried out by the British Society of Antiquaries. The excavations revealed the remains of the original church, including the foundations of the central dome, the columns of the nave, and the mosaics on the walls.

Ephesus, Council of, the third ecumenical council, 431. The idea of this great council seems to have been due to Nestorius, the Bishop of Constantinople. St. Cyril, Patriarch of Alexandria, accused him to Pope St. Celestine of heresy, and the pope had replied on 11 August, 430, by charging St. Cyril to assume his authority and give notice in his name to Nestorius that, unless he recanted within ten days, he was to be considered by his own side and by the rest of the churches the heretic. Nestorius, therefore, was accused of heresy, and the council of 431 was called to determine the case. The council was summoned by the Emperor Theodosius II, who invited to summon a general council to judge the difference between the
Patriarch of Alexandria and himself, and he worked so well that the letters of invocation were issued by the emperor to all metropolitans on 19 November, some days before the messengers of Cyril arrived. The emperor was able to take this course without seeming to favour too much, because the matter of the capital, whom Nestorius had excommunicated for their opposition to his heretical teaching, had also appealed to him to call together a council. Nestorius, therefore, paid no attention to the pope's ultimatum, and refused to be guided by the advice to submit with his friend John, the Patriarch of Antioch, volunteered.

The pope was pleased that the whole East should be united to condemn the new heresy. He sent two bishops, Arcadius and Projectus, to represent himself and his Roman council, and the Roman priest, Philip, as his personal representative. Philip, therefore, takes the first place, though, not being a bishop, he could not preside. It was probably a matter of course that the Patriarch of Alexandria should be president. The legates were directed not to take part in the discussions, but to give judgment on them. It seems that Chaleedon, twenty years later, set the precedence by opening the session. The legates should always be summoned presidants at an ecumenical council, and this was henceforth looked upon as a matter of course, and Greek historians assumed that it must have been the case at Nicaea. For his emperor was anxious for the presence of the most venerated prelate of the whole world, Augustine, and sent a special messenger to that great man with a letter in honourable terms. But the saint had died during the siege of Hippo in the preceding August, though the troubles of Africa had prevented news from reaching Constantine. The emperor wrote an angry letter to Cyril, and a temperate one to the council. The tone of the latter epistle and of the instructions given to the imperial commissioner, Count Candidian, to be absolutely impartial, are ascribed by the Coptic Acts to the influence exercised on the emperor by the Abbot Victor, who had been sent to Constantinople by Cyril as his agent at the Court on account of the veneration and friendship which Theodosius was known to feel for the holy man. Nestorius, with sixteen bishops, and Cyril, with fifty, arrived before Pentecost at Ephesus. The Coptic tells us that the two parties arrived on the same day, and that in the evening Nestorius proposed that all should join in the Vesper service together. The other bishops refused. Memnon, Bishop of Ephesus, was afraid of violence, and sent his clergy only to the church. The mention of a Flavian, who seems to be the Bishop of Philippa, casts some doubt on this story, for that bishop did not arrive till later. Memnon of Ephesus had forty suffragans present, not counting twelve from Pamphylia (whom John of Antioch calls heretics). Juvenal of Jerusalem, with the neighbouring bishops whom he looked upon as his suffragans, and Flavian of Philippa, with a contingent from the countries which looked to Thessalonica as their metropolis, arrived soon after Pentecost. The Patriarch of Antioch, John, an old friend of Nestorius, wrote to explain that his suffragans had not been able to start till after the Council of Constantinople. (The Coptic Acts say that he was a flamine at Antioch.) The journey of thirty days had been lengthened by the death of some horses; he would accomplish the last five or six stages at leisure. But he did not arrive, and it was said that he was loitering because he did not wish to join in condemning Nestorius. Meanwhile the heat was great, and all the bishops were ill. Two or three died. John of Antioch's metropolitan, those of Apamea and Hierapolis, arrived and declared that John did not wish the opening of the council to be deferred on account of his delay. However, these two bishops and Theodoret of Cyrus, with sixty-five others, wrote a memorial addressed to St. Cyril and Juvenal of Jerusalem, begging that the arrival of John should be awaited. Count Candidian arrived, with the imperial decree, and he took the same view. But Cyril and the majority determined to open the council on 22 June, sixteen days having elapsed since John had declared himself too ill. It was clear to the majority that this delay was intentional, and they were probably right. Yet it is regrettable that all possible allowance was not made, especially as no news had yet come from Rome.

For Cyril had written to the pope with regard to an important question of the Nestorians recanted within the ten days fixed by the pope, and he was consequently treated as excommunicate by the majority of the bishops. Was he to be allowed a fresh trial, although the pope had already condemned him? Or, on the other hand, was he to be merely given the opportunity of explaining or excusing his contumacy? One might have presumed that Pope Celestine, in approving of the council, intended that Nestorius should have a full trial, and in fact this was declared in his letter which was still on the way. But as no reply had come to Cyril, that saint considered that he had no further right to treat the pope's letter as a matter for further discussion, and no doubt he had not much wish to do so. The council assembled on 22 June, and St. Cyril assumed the presidency both as Patriarch of Alexandria and as filling the place of the most holy and blessed Archbishop of the Roman Church, Celestine. In order to carry out his own ideas, he was anxious for the presence of the whole world, and Augustinian, and sent a special messenger to that great man with a letter in honourable terms. But the saint had died during the siege of Hippo in the preceding August, though the troubles of Africa had prevented news from reaching Constantine. The emperor wrote an angry letter to Cyril, and a temperate one to the council. The tone of the latter epistle and of the instructions given to the imperial commissioner, Count Candidian, to be absolutely impartial, are ascribed by the Coptic Acts to the influence exercised on the emperor by the Abbot Victor, who had been sent to Constantinople by Cyril as his agent at the Court on account of the veneration and friendship which Theodosius was known to feel for the holy man. Nestorius, with sixteen bishops, and Cyril, with fifty, arrived before Pentecost at Ephesus. The Coptic tells us that the two parties arrived on the same day, and that in the evening Nestorius proposed that all should join in the Vesper service together. The other bishops refused. Memnon, Bishop of Ephesus, was afraid of violence, and sent his clergy only to the church. The mention of a Flavian, who seems to be the Bishop of Philippa, casts some doubt on this story, for that bishop did not arrive till later. Memnon of Ephesus had forty suffragans present, not counting twelve from Pamphylia (whom John of Antioch calls heretics). Juvenal of Jerusalem, with the neighbouring bishops whom he looked upon as his suffragans, and Flavian of Philippa, with a contingent from the countries which looked to Thessalonica as their metropolis, arrived soon after Pentecost. The Patriarch of Antioch, John, an old friend of Nestorius, wrote to explain that his suffragans had not been able to start till after the Council of Constantinople. (The Coptic Acts say that he was a flamine at Antioch.) The journey of thirty days had been lengthened by the death of some horses; he would accomplish the last five or six stages at leisure. But he did not arrive, and it was said that he was loitering because he did not wish to join in condemning Nestorius. Meanwhile the heat was great, and all the bishops were ill. Two or three died. John of Antioch's metropolitan, those of Apamea and Hierapolis, arrived and declared that John did not wish the opening of the council to be deferred on account of his delay. However, these two bishops and Theodoret of Cyrus, with sixty-five others, wrote a memorial addressed to
either deny the Godhead [θεότης] of the Only-begotten to have become man, or else admit the same of the Father and of the Holy Ghost." (Nestorius means that the Divine Nature is numerically one—and if Nestorius really said θεότης, and not θεοτάτης, he was wrong.) The Arians were further accused of him of uttering the heresy that the Son who died is to be distinguished from the Word of God. A series of extracts from the holy Fathers was then read, Peter I and Athanasius of Alexandria, Julius and Felix of Rome (but these papal letters were Apollinarian forgeries). Theophylact, Cyril's uncle, Cyril's friend, Gregory Nazianzen, Basil, Gregory of Nyssa, Atticus, Amphiloctius. After these, contrasting passages from the writings of Nestorius were read. These were of course pieces justificatives brought forward by Cyril, and necessary to inform the council as to the question at issue. Hefele has wrongly understood that the bishops were examining the doctrine of Nestorius afresh, without accepting the condemnation by the pope as necessarily correct. A fine letter from Cyprian, Bishop of Carthage, and primate of a greater number of bishops than any of the Eastern patriarchs, was next produced, in the midst of the devastation of Africa by the Vandals, and naturally could neither hold any synod nor send any bishops. No discussion followed (and Hefele is wrong in suggesting an omission in the Acts, which are already of extraordinary length for a single day), but theAmythias of Nestorius was now complaining of Count Candian and his soldiers, as the other side did of Memnon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the division, and wrote that a collective session must be held, and the matter put to the test. The letter of Palladius who brought this epistle took back with him many letters from both sides. Cyril proposed that the emperor should send for him and five bishops, to render an exact account.

At last on 10 July the papal envoys arrived. The second session assembled a few hours later, in the episcopal residence. The legate Philip opened the proceedings by saying that the former letter of St. Celestine had been already read, in which he had decided the present question; the pope had now sent another letter. This was read. It contained a general exhortation to the council, and concluded by saying that the legates had instructions to carry out what the pope had formerly decided; doubtless the council would agree. The Fathers then cried:

"This is a just judgment. To Celestine the new Paul! To the new Paul Cyril! To Celestine, the guardian of the Faith! To Celestine, the foreigner! To Celestine, the Synod gives the Synod of our most holy father and colleague Celestine, Bishop of the Roman Church, with many tears have arrived at the following grievous sentence against him: Our Lord Jesus Christ, Who has been blasphemed by him, has defined by this holy synod that the same Nestorius is excluded from all episcopal dignity and from every assembly of bishops." 

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to "the new Judas" was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business had been concluded in a single long session, and it was evening when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the Arians buried down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out in full. In a letter to the Egyptian bishops in the same city and to the Abbot Basil of the Coptic community, the Abbot Victorius, Bishop of Rome, made a appeal to the emperor, declaring that what the pope required had been done, and it is an accurate account of the work of the first session and the sentence; canonical refers to the words of the sentence, necessarily obliged by the canons, and Apostolic to the words "and the sentence of the Synod".

The legate Arcadius expressed his regret for the late arrival of his party, on account of storms, and asked to see the decrees of the council. Philip, the pope's personallegate, then thanked the bishops for adhering to their acclamations as holy members to their holy head—"for your blessedness is not unaware that the Apostle Peter is Westerns, had spoken of the violence of the people, egged on by their bishop Memnon who (so the heretic said) had shut the churches to him and threatened him with death.

Five days after the first session John of Antioch arrived. The party of Cyril and Nestorius was deputation to meet him honourably, but John was surrounded by soldiers, and complained that the bishops were creating a disturbance. Before he would speak to them, he held an assembly which he designated "the holy synod". Candidian deposed that he had disapproved of the assembling of the bishops before John's arrival. He attended the session and read the emperor's letter (of this not a word in the Acts, so Candidian was apparently lying). John accused Memnon of violence, and Cyril of Arian, Apollinarian, and Eunomian heresy. These two were deposed by forty-three bishops present; the members of the council were to be forgiven, provided they would condemn the twelve anathematisms of Cyril. This was absurd, for most of these could not be understood in anything but a Catholic sense. But John, who was not a bad man, was in a bad temper. It is noticeable that not a word was said at this session about the refusal of John to receive the assembled bishops. This party of Cyril was now complaining of Count Candidian and his soldiers, as the other side did of Memnon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the division, and wrote that a collective session must be held, and the matter put to the test. The letter of Palladius who brought this epistle took back with him many letters from both sides. Cyril proposed that the emperor should send for him and five bishops, to render an exact account.

At last on 10 July the papal envoys arrived. The second session assembled a few hours later, in the episcopal residence. The legate Philip opened the proceedings by saying that the former letter of St. Celestine had been already read, in which he had decided the present question; the pope had now sent another letter. This was read. It contained a general exhortation to the council, and concluded by saying that the legates had instructions to carry out what the pope had formerly decided; doubtless the council would agree. The Fathers then cried:

"This is a just judgment. To Celestine the new Paul! To the new Paul Cyril! To Celestine, the guardian of the Faith! To Celestine, the foreigner! To Celestine, the Synod gives the Synod of our most holy father and colleague Celestine, Bishop of the Roman Church, with many tears have arrived at the following grievous sentence against him: Our Lord Jesus Christ, Who has been blasphemed by him, has defined by this holy synod that the same Nestorius is excluded from all episcopal dignity and from every assembly of bishops." 

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to "the new Judas" was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business had been concluded in a single long session, and it was evening when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the Arians buried down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out in full. In a letter to the Egyptian bishops in the same city and to the Abbot Basil of the Coptic community, the Abbot Victorius, Bishop of Rome, made a appeal to the emperor, declaring that what the pope required had been done, and it is an accurate account of the work of the first session and the sentence; canonical refers to the words of the sentence, necessarily obliged by the canons, and Apostolic to the words "and the sentence of the Synod". The legate Arcadius expressed his regret for the late arrival of his party, on account of storms, and asked to see the decrees of the council. Philip, the pope's personallegate, then thanked the bishops for adhering to their acclamations as holy members to their holy head—"for your blessedness is not unaware that the Apostle Peter is
the head of the Faith and of the Apostles." The Metropolitan of Ancyra declared that God had shown the justice of the synod's sentence by the coming of St. Celestine's letter and of the legates. The session closed with the reading of the pope's letter to the emperor.

On the following day, 11 July, the third session took place. The legates had read the Acts of the first session and now demanded only that the condemnation of Nestorius should be formally read in their presence. When this had been done, the three legates severally pronounced their confirmation in the pope's name. The exordium of the speech of Philip is celebrated: "It is doubtful to none, nay it has been known to all ages, that holy and blessed Peter, the prince and head of the Apostles, the column of the Faith, the foundation of the Catholic Church, received from our Lord Jesus Christ, the Saviour and Redeemer of the human race, the keys of the Kingdom, and that to him was given the power of binding and loosing sins, who until this day and for ever lives and judges in his successors. His successor in order and his representative, our holy and most blessed Philip, Bp. of Antioch, spoke in word and in deed, with words such as these before their eyes that Greek Fathers and councilors spoke of the Council of Ephesus as celebrated "by Celestine and Cyril". A translation of these speeches was read, for Cyril then rose and said that the synod had understood them clearly; and now the Acts of all three sessions must be presented to the legates and the synod. Arcadius replied that they were of course willing. The synod ordered that the Acts should be set before them, and they signed them. A letter was sent to the emperor, telling him how St. Celestine had held a synod at Rome and had sent his letter to Alexandria. John had set up a placard in the city accusing the synod of the Apollinarian heresy. He is again cited, and this is counted as the third canonical summons. He would pay no attention. In consequence the council suspended and excommunicated him, together with thirty-four bishops of his party, but refrained from deposing them. Some of John's party had already deserted him, and he had gained only a few. In the letters to the emperor and the pope which were then dispatched, the synod described itself as now consisting of two hundred and ten bishops. The long letter to Celestine gives full and the whole of the synod, and mentions that the pope's decrees against the Pelagians had been read and confirmed. At the end of the sixth session, which dealt only with the case of two Nestorianizing priests, was made the famous declaration that no one must produce or compose any other creed than that of 731, and "contrary to?" the Nicene, and that anyone who should propose any such to pagans, Jews, or heretics, who wished to be converted, should be deposed if a bishop or cleric, or anathematized if a layman. This decision became later a fruitful source of objections to the decrees of later councils. The letter was sent to the bishops of the so-called Constantinopolitan Creed; but that creed itself would be abolished by this decree if it is taken too literally. We know of several matters connected with Pamphylia and Thrace which were treated by the council, which are not found in the Acts. St. Leo tells us that Cyril reported to the pope the intrigues by which Juvenal of Jerusalem tried at Ephesus to carve himself a patriarchate out of that of Antioch, in which he see lay. He was to succeed in this twenty years later, at Chalcedon. In the seventh and last session on 17 July (it seems) the bishops of Cyum pressed the council to approve their claim of having been ancienly and rightly exempt from the jurisdiction of Antioch. Six canons were also passed against the adherents and supporters of Nestorius.

The history of the intrigues by which both parties tried to get their side de-tailed here. The orthodox were triumphant at Ephesus by their numbers and by the agreement of the papal legates. The population of Ephesus was on their side. The people of Constantinople rejoiced at the deposition of their heretical bishop. But Count Candidian and his troops were on the side of Nestorius, whose friend Count Irenaeus, was also at Ephesus, working for him. The emperor had always championed Nestorius, but had been somewhat shaken by the reports of the council. Communication with Constantinople was impeded both by the friends of Nestorius there as Candidian and reports of the letter. A letter was taken to Constantine at last in a hollow cane, by a messenger disguised as a beggar, in which the miserable condition of the bishops at Ephesus was described, scarce a day passing without a funeral, and entreaty was made that they might be allowed to send representatives to the emperor. Ephesius, Robber Council of (Lattrocinium).—The Acts of the first session of this synod were read at the Council of Chalcedon, 451, and have thus been preserved to us. The remainder of the Acts (the first session being wanting) are known only through a Syriac translation by a Monophysite monk, published from the British Museum MS. Addit. 14, 530, written in the year 535. On the events which preceded the opening of the council, 8 August, 449, see Dioscorus. The emperor had convoked it, the pope had agreed. No time had been left for any Western bishops to attend, except a certain Julius of an unknown see, who, together with a Roman priest, Renatus (he died on the way), and the deacon Hilarus, afterwards pope, represented St. Leo. The Emperor Theodosius II gave to Dioscorus, Patriarch of Alexandria, the presidency —τὴν ἀδελφίαν καὶ τὴν πρωτείαν. The legate Julius is mentioned, but when this name was read by the emperor, the bishops cried: “He was cast out. No one represented Leo.” Next in order was Juvenal of Jerusalem, above both the Patriarch of Antioch, Domnus, and St. Flavian of Constantinople. The number of bishops present was 127, with eight representatives of Alexandria. The session is not noted, but the name of the notary Duleitius. The question before the council by order of the emperor was whether St. Flavian, in a synod held by him at Constantinople in November, 448, had justly deposed and excommunicated the Archimandrite Eutyches for refusing to admit two natures, and laterly Flavian and six other bishops, who had been present at his synod, were not allowed to sit as judges in the council. The brief of convocation by Theodosius was read, and then the Roman legates explained that it would have been contrary to custom for the pope to be present in person, but he had sent a letter by them. In this letter St. Leo had appealed to his dogmatic letter to Flavian, which he intended to read at the council and accepted by it as a rule of faith. But Dioscorus took care not to have it read, and instead of it a letter of the emperor, ordering the presence of the council of the fifth session at Constantinople, was read. The question of faith was next proceeded with. Dioscorus declared that this was not a matter for inquiry: they had only to inquire into the recent doings. He was acclaimed as a guardian of the faith. Eutyches then was introduced, and declared that he had held the Nicene Creed, to which nothing could be added, and from which nothing could be taken away. He had been condemned by Flavian for a mere slip of the tongue, though he had declared that he held the faith of Nicea and Ephesus, and had appealed to the present council. He had been in danger of his life. He now asked for judgment against the censures which had been brought against him.

The accuser of Eutyches, Bishop Eusebius of Dorylaum, was not allowed to be heard. The bishops agreed that the Acts of the condemnation of Eutyches, at a council held at Constantinople in November, 448, should be read, but the legates asked that the pope’s letter might be heard first. Eutyches interrupted with the complaint that he did not trust the legates; they had been to dine with Flavian, and had received much courtesy. Dioscorus decided that the Acts of the fifth session at Constantinople should have proceeded in his name, and so the letter of St. Leo was never read at all. The Acts were then read in full (for an account of them see Eutyches), and also the account of an inquiry made on 13 April into the allegation of Eutyches that the synodal Acts had been incorrectly taken down, and of another inquiry on 27 April into the accusation made by Eutyches that Flavian had drawn up the sentence against him beforehand. While the trial was being related, cries arose of belief in one nature, that two natures meant Nestorianism, of “Burn Eusebius”, and so forth. St. Flavian rose to complain that no opportunity was given him of defending his own action. On the question of the Acts of the Robber Council now give a list of 114 votes in the form of short speeches absolving Eutyches. Even three of his former judges joined in this, although by the emperor’s order they were not to vote. Barsanus added his voice in the last place. A petition was read from the monastery of Eutyches, which had been communicated by Flavian. On the question of the monks that they agreed in all things with Eutyches, and with the holy Fathers, the synod absolved them.

Next in order to establish the true Faith an extract was read from the Acts of the first session of the Council of Ephesus of 431. Many of the bishops, and also the deacon Hilarus, expressed their assent, some adding that nothing beyond this faith could be allowed. Dioscorus then spoke, declaring that it followed that Flavian and Eusebius must be deposed. No less than 101 bishops gave their votes orally, and the signatures of all the 135 bishops were signed. The last 34 Eusebius had previously interposed an appeal to the pope and to a council under his authority. Their formal letters of appeal have been recently published by Ameli. The evidence given at Chalcedon is conclusive that the account in the Acts of this final scene of the session is not to be trusted. The act of the bishops had been violently prevented from taking notes. It was declared that both Barsanus and Dioscorus struck Flavian, though this may be exaggeration. But we must believe that many bishops threw themselves on their knees to beg Dioscorus for mercy to Flavian, that the emperor was inclined to introduce also the Alexandrian Parabolas, and that a scene of violence ensued; that the bishops signed under the influence of bodily fear, that some signed a blank paper, and that others did not sign at all, the names being afterwards filled in of all who were actually present.

The appeal of Eutyches uttered a single word in Latin, Contradictitur, annulling the sentence in the pope’s name. He then escaped with difficulty. Flavian was deposed into exile, and died a few days later in Lydia. No more of the Acts was read at Chalcedon. But we learn from Theodoret, Evagrius, and others, that the legates Tarquinius, Domnus, and Ibas. The Syriac Acts take up the history where the Chalcedonian Acts break off. Of the first session only the formal documents, letters of the emperor, petitions of Eutyches, are known to be preserved in Syriac, though not in the same MS. It is evident that the Monophysites editor thoroughly disapproved of the first session, and purposely omitted it, not because of the high-handed proceedings of Dioscorus, but because the Monophysites as a general rule condemned Eutyches as a heretic, and did not wish to remember his rehabilitation by a council which they considered to be oecumenical.

In the next session, according to the Syriac Acts, 113 were present, including Barsanus. Nine new names appear. The legates were sent for, as they did not appear, but only the notary Duleitius could be found, and he had made a mistake. The first case was that of the Bishop of Edessa. This famous champion of the Antiochian party had been accused of crimes before Domnus, Bishop of Antioch, and had been acquitted, soon after Easter, 448. His accusers had gone to Constantinople and obtained a new trial from the emperor. The bishops Photius of Tyre, Eustathius of
Berytus, and Uranis of Imeria were to examine the matter. These bishops met at Tyre, removed to Berytus, and returned to Tyre, and eventually acquitted Ibas once more, together with his fellow-accused, Daniel, Bishop of Harran, and John of Theodosianopolis. This was in February. The bishops had been too kind, Cherea, Governor of Osroene was now ordered to go to Edessa to make a new inquiry. He was received by the people on 12 April with shouts (the detailed summary of which took up some two or three pages of his report), in honour of the emperor, the governor, the late Bishop Rabula, and against Nestorius and Ibas. Cherea went to Constantinople, with two letters of his own, an elaborate report, detailing all the accusations he could manage to rake together against Ibas. The emperor ordered that a new bishop should be chosen. It was this report, which provided a history of the whole affair, that was now read at length by order of Diorescus. When the famous letter of Ibas to Maris was read, cries arose such as "These things pollute our ears... Cyril is immortal. Let Ibas be burnt in the midst of the city of Antioch. Exile is of no use. Nestorius and Ibas should be burnt together!" A final indictment was made in a large document of Edessa, and Ibas named Eulogius. The sentence was finally given against Ibas of deposition and excommunication, without any suggestion that he ought to be cited or that his defence ought to be heard. It is scandalous to find the three bishops who had acquitted him but a few months previously, only anxious to the concurrence. He was quietly deposed by the agreement of all the council. He was, of course, not present and could not defend himself.

It was next the turn of Irenaeus, who as an influential layman at the former Council of Ephesus had shown much favour to Nestorius. He had later become Bishop of Byblos, but had never been consecrated. Irenaeus, Bishop of Byblos, because he had been consecrated by Irenaeus and was his friend, was next deposed. Sophronius, Bishop of Jerusalem, was a cousin of Ibas. He was therefore accused of magic, and his case was reserved for the judgment of the new Bishop of Edessa—a surprisingly mild decision. The council turned higher game. The great Theodoret, whose learning and eloquence in the pulpit and with the pen were the terror of the party of Dioscorus, had been confined by the emperor with his own diocese in the preceding year, to prevent his preaching at Antioch; and Theodosius had twice written to prevent his coming to Ephesus to the council. It was not difficult to find reasons for deposing him in his absence. Far as he was from Ephesus, he had been a friend of Nestorius, and for more than three years (431-4) the most redoubtable antagonist of St. Cyril. But the two great theologians had come to terms and had celebrated their agreement with great joy. Theodoret had tried to make friends with Dioscorus, but his advances had been rejected with scorn. A monk of Antioch now brought forward a volume of extracts from the works of Theodoret. First was read Theodoret's fine letter to the monks of the East (see Mansi, V, 1023), then some extracts from a lost "Apology for Dioscorus and Theodoret," the very name of this work of Theodoret in the Greek, the Greek to be pronounced. Dioscorus pronounced the sentence of deposition and excommunication.

When Theodoret in his remote diocese heard of this absurd sentence on an absent man against whose reputation not a word was uttered, he at once appealed to the pope in a famous letter (Ep. cxii). He wrote also to the legate Renatus (Ep. cxvii), being unaware that he was dead. The council had a yet bolder task before it. Domnus of Antioch is said to have agreed in the first session to the acquittal of Eutyches. But he relented, on the plea of the emperor, to appear any more at the council. He seems to have been more terrified, or both, at the tyranny exercised by Dioscorus. The council had sent him an account of their actions, and he replied (if we may believe the Acts) that he agreed to all the sentences that had been given and regretted that his health made his attendance impossible.

It is almost incredible that immediately after receiving this message, the council proceeded to hear a number of petitions from monks and priests against Domnus himself. He was accused of friendship with Theodoret and Flavian, of Nestorianism, of altering the form of the Sacrament of Baptism, of intruding an immoral bishop into Emess, of having been unnaturally appointed himself, and in fact of being an enemy of Dioscorus. Several pages of the MS. are unfortunately lost; but it does not seem that the unfortunate patriarch was cited to appear, or given a chance of defending himself. The sentence was worse than Ibas. He was deposed by a vote of the council, and with this final act of injustice the Acts come to an end. The council wrote the usual letter to the emperor (see Perry, trans., p. 431), who was charmed with the result of the council and confirmed it with a letter (Mansi, VII, 495, and the Acts). Dioscorus sent an encyclical to the bishops of the East, with a form of adhesion to the council which he was to sign (Perry, p. 375). He went to Constantinople and appointed his secretary Anatolius in charge of the great council. In a panic he had become his tool; he had deposed the Patriarch of Antioch and Constantinople; but one powerful adversary yet remained. He halted at Nicea, and with ten bishops (no doubt the ten Egyptian metropolitan whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour"—in the words of the bishops at Chalcedon—and excommunicated the pope himself.

Meanwhile St. Leo had received the appeals of Theodoret and Flavian (of whose death he was unaware), and had written to the Bishop of Tarsus and to the empress that all the Acts of the council were null. He communicated all who had taken part in it, and absolved all whom it had condemned, with the exception of Domnus of Antioch, who seems to have had no wish to resume his see and retired into the monastic life which he had left many years before with regret. (For the results of the Robber Council, or Latrocinum,—the name given to it by St. Leo—see Chalcedon, Eutyches, and Leo I, Pope.)

The Acts of the first session of the council will be found in those of the Council of Chalcedon, in Mansi, Harcouin, and the other collections. The Syrian Acts were published in the 'Summary' of Perry, Nat. Hist. of the First Council of Ephesus, a copy of an original at Oxford (1875): tr. from The Second Synod of Ephesus from Syriac MSS. (Dartford, 1881). For French and German versions and other literature, see Bishop.

John Chapman.

Ephesus, The Seven Sleepers of.—The story is one of the many examples of the legend about a man who falls asleep and years after wakes up to find the world changed. It is told in Greek by Symeon Metaphrastes (q. v.) in his "Lives of the Saints" for the month of July; Gregory of Tours did it into Latin. There is a Syriac version by James of Sarv (Life of Charyas, cxii). There is a French version by Jerome of Durham (lxxii), and from the story of the council for a description of the story. There is a Latin version by Lucilius (lxxii), and in other Eastern languages. There is also an Anglo-Norman poem, "Li set dormanz," written by certain Chaddry, and it occurs again in Jacobus de Vorge's "Golden Legend" (Legenda aurea) and in an Old-Norse fragment. Of all these versions and re-editions
it seems that the Greek form of the story, which is the basis of Symeon Metaphrastes, is the source. The story is this: Decius (249–251) once came to Ephesus to enforce his laws against Christians—a gruesome description of the horrors he made them suffer follows—here he seven noble youths were named Diomedes, Jamblichos, Martin, John, Dionysios, Exakostodianos, and Antoninos (so Metaphrastes; the names vary considerably; Gregory of Tours has Achillides, Diomedes, Diogenus, Probatos, Stephanus, Sambatus, and Quiriacus), who were Christians. The emperor tried them and then gave them a short time for consideration, till he came back again to Ephesus. They gave their property to the poor, took a few coins only with them and went into a cave on Mount Anchilos to pray and prepare for death. Decius came back after a journey and inquired after these seven men. They heard of his return and then, as they said their last prayer in the cave before giving themselves up, fell asleep. The emperor told his soldiers to find them, and when found asleep in the cave he ordered it to be closed up with huge stones and sealed; thus they were buried alive. But a Christian came and wrote on the outside of the cave the names of the martyrs and their dates. Years passed, the empire became Christian, and Theodosius [either the Great (379–395) or the Younger (408–450), Koch, op. cit. infra, p. 12] reigned. In his time some heretics denied the resurrection of the body. While this controversy went on, a rich landowner named Diomedes, the possessor of which he rented, as a cattle-stall. Then they awake, thinking they have slept only one night, and send one of their number (Diomedes) to the city to buy food, that they may eat before they give themselves up. Diomedes comes into Ephesus and the usual story of cross-purposes follows. He is as an act of God crosses over churchyards. The second part of the ephod, which immediately followed, was adorned with a border of pomegranates "of violet, and purple, and scarlet twice dyed, with little bessels set between", whose sound was to be heard while the high-priest was ministering. The "rational of judgment" was a breastplate fastened on the front of the ephod, adorned in material of the high-priest: it was a span in length and width, and was ornamented with four rows of precious stones on which were inscribed the names of the twelve tribes. It held also the Urim and Thummim (doctrine and truth) by means of which the high-priest consulted the Lord. The third part of the ephod was a breastplate of shoulder-pieces, or suspenders, fastened to the bodices in front and behind, and passing over the shoulders. Each of these straps was adorned with an onyx stone engraved with the names of six of the tribes of Israel, so that the high-priest while ministering wore the names of all the tribes, six upon each shoulder (Ex., xxviii, 9–12; xxx, 7; xxxv, 9; xxxix, 16–19). The third part of the ephod was the cincture, of the same material as the main part of the ephod and woven in one piece with it, by which it was girt about the waist (Lev., vii, 7). Some authors maintain that the correct Hebrew reading of Ex., xxviii, 8, speaks of this band of the ephod; the contention agrees with the Syriac and Chaldee versions and with the rendering of Josephus (cf. Ex., xxxvii, 27 sq.; xxxix, 5; xxxix, 20 sq.). It must not be imagined that the ephod was the ordinary robe of the high-priest: he wore it while performing the duties of his ministry (Ex., xxviii, 4; Lev., vii, 7; I K., ii, 28) and when consulting the Lord. Thus David learned through Abiathar's ephod the disposition of the people of Cedia (I K., xxii, 11 sq.) and the best plan of campaign against the Amalecites (I K., xxx, 7 sqq.). In I Par., xiv, 18, it appears that Saul wished the priest Achias to consult the Lord by means of the Ark; but the Septuagint passage of this reading, its context (I K., xiv, 3), and the text of Josephus (Ant. Jud., vi, 5) plainly show that in I Par, xiv, 18, we must read "the ephod" instead of "bring the ark." The Common Ephod.—An ephod was born by Samuel when serving in the time of Heli (I K., ii, 18), by the eighty-five priests slain by Doeg in the sanctuary of Nobe (I K., xxiii, 18), and by David dancing before the Ark (II K., vi, 14). The linen ephod; its general form may be supposed to have resembled the ephod of the high-priest, but its material was not the celebrated fine white linen, nor does it appear to have been adorned with the variegated colours of the high-priest's ephod. The Septuagint translators seem to have intended to emphasize the difference between the ephod of the high-priest.
and that worn by David, for they call this latter the idolatrous ephod.

The Idolatrous Ephod.—According to Judges, viii, 26 sq., Gedeon made an ephod out of part of the spoils taken from the Midianites, their golden ear-rings, jewels, and gold chains of gold. All the people paid idolatrous worship to this ephod, so that it became a ruin to Gedeon and all his house. Some writers, following the Syriac and Arabic versions, have explained this ephod as denoting a gold casing of an oracle image. But there is no other instance of such a figurative meaning of the Hebrew verb used to express the placing of the ephod on the part of Gedeon in Judges, vi, 37, the spreading of the fleece of wool. The opinion that Gedeon’s ephod was a costly garment like that of the high-priest, is, therefore, preferable.

A. J. MAAS.

Ephraem (Ephrem, Ephrāim), Saint, b. at Nisibis, then under Roman rule, early in the fourth century. He was taught by Abnīl or Abibal. His mother was a native of Amid. Ephraem was instructed in the Christian mysteries by St. James, the famous Bishop of Nisibis, and was baptized at the age of eighteen (or twenty-eight). Then he became more a student than a bishop, who availed himself of the services of Ephraem to renew the moral life of the citizens of Nisibis, especially during the sieges of 338, 341, and 350. One of his biographers relates that on a certain occasion he cursed from the city walls the Persian hosts, whereupon a cloud of flies and mosquitoes settled on the army of Sapor II and compelled it to withdraw. The adventurous campaign of Julian the Apostate, which for a time menaced Persia, ended, as is well known, in disaster, and his successor, Jovianus, was only too happy to rescue from annihilation some remnant of the great army which his predecessor had led across the Euphrates. To accomplish even so much the emperor had to sign a disadvantageous treaty, by the terms of which Rome lost the Eastern provinces conquered at the end of the third century; among the cities retroceded to Persia was Nisibis (363). To escape from his persecutions the Syrian saint fled to Persia, most of the Christian population abandoning Nisibis en masse. Ephraem went with his people, and settled first at Beet-Garbaya, then at Amid; finally at Edessa, the capital of Osroene, where he spent the remaining ten years of his life, a hermit remarkable for his severe asceticism. Nevertheless he took an interest in all matters that closely concerned the population of Edessa. Several ancient writers say that he was a deacon; as such he could well have been authorized to preach in public. At this time a certain heretical sect was active in Edessa: Ephraem contended with it, and with all the disciples of the illustrious philosopher Bardeanes. To this period belongs nearly all his literary work; apart from some poems composed at Nisibis, the rest of his writings—sermons, hymns, exegetical treatises—date from his sojourn at Edessa. It is not improbable that he is one of the chief founders of the theological "School of the Persians," so called because its first students and original masters were Persian Christian refugees of 363. At his death St. Ephraem was borne without pomp to the cemetery of the "foreigners" in the Armenian monastery of the St. Sergius and Bacchus in Persia to possess him of his body.

The aforementioned facts represent all that is historically certain concerning the career of Ephraem (see BOUVY, "Les sources historiques de la vie de S. Ephrāim" in "Revue Augustiniennè", 1903, 155-64). All details added later by Syrian biographers are at best of double value. To this class belong not only the legendary and occasionally puerile traits so dear to Oriental writers, but also others seemingly reliable, e. g. an alleged journey to Egypt with a sojourn of eight years, during which he is said to have confuted publicly certain Arian heretics, and of certain relations of St. Ephraem and St. Basil are narrated by very reliable authors, e. g. St. Gregory of Nyssa (the "Pseudo?" and Sozomen, according to who the hermit of Edessa, attracted by the great reputation of St. Basil, resolved to visit him at Caesarea. He was actually received and ordained deacon by St. Basil; four years later he refused both the priesthood and the episcopate that St. Basil offered him through delegates sent for that purpose to Edessa. Though Ephraem seems to have been quite ignorant of Greek, this meeting with St. Basil is not improbable; some good critics, however, hold the evidence insufficient, and therefore reject it, or at least withhold their adhesion. The life of St. Ephraem, therefore, offers not a few obscure problems; only the general outline of his career is known to us. It is certain, however, that while he lived he was very influential among the Syrian Christians of Edessa, and that his messages were accepted by all, Orthodox, Monophysites, and Nestorians. They call him the "sun of the Syrians," the "column of the Church," the "harp of the Holy Spirit." More extraordinary still is the homage paid by Greeks who rarely mention Syrian writers. Among the works of St. Gregory of Nyssa (Hist. Ecel., XLI. 819) is mentioned (though not acknowledged by some) which is a real panegyric of St. Ephraem. Twenty years after the latter’s death St. Jerome mentions him as follows in his catalogue of illustrious Christians: "Ephraem, deacon of the Church of Edessa, wrote many works (opuscula) in Syriac; these became so famous that his writings are publicly read in some churches after the Sacred Scriptures. I have read in Greek a volume of his on the Holy Spirit; though it was only a translation, I recognized therein the sublime genius of the man" (De viris illust., c. cxv).

Theodore of Cyrus also praised his poetic genius and theological knowledge (Hist. Eccl., IV. xxvi). Sozomen pretends that Ephraem wrote 3,000,000 verses, and gives the names of some of his disciples, some of whom remained orthodox, while others fell into heresy (Hist. Eccl., III. xvi). From the Syrian and Byzantine Churches the fame of Ephraem spread among all Christians and the Biblical Martyrology mentions him on 1 February. In their menologies and synaxaria Greeks and Russians, Jacobites, Chaldeans, Copts, and Armenians honour the holy deacon of Edessa.

WORKS OF ST. EPHRAEM.—The works of this saint are so numerous and important that it is impossible to treat them here in detail. Let it suffice to consider briefly: (1) the text and the principal versions and editions of his writings; (2) his exegetical writings; (3) his poetical writings.

(1) Texts and Principal Versions and Editions.—The Syriac original of Ephraem’s writings is preserved in many manuscripts, one of which dates from the fifth century. Through much transcription, however, his writings, particularly those used in the various liturgies, have suffered no little interpolation. Moreover, many of his exegetical works have perished, or at least have not yet been found in the libraries of the Orient. Numerous versions, however, console us for the loss of the originals. He was still living, or at least not long dead, when the translation of his writings into Greek began. Armenian writers seem to have undertaken the translation of his works in part, and Russian versions are perhaps more numerous. The Syriac manuscripts cited in part these commentaries and hold the Armenian version as very ancient (fifth century). The Monophysites, it is well known, were wont from an early date to translate or adapt many Syriac works. The writings of Ephraem were eventually translated into Arabic and...
Ethiopian (translations as yet unedited). In medi-
Ephraem. His minor works were translated
tal times some of his minor works were translated
from the Greek into Slavonic and Latin. From these
versions they were eventually made French, German,
Italian, and English adaptations of the ascetic writings
of St. Ephraem. The first printed (Latin) edition
was based on a translation from the Greek done by
Ambrogi Traversari (St. Ambrose of Canadoli),
and issued from the press of Bartholomew Guldenbeek
of Sultz, in 1475. A far better edition was executed
by Gerhard Vossius (1589–1619), the learned provost of
Tongres, at the request of Gregorii XIX, in 1679.
Edward Thwaites edited, from manuscripts in the
Bodleian Library, the Greek text, hitherto known only
in fragments. The Syriac original was unknown in
Europe until the fruitful Oriental voyage (1706–07)
of the Maronites Gabriel Eva, Elias, and especially
Joseph Simeon Assermani (1716–17), which resulted
in the discovery of a precious collection of manuscripts
in the Nitrian (Egypt) monastery of Our Lady.
These manuscripts found their way at once to the Vatican
Library. In the first half of the nineteenth century
the British Museum was notably enriched by similar
founds of Syriac versions of Lord Burydall (1828),
Camaldoli (1829), and Tattam (1839, 1841).
All recent editions of the Syriac original of Ephraem’s writings are based
on these manuscripts. In the Bibliothèque Nationale
(Paris) and the Bodleian (Oxford) are a few Syriac
fragments of minor importance. Joseph Simeon
Assermani was employed to make the best use of his
found manuscripts and proposed at once to Clement
XII a complete edition of the writings of Ephraem in
the Syriac original and the Greek versions, with a new
Latin version of the entire material. He took for his
own share the edition of the Greek text. The Syriac
text was entrusted to Father Peter Mohar (Benedictus),
a native Maronite. After the death of Moharak, his labours were continued by Stephanus
Evodius Assemani. Finally this monumental edition
of the works of Ephraem appeared at Rome (1752–46)
in six folio volumes. It was completed by the labours
of Overbeck (Oxford, 1865) and Bickell (Carmina
Nisibena, 1866), while other savants edited newly
found fragments (Zingerle, P. Martin, Rubens Duval).
A splendid edition (Mechlin, 1882–902) of the hymns
and sermons of St. Ephraem is owing to the late
Mr. J. Lamy. However, a complete edition
of the vast works of the great Syriac doctor is yet
to be executed.

(2) Exegetical Writings.—Ephraem wrote
commentaries on the entire Scriptures, both the Old
and the New Testament, but much of his work has been
lost. We have here in Syriac his commentary on
Genesis and on a large portion of Exodus; for the other
books of the Old Testament we have a Syriac abridg-
ment, handed down in a catena of the ninth century
by the Syriac monk Severus (851–61). The
commentaries on Ruth, Ezdras, Nehemia, Esther, the
Psalms, Proverbs, the Canticle of Canticles, and Ecclesi-
isticius are lost. Of his commentaries on the New
Testament there has survived only an Armenian
version. The Scriptural canon of Ephraem resembles
our own very closely. It seems doubtful that he
accepted the deutero-canonical writings; at least no
commentary of his on these books has reached us.
On the other hand he accepted as canonical the apoc-
ryphal Third Epistle to the Corinthians, and wrote a
commentary on it. The Scriptural text used by
Ephraem is the Syriac Peshito, slightly differing,
evertheless, from the translated text of the Vulgate.
The New Testament was known to him, as to all
Syrians, both Eastern and Western, before the time
of Rabulas, in the harmonized “Diatessaron” of Tatian;
it is also this text which serves as the basis of his
commentary. His text of the Acts of the Apostles
appears to have been closely related to that called
the “Occidental”. (J. R. Harris, “Fragments of the
Commentary of Ephrem Syrus upon the Diatessaron”,
London, 1905; J. H. Hill, “A Dissertation on the
Gospel Commentary of St. Ephraem the Syrian”.
Edinburgh, 1896; F. C. Burkitt, “St. Ephraem’s
Quotations from the Gospel, Corrected and Arranged”,
Oriental Texts and Studies (Latin), ed. G. W. Traversari,
Cambridge, 1901, VII.)
Ephraem wrote in prose not few Sermon
pieces, which were later divided into homilies and
hymns. The homilies (Syriac meané, i.e. discourses) are written in seven-syllable
verse, often divided into two parts of three and four
syllables respectively and used at feasts of Our Lord and of the saints; sometimes he
enlarges a Scriptural narrative or takes up a spiritual
or edifying theme. In the East the Lessons for the
ecclesiastical services (see Office, Divine; Breviary)
were often taken from the homilies of Ephraem. The
hymns (Syriac mahtras; i.e. melodious) are
written for the choir service of nuns, and were
destined to be chanted by them; hence the division into stro-
phes, the last verses of each strophe being repeated
in a kind of refrain. This refrain is indicated at
the beginning of each hymn, after the manner of an
antiphon; there is also an indication of the musical
key in which the hymn should be sung. The following may
serve as an illustration. It is taken from an Eiphany
hymn (ed. Lamy, I, p. 4).—Air: Behold the month.
(1) Hymn: Glory to Thee, O Lord; Glory to Thee
of Thy manifestation. Strophe: He has renewed
the heavens, because the foolish ones had adored
all the stars: He has renewed the earth which had lost
its vigour through Adam. (2) A new creation was made
by His spittle! And He Who is all-powerful made straight
both the earth and the Heavens—Redrain: Glory to Thee, O Lord;
Ephraim’s hymns are incited to wonder at the enthui-
asm of his admirers in the ancient Syriac Church. His “lyricism” is by no means what we understand by
that term. His poetry seems to us prolix, tiresome,
colourless, lacking in the personal note, and in general
devoid of charm. To be just, however, it must be
remembered that his poems are known to most readers only in versions, from which of course the original rhythm has disappeared—precisely the charm and most striking feature of this poetry. These hymns, moreover, were not written for private reading, but were to be sung by alternating choirs. We have only to compare the Latin psalms as sung in the choir of a Benedictine monastery with the private reading of them by the priest in the recitation of his office. Nor must we forget that literary taste is not everywhere and at all times the same. We are influenced by the Greek thought in two ways: we are aware or like to admit. In literature we admire most the qualities of lucidity, sobriety, and varied action. Orientals, on the other hand, never weary of endless repetition of the same thought in slightly altered form; they delight in pretty verbal niceties, in the manifold play of rhythm and accent, rhyme and assonance, and acrostic. In this respect it is scarcely necessary to remind the reader of the well-known peculiarities and qualities of Arabic poetry.

As stated above there is no complete edition of the works of St. Ephraim. Satisfactory life of the great doctor. Mention has been made of the Assemani edition of his works: Opera omnia quae extant gravis syriacae latinae in sex tomas divisi (1732-46). It is considered imperfect from the textual standpoint, while the Latin translation is rather a paraphrase. Overbeck, S. Ephraem Syri opera selecta (Stuttgart, 1856-59). Bickell, Carmina Minus (Leipzig, 1866, 1891). LAMY, Hymni et Sermones (Mehlin, 1882—96 and 1902). Among the various versions of the Armenian version is that introduced by the Mechitarists (Venice, 1856, 1893). See also Bickell, Conspicuum rei Syriorum literarum (Munster, 1871); WRIGHT, A Short History of Syriac Literature (London, 1894); GÉRASER in Kirchenlex., s. v. Ephraim; especially BARDENHEWER, Patrology, tr. SHAHAI (Freiburg in., 1908), 587-92, excellent apparatus.

Ephraim of Antioch (Ἐφραίμ), one of the defenders of the Faith of Chalcedon (451) against the Monophysites, b. at Amida in Mesopotamia; d. in 545. He was Count of the East (Comes Orientis) under Justinian I. In 527 he succeeded Euphrasius as Patriarch of Antioch. Most of his many works are lost. We know the titles of them, however, from Anastasius Sinaita (c. 700), St. John Damascene (d. about 754) or whoever was the author of the “Sacra Parallela”, and especially Photius (d. 891). Anastasius (P. G., LXXV, 1185-1188) quotes passages from a work of Ephraim against Severus, the Monophysite Patriarch of Antioch (512-519). The “Sacra Parallela” give a short passage from “St. Ephraim, Archbishop of Antioch”, taken from a work “On John the Baptist and the Synod” (Tit. Ixi, cf. P. G., LXXVI, 2, 2104—d. 89). Photius (P. G., 1027-1024) speaks of four books by Ephraim. The first consisted of sermons and letters, the second and third contained a treatise against Severus in three parts and an answer to five questions about Genesis addressed to the author by a monk named Anatolius. The fragments quoted by Photius represent practically all that is left of Ephraim’s writings. Cardinal Mai was able to add a few more from a Ms. Catena in the Vatican library (P. G., LXXVI, loc. cit.). Krumbacher (Byz. Litt., loc. cit.) mentions a few other fragments in the Paris library, etc., and considers that Ephraim was not more than a single person. Leontius of Antioch in 545, if more of his work had been preserved. He had an extensive knowledge of Greek Fathers and follows chiefly St. Cyril of Alexandria in his Christology. KRUMLACHER, Byzantinische Literatur (Munich, 1897), 57; BARDENHEWER, Patrology, tr. SHAHAI (Freiburg in., 1908), 580.

ADRIAN FORTESCUE.

Epicureanism.—This term has two distinct, though cognate, meanings. In its popular sense, the word stands for a refined and calculating selfishness, seeking not power or fame, but the pleasures of sense, particularly of the palate, and those in company rather than solitude. An epicure is one who is extremely choice and delicate in his viands. In the other sense, Epicureanism signifies a philosophical system, which includes a theory of nature, and of mind.

History.—Epicurus, from whom this system takes its name, was a Greek, born at Samos 341 b. c., who, in 307 b. c., founded a school at Athens, and died 270 b. c. The Stoic School, diametrically opposite to this, was founded about the same time, probably 310 b. c. It is said of them that they were roving for their respective watchwords Pleasure and Duty, sprang together with the first generation after Aristotle (d. 322 b. c.), each of them holding a half-truth and by exagerration turning it into falsehood. The Epicurean School was rather a practical discipline than a habit of speculation. The master laid down his principles dogmatically, as if they must be evident as soon as stated, to any one not foolish. His disciples were made to learn his maxims by heart; and they acquired a spirit of unity more akin to that of a political party, or of a sect, than to the mere intellectual agreement of a school of philosophers. And a quarter of a century after the death of its founder, the system was introduced into Rome, and there, as well as in its native country, it attracted in the course of time a number of adherents such as moved the astonishment of Cicero. It had the fortune to be adopted by the finest Greek rhetoricians, Lucretius, and was grounded in him in a poem (De rerum natura) with a beauty of expression and a fervour of eloquence worthy of a noble theme. In the latter half of the second century, when Marcus Aurelius was founding chairs of philosophy at Athens, that emperor, himself a Stoic, recognized the Epicurean pleasure, hut he never understood in it the beauty of expression and a fervour of eloquence worthy of a noble theme. In modern times Epicureanism has had many theoretical as well as practical adherents. In the seventeenth century, when Aristotelianism and Scholasticism were assailed by the champions of the new sciences, Gassendi (q. v.) selected Epicurus for his master; but he seems to have been attracted chiefly by the physics, and to have aimed at reforming the moral system as to make it tolerable to a Christian. The numerous editions of the poem of Lucretius which the present age is producing may be taken to indicate a sympathy with the philosophy expounded in it.

Epicurean Ethics.—Philosophy was described by Epicurus as “the art of making life happy”, and he says that “prudence is the noblest part of philosophy”. His natural philosophy and epistemology seem to have been adopted for the sake of his theory of life. It is, therefore, proper that his ethics should first be explained. The purpose of life, according to Epicurus, is personal happiness; and by happiness he means not that state of well-being and perfection of which consciousness is accompanied by pleasure, but pleasure itself. Moreover, this pleasure is sensuous, for it is such only as is attainable in this life. This pleasure is the immediate purpose of every action. “Habitate yourself”, he says, “to think that death is nothing to fear for all good and evil is in feeling; now death is the privation of feeling. Hence, the right knowledge that death is nothing to us makes us enjoy what there is in this life, not adding to it an indefinite duration, but eradicating the desire of immortality.” His idea of the pleasurable differs from that of the Cyrenaic school which preceded him. The Cyrenaics looked to the momentary pleasure of joy and excitement. The pleasure of Epicurus is a state, equally diffused, “the absence of [bodily] pain and [mental] anxiety”. “That which begets the pleasurable life is not [sensual indulgence], but a sober reason which searches for the grounds of choosing and rejecting, and which bat-
ishes those doctrines through which mental trouble, for the most part, arises." The wise man will accordingly desire "not the longest life, but the most pleasant life. It is for the sake of this condition of permanent pleasure, or tranquillity, that the virtues are desirable. We cannot live pleasurably without living prudently, gracefully, and justly, without living pleasantly, in consequence; for "the virtues are by nature united with a pleasurable life; and a pleasurable life cannot be separated from these. The virtues, in short, are to be practised not for their own sake, but solely as a means of pleasure, "as means of use for the sake of health". In accordance with this view, he says that "friendship is to be pursued by the wise man only for its utility; but he will begin, as he sows the field in order to reap". "The wise man will not take any part in public affairs"; moreover, "the wise man will not marry and have children". But "the wise man will be humane to his slaves". "He will not think all sinners to be equally bad, nor all philosophers to be equally good." That is, apparently, he will not have any very exacting standard, and will neither believe very much in human virtue, nor think human condition was ever discovered by human frailty. In this system, "prudence is the source of all pleasure and of all virtue."

The defects of this theory of life are obvious. In the first place, as to the matter of fact, experience shows that happiness is not best attained by directly seeking, but the self is the selfish, than, the unselfish. In the next place, the theory altogether destroys virtue as virtue, and eliminates the idea and sentiment expressed by the words "ought", "duty", "right", and "wrong". Virtue, indeed, is such a thing as true and highest pleasure; all such pleasure, so far as it depends upon ourselves, depends upon virtue. But who he practises virtue for the sake of the pleasure alone is selfish, not virtuous, and he will never enjoy the pleasure, because he has not the virtue. A similar observation may be made upon the Epicurean theory of friendship. Friendship for the sake of advantage is not true friendship in the proper sense of the word. External actions, apart from affection, cannot constitute friendship; that affection no one can feel merely because he judges it would be advantageous and pleasureable, in fact he cannot know the pleasure he first feels the affection. If we consider the Epicurean condemnation of patriotism and of the family life, we must pronounce a still severer censure. Such a view of life is the meanest form of selfishness leading in general to vice. Epicurus, perhaps, was better than his theory; but the theory itself, if it did not originate in coldness of heart and meanness of spirit, was extremely well suited to encourage them. If sincerely embraced and consistently carried out, it undermined all that was chivalrous and heroic, and even all that was ordinarily virtuous. Fortitude and justice, as such, ceased to be objects of aspiration, and tranquillity sank into a mere matter of calculation. Even prudence itself, dissociated from all moral quality, became a mere balancing between the pleasures of the present and of the future.

Theology.—Epicurus said that "it was not impiety to deny the gods of the multitude, but it was impiety to think of the gods as the multitude thought:" a sound principle, but one which he wrongly applied, since he got rid of what was true as well as of what was corrupted in the vulgar religion. Fear of the gods was an evil to be eradicated, as incompatible with tranquillity. As to the gods, the nature, the gods are immortal, but material, like every other being. He seems to have held that there was one supreme being; but this god was not the creator, scarcely the orderer, of the universe, the gods being only a part of the All. Nor is there a Providence, for an interest in human affairs would be inconsistent with perfect happiness. In short, the gods are magnified Epicurean philosophers.

Natural Philosophy.—The physics of Epicurus are in a general sense atomic. He claimed originality for his theory, asserting that it began with his reflections upon a passage in Hesiod. As he read in old age, he asked, What is chaos? —a question which his teacher could not answer. It is generally held, however, that he really learned his atomism from the Democritean philosophy, modifying it in one important respect; for he supposes that the atoms in falling through empty space collide by virtue of a self-determinating motion, or rather a position aetition owing to which it is possible for them by chance to swerve a little from the vertical direction.

Biology.—In this Epicurus simply followed the view of Empedocles, that, first, all sorts of living things and animals, well or ill organized, were evolved from the earth and that those survived which were suited to preserve themselves and reproduce their kind.

Anthropology.—The anthropology of Lucretius may be supposed to have been derived, like his physics and biology, from Epicurus. According to the Lucretian theory men were originally savage; the primitive condition was one of war; in which condition men were like the wild beasts in strength and cunning; civil society was formed under the pressure of the evils of anarchy. The reader recognizes here the ideas indicated by the eighteenth-century phrases "state of nature" and "social contract". The "golden age" is a dream.

Logic.—The Epicurean logic is criterional. The test of truth practically is the pleasant and the painful belief. Theoretically, their criterion is sensation. Sensation never is deceptive; the error lies in our judgment. Dreams, the ravings of fever or lunacy, the delirium of the drunkard, are true in itself. Besides sensation the human mind has also notions, or anticipations (πρόληψεις), as when, seeing an object at a distance, one wonders whether it is a man or a tree. These notions are the results left by previous sensations. The notion does not supersede the opinion, but the internal sense of a brute, such as enables a dog, for example, to welcome strangers belonging to the profession of his master, and to bark furiously at a beggar that he has never seen before. The understanding, then, does not differ essentially from the internal senses.

Psychology.—The human soul is non-mortal, being composed of a finer kind of atoms, resembling those of air or fire, but even more subtle. It is the bodily organism that holds together the atoms composing the soul. Yet the human will is free. "Better were it to accept all the legends of the gods, than to make ourselves slaves to the fate of the natural philosophers." Fatalism, which to minds of a stoical disposition seemed a source of strength, was to those of an Epicurean temper simply a source of unpleasantness and helplessness. The freedom asserted by the Epicureans is not rational freedom in the true sense of the word. It does not consist in the power of choosing the right and the noble in preference to the pleasant. It is little better than physical contingency, and may be described as Casualism. The whole philosophy may well be described in a trenchant phrase of Macaulay as "the silliest and meanest of all systems of natural and moral philosophy".

The "Volumina Herculanensia" (first series, Naples, 1793–1855; and 2nd series, Naples, 1861–1878), 1–XI, contain many fragments of treatises by Epicurus and several members of the school. Fragments of Epicurus's Physics, De natura rerum, De quaest. phys., De sensibus, De motu, De placitis et nipiis, De substantially new, have been published by Orelli, after Rosen (Leipzig, 1818). Also A Description of the Oxford Copies of the Heracles (Oxford, 1890); D'Agostini, Dwight, De Vita et Doctrina Philosopher, X (from which almost every quotation in this article is taken); Lycopolus, De Reechavet, that especially the edition with notes by Moreau, 2 vols. (London, 1898–1900); Arbell, Discours d'Epicure, I, xxii; II, xxii; III, vi; Athen. Molar, Quaest. phys. 1 vii; Posit. spec. 1 vii; De potestas securim; Epicur. decret. I, vii; De Beneficia, IV, vii; Cicero, De Fin., I, vii; II, vii, xxx; xxx, xxxii;
EPIKLESIS

Epicurus. See Epicureanism.

Epidaurum. See Ragusa.

Epikeia. See Law.

Epiklesis (Gr. έπικλήσις; Lat. invocatio) is the name of a prayer that occurs in all Eastern liturgies (and originally in Western liturgies also) after the words of Institution, in which the celebrant prays that God may send down His Holy Spirit to change this bread and wine into the Body and Blood of His Son. This form has given rise to one of the chief controversies between the Eastern and Western Churches, inasmuch as the former, except in certain services (rare at present), do not use the Epiklesis, and not the words of Institution, is the essential form (or at least the essential complement) of the sacrament.

Form of the Epiklesis. It is certain that all the old liturgies contained such a prayer. For instance, the Liturgy of St. James the Apostle (Constantinople, immediately after the recital of the words of Institution, goes on to the Anamnesis—"Remembering therefore His Passion . . .")—in which occur the words: "Thou, the God who lackest nothing, being pleased with them (the Offerings) for the honour of Thy Christ, and sending down Thy Holy Spirit on this sacrifice, we witness the Passion of the Lord Jesus, to manifest (τροφονδηθησαί) this bread as the Body of Thy Christ and this chalice as the Blood of Thy Christ . . ." (Brightman, Liturgies Eastern and Western, I, 21).

So the Greek and Syrian Liturgies of St. James (ibid., 54, 88-89), the Alexandrine Liturgies (ibid., 134, 17b), the Abyssinian Rite (ibid., 233), those of the Nestorians (ibid., 287) and Armenians (ibid., 439). The Epiklesis in the Byzantine Liturgy of St. John Chrysostom is said thus: "We offer to Thee this reasonable and unbloody sacrifice; and we beg Thee, we ask Thee, we beseech Thee that Thy Holy Spirit on us and on these present gifts" (the Deacon says: "Bless, Sir, the holy bread") "make this bread into the Precious Body of Thy Christ" (Deacon: "Amen. Bless, Sir, the holy chalice"); "and that which is in this chalice, the Precious Blood of Thy Christ" (Deacon: "Amen. Bless, Sir, both") "changing [μεταβαλλώ] them by Thy Holy Spirit" (Deacon: "Amen. Amen, Amen."). (Brightman, op. cit., I, 386-387.)

Nor is there any doubt that the Western rites at one time contained similar invocations. The Gallican Liturgy contains variable forms according to the feast. That for the Circumcision was: "Hae nos, Domine, instituta et praeposita retinetae supplianti oramus ut hoc sacrificium suscipere et beneficere et sanctificare digneris: ut fiat nobis eucharistia legitima in tuo Filioque tui nomine et Spiritus sancti, in transformatione corporis sanctae eucharistiae in corpore sanctorum et conscriptis membris tuorum et sanctis operibus, ut in te possit perfecta eucharistia. Amen." (Duchesne, "Origines du culte chrétien", 2nd ed., Paris, 1900, p. 208, taken from St. Germanus of Paris, d. 576). There are many allusions to the Gallican Invocation. For instance St. Isidore of Seville (De ecclesiis, I, 15, etc.). The Roman Rite at one time had an Epiklesis after the words of Institution. Pope Gelasius I (492-496) refers to it plainly: "Quo modo ad divini mysterii consecrationem colendis Spiritus adveniere, si sacerdos omnem plenius actionibus reprorpetur?" ("Epp. Fragm.", vii, in Thiel, "Epp. Rom. Pont.", I, 865). Wetterich (Der Konsekationsmoment im h. Abendmahl, 1080, pp. 133 sqq.) brings other evidences of the old Roman Invocation. He (p. 166) and Drews (Entstehungsge- schichte des Kanons, 1902, p. 294) believe that several secrets in the Leontine Sacramentary were originally Invocations (see article CANON OF THE MASS). Of this Invocation we have now only a fragment, with the essential clause left out—our prayer: "Supplie- res to rogamus" (Duchesne, op. cit., 173-5). It seems that an early insistence on the words of Institution as the form of Consecration (or, for instance, "De mysteriis", "De sacramentis", IV, 4, 14-15, 23; St. Augustine, Sermo ccxxvii, in P. L., XXXVIII, 1900) led in the West to the neglect and mutilation of the Epiklesis.

Origin. It should be noticed that the Epiklesis for the Holy Eucharist is only one of many such forms. In other sacraments and blessings similar prayers were used, to ask God to send down His Holy Spirit to sanctify the matter. There was an Epiklesis for the water of baptism. Tertullian (De bapt., iv), Optatus of Mileve ("De saecismo. Don. III, i, 6; VI, iii, in Corp. Script. pec. lat. vol. II, 69, 148, 149). St. Jerome (Contra Lucif., vi, vii), St. Augustine (De bapt., V, xxvii), in the West; and St. Basil (De Spirit. Nuncio, xv, 35), St. Gregory of Nyssa (Orat. cat. magn. xxiil), and St. Cyril of Jerusalem (Cat. iii, 3), in the East, refer to it. In Egypt especially, Epikleses were used to bless wine, oil, milk, etc. In all these cases (including that of the Holy Eucharist) the idea of invoking the Holy Ghost to sanctify is a natural one derived from Scripture (Joel, ii, 32; Acts, ii, 21: "et effusae sunt de Domino spiritus"; cf. Rom. v, 13; I Cor., i, 2). That in the Liturgy the Invocation should occur after the words of Institution is in fact the case of many which show that people were not much concerned about the exact instant at which all the essence of the sacrament was complete. They looked upon the whole Consecration-prayer as one simple thing. In it the words of Institution always occur (with the doubtful exception of the Nestorian Rite); they believed that Christ would, according to His promise, do the rest. But they did not ask at which exact moment the change takes place. Besides the words of Institution there are many other blessings, prayers, and signs of the cross, some of which came before and some after these words, sending them down, as it were, with the other words themselves combine to make up the one Canon of which the effect is Transubstantiation. So also in our baptism and ordination services, part of the forms and prayers whose effect is the sacramental grace comes, in order of time, after the essential words. It was not till Scholastic times that theologians began to discuss the minimum of form required for the essence of each sacrament.

The Controversy. The Catholic Church has decided the question by making us kneel and adore the Holy Eucharist immediately after the words of Institution, and by letting her dogma be visibly disappear. On the other hand Orthodox theologians all consider the Epiklesis as being at least an essential part of the Consecration. In this question they have two schools. Some, Peter Moglias, for instance, consider the Epiklesis alone as consecration in itself. Monumenta fidei ecc. orient. I, 1865, 1, 180, so that probably the words of Institution might be left out without affecting the validity of the sacrament. But the greater number, and now apparently all, require the words of Institution too. They must be said, not merely historically, but as the first part of the essential form; they must be the words of Institution forth and is perfected by the Epiklesis. Both elements, then, are essential. This is the theory defended by their theologians at the Council of Florence (1439). A deputation of Latins and Greeks was appointed then...
to discuss the question. The Greeks maintained that both forms are necessary, that Transubstantiation does not take place till the second one (the Epiklesis) is pronounced, and that the Latin "Supplices te rogamus" is a true Epiklesis having the same effect as the other form. The Dominican Juan de Torquemada defended the Western position that the words of Institution alone and at once consecrate (Hardouin, IX, 977 sqq.). The decree of the council eventually defined this ("quod illa verba divina Salvatordominum virtutem transsubstantiationis habent", ibid.; see also the decree of the Armenians: "forma hæc sacramenti sunt verba Salvatoris") in December 10th ed., no. 698-old no. 593). Cardinal Bessarion afterwards wrote a book (De Sacramento Eucharistiae et quibus verbis Christi corpus conficitur, 1402, in P., VI, XI, 494-525), to whom Marcus Eugenius of Ephesus answered in a treatise with a long title: "That not only by the sound of the Lord's words are the divine gifts sanctified, but (in addition) by the prayer after these and by the consecration of the priest in the strength of the Holy Ghost'.

The official Euchologion of the Orthodox Church has after the words of Institution to explain that: "Since the demonstrative pronoun: This is my body, and again: This is my blood, do not refer to the Offerings that are present, but to those which Jesus, taking in His hands and blessing, gave to His Disciples; therefore those words of the Lord are repeated as [Ayerqmvicam, Dosithei, in Kimmel, op. cit., I, 431], and is superfuous to show the Offerings (by an elevation) and indeed contrary to the right mind of the Eastern Church of Christ" (ed. Venice, 1898, p. 63). This would seem to imply that Christ's words have no part in the form of the sacrament. On the other hand Dosithei in the Synod of Jerusalem (1679) apparently requires both words of Institution and Epiklesis: "It [the Holy Eucharist] is instituted by the essential word [pjuata iapparipwv, i.e. Christ's word] and sanctified by the invocation of the Holy Ghost" (Conf. Dosithei, in Kimmel, op. cit., I, 431), and this seems to be the common theory among the Orthodox Church in our time. Their arguments for the necessity of the Epiklesis as at any rate the perfecting part of the form are: (1) that the context shows the words of Institution to be used only as a narrative; (2) that otherwise the Epiklesis would be superfluous and deceptive: its very form shows that it effects a change. The first and second points are not difficult to answer. The words of Institution are certainly used historically ("qui pridie quam pateretur, sumpset panem et vinum", viz. dixit: hoe est enim corpus meum, as well as all Eastern forms, is an historical account of what happened (at the Last Supper); but this is no proof that they may not be used effectively and with actual meaning too. Given the intention of so doing, they necessarily would be so used. The second point is already answered above: the succession of time in sacramental prayers necessarily involves nothing but a dramatization of what has already reas taken place in one instant (this point is further evolved by Fortescue, "The Orth. Eastern Church", loc. cit.), true as it is. The Euchologion of the Orthodox Church with the appearance of the Eucharistic liturgy, which is customary in the East, the consecration of the consecrating, as early as St. Augustine, and the disappearance of any real Epiklesis in our Liturgy confirms this. Among Eastern Fathers there is less unanimity. Some, notably St. Cyril of Jerusalem, refer the consecration to the action of the Holy Ghost (as does the Mass of the West). But this is the moment (St. Cyril, CST, xix, 7; xxvii, 3; xxviii, 7; 19; cf. Basel, "De Spir. Sancto", xxvii sqq.); others, as St. John Chrysostom (Hom. i, De prod. Iudae, 6: "He [Christ] says: This is my body. This word changes the offering"; cf. Hom. ii, in II Tim. ii), quite plainly refer Consecration to Christ's words. It should be noted that these Fathers were concerned to defend the Real Presence, not only to explain the moment at which it began, that they always thought of the whole Eucharistic prayer as one form, containing both Christ's words and the Invocation, and that a statement that the change takes place by the power of the Holy Ghost, but not necessarily by the words of Institution, is the change to this special prayer. For instance St. Irenæus says that "the bread which receives the Invocation of God is not common bread, but a Eucharist," (Adv. haer., IV, xviii, 5), and, yet immediately before (I, xxi, 4) he explains that that bread is the Body of Christ over which the Invocation is said. The final argument against the Epiklesis as Consecration-form is the account of the Last Supper in the Gospels. We know what Christ did then, and that He told us to do the same thing. There is no hint of an Epiklesis at the Last Supper. It may finally be noted that later, in the West too (since the sixteenth century especially), this question aroused some not very important discussion. The Dominican Ambrose Catharinus (sixteenth century) thought that our Consecration takes place at an Epiklesis that precedes the recital of Christ's words. If the Epiklesis he thinks to precede the prayer "Quam oblata est?". A few others (including Renaudot) more or less shared his opinion. Against these Hoppe (op. cit. infra) showed that in any case the Epiklesis always follows the words of Institution and that our "Quam oblata est?" is to be considered one form. A few others suggest a mitigated theory, according to which the Invocation (in our case the "Supplices te rogamus") belongs not to the essence of the sacrament, but in some way to its (accidental) integrity. John of Torquemada at the Council of Florence (Hardouin, IX, 978), Suarez (De Sacramentis, disp. iv, 1), Dillmann (De Euch., iv, 14), Lugo (De Euch., disp. xi, 1) explain that the Invocation of the Holy Ghost is made rather that He may sanctify our reception of the Holy Eucharist. This is a theoretical explanation sought out to account for the fact of the Epiklesis, without giving us our insistence on the words of Institution as alone consecrating. Historically and according to the text of the old invocations they must rather be looked upon as dramatically postponed expressions of what happens at one moment. There are many like cases in our rite. (examples quoted in "The Orth. Eastern Church", loc. cit.).

ADRIAN FORTESCUE.

Epiphania, a titular see in Cilicia Secunda, in Asia Minor, suffragan of Anazarbus. This see is mentioned by many ancient writers, Ptolemy, Pliny, Stephanus Byzantius, etc. It was formerly called Omiandos and afterwards Epiphania, after Antiochus IV Epiphanes, King of Syria (175-161 B. C.). Cicero once encamped there, and Pompey settled there some of the pirates he had subdued. The civil era beginning in A. D. 37 (Barthelemy, Numismatique ancienne, 247). Seven bishops of Epiphania are known, from 325 to 692 (Lequien, Orients christ., ii, 895). The first, St. Amphion, suffered during the persecution of Diocletian and was present at the Council of Nicaea. (325). The name Epiphanes was the birthplace of a Gea, the usurping Bishop of Alexandria in the fourth century. Its ruins stand near Pyi,as, in the sanjak of Djebel-i-Bereket, vilayet of Adana; there are remains of walls, a temple, an acropolis, an aqueduct, and many houses, all built in basilica. Nearby are the celebrated "Cilician Gates" and the battle-
Field of Issus (Ramsay, Asia Minor, 386; Alishan, Sissouan, Venice, 1899, 175). Another Epiphanius was a suffragan of Damascus. It is the modern Hamah, on the Orontes (about 60,000 inhabitants). Jesuits and native Maronites sister care for its Catholic population, who are, for the most part, Greek Melchites. For these and for Catholic Syrians, Hamah is united with Emesa (q. v.).

S. VAILHÉ

Epiphanius, surnamed Scholasticus, or in modern terms, the Philologist, a translator of various Greek works in the middle of the sixth century of the Christian Era. He prepared for Cassiodorus the text of the "Historia Tripartita," a compilation of the works of Socrates, Sozomen, and Theodoret. We also have his translation of the commentary of Didymus on the seven Catholic Epistles and that of "Codex encycelus," a list of the admissions of the bishops of the East to the decrees of the Council of Chalcedon, a list drawn up in 458 by order of the Emperor Leo I. The author made several additions to it. He also translated the commentary of Didymus on the Book of Daniel and that of Epiphanius of Solanina on the Canticle of Canticles. These works are either lost or as yet undiscovered. "He belongs," says Julicher, "to the group who, like Dionysius Exiguus, Mutianus, and many unknown others, satisfied the needs of the Latin to translate Greek theological works."

BARDENSEWER, Patrologia (tr. St. Louis, 1908), 532, 557, 656; JULICHER in Realency. der class. Alterthumswiss. (Stuttgart, 1897), VI, 1, 192.

PAUL LEJAY

Epiphanius of Constantinople, d. 554. Epiphanius succeeded John II (518–20) as Patriarch of Constantinople. It was the time of the reaction against Monophysitism in the Eastern Empire that followed the accession of Justin I (518–27). Justin was Catholic; he let the Henotic (482) of his predecessor Zeno (474–91) quietly drop, and very soon after his accession he caused a synod of forty bishops to meet under John II at the capital, in order to proclaim a general acceptance of the decrees of Chalcedon throughout the empire, the restoration of Catholic, and the deposition of Monophysite, bishops (P. G., LXXVI, I, 783). The same synod reopened negotiations with the East, and even after the schism of 484–54 was closed. The reigning pope was Hormisdas (514–23), and it was on this occasion that he composed his famous formula. On Easter Day, 24 March, 519, the reunion was proclaimed. Severus of Antioch and the other Monophysite leaders fled to Egypt. The papal legates remained at Constantinople till 520. In that year the Patriarch John died, and Epiphanius was elected as his successor. He was then given authority from the pope to reconcile all schismatic and Monophysite who retracted their errors and signed the formula. Epiphanius signed it himself in the first place (Mansi, VIII, 502 sqq.

Four letters from Epiphanius to Hormisdas are extant, with the pope's letters to him (P. L., LXXII). In the first, from Hormisdas to Epiphanius (col. 493), the pope complains that he has received as yet no letter and to announce that he had demanded. In the second letter (I. c.) the pope requires that three repentant Monophysite bishops, Elias, Thomas, and Nicostorus, should be restored to their sees, and he appoints Epiphanius to restore them. Epiphanius then writes to Hormisdas (col. 494–95) to announce his acquiescence to the see of Constantinople, which he had demanded. He excuses himself for his delay by explaining the difficult circumstances and the disorder that still remain since the Monophysite troubles, and protests his exceeding desire for communion with the Roman see: "It is my special prayer, most blessed Father, to be united to you and to embrace the Divine dogmas which were left by the holy Apostles especially to the holy See of Peter, chief of the Apostles; for I count nothing more precious than them" (l. e.). He then draws up a very orthodox profession of faith according to the decrees of Epheus and Chalcedon; he accepts all the dogmas that the Roman see has proclaimed to St. Peter, and declares that he will never name in his dipthongs anyone who is condemned by the pope. His second letter (col. 497–99) to Hormisdas praises the emperor's zeal for the Faith, explains the case of many bishops in the East, appeals to Epiphanius wishing to receive communion now that they have renounced Monophysitism, and mentions a jewelled chalice and other gifts he sends to the pope (this letter is dated 520). Hormisdas answers (col. 505–6), exhorting the patriarch to persevere in reconciling Monophysites and thanking him for his presents. Epiphanius' third letter relates that a number of Eastern bishops have petitioned the emperor for union with Rome (col. 506–7), and the fourth (col. 507) praises Paulinus, whom the pope had sent to Constantinople as his legate. Migne (P. G., LXXVI, Pt. I, 783–96) gives the text of the correspondence of Severus of Antioch and Hormisdas (518–27) and of the synod of Constantinople held under Epiphanius. Assemani (Bibl. Orient., I, 619) gives a list of forty-five canons drawn up by this same synod. Epiphanius was succeeded by Anthimus I.

ADRIAN FORTESCUE

Epiphany, known also under the following names: (1) ἐπιφάνεα, or ἐπιφάνεα, ή μη (rarely ή ἐπιφάνεα, though, e. g., in Athanasius, ή μη ἐπιφάνεα occurs): άναφάνεα: dies epiphaniarum; festivitas declarationis, manifestationis, apparitio: acceptio. (2) ἵματα ἅνα φωτείνα: dies luminis; dies lavarici. (3) παραβάθη, Bithania; etc. (4) Festum trium regum: whence the Dutch Driekoningsdag, Danish Tre-kongedag: etc. (5) Twelfth Day, Swedish Trettende-dagen: etc.—The meaning of these names will be explained below. The feast was called among the Syrians denho (up-going), a name to be connected with the notion of rising light expressed in Luke, i, 78. The name Epiphania survives in Belana, the name of a great fair at Athens, which, after the schism of 484, was held on 6 January, the feast of the Epiphaniarum (Mansi, VIII, 502 sqq.).

Four letters from Epiphanius to Hormisdas are extant, with the pope's letters to him (P. L., LXXII). In the first, from Hormisdas to Epiphanius (col. 493), the pope complains that he has received as yet no letter and to announce that he had demanded. In the second letter (I. c.) the pope requires that three repentant Monophysite bishops, Elias, Thomas, and Nicostorus, should be restored to their sees, and he appoints Epiphanius to restore them. Epiphanius then writes to Hormisdas (col. 494–95) to announce his acquiescence to the see of Constantinople, which he had demanded. He excuses himself for his delay by explaining the difficult circumstances and the disorder that still remain since the Monophysite troubles, and protests his exceeding desire for communion with the Roman see: "It is my special prayer, most blessed Father, to be united to you and to embrace the Divine
Basilidians celebrate Christ’s Nativity and also His Baptism on 6 and 10 January, or did they merely keep His Baptism on these days, as well as His Nativity on another date? The evidence, if not Clement’s actual words, suggest the former. It is certain that the Epiphany services were held in the ancient church in the East as a more or less marked commemoration of the Nativity, or at least of the *Angeli ad Pastores*, the most striking “manifestation” of Christ’s glory on that occasion. Moreover, the first actual reference to the ecclesiastical feast of the Epiphany (Ammonius Marcellinus, XXI, ii. 14, 204) appears to be doubled in Zonaras (XIII, xi) by a reference to the same festival as that of Christ’s Nativity. Moreover, Epiphanius (Hær., ii, 27, in P. G., XLI, 935) says that the sixth of January is *σημείως γενεθλίων τοστιγμόν επιφάνειας*, Christ’s Birthday, i.e. His Epiphany. Indeed, he assigns the Baptism to 12 Abir, i.e. 6 November. Again, in chapters xcvii and xcviii (P. G., XLI, 940 sq.), he asserts that Christ’s Birth, i.e. Theophany, occurred on 6 January, as did the miracle at Cana, in consequence of which water, in various places (Cyzara, for instance), was then yearly by a miracle turned into wine, of which he had charge. It will be evident that does not expressly deny that the Church celebrated the Epiphany in his time at Alexandria, he at least implies that she did not. Still less can we think that 6 January was then observed by the Church as holy. Moreover, Origen, in his list of festivals (Contra Celsum, i, 204, P. G., XI, 1150) makes no mention of it.

Owing no doubt to the vagueness of the name *Epiphany*, very different manifestations of Christ’s glory and Divinity were celebrated in this feast quite early in its history, especially the Baptism, the miracle at Cana, the Nativity, and Baptism. But we cannot for a moment suppose that in the first instance a festival of manifestations in general was established, into which popular local devotion read specified meaning as circumstances dictated. It seems fairly clear that the Baptism was the event predominately commemorated. The Apostolic Constitutions (VIII, xxxiii; cf. V, xii) mention it. Kellner quotes (cf. Selden, De Synodis, III, xv, 204, 220) the oldest Opticis Calendar for the name *Diæ baptismi sanctificatì*, and the later for that of *Immersio Domini* as applied to the *Thermonymian* of Nazianzus (XI, 21). *Hic videbatur* with ἡ ἁγία τοῦ Χριστοῦ γένεσις, but this sermon (Orat. xxxviii in P. G., XXXVI, 312) was probably preached 25 Dec., 380; and after referring to Christ’s Birth, he assures his hearers (P. G., 329) that they shall shortly see Christ baptized. On 6 and 7 Jan., he preached orations xxxix and xl (P. G., loc. cit.) and there declared (col. 349) that the Birth of Christ and the leading of the Magi by a star having been already celebrated, the commemoration of His Baptism would now take place. The first of these two sermons is headed εἰς τὰ ἁγία φως, referring to the lights carried on that day to symbolize the spiritual illumination of baptism, and the day must carefully be distinguished from the Feast of the Purification, also called *Festum lumen* for a wholly different reason. Chrysostom, however, in 386 (see Christmas) preached “Hom. vi in B. Philoegonium” where (P. G., XXXVI, 366 a d. 367) Cassian (Coll., X, 2, in P. L., XLIX, 820) says that this his practice is still observed in the Egyptian monasteries and that the Epiphany is commemorated on 6 January.

At Jerusalem the feast had a special reference to the Nativity owing to the neighbourhood of Bethlehem. The account left to us by Etheria (Silvia) is mutilated at the beginning. The title of the subsequent feast, *Quadragesimae de Epiphania* (Peregrin. Silvius, ed. Geye, c. xxvi), leaves us, however, in no doubt as to what she is describing. On the vigil of the feast (5 Jan.), a procession left Jerusalem for Bethlehem and returned in the morning. At the second hour the services were held in the splendidly decorated Golgotha church, after which that of the Anastasis was visited. On the second and third days this ceremony was repeated; on the fourth the service was offered on Mount Olivet; on the fifth at the grave of Lazarus at Bethany; on the sixth on Sion; on the seventh in the church of the Anastasis. On the ninth in that of the Holy Cross. The procession to Bethlehem was nightly repeated. It will be seen, accordingly, that this Epiphany octave had throughout so strong a Nativity colouring as to lead to the exclusion of the commemoration of the Baptism in the year 385 at any rate. It is, however, by way of actual baptism on this day that the West seems to enter into connexion with the East. St. Chrysostom (Hom. in Bapt. Chr. in P. G., XLVI, 363) tells us how the Antiochians used to take home baptismal water consecrated on the night of the festival, and that it remained for a year on the altar without corruption. On this day, the waters by the dipping into river, sea, or lake of a crucifix, and by other complicated ritual, is a most popular ceremony. A vivid account is quoted by Neale (“Holy Eastern Church,” Introduction, p. 754; cf. the Greek, Syriac, Coptic, and Russian versions, edited or translated by John, Marquess of Bute, and A. Wallis Budge). The people consider that all ailments, spiritual and physical, can be cured by the application of the blessed water. This custom would seem, however, to be originally connected rather with the miracle of the baptism than with the baptism itself. That baptism on this day was quite usual in the West is proved, however, by the complaint of Bishop Himerius of Tarragona to Pope Damasus (d. 384), that baptisms were being celebrated on the feast of the Epiphany. Pope Siricius, who answered (ibid., i, 21, 6), identifies the feasts of *Natalitia Christi* and of *His Apparitio*, and is very indignant at the extension of the period for baptisms beyond that of Easter and that of Pentecost. Pope Leo I (“Ep. xvi ad Sicil. episcopos,” c. i, in P. L., LIV, 701; cf. 696) denounces the practice of baptizing in the church of *Nativitas Domini* as *tartamabilis*; the Council of Tours (canon iv) condemned it in 517, and Victor Vitensis alludes to it as the regular practice of the (Roman-) African Church (De Persic. Vandal., i, xvi, in P. L., LVIII, 216). St. Gregory of Tours, moreover (De gloriam martyrum in P. L., LXXI, 783; cf. cci, xxvii), relates that those who lived near the Jordan were baptized in it that day, and that miracles were then wont to take place. St. Jerome (Comm. in Ez., 1, on verse 3 in P. L., XXV, 18) definitely asserts that it is for the baptism and opening of the heavens that the *dies Epiphaniorum* is still venerable and not for the Nativity of Christ in the flesh, for then *absconditus est, in non apparuit—‘He was hidden, and did not appear.’* That the Epiphany was of later introduction in the West than the Christmas festival of 25 December, has been made clear in the article CHRISTMAS. It is not contained in the Philocalian Calendar, while it was most likely that 25 December was celebrated at Rome before the sermon of Pope Liberius (in St. Ambrose, De virg., iii, i, in P. L., XVI, 219) which may assign to 25 Dec., 354. St. Augustine clearly observes Oriental associations in the Epiphany festivities: “Righly calls” has (Serm. Domin. 2, in Epiph. Domini, in P. L., LXVIII, 1033) “the heretic Donatists always refused to celebrate this day with us; for neither do they love unity, nor are they in communion with the Eastern Church, where that star appeared.” St. Philaeus (Hær., c. cxvi, in P. L., XII, 1273) adds that certain heretics refuse to celebrate the Epiphany, regarding it, apparently, as a needless duplication of the
Nativity feast, though, adds the saint, it was only after twelve days that Christ "appeared to the Magi in the Temple." The dies epiphaniarum, he says (P. L., xii, 1274), is by some thought to be "the day of the Baptism, or of the Transformation which occurred on the same day." Finally, an unknown Syrian father of Balsabiri (Assemani, Bibl. Orient., ii, 163) boldly writes: "The Lord was born in the month of January on the same day on which we celebrate the Epiphany; for of old the feasts of the Nativity and Epiphany were kept on one and the same day, because on that same day He was born. The reason why our fathers changed the solemnity celebrated on 6 January, and transferred it to 25 December follows: It was the custom of the heathens to celebrate the birthday of the sun on this very day, 25 December, and on it they lit lights on account of the feast. In these solemnities and festivities the Christians too participated. When, therefore, the teachers observed that the Christians were inclined to this festival, they took counsel and decided that the true birth-feast be kept on this day, and on 6 Jan., the feast of the Epiphany. Simultaneously, therefore, with this festival the custom prevailed of burning lights until the sixth day of the new moon." It is simpler to say that, about the time of the diffusion of the December celebration in the East, the West took up the Oriental January feast, retaining all its chief characteristics, though attaching overwhelming importance to the mountain-top, as time went on, to the appearance of the Magi. Epiphanius indeed had said (loc. cit.) that not only did water in many places turn into wine on 6 Jan., but that whole rivers, and probably the Nile, experienced a similar miracle; nothing of this sort is noted in the West. The Leonine Sacramentary is defective on this point, but Leo's eighth epistle—"On the Epiphany" (p. l. l. v, serm. xxxii, col. 234, and serm. xxxviii, col. 263)—bear almost wholly on the Magi, while in serm. xxxv, col. 249, he definitely asserts their visit to be the consecration for which the feast was instituted. Fulgentius (serm. iv in P. L., lxxv, 732) speaks only of the Magi and the Innocents. Augustine's sermons (exev-xev in P. L., xxxviii) deal almost exclusively with this manifestation, and the Gelasian Sacramentary (p. l. lxxix, 1062) exclusively, both on the vigil and the feast. The Gregorian Sacramentary makes greater use of Ps. lxxx (A.V. lxxxiii), 10 and mentions the feast with the appearance of the Magi only in the Canon. The Ambrosian, however, refers to all three manifestations in the vigil-precise, and in the feast-precise to Baptism alone. The "Missale Vesperianum" (Næs and Forbes, The A. C. Liturgies of the English Church, p. 328) speaks, in the prayer of Illuminatio, Manifestatio, Declaratio, and composes its Gospel of Matt., iii, 13-17; Luke, iii, 23; and John, i, 1-11, where the Baptism and Cana are dwelt upon. The Magi are referred to on the Circumcision. The Gothic Missal (Næs and Forbes, op. cit., p. 52) mentions the Magi on the vigil, saying that the Nativity, Baptism, and Cana make Christ's Illustratio. All the manifestations are, however, referred to, including (especially) the feeding of the 5000, a popular allusion in the East, where the name fablea Augustine (serm. suppl. xvi, c. i, in P. L., XXXIX, 203) speaks of the feast day 5 of the Jerusalem ritual as on an equality with the other manifestations, whereas in the West the name Bethania occurs. Maxym of Turin admits the day to be of three miracles, and speaks (Hom. vii, in epiph., in P. L., lxxvii, 273) on the historical connexion of date and events. Pseudo-Dionysius, Paulinus of Nola (Pomo. ii, 47; Natal., v, 47, in P. L., l. x. i), and Sedulius (in P. L., lxxiii) all insist on the three manifestations. The Mozarabic Missal refers mainly to the Magi, using of their welcome by Christ the word accepto, a term of "initiation" common to Mithraists and Christians. In 3-4, the Council of Saragossa (can. iv), read together with the Mozarabic Missal's Mass in jejunio epiphaniarum, makes it clear that a fast at this season was not uncommon among the orthodox. "Cod. Theol." (i, viii, 20, xxv, v, 2) forbids the circus on this day in the year 400; "Cod. Just." (iii, xii, 6) makes it a day of obligation. In his "Mithraeum," a treatise of 250 on this sect, Eusebius, it is also laid down that the admission of new initiates should be delayed because of obligation in Spain; in Thrace (if we can trust the "Passio S. Philippi") in Ruinart, "Acta," 440, 2) it was kept as early as 304. Kellner quotes the "Testamentum Jesu Christi" (Mainz, 1899) as citing it twice (i, 28; iv, 67, 100) as a high festival together with Easter and Pentecost.

In the present Office, Crucidis Horeos alludes to the three manifestations; in Nocturn i, the first response for the day, the octave, and the Sunday within the octave, deals with the Baptism, as does the second response; the third response, as all those of Nocturns i and iii, is on the Magi. The antiphon to the Benedictus runs: "To-day the Church is joined to her celestial spouse, because in Jordan Christ doth wash her sins; the Magi hasten with gifts to the royal marriage-feast, and the guests exult in the water turned to wine." O Solo refers to the Magi only. The Magnificat antiphon of Second Vespers of Holy Day is adorned with three miracles: to-day a star led the Magi to the crib, to-day wine was made from water at the marriage, to-day in Jordan Christ willed to be baptized by John to save us." On the Epiphany it was a very general custom to announce the date of Easter, and even a practice ordered by many councils, e.g. that of Orleans in 514 (can. i); Auerre in 558 and 559 (can. ii), and still observed (Kellner) at Turin, etc. Gelasius finally tells us (Ep. ad. episc. Lucan., c. xlii, in P. L., lix, 52) that the dedication of virgins occurred especially on that day. The Pepysator, or Phrygian Montanists, says Sozomen (Hist. Eccl. vii, xxv, in P. G., lxvi, 1473), kept Easter on 6 April; hence (reckoning an exact number of years to the Divine life) Christ's birthday would have fallen on 6 January. But, it may be urged, the first notice we have of the observance of this date, refers to Christ's Baptism. But this (if we may assume, too, to have argued from 6 April) will have fallen on the exact anniversary of the Birth. But why pre-eminently celebrate the Baptism? Can it be that the celebration started with those, of whatever sect, who held that at the Baptism the Godhead descended upon Christ? On this uncertain territory we had better risk no footstep till fresh evidence, if such there be, is furnished us. Nor is this the place to discuss the legends of the Three Kings, which will be found in the article Mosis.

Epistemology (ἐπιστημονία), knowledge, science, and θεωρία, speech, thought, discourse), in a most general way, is that branch of philosophy which concerns itself with the value of human knowledge. The name epistemology is of recent origin, but especially since the publication of Ferrier's "Institutes of Metaphysics: the Theory of Knowing and Being" (1854), it has come to be used currently instead of other terms, still sometimes met with, like applied logic, material or
THE ADORATION OF THE MAGI—GHIRLANDAIO
OSPizio degli Innocenti, FLORENCE
critical logic, critical or initial philosophy, etc. To the same part of philosophy the name criteriology is given by the authors of some Latin textbooks and by the Louvain School. The exact province of epistemology is as yet but imperfectly determined, the two main correspondents for the two meanings of the Greek word επιστροφή. According as this is understood in its more general sense of knowledge, or in its more special sense of scientific knowledge, epistemology is "the theory of the origin, nature and limits of knowledge" (Baldwin, 'Dict. of Philos. and Psychol."
Nestle, 1901, p. 333; cf. "Gnosology", I, 114); or "the philosophy of the sciences", and more exactly, "the critical study of the principles, hypotheses and results of the various sciences, designed to determine their logical (not psychological) origin, their value and objective import" ('Bulletin de la Société française de Philos.', June, 1905, fasc. no. 7 of the Vocabulaire philosophique, s. v. "Epistémologie", 221; cf. Aug. 1906, fasc. 9 of the Vocabul. s. v. "Gnosologie", 332). The Italian usage agrees with the French. According to Ranzoli ("Dizionario di scienze filosofiche", Milan, 1905, s. v. "Epistemologia", 220; cf. "Epistemology", 2, ed., 1895, fasc. no. 7 of the Vocabulaire des sciences, s. v. "Epistémologie", 221), epistemology "determines the objects of every science by ascertaining their differentiating characteristics, fixes their relations and common principles, the laws of their development and their special methods". Here we shall consider epistemology in its first and broader meaning, which is the usual one. Hence, in applying the theory of knowledge, the German Erkenntnistheorie, i.e. "that part of philosophy which, in the first place, describes, analyses, examines genetically the facts of knowledge as such (psychology of knowledge), and then tests chiefly the value of knowledge and of its various kinds, its conditions of validity and correspondence to the two meanings of knowledge" (Eisler, Wortherbuch der phil. Begriffe, 2d ed., Berlin, 1904, I, 298). In that sense epistemology does not merely deal with certain assumptions of science, but undertakes to test the cognitive faculty itself in all its functions.

**Historical Outline:** The first efforts of Greek thinkers centre around the study of nature. This early philosophy is almost exclusively objective, and supposes, without examining it, the validity of knowledge. Doubt arose later chiefly from the disagreement of the Sophists in determining the primary elements of matter and in discussing the nature and attributes of reality. Parmenides holds that it is unchangeable; Heraclitus, that it is constantly changing; Democritus endows it with an eternal inherent motion, while Anaxagoras requires an independent and intelligent agent. This led the Sophists to question the possibility of certainty, and prepared the way for their sceptical tendencies. With Socrates, Plato, and Aristotle, who oppose the Sophists, the power of the mind to know truth and reach certainty is vindicated, and the conditions for the validity of knowledge are examined. But epistemological questions are not yet treated on their own merits, nor kept sufficiently distinct from purely logical and metaphysical inquiries. The philosophy of the Stoics is primarily practical, knowledge being looked upon as a means of right living and as a condition of happiness. As man must act according to guiding principles and rational convictions, human action supposes the possibility of knowledge. Subordinating science to ethics, the Epicureans admit the necessity of knowledge for conduct. And since Epicurean ethics rests essentially on the experience of pleasure and pain, these sensations are ultimately the condition of nature, it was necessary to present the attributes of opinions, the impossibility of demonstrating everything, the relativity of perception, became again the main arguments of scepticism. Pyrrho claims that the nature of things is unknowable, and consequently we must abstain from judging; herein consist human virtue and happiness. The representatives of the Middle Academy also are sceptical, although in a less radical manner. Thus Aecreolaus, while denying the possibility of certain and claiming that the duty of a wise man is to refuse his assent to any proposition, admits nevertheless that a degree of probability suffices for the conduct of life. Again, the Middle Academy develops the same doctrine and emphasizes its practical aspect. Later sceptics, Æneasidemus, Agrippa, and Sextus Empiricus, make no essential addition.

The Fathers of the Church are occupied chiefly in defending Christian dogmas, and thus indirectly in preserving the harmony of revealed truth with reason. St. Augustine goes farther than any other father in his analysis of knowledge and in the inquiry concerning its validity. He wrote a special treatise against the sceptics of the Academy who admitted no certain, but only probable, knowledge. What is probability, he asks in an argument ad hominem, but a likeness of or an approach to truth and certainty? And then how can one speak of probability who does not first admit certainty? On one point at least, the existence of the thinking subject, doubt is impossible. Should a man doubt everything or be in error, the very fact of doubting implies existence. Epistemology as a logical principle also is certain. Although the senses are not untrustworthy, perfect knowledge is intellectual knowledge based on the data of the senses and rising beyond them to general causes. In medieval philosophy the main epistemological issue is the objective nature of knowledge. After Plato and the Scholastics hold that there is no science of the individual as such. As science deals with general principles and laws, to know how far science is legitimate it is necessary to know first the value of general notions and the relations of the universal to the individual. Does the universal exist in nature, or is it a purely mental product? Such was the question raised by Porphyry in his introduction to Aristotle's "Categories". Up to the end of the twelfth century, the answers are limited to two, corresponding to the two possibilities mentioned by Porphyry. Hence if one may speak of Realism at that period, it does not seem altogether correct to speak of Conceptualism or Nominalism in the well-defined sense which these terms have since acquired (see De Wulf, Hist. de la phil. médiévale, 2d ed., Louvain, 1905). Later, a third theory, which St. Anselm introduces to the mind a basis for the exercise of its functions of abstraction and generalization, this moderate Realism, as it is called in opposition to Conceptualism on the one side, and, on the other, to exaggerated, or absolute Realism, is also essentially the doctrine of Duns Scotus; and it prevailed in the School till the period of decadence when Nominalism or Terminism was introduced by Occam and his followers.

In modern times Descartes may be mentioned for his methodical doubt and his solution of it in theCogito, ergo sum, i.e. I think, therefore, I exist. But Locke, in his "Essay Concerning Human Understanding", is the first to give a clear statement of epistemological problems. To begin with ontological discussions is to begin "at the wrong end" and to take "a wrong course" Hence it came to my thoughts that . . . before we set ourselves upon inquiries of the nature of things, it was necessary to examine our abilities, and to see what objects our understandings were, or were not fitted to deal with" (Essay to the Reader). Locke's purpose is to discover the "certainty, evidence and extent" of human knowledge (I, 1, 3), to find "the horizon which sets the bounds between the enlightened and dark parts of things,
between what is, and what is not comprehensible by us” (I, i, 7), and “to search out the bounds between opinion and knowledge” (I, i, 3). One who reflects on the contradictions among men, and the assurance with which every man maintains his own opinion “problem: and have reason to expect that either he is no such thing as truth at all, or that mankind hath no sufficient means to attain a certain knowledge of it” (I, i, 2). This investigation will prevent us from undertaking the study of things that are “beyond the reach of our capacities” (I, i, 4), and will be “a cure of skepticism and idleness” (I, i, 6). Such is the problem the main point in its criticism may be mentioned the following: “We have the knowledge of our own existence by intuition; of the existence of God by demonstration; and of other things by sensation” (IV, ix, 2). The nature of the soul cannot be known, nor does the trustworthiness of the senses extend to “secondary qualities”; a fortiori, substance and essences are unknowable. These and other conclusions, however, are not reached by a truly epistemological method, i.e. by the criticism of the processes and postulates of knowledge, but almost exclusively by the psychological method of mental analysis and speculations in Locke’s way. Proceeding farther, Berkeley denied the objectivity even of primary qualities of matter, and Hume held a universal and radical phenomenalism. Aroused from a “dogmatic slumber” by the scepticism of Hume, Kant took up again the same problem of the origin, validity, and limits of human knowledge. This is the task of criticism, not the criticism of books and systems, but of reason itself in the whole range of its powers, and in regard to its ability to attain knowledge transcending experience. Briefly stated, the solution reached by Kant is that we know things-as-they-appear, or phenomena, but not the noumena, or things-in-themselves. These latter, precisely because they are outside the mind, are also outside the possibility of knowledge. Kant’s successors, identifying the theory of being with the theory of knowing, elaborated this critique into a systematic metaphysics in which the very existence of things-in-themselves was denied. After Kant we reach the present period in the evolution of epistemological problems.

PROBLEMS.—To-day epistemology stands in the forefront of philosophical sciences. The preceding outline, however, shows that it may be constituted as a distinct investigation and to receive a special systematic treatment. In older philosophers are found partial discussions, not yet co-ordinated and regarding only special aspects of the problem. The problem itself is not formulated before Locke, and no true epistemological solution attempted before Kant. In the beginning of philosophical investigation, as well as in the beginning of cognitive life in the individual, knowledge and certitude are accepted as self-evident facts needing no discussion. Full of confidence in its own powers, reason at once rises to the highest metaphysical considerations, and in this reality is often to this reality, is to presuppose knowledge; or, perhaps, revise its conclusions; for contradictions cause doubt, and doubt leads to reflection on the value of knowledge. Throughout history, also, interest in epistemological questions is aroused chiefly after periods characterized by ontological investigations implying the assumption of the validity of knowledge. As the psychology of knowledge develops, philosophers are to be found in epistemology, and therefore their solutions more varied. Originally the choice is almost exclusively between affirming the value of knowledge and denying it. For one who looks upon knowledge as a simple fact, these are the only two possible alternatives. After psychology has shown the complexity of the knowing-process, pointed out its various elements, examined its genesis, and followed its development, knowledge is no longer deemed either valid or invalid in its totality. Certain forms of it may be rejected and others retained; or knowledge may be held as valid up to a certain point. In fact, at present, one would look in vain for absolute and unlimited dogmatism as well as for pure and complete scepticism. Opinions vary between these two extremes; and hence comes, partly at least, the confusion of terms by which various views are designated—a labyrinth in which the most experienced can hardly find their way. Hence a few attempts only were made, and their names used in their most general and obvious sense.

The main problems of epistemology may be conveniently reduced to the following. Starting from the fact of spontaneous certitude, the first question is: Does reflection also justify certitude? Is certain knowledge within man’s power? In a general way Dogmatism gives an affirmative, Scepticism a negative answer. Modern Agnosticism (q.v.) attempts to indicate the limits of human knowledge and concludes that the ultimate reality is unknowable. This leads to the second problem: Does knowledge arise, or what modes of knowledge are valid? Empiricism (q.v.) admits no other trustworthy information than the data of experience, while Rationalism (q.v.) claims that reason as a special faculty is more important. A third question presents itself: What is knowledge? Is it a process within the mind with the special feature of referring to something without the mind, of representing some extramental reality? What is the value of this representative aspect? Is it merely the result of the mind’s inner activity, as Idealism (q.v.) claims? Or is the mind also passive in the act of knowing, and does it in fact reflect some other reality, as Realism asserts? And if there exist such realities, can we know anything about them in addition to the fact of their existence? What is the relation between the idea in the mind and the thing outside the mind? Finally, even if knowledge is valid, the fact of error is undeniable; what then will be the criterion by which truth may be distinguished from error? What signs decide whether certitude in any case is justified? Such systems as Intellectualism, Mysticism, Pragmatism, Traditionalism, etc., have attempted to answer these questions.

Like all other sciences, epistemology should start from self-evident facts, namely the facts of knowledge and certitude. To begin, as Descartes did, with a universal doubt is to do away with the facts instead of interpreting them; nor is it possible consistently to emerge out of such a doubt. Locke’s principle that “knowledge is conversant only with our ideas” is contrary to experience, since in fact it is for the psychologist alone that ideas become objects of knowledge. First to isolate the mind absolutely from external reality, and then to ask how it can nevertheless come to have knowledge, is to presuppose the knowable problem. As to the Kantian attitude, it has been criticized repeatedly for examining the validity of knowledge with the knowing faculty, for making reason its own critic and judge while its rights to criticize and judge are still held in doubt. Epistemology, the science of knowing, is closely related to metaphysics, the science of being, as its necessary introduction, and as gradually leading into it. The main epistemological issues cannot be met without stepping almost immediately on metaphysical ground, since the faculty of knowledge cannot be examined apart from its existence; the contents of knowing, after all, are logic. In its strict sense is the science of the laws of thought: it is concerned with the form, not the matter of knowledge, and in this it differs from epistemology. Psychology deals with knowledge as a mental fact, apart from its truth or falsity; it endeavours to deter-
mine the conditions, not only of cognitive, but of all mental processes and to discover their relations and the laws of their sequence. Thus logic and epistemology complement the work of psychology in two different directions, and epistemology forms a transition from psychology to metaphysics. It is true that epistemology can hardly be overestimated, since it deals with the ground-work of knowledge itself, and therefore of all scientific, philosophical, moral, and religious principles. At the present time especially it is an indispensable requisite for apologetics, for the very foundations of religion are precisely the doctrines and beliefs looked upon by the reach of human intelligence. In fact much recent discussion concerning the value of knowledge has taken place on the ground of apologetics, and for the distinct purpose of testing the value of religious beliefs. If, contrary to the definitions of the Council of the Vatican, the existence of God and some at least of His attributes cannot be demonstrated, it is evident that there is no possibility of revelation and supernatural faith. As Pius X expresses it (Encycl. "Pascendi", 8 Sept., 1907), to confine reason within the field of phenomena and give it no power to go beyond these limits is to make it "incapable of lifting itself up to God and of recognizing His existence by means of visible things. And then all will readily perceive what becomes of natural theology, of the motives of credibility and of external revelation."

Epistle (in the Mass).—See LESSONS.

Epistle (in Scripture).—Lat. epistola; Gr. ἐπιστολή. In Hebrew, at first only the general term meaning "book" was used, then certain transitional expressions signifying "writing", and finally יִפְרָדָת (of Assyrian or Persian origin), and הָנָה, הָנָהוֹת (of Persian derivation), which are frequent in the Septuagint rendering הָנָהוֹת. In the study of Biblical epistles, it will be found convenient to distinguish between the Old Testament and the New.

The Old Testament exhibits two periods in its idea of an epistle: first, it presents the epistle under the general concept of a book or a writing; secondly, it regards the epistle as a distinct literary form. It may be difficult to point out the dividing line between these two periods with accuracy; in general it may be maintained that the Hebrews developed their notion of epistle as a specific form of writing during the time of the Captivity. The first instance of a written Biblical message is found in II K., xi, 14–15, where we are told about David's letter to Joab concerning Urias; there was need for secrecy in this case as well as in that of Jezabel's order to the ancients and chief men of the city in the matter of Naboth (III K., xxii, 8–9), and the commands sent to Samaria (IV K., iv, 1, 6). It may have been in order to avoid the danger of a personal interview that the Prophet Elias (Eli'eus?) wrote to King Joram concerning his impending punishment (II Par., xxii, 12–13). The desire to be emphatic and peremptory prompted the letter of the king of Syria to the King of Israel (I K., iv, 11). The recovery of Naaman's leprosy (IV K., v, 5–7), and Sennacherib's open letter to Ezecias (IV K., xix, 14; Is., xxxvii, 14; II Par., xxxii, 17), the wish to be courteous seems to have inspired the letter of Merodach Baladan to Ezecias after the latter's recovery from sickness (IV K., xx, 12; Is., xxxix, 1). Similar to the foregoing authoritative letters is the message addressed by Jeremias to the exiles in Babylon (Jer., xxxix, 1 sq.); the Prophet alludes also to letters sent by a prophet from Babylon to Jerusalem with the purpose of undermining Jeremias's authority (ibid., 28, 29).

Thus far letters are relatively infrequent. The importance of epistology in the Bible, and they are not regarded as constituting a distinct class of literature. After their first attestation in the Law, and then in the prophets, letters become, especially in the later periods, a peculiarly important form of writing. The important thing is that the letter, as a form of writing, begins to be marked by a formal address and a distinctly epistolary ending. Instances of such explicit address may be seen in Esd., iv, 7: "To Darius the king all peace"; Esth., xiii, 1: Artaxerxes the great king who reigneth from India...; but even the prophets and governors of the hundred and twenty-seven provinces, that are subject to his empire, greeting"; I Mach., xi, 30: "King Demetrius to his brother Jonathan, and to the nation of the Jews, greeting". An instance of an epistolary conclusion occurs in 2 Mach., xi, 33: "That the hundred and forty-eighth, the fifteenth day of the month of Xanthicus", a similar example may be seen, ibid., 38. But the Old Testament does not furnish us with any model of private correspondence between Hebrews.

The New Testament presents us with a very highly developed form of epistle. Rarely, no doubt, the subject have found it convenient to follow Professor Deissmann in his distinction between the letter and the epistle. The letter is a private and confidential conversation with the addressee, his anticipated answers shaping the course of the writing; the epistle is general in aim, addressed to all whom it may concern, and tends to publication. The letter is a spontaneous product of the writer, the epistle follows the rules of art. If publication be regarded as an essential condition of literature, the letter may be described as a pre-literary form of self-expression. In order to apply this distinction to the New Testament, we may regard the messages contained in, or referred to by, the New Testament Books, we shall group the relevant data as pre-Pauline, Pauline, and post-Pauline

Pre-Pauline.—The Book of Acts (ix, 2; xxii, 5; xxvii, 21) shows that the Jews of Jerusalem sent formal letters to the Synagogue of the Dispersion; Acts, xx, 22–23, gives a parallel instance of a letter written by the Apostles from Jerusalem to the churches in Antioch, Syria, and Cilicia. We may also infer from the testimony of the New Testament (I Cor., xvi, 3; II Cor., i, 1; Rom., xvi, 2); Acts, xviii, 27) that letters of commendation were of common occurrence. I Cor., vii, 1, informs us that the Corinthian Christians had applied to St. Paul in their difficulties by way of letter.

Pauline.—The Pauline Epistles form a collection which was formerly called ἐπιστολαί. They are called "epistles", though that addressed to the Hebrews hardly deserves the name, being really a theological homily. The Epistles mentioned in I Cor., v, 9, and Col., iv, 16, have not been preserved to us; their accidental loss makes us suspect that other Epistles may have perished. The peculiar form and style of the Pauline Epistles are studied in their respective introductions and commentaries; but we may add that I Tim., II Tim., and Tit. are called Pastoral Epistles; owing to its peculiar style and form, it is supposed by some writers that the Epistle to the Hebrews was not even dictated by the Apostle, but
only expresses his doctrine. Only the three Pastoral Epistles and Philemon are addressed to individuals; all the others are directed to churches, most of which, however, were well known to the writer. They exhibit more of their author's personal character than most of the other books of the New Testament.

Post-Pauline.—Generally speaking, we may describe the so-called Catholic Epistles as Post-Pauline. We need not note here that these Epistles are not named after their addressees, as happens in the case of the Pauline Epistles, but after the inspired author. The Epistle of St. James has an unappropriated salutation; it was meant for a class, not for persons known to the writer. In I John we have a sermon rather than a letter, though its familiarity of language indicates that the readers were known to the writer. The following two Epistles of St. John are real letters in style and form. St. Peter's first Epistle supposes some familiarity with his readers on the part of the writer; this can hardly be said of II Peter or of the Epistle of Jude. What has been said sufficiently shows that Professor Deissmann's distinction between the artistic epistle and pre-literary letter cannot be applied with strict accuracy. Quite a number of the New-Testament Epistles contain those touches of intimate familiarity which are supposed to be the essential characteristics of the letter.

Epping, Joseph, German astronomer and Assyriologist, b. at Neuenkirchen, near Rheine in Westphalia, 1 Dec., 1835; d. at Exaeten, Holland, 22 Aug., 1894. His parents died while he was very young and he owed his early education to the fostering care of relations. After completing the usual gymnasium course at Rheine and at Münster he matriculated at the academy in Münster, where he devoted himself particularly to mathematics. In 1859 he entered the novitiate of the Society of Jesus in Münster and after his philosophical studies was appointed professor of mathematics and astronomy. Maria-Lasch, he spent the years from 1867 to 1871 in the study of theology and was ordained priest in 1870. García Moreno, President of Ecuador, had petitioned the General of the Jesuits in the early seventies for members of the Society to form the faculty of the Polytechnic at Quito, which he had recently founded. A number of German Jesuits responded to the call, among them Epping, who set out in June, 1872, for Quito to become professor of mathematics. He quickly learned Spanish and was able to write a textbook of geometry in that language. He likewise took an active part in all the scientific works of the Fathers. The political disturbances which followed the assassination of Moreno (6 Aug., 1875) made it necessary for the Jesuits to return to Europe, and Epping arrived in Holland in the full of 1876. He spent the remaining years of his life at Biljdenbek, and later at Exaeten, as professor of astronomy and mathematics to the younger members of his order, devoting his leisure to research and literary work.

Epping's first published volume, "Der Kreislauf im Kosmos", appeared in 1852. It was an exposition and critique of the Kant-Laplace nebular hypothesis and an exposition of the pantheistic conclusions which had been drawn from it. His most important work, however, was begun in collaboration with Father Strasmaier who, in connexion with his own studies in Assyriology, had induced him to undertake a mathematical investigation of the Babylonian astronomical observations and tables. After considerable labour the key was found. He discovered the table of differences for the new moon in one of the tablets and identified Guttu with Mars, Sukku with Saturn, and Te-ut with Jupiter (Epping and Strasmaier in "Stimmen aus der Landoer L. Ap. d. 277-292). Eight years later he published "Astronomische Aus Babylon oder das Wissen der Chaldäer über den gestirnten Himmel" (Freiburg in Br., 1881). This work was of much importance both from the standpoint of astronomy and chronology. It concerned an astronomical study of the ancient Babylonians, worked out from their Ephemerides of the moon and the planets. This was supplemented by "Die babylonische Berechnung des Neumondes" (Stimmen aus Maria-Lasch, Vol. XXXI, pp. 225-240). He was also the author of a number of articles in the "Zeitschrift für Assyriologie".

Erasmus, Desiderius, the most brilliant and most important leader of German humanism, b. at Rotterdam, Holland, 28 October, probably in 1466; d. at Basle, Switzerland, 12 July, 1536. He was the illegitimate child of Gerard, a citizen of Gouda, and Margaretha Rogers, and at a later date latinized his name to Desiderius Erasmus. Eventually his father became a priest. Erasmus and an elder brother were brought up at Gouda by their mother. When nine years old he was sent to the school of the celebrated Humanist Hegius at Deventer, where his taste for humanism was awakened and his powers of mind received their bent for life. The most brilliant qualities of his intellect, a wonderful memory and an extraordinarily quick power of comprehension, showed themselves even in his earliest training. His mother died when he was thirteen years old, and a little later his father also; he was now sent by his guardians for two years, and afterwards called two lost years, to the monastery school of Hertogenbosch. Then, after wandering aimlessly about for a time, he was forced, through necessity and the insistence of his guardians, to enter in 1486 the monastery of Einsius, near Gouda, a house of Canons Regular. He felt no true religious vocation for such a step, and in later years characterized this act as the greatest misfortune of his life. As a matter of fact the beginnings of his religious indifferentism and of his weakness of character are to be sought in his joysless youth and in the years spent under compulsion in the monastery. He was left free, however, pursuant to his studies, and devoted himself mainly to the ancient classics, whose content and formal beauty he passionately admired. His religious training was obtained from the study of St. Jerome and Lorenzo Valla. In 1491 a lucky accident freed him from monastic life. The Bishop of Cambrai was minded to visit Italy and chose Erasmus as secretary and travelling companion, attracted by the young man's linguistic attainments; he also ordained him priest in 1492. The journey was never made, but Erasmus remained in the service of the bishop, who, in 1496, sent him to Paris to complete his studies. The scholar's most important position, however, they then prevailed at Paris was so repugnant to him that he spent much of his time travelling through France and the Netherlands, receiving occasionally friendly help; he was also for a while at Orléans, where he worked at his collection of proverbs, the later "Adagia".
money for a trip to England he earned by acting as tutor to three Englishmen, from whom he also obtained valuable letters of introduction. During his stay in England (1498–99), he made the acquaintance of Oxford of Colet, Thomas More, Latimer, and others, with all of whom he acquired the dress of a gentleman and opened into lifelong friendship. Colet showed him how to reconcile the ancient faith with humanism by abandoning the scholastic method and devoting himself to a thorough study of the Scriptures. Consequently, on his return to the Continent he took up with ardour the study of Greek and Latin works, and in 1508 he published the first translations of Erasmus occurred in this early period. In 1500 he was the "Adagia", a collection of Greek and Latin proverbs, in which he expressed the nature of true religion and true piety, but with comments that were biting and antagonistic to the Church; in 1505 Lorenzo Valla’s "Annotationes" to the New Testament, the manuscript of which he had found in a monastery at Brussels. His introduction to this work is important, for in it occurred his first utterance concerning the Scriptures, laying the foundation of the necessity of a new translation, a return to the original text, and respect for the literal sense.

In 1506 he was finally able, by the aid of his English friends, to attain his greatest desire, a journey to Italy. On his way thither he received at Turin the degree of Doctor of Divinity; at Bolongaro, at Padua, and at the academic centres of Upper Italy, he was greeted with enthusiastic honour by the most distinguished humanists, and he spent some time in each of these cities. At Venice he formed an intimate friendship with the famous printer Aldus Manutius. His reception at Rome was equally flattering; the cardinals, especially Giovanni de’ Medici (later Leo X), and Domenico Grimani, were particularly gracious to him. He could not, however, be persuaded to fix his residence at Rome, and refused all offers of ecclesiastical promotion. Henry VIII had just reached the throne of England, and thus awakened in Erasmus the hope of an advantageous appointment in that country, for which he accordingly set out. On his way out of Italy (1509) he wrote the satire known as "The Praise of Folly" ("Morie Encomium", or "Laus Stultitiae"), which in a few months went through seven editions. Outspoken for the future Evangelical Revolution, it scourged the abuses and follies of the various classes of society, especially of the Church. It is a cold-blooded, deliberate attempt to discredit the Church, and its satirical and stinging comment on ecclesiastical conditions are not intended as a healing medicine but a deadly poison.

Erasmus may now be said to have reached the acme of his fame; he was in high repute throughout all Europe, and was regarded as an oracle both by princes and scholars. Every one felt it an honour to enter into correspondence with him. His inborn vanity and self-complacency were thereby increased, and at the point of becoming a disaster; as the same time he sought, often by the grossest flattery, to obtain the favour and material support of patrons or to secure the continuance of such benefits. This was also the period of his greatest literary productivity. He wrote at this time several books of instruction and observation, as well as two pamphlets which later on were a part of the scholastic revolution that was soon to break out. The next five years he spent in England, but never accepted a permanent office; it was only for a short time that he held a professorship of Greek at Cambridge. When the hopes he had based on the friendship of Henry VIII proved vain, he realized only then that Henry’s money was all needed in warlike schemes, Erasmus returned to Brabant, where he became one of the royal councillors of Archduke Charles, later Emperor Charles V. This office gave him a fixed salary, and for his princely patron he now wrote the "Institutio principis christiani", a humanistic portrait of the ideal ruler. The archduke thought of making Erasmus a bishop, wherefore, with the aid of the papal legate Ammonius, the famous scholar obtained a papal Brief releasing him from all obligations to his monastery and also from the censures he had incurred by issuing his work without papal permission. No longer obliged to have permanent residence, Erasmus kept up his wandering life, occupied alternately with the composition and the publication of his works. In order to secure absolute freedom Erasmus refused many brilliant offers, among them an invitation from the King of France to reside at Paris, from Archduke Ferdinand to come to Vienna, and from Henry VIII to return to England. He frequently went to Basle to visit the famous printer Froben, who published henceforth nearly all the writings of Erasmus and procured for them a very wide circulation.

In this way Erasmus came into closer relations with German humanism, and his influence did much to increase its prestige in south-western Germany, inasmuch as the followers of the "new learning" in Basle, Constance, Schlettstadt, and Strasbourg, looked up to him as their leader. One of his chief works at this period, "Carmina Elegiaca" (1513), and "Colloquia" (1514), was issued in an enlarged form in 1526, and often reprinted. It is a kind of textbook for the study of the Latin language, an introduction to the purely natural formal training of the mind, and a typical example of the frivolous Renaissance spirit. The devoted monkish life and spirit was not to be held up to pitiful scorn; moreover, he descends only too often to indecent and cynical descriptions. His edition of the Greek original of the New Testament, "Novum Instrumentum omne" (Basle, 1516), no model of text-critical scholarship, was accompanied by a classical Latin translation destined to replace the Vulgate. Among the notes, partly textual criticism, partly exegetical comments, were inserted sarcastic slurs on the ecclesiastical conditions of the period. In a general introduction he discussed the importance of the Scriptures and the best method of studying them. Although the Complutian edition offered a better text and was also printed, but not published, at an earlier date, yet the edition of Erasmus remained for a long time authoritative on account of his high reputation, and became the basis of the textus receptus or received text. No less instrumental in preparing the way for the Evangelical Revolution by severing the scholastic method and undermining the traditional authority of the Scriptures were the "Paraphrases of the New Testament" (1517 and later). This work was dedicated to various princes and prelates, e. g. the paraphrases of the Evangelists, to Charles V, Francis I, Henry VIII, and Ferdinand I. In these publications the attitude of Erasmus towards the text of the New Testament is an extremely radical one, even if he did not follow out all its logical consequences. In his opinion the Epistle of St. James shows few signs of the Apostolic spirit; the Epistle to the Ephesians has not the vision of St. Paul, and the Epistle to the Hebrews he assigns with some hesitation to Clement of Rome. In exegesis he favoured a cold rationalism and treated the Biblical narratives just as he did ancient classical myths, and interpreted them in a subjective and figurative, or, as he called it, a metaphorical manner.

The literary works issued by Erasmus up to this time made him the intellectual father of the Reformation. What the Reformation destroyed in the organic life of the Church Erasmus had already openly or covertly subverted in a moral sense in his "Praise of Folly" (1509), and he realized it in his "Adagia" and "Colloquia", by his biting sarcasm or by his cold scepticism. Like his teacher Lorenzo Valla, he regarded Scholasticism as the greatest perversion of the religious spirit; according to him this degeneration dated from the primitive Christological controversies, which caused the Church to lose its evangelical simplicity and become the vice-
tim of hair-splitting philosophy, which culminated in Scholasticism. With the latter there appeared in the Church that Pharisaism which based righteousness on good works and monastic sanctity, and on a ceremonialism beneath whose weight the Christian spirit was stifled. In the discipline of devotion to the eternal salvation of souls, Scholasticism repelled the religiously inclined by its hair-splitting metaphysical speculations and its over-curious discussion of unsolvable mysteries. The religious life, he held, was not furthered by discussions concerning the procession of the Holy Ghost, or the cause of the effects, and the character of indebitis of baptism, or gratia gratia data or acquisita; of just as little consequence was the doctrine of original sin. Even his concept of the Blessed Eucharist was quite rationalistic and resembled the later teaching of Zwinglei. Similarly he rejected the Divine origin of the primacy, of confession, the indissolubility of marriage, and other fundamental principles of Christian life and the ecclesiastical constitution. He would replace these traditio inus and constitutio inus hominis by the simple words of the Scriptures, the interpretation of which should be left to the individual judge, the disciplinary ordinances of the Church met with even less consideration; fasts, pilgrimages, veneration of saints and their relics, the prayers of the Breviary, celibacy, and religious orders in general he classed among the perversities of a formalistic Scholasticism. Over against this "holiness of the form," he set the "true orthodoxy of Christ, a purely natural ethical ideal, guided by human sagacity. Of course this natural standard of morals obliterated almost entirely all differences between heathen and Christian morality, so that Erasmus could speak with perfect seriousness of a "Saint" Virgil or a "Saint" Homer. In his edition of the Greek New Testament and in his "Paraphrases" of the same he forestalled the Protestant view of the Scriptures.

Concerning the Scriptures, Luther did not express himself in a more rationalistic manner than Erasmus; nor did he interpret them more rationalistically. The only difference is that Luther said clearly and positively what Erasmus often merely suggested by a doubt, and that the former sought in the Bible, above all other things, the certainty of justification by Christ, while the latter, with an almost Pelagian definiteness, sought therein the model of a moral life. So, of course, the same fundamental principle and arguments were put forth by the representatives of eighteenth-century "Enlightenment" to attain exactly the same results. It must be added, however, that the attitude of Erasmus towards the religious questions of his time was conditioned rather by literary interests than by profound interior convition. His demeanour was apt to be influenced by anxiety for peace and by personal considerations; moreover, in contrast to Luther, it was the refined and scholarly public, not the common people, that he sought to influence by his writings. He, therefore, laboured for a reformation of the Church that should be antagonistic to the pope and the bishops, nor productive of a violent rupture, but which, through the dissemination of a larger enlightenment, would eventually but gradually result in the wished-for reorganization. This was to be the work, however, not of the common people, but of scholars and princes. Hence he tried subsequently to check the Lutheran movement by some kind of peaceful compromise. With a scholar's love of peace, he was from the beginning disinterested to enter deeply into the current religious dispute. For a time his reform ideas seemed to have some prospect of success, especially among the princes of the empire. As soon, however, as the Lutheran movement was seen to mean definitive separation from the Church, it was clear that a rigorous adherence to the latter was the only logical attitude and the one most capable of defence. In the first years of the Reformation many thought that Luther was only carrying out the programme of Erasmus, and this was the opinion of those strict Catholics who from the outset of the great conflict included Erasmus in their attacks on Luther.

Given the wavering character of Erasmus, such attacks were not directed at his equivocal attitude, if not plain double-dealing. He never clearly to understand that he agreed with him, and urged only a less violent manner and more consideration for the pope and ecclesiastical dignitaries. At the same time he felt that the attitude of Luther for easier access on some points more and more from Luther. In 1519 he wrote to Luther: "I observe as strict a neutrality as possible, in order to advance scholarship, which is again beginning to flourish, by my modesty rather than by passion or violence." That close relations between these two fundamentally different characters were maintained as late as the Diet of Worms, though both soon clearly saw the difference in their points of view and their attitudes, was largely due to Melancthon. Though Erasmus had prepared the way for him, Luther was greatly dissatisfied with him because of his strongly rationalistic concept of original sin and the doctrine of grace. As early as 1517 Luther thus warned himself concerning Erasmus: "My liking for Erasmus declines from day to day. . . . The human is of more value to him than the Divine. . . . The times are now dangerous, and I see that a man is not a more sincere Catholic than he who is a Greek or Hebrew scholar." Luther felt hurt, moreover, by the cool and reserved manner in which Erasmus passed judgment on his writings and actions. Nevertheless, Erasmus always opposed any persecution of Luther, and frequently and in no measured terms condemned the Bull of excommunication. At the same time, he declined any association with Luther, and protested his ignorance of the latter's writings and his own complete submission to the highest ecclesiastical authority. But with all this he took the part of Luther in his correspondence with the Elector Frederick of Saxony. He expressed his views concerning Luther's doctrine in twenty-two "Axiomata" addressed to the Elector's court chaplain, Spalatinus, which, to his disgust, were soon afterwards printed. In this memoir and in other writings addressed to the emperor and to friends at Rome, Erasmus proposed arbitration by a court of scholars; moreover, of the violent attacks made on himself by the monks and asserted his absolute neutrality and his fidelity to Rome. The latter assurance was all the more necessary as the papal legate Alexander in his reports to Rome put the authorities on their guard against Erasmus, and accused him of being an accomplice in the religious revolt. "The poison of Erasmus has a much more dangerous effect than that of Luther, who by his notorious satirical and insulting letters has injured his own teaching."

While Erasmus, by his relations with the Roman Curia, was able to checkmate the aforesaid and similar hostile complaints, in Germany he continued to be regarded with distrust and even with hatred, sentiments that acquired new strength when, in spite of repeated entreaties, he refused to appear publicly against Luther. Inquisitions and charges of this kind were brought against him, especially by the theologians of Louvain. Consequently, in 1521, he moved to Basle, where the presence of numerous humanists of the Upper Rhine seemed to assure him a peaceful existence. Even here his attitude continued for a considerable time uncertain. To Duke George of Saxony he expressed his wish to take part in the destruction of Martin Luther and blamed both the Bull of excommunication and the imperial edict against the reformer, yet in his correspondence with the emperor and with Adrian VI he denied all association with Luther, and reverted again to his plan of reconciliation by means
ERASMUS

of a court of arbitration. He also defended with great earnestness his own orthodoxy against Stunica, who wrote the treatise "Erasmi Rotterdami blasphemiae et impietates" (Rome, 1522), to prove that Lutheran errors were to be found in the aforesaid "Annota-
tiones". The New Testament. The same year (1521), the fugitive Von Hutten, on his way to Zurich, attempted, but in vain, to meet at Basle his former friend. Von Hutten revenged himself in his "Expos-
tutatio cum Erasmo" (1523), in which he laid bare with passionate violence all the weaknesses, all the parvitas and idemnitas animi of his former patron. Erasmus replied from Basle with his "Spongia adversus adspersinve Hutteni", in which, with equal violence, he attacked the character and life of his op-
oponent, and defended himself against the reproach of duplicity. He had endeavoured, so he wrote, to hold aloof from all parties; he had, indeed, attacked Ro-
amian abuses, but he had never attacked the Apostolic See or its teaching.

All sympathetic association of Erasmus with the Reformers now ceased, though Melanthon tried to

reach the final rupture. One after another, the leaders of the religious anti-Roman movement withdrew from him; most of them put in an appearance at Zwingli's famous Theological convention at Basle. Shortly before his death he heard the sorrowful news of the execution of two of his English friends, Sir Thomas More and Bishop Fisher.

Editions of the classics and the Fathers of the Church kept the Reformation on foot during the later period of his life. In 1523 appeared his edition of the Epistles of St. Paul, in 1526 of the St. Irenaeus of Lyons; in 1527 of St. Ambrose; in 1528 of St. Augustine; in 1529 of the St. Cyprian; in 1530 of St. Chrysostom; his edition of Origen he did not live to finish. In the same period he issued the theological and pedagogical treatises: "Ecclesiasticae sive Concinnator Evangeliorum" (1535), a greatly admired homiletic work; "Modus confinden
ti" (1528), a guide to right confession; "Vida christi" (1531); "De civilitate morum puerilium"; "De preparatioj ad mortem", etc.

Opinions concerning Erasmus will vary greatly. No one has defended him without reserve, his defects of character being too striking to make this possible. His vanity and egotism were boundless, and to gratify them he was ready to pursue former friends with defamation and invective; his flattery, where favour and material advantages were to be had, was often repulsive, and he lacked straightforward speech and decision in just those moments when both were nece-
sary. His religious ideal was entirely humanistic: reform of the Church on the basis of her traditional constitution, the introduction of humanistic "enlighten-
ment" into ecclesiastical doctrine, without, how-
ever, breaking with Rome. By nature a cold, schol
arily character, he had no real interest in unconfessional questions connected with his heresy, and a sympathy for the doctrines and destinies of the Church. Devoid of any power of practical initiative he was constitutionally unfit for a more active part in the violent religious movements of his day, or even to sacrifice himself for the defence of the Church. His bi-
gnostic, intellectual, and above all his natural philos-
phy for the Reformation; it spared neither the most sacred elements of religion nor his former friends. His was an absolutely unspeculative brain, and he lacked en-
tirely all power of acute philosophical definition; we need not wonder, therefore, that on the one hand he
was unable to grasp firmly ecclesiastical doctrine or deal justly with its scholastic formulation, while on the other he inveighed with extreme injustice against the institutions of the Church. It must not be forgotten that the grave defects of his character were compensated by qualities which won the universal European fame of the man through several decades, a public esteem and admiration far excelling in degree and extent the lot of any scholar since his day. He had an unequalled talent for form, great journalistic gifts, a surpassing power of expression; for strong and moving discourses, keen wit and covert sarcasm, he was unsurpassed. In him the world beheld a scholar of comprehensive and many-sided learning, though neither profound nor thorough, a man of universal observation, a writer whose diction was brilliant and elegant in the highest degree. In a word, Erasmus exhibits the quintessence of the Renaissance spirit; in him are faithfully mirrored both its good and bad qualities. It cannot be denied that Erasmus was a potent factor in the educational movement of his time. As the foremost of the German humanists, he laboured constantly and effectually for the spread of learning, which imparted to the education of the Renaissance period its content and spirit. By his intercourse with scholars and students, his published satires on existing institutions and methods, and especially his work in editing and translating the Greek and Latin classics he gave a powerful impulse to the study of the classics. But his more direct contributions to education are marked by the inconsistency which appears in his whole career. Some of his writings, e.g. his "Order of Study" (De ratione studii, 1516) and his "Liberal Education of Children" (De pueris instructis et educandis, 1523) were excellent advice to parents and teachers on the care of children, development of individuality, training in virtue and in the practice of religion, with emphasis on the moral qualifications of the teacher and the judicious selection of subjects of study. In other writings, as in the "Colloquia", the tone and the language are just the opposite, so offensive in fact that even Luther in his "Table Talk" declares: "If I die I will forbid my children to read his Colloquies..." See now what poison he scatters in his Colloquies among his made-up people, and goes crafty at our youth to poison them. It is not surprising that he be condemned by the Sorbonne (1526) as dangerous to morals, and was eventually placed on the Index. That in most works on the history of education Erasmus occupies so large a place, while others who contributed far more to the development of educational method (e. g. Vives) are not mentioned, is perhaps due to sympathy with the anti-ecclesiastical attitude of Erasmus, rather than to the intrinsic value of his constructive work (see Stoeckl, Gesch. d. Pädagogik, Mainz, 1876). A complete edition of the works of Erasmus, to which a life of him was added, was issued by Beatus Rhenanus (Basle, 1540—41) in 9 vols.; an edition was also published by Le Clerc (Leyden, 1703—06), 10 vols.; Ruelens, "Erasm. Rott. Silva carminum" (Brussels, 1864). The editions of the letters of Erasmus have been as follows: "Epistulae familiares Erasi" (Basle, 1519); Herzog, "Epistulae fam. ad Bon. Amerbachum" (Basle, 1779); Horwitz, "Erasmi" in the "Transactions of the philosophical-historical section of the Academy of Vienna, vols. XX and XCV (1878—85); Horwitz, "Erasmus and Martin Lipsius" (1882); F. M. Nichols, "The Epistles of Erasmus" (London, 1901—04), 2 vols.; von Muskovski, "Correspondenz des Erasmus mit Polen" (Breslau, 1890); letters from him were published by Reichling, "Ausgew. pädagogische Schriften des Erasmus" (Freiburg, 1896). Information about the life of Erasmus is obtained from his letters to Servatius and granius. Durand de Labour, "Erasme de Rotterdam, précurseur du xvieme siècle de l'esprit moderne" (Paris, 1872); II. Drummond, "Erasmus, his Life and Character" (London, 1891); J. H. Emsley, "Erasmus and Thomas More" (Paris, 1874); Gilly, "Erasmus (Arts, 1879); Richter, "Erasmusstudien" (Dresden, 1901); Fr. Scherbern, "The Oxford Reformers: John Cranach, Thomas More, and John Hus" (1927); Freudenthal, "Life and Letters of Erasmus" (London, 1894); Emeron, "Erasmo" (London, 1899); Fennimore, "Erasmus" (London, 1901); Gilly, "Erasmus, Raphael, and Antonio Panormita" (1902), with a good bibliography, pp. 196—229; concerning the policy of persecution of Erasmos see "Praeambulae Erasiani" (Augsburg, 1527); Kalhoff in Zeitschrift für Reformationsgeschichte, 1 (1904), 1 sqq.; Hartfels, "Erasmus u. die Papias" in "Historisches Jahrbuch" (1898), 1 sqq., 1 tr. of the Papist. Schriften des Erasmus" (1895); Richter, "Das Erasmus u. seine Stellung zu Luther" (Leipzig, 1895); Hermann, Die religiösen Reformbestrebungen des deutschen Humanismus (Frankfurt, 1907); Streichert, "Erasmus von Rotterdam" zur Kirche und zu den relig. Bewegungen seiner Zeit (Leipzig, 1870); Scholz, "Die pädagogischen und didaktischen Grundsätze des Erasmus" (1880); Bach, "Die Lehren von Erasmus über die Erziehung und den ersten Unterricht der Kinder" (1892); Grooten, "Das Ideal der Bildung und Erziehung bei Erasmus" (1890); Hoffmann, "Erasmus über die Studienführung und die Erziehung" (1879); and the "Erasmusiana" (Brussels, 1866); Erasmi, issued by the University of the Geneva (Geneva, 1957-1901). 1-7.

Josef Sauer.

Erasmus and Erastianism.—The name "Erastianism" is often used in a somewhat loose sense, denoting an undue subservience of the Church to the State. This was not, however, the principal question on which the system of Erastus turned, but rather a subsidiary one and a deduction from it. This can be explained by a short account of his life and works. The real name of this secretary was Theodor or Liélier. He used the Latinized form in his works, and accordingly has become known by that name. He was born at Baden, in Switzerland, of humble parents, 7 September, 1524; and died 31 December, 1583. For his education he went to Basle in 1540, and two years after he found a patron and tutor in his father, who was able to enter the university. His zeal for learning may be estimated from the fact that although by disease he lost the use of his right arm, he learnt to write with his left hand, and is said to have been able to take down his notes more fluently than others who had no similar impediment. During his residence at Basle there was an outbreak of plague. Erastus was one of the victims; but he did not suffer severely, and on his recovery, schools having been suspended, he left Basle and proceeded to Bologna, where he studied philosophy and medicine. He was afterwards for a time also at the University of Padua. In 1553 he returned to Germany and obtained an appointment as court physician to the Prince of Hennepen. We next find him in 1558 as court physician to the elector Palatine, Otto Heinrich, and occupying at the same time the chair of medicine in the University of Heidelberg.

Although his work and lectureship were both connected with medicine, the chief interest of Erastus had always been in theology. Heidelberg was at that time the scene of severe controversial strife. Erastus, who was himself a follower of Zwingle, threw himself heart and soul into the conflict against the Lutherans. The Elector Frederick III by whose successor, Otto Heinrich in 1559) was then enforcing the teaching of Calvinistic doctrines, and Beza was actively defending them as against Brenz in Stuttgart. A conference was arranged to take place at the monastery of Maulbronn in 1564, and by request of the elector, Erastus took a prominent part therein. He published a statement defending the doctrine of Zwingle, and on its being attacked, he wrote a second defense the following year. The conference was far from successful in settling the dispute, which continued in an aggravated form. In 1568, Erastus wrote his celebrated "Theses" against what he called the "excommunication fever," which was then spreading everywhere. They were violently attacked by Beza, and Erastus answered the following year by his "Confutation THE". Notwithstanding his efforts, a full presbyterian system was set up in 1570 at Heidelberg and the
council proceeded to excommuni- cate Erastus on the ground of his alleged Unitarianism. After a long further controversy, he succeeded in convincing them that this allegation was false; and the excommunication was removed in 1576; but his position had become difficult. In 57 years later he returned to office. He returned to Basle, where he taught ethics for a short time, until his death. On his tomb in St. Martin’s church he is described as “an acute philosoper, a clever physician, and a sincere theologian”. He left behind him the reputation of an upright life, with great amiability of character, coupled with an absorbing zeal for being right. He took an active part in combating the superstitions of astrology; and he showed that he was not free from the prejudices of his day by advocating the killing of witches.

The great work by which Erastus is known is his “Seventy-five Theses”, to which we have already alluded. They were never printed in his lifetime, but during his last illness he expressed a desire that they should be published, and Castelvetro, who married his widow, carried out his wishes. The “Theses” and “Confirmatio thesium” appeared together in 1589, the printer’s name and place being suppressed from moti- ves of prudence. The context of the “Theses” turned was that of excommunication. The term is not, however, used by Erastus in the Catholic sense as excluding the delinquent from the society or membership of the Church. The excommunication on which he alludes was the exclusion of the defaulter from life in participation in the sacraments. He explains what he means in the introduction to the “Theses” which he wrote at the end of his life. “It is about sixteen years ago”, he writes, “since some men were seized on by a certain excommuniaitory fever, which I then did not admire with the title of ecclesiastical discipline. They affirmed the manner thereunto to be this; that some certain preachers should sit in the name of the whole Church and should judge who were worthy or unworthy to come unto the Lord’s Supper.” The first eight theses are devoted to a detailed explana- tion of the various senses in which the word excommunion is used, and in the ninth Erastus defines the issue with which he is concerned: “This, then, is the question, whether any command or any example can be produced from Holy Scriptures requiring or intimating that such persons [i.e. sinners] should be ex- cluded from the sacraments.” In the following thesis (x) he says: “Our answer is that none such can be found, but rather that many, and even examples, there exists, of an opposite tendency, occur everywhere in the Bible.” The following twenty-eight theses are devoted to developing and maintaining his conclusions, the last half of his work to answer possible objections.

The chief argument on which Erastus bases his whole system is an analogy between the Jewish and Christian Dispensations, and it is exactly here that the folly of his conclusions becomes manifest. A Cathol- ical indeed, ‘would be less likely to fall into the error of looking upon the Sacrament of the Eucharist and the Sacrifice of the Mass as in any close way analogous to the Sacraments of the Old Law, and the slaying of the paschal lamb; or the relation of the ceremonial law to the golden calf of the Jewish Church, as in any way realizable in the most Christian of states. To a Pro- testant who looked upon the Bible as the sole source of Revelation this was different. Erastus argued that by the Law of Moses no one was excluded from the offering of the paschal sacrifice, but every male was commanded to observe it under pain of death. In the following thesis (lxxiv) that “If that Church and State were both wisely founded, arranged, and ap- pointed, any other must merit approbation which approaches to its form as nearly as present times and circumstances will permit. So that wherever the magistracy is godly, there is no need of any other author- ity under any other pretension or title to rule or
punish the people—as if the Christian magistrate differed nothing from the heathen. I allow indeed the magistrate ought to consult, when doctrine is concerned, those who have particularly studied it; but that there should be any such ecclesiastical tribunal to take the conduct of men's conduct, we find no such thing anywhere appointed in the Holy Scriptures. It must be reasonably asked how the system of Erastus could work in a state which is professedly un-Christian, and the last thesis is devoted to answering that question. "But in those churches, the members of which live under an ungodly government (for example Popish or Mohammedan), under such a government those who in church, according to the precept of the Apostle, to settle disputes by arbitration, compose quarrels, and do other offices of that sort. These men ought also, in conjunction with the ministers, to admonish and reprove them who live unholy and impure lives; and if they do not succeed, they may also punish, or rather recall them to virtue, either by refusing to hold private intercourse with them or by a public rebuke, or by any other such mark of disapprobation. But from the sacraments which God has instituted, they may not deprive any who desire to partake.

The full system of Erastus was never accepted or promulgated by any definite sect or band of followers; but the influence of his opinions was very considerable, both in Germany and in Great Britain. The Presbyterians of course have always vigorously repudiated his doctrine; but in the Westminster Assembly (1643–7) there was a strong Erastian party. A long controversy, a definite resolution, affirming that the Church has its own government distinct from the civil power, was carried almost unanimously, the sole dissenting being the well-known divine, John Lightfoot. On the general questions of the relation between Church and State, it must be admitted that the opinions popularly denoted by the word Erastian have had unmistakable influence on the Established Church of England, though there has always been a party resisting the encroachments of the civil power. We can, perhaps, take Hooker’s "Ecclesiastical Polity" as an authoritative exposition of this phase of Anglicanism. Hooker was a contemporary of Erastus, and in his preface he gives an account of the controversy of the latter with Beza. The eighth volume, however, in which he deals with the question before us did not appear until 1649, many years after his death. Its authenticity has been questioned; but it is now generally conceded that it is based on rough notes made during his lifetime. He adopts the analogy of Erastus between the Jewish nation and a Christian state.

Starting from the truism that a good monarch should look to the spiritual good of his subjects no less than to the temporal, he defends at once the title of the king to be head of the Church. He considers that the consent of the holy is required before an ecclesiastical law can be binding, and looks upon Parliament as their mouthpiece, and accordingly defends the right of Parliament to legislate on ecclesiastical matters. He defends the king’s power of appointing bishops and his jurisdiction over ecclesiastical courts. We may contrast with this the Catholic system of the union of Church and State which has always been the Church’s ideal, and has often been in great measure and in our own day, brought into prominence by the solemn pronouncements of Pius IX. The power of the State is maintained to be of God, either immediately, or mediately through the will of the people; and the civil government exists side by side with the ecclesiastical government. Each is of its own sphere. The pope has “temporal power”, using the term in its true sense, i.e. of his right to certain interference with the temporal government of states when the principles of religion are at stake. On the other hand, any interference on the part of the State with ecclesiastical appointments, as, for example, by nomination of bishops or by veto on such nomination, or even on the election of the pope, such as has sometimes existed in the case of some Catholic powers, is conceded by courtesy, in consideration of services rendered and by no means acknowledged as a right. See Hergenrother, “Catholic Church and State” (4th ed., London, 1870). The “Theses” of Erastus and the “Confirmation Thesaur” were reprinted at Amsterdam in 1649. An English translation of the “Theses”, without the “Confirmation”, appeared in London in 1659—a very literal rendering, in places hardly intelligible. A new and improved translation of the “Theses”, by Dr. Robert Lee, with a valuable preface, was published at Edinburgh in 1844 and is still the standard edition.

ERBERMANN, Erbein, theologian and controversialist, b. 25 May, 1597, at Rendsweisdorf, in Bavaria; d. 8 April, 1675. He was born of Lutheran parents, but at an early age became a Catholic, and on 30 May, 1620, entered the Society of Jesus. After completing his theological studies he taught philosophy and Scholastic theology, first at Mainz and afterwards at Würzburg. Subsequently he was appointed rector of the pontifical seminary at Fulda, which position he held for seven years. His theological attainments and zeal for the Church brought him into conflict with many of the leading Reformers of his time. He watched with a keen interest what in Protestant theological circles is known as “the symmetrical controversy”, and in his frequent encounters with its chief protagonists he must have proved himself a able Catholic. His principal works are: “Anatome Calixtina” (Mainz, 1644), and “Trenico Catholico” (2 vols., Mainz, 1645–46), in which he examines critically the religious tenets of George Caietius; “Interrogationes apologeticae” (Würzburg, 1651); “Examen Examinis Conringiani” (Würzburg 1644), an exposition of the infallibility of the Church against H. Conring; “Anti-Museus, i.e. paralela Ecclesiæ veræ et falsæ” (Würzburg, 1659), and “Anti-Musei paræ altera” (Würzburg, 1661); “Asserta theologica de fide divina” (Würzburg, 1665).

ERNST, BERNARD.  

Ercilla y Zúñiga, Alonso de, Spanish soldier and poet, b. in Madrid, 7 August, 1535; d. in the same city, 29 Nov., 1594. After his father’s death, his mother became lady-in-waiting to the Infanta Maria and made young Alonso a page to Prince Philip. Ercilla received a very thorough education, for besides having the most learned teachers, he enjoyed the advantages of very extensive travelling and of living at court where he came in contact with high personages. When he was only fifteen he accompanied Philip through Italy and Germany; and their travels lasted three years. Later, Ercilla accompanied his mother to Bohemia where he left her and then visited Austria, Hungary, and other countries. Returning to Spain, he soon started out again with Philip. In London he made the acquaintance of Jerónimo de Alderete (1555), whose stories of his thrilling adventures in the New World so fired Ercilla’s imagination that he determined to accompany a New World expedition there, and later obtained leave from Philip, and they set sail for America, 15 Oct., 1555. Soon after their arrival, however, Alderete died (near Panama, April, 1556). Ercilla continued on his way to Peru, and in 1557 joined the forces of García Hurtado de Mendoza, who
had recently been appointed Governor of Chile. During the succeeding two or three years he played a brilliant part in combating an insurrection among the natives of Arauco, a province of Chile, suffering great hardships, and distinguishing himself several times. After a severe illness he returned to Spain in 1562, and for a time resumed his travels through Europe. In 1570, he married Doña María de Bázán, a woman of illustrious family and of intellectual attainments. He died at Madrid neglected and in great poverty.

Ercilla's great work is "La Araucana", an epic poem of thirty-seven cantos, describing the difficulties encountered by the Spaniards during the insurrection in Arauco, and the heroic deeds of the natives as well as his companions. The epic partakes of the character of history, and the author adheres with such strict fidelity to the truth, that subsequent historians characterize his work as thoroughly trustworthy. In it the difficult art of story-telling is carried to perfection. Places are admirably described, dates are given with accuracy, and the customs of the natives faithfully set forth, giving to the narrative animation and colour. The poem was published in three parts, the first appearing in 1569, the second in 1578, and the third in 1590. The best editions are those published by the Spanish Academy in 1776 and 1828.

Arana, Historia general de Chile (Santiago, 1844); Ticknor, History of Spanish Literature (New York, 1857), i.; Ventura Fuentes.

Ercowald, Saint, Bishop of London, d. about 690. He belonged to the princely family of the East Anglian Offa, and devoted a considerable portion of his patrimony to founding two monasteries, one for monks at Chertsey, and the other for nuns at Barking in Essex. Over the latter he placed his sister, St. Eadburg, as abbess. He himself discharged the duties of superior at Chertsey. Ercowald continued his monastic life till the death of Bishop Wini in 675, when he was called to the See of London, at the instance of King Sebbi and Theodore, Archbishop of Canterbury. As monk and bishop he was renowned for holiness of life, and miracles were wrought in attestation of his sanctity. The sick were cured by contact with the litter on which he had been carried; this we have on the testimony of Venerable Bede. He was present in 688 at the reconciliation between Archbishop Theodore and Wilfrith. King Ine in the pref. to his "life" calls Ercowald "my bishop". During his episcopate he enlarged his church, augmented its revenues, and obtained for it special privileges from the king.

According to an ancient epitaph, Ercowald ruled the Diocese of London for eleven years. He is said to have eventually retired to the convent of his sister at Barking, where he died 30 April. He was buried in St. Paul's, and his tomb became renowned for miracles. The citizens of London had a special devotion to him, and they regarded with pride the magnificence of his shrine. During the burning of the cathedral in 1087 it is reported that the shrine and its silken coverings remained intact. A solemn translation of St. Ercowald's body took place 14 Nov., 1148, when it was raised above the high altar. The shrine was robbed of its jewels and ornaments in the sixteenth century, and the bones of the saint are said to have been buried at the east end of the choir. The feast is observed by English Catholics on 14 November. Prior to the Reformation, the anniversaries of St. Ercowald's death and translation of his relics were observed at St. Paul's as feasts of the first class, according to an ordinance of Bishop Braybrooke in 1390.

COLUMBA EDMONDS.

ERDINGTON

Edery. See Transylvania.

Erdewicke, Sampson, antiquarian, date of birth unknown; d. 1593. He was born at Sandon in Staffordshire, his father. He descended from Richarde de Vernon, Baron of Shipbrook, in the reign of William the Conqueror. The family resided originally at Erdewicke Hall, in Cheshire, afterwards at Leighton and finally in the reign of Edward III settled at Sandon. Hugh Erdewicke was a staunch Catholic who suffered for his Faith. In 1582 he was reported to the Privy Council by the Anglican Bishop of Coventry as "the sorest and dangerous pest, one of them in all England". His son, Sampson, born in the reign of Henry VIII, entered Brasenose College, Oxford, as a gentleman-commoner in 1593. Leaving Oxford, he returned to Sandon where he spent the rest of his life as a wealthy gentleman under the usual disabilities of a recusant. He devoted himself to antiquarian studies, particularly to the thorough "Survey of Staffordshire". By this work his name is chiefly remembered, but it was not published during his lifetime, and considerable mystery exists as to the original MS. Because the numerous existing copies differ much from one another. A description of these was published by William Salt, F.S.A., in 1844. The "Survey" itself was published by Dugge (1717 and 1723), by Shaw in his Staffordshire (1798), and by Harwood (1829 and 1841). Other unpublished MSS. by Erdewicke are in the British Museum and the College of Arms. Latterly he employed as amanuensis, William Wyrley, a youth whom he had educated and who afterwards published writings of his own. One of these, "The True Use of Armorie", was claimed by Erdewicke as his own work, but he told William Burton the antiquary, that he had given Wyrley leave to publish it under his own name; but Antony à Wood denies this, adding that "Erdewicke being oftentimes crazed, especially in his last day, and fit then for no kind of serious business, would say anything as it came into his mind, as 'tis very well known at this day among the chief of the College of Arms" (Ath. Oxon., Bliss ed., II, 217). Erdewicke married first Elizabeth Dixwell, secondly Mary Digby (24 April, 1593). He died in 1603, but the date usually given, 11 April, must be erroneous, as his will is dated 15 May. He is buried on the right-hand side of Sandon Church, beneath an elaborate monument representing his own recumbent figure. Camden and other antiquaries praise his knowledge and industry, and he is believed to have been elected a member of the Society of Antiquaries founded by Archbishop Parker in 1672.

EDWIN BURTON.

Erdington Abbey, situated in a suburb of Birmingham, Warwickshire, England, belongs to the Benedictine congregation of St. Martin of Beuron, Germany, and is dedicated to St. Thomas of Canterbury. Driven from Germany by the Falk laws, four of these exiled monks went to Erdington at the request of Bishop Ullathorne, O.S.B., and of the Rev. Daniel Haigh, M.A., a convert Anglican clergyman who gave them the splendid Gothic church which he had built and established out of his own private fortune. They dedicated their lives to offering to Almighty God for the gift of the true Faith. Father Haigh's modest presbytery was the first monastery, and here Dom Placid Walter, Arch-Abbot of the Beuron Congregation, Dom Hildebrand de Hempel, later Abbot Primate of the Benedictine Order, Dom Leo Linse, afterwards Abbot of Port Augustus in

EDWIN BURTON.
ERHARD

Scotland, Dom Leodgar Stocker, and a lay brother took up their abode in October, 1876. Dom Pleaid was the first prior. Two years later, Dom Hildebrand succeeded Dom Pleaid, and at once set about building a monastery that would accommodate the community. The first of its kind in the Birmingham, with Dom Wilfrid Wallace, an English priest who had lately joined the community, as head master. Dom Leo Linsie became prior in 1882, and was succeeded in 1886 by Dom Boniface Wolff, who was followed, in turn, by Dom Silvester Schliechte in 1895. On the feast of the Assumption, 1896, the priory was transformed into an abbey by a Brief of Leo XIII, though three years elapsed before it received an abbey. These were years of spiritual and material development. A novitiate was opened and a school for oblates, several members were added to the community, and a large addition made to the monastic buildings. These comprised the abbot's apartments and chapel, rooms for guests, entrance hall, parlours, novitiate, and clerical. They were completed and blessed in 1899. In July, 1899, Dom Anagar Höckelmann was appointed its first abbot, and he was blessed in the abbey on 3 Sept., by Bishop Isliey of Birmingham. Since then a spacious refectory and library have been built, and the community continues to grow.

The Church and Abbey of Erdington, A Record of Fifty Years. 1850-1900 (Birmingham, 1900). PETER NUGENT.

ERHARD, SAINT, bishop of that city in the seventh century, probably identical with an abbot Erhard of Ebersheim in 88 of a Merovingian diploma of 684. Ancient documents call him also Erard and Herhard. The legendary account of his life offers little that is historically certain. The following, however, seems reliable. Erhard was born in Ireland, then known as “Scotia.” Like many of his countrymen he went to the Continent as missionary bishop or archiepiscopal, and coming to the Vosges mountains, Hildulf, said to have been Archbishop of Trier, and who lived there as a hermit (666-671). He is called Erhard’s brother, but very likely spiritual relationship was meant. It is said that each of them founded seven monasteries. Thence Erhard went to Ratisbon and founded the nunnery of Niedermünster. By Divine inspiration he was recalled to the Rhineland to baptize St. Oda, blind from birth, but who received her sight at her baptism. He sent a messenger to her father, Duke Attich, and reconciled him with his disowned daughter. According to another account, St. Oda was baptized by Hildulf, Erhard acting as her sponsor. The year of his death is not known. He was interred in the still-extant Erhard-crypt at Niedermünster, and miracles were wrought at his grave, that was guarded in the Middle Ages by “Erhardintonnen,” a religious community of women who were there a perpetual round of prayer. Otto II, in 974, made donations of property in the Danube valley to the convent “where the holy confessor Erhard rests.” On 7 Oct., 1052, the remains of the holy bishops Erhard and Wolfgang were raised by Pope St. Leo IX in presence of Emperor Henry III and many bishops, a ceremony which was at that time very large, but mention only the raising of Wolfgang, not that of Erhard. At the close of the eleventh century, Paul von Bernried, a monk of Fulda, at the suggestion of Abbess Heilkia of Niedermünster, wrote a life of Erhard and added a second book containing a number of miracles. The learned canon of Ratibson, Conrad of Megenberg (d. 1374), furnished a new edition of this work. The church in Niedermünster, now a parish church, still preserves the crosier of the saint, made of black buffalo-horn. A bone of his skull was enclosed in a precious receptacle in 1806 and is placed upon the heads of the faithful on his feast day. St. Jan. Three ancient Latin lives of the saint are found in the Acta Sanctorum (8 Jan.). The beautiful reliquary is reproduced in Jakob, “Die Kunst im Dienste der Kirche” (illust. 16).

ERIE.

See AMERICA, PRE-COLUMBIAN DISCOVERY OF.

Erie, Diocese of (Eriensia), established 1853; it embraces the thirteen counties of North-Western Pennsylvania, U. S. A.: Erie, Crawford, Warren, McKean, Potter, Mercer, Venango, Forest, Elk, Cameron, Clarion, Jefferson, and Clearfield, an area of 10,627 square miles. This territory enjoys the distinction of having been under three different national and ecclesiastical governments: under the French flag and the See of Quebec from 1753 to 1758; under the English flag and the Vicariate Apostolic of London from 1758 to the Treaty of Paris, 3 September, 1783, and the erection of the See of Pittsburgh in 1789; under the American flag since the Treaty of Paris and a part of the See of Baltimore until the establishment of the Diocese of Philadelphi in 1808. In August, 1814, when the Diocese of Pittsburgh was formed, it included all that part of the State of Pennsylvania west of a line running along the eastern border of Bedford, Huntingdon, Clearfield, Elk, McKean, and Potter counties, and consequently, the territory of the present Diocese of Erie. In 1853 the Right Rev. Michael O'Connor, the first Bishop of Pittsburgh, petitioned the Holy See, through the Fifth Provincial Council of Baltimore, for a division of his diocese, and took for himself the poorest part, and thus became the first Bishop of the Diocese of Erie. When Bishop O'Connor assumed the government of the diocese, 29 July, 1853, there were only twenty-eight churches with eleven secular priests and three Benedictine Fathers to attend to the wants of the Catholics scattered throughout the thirteen counties. At the urgent request and petition of the priests and people of Pittsburgh, Bishop O'Connor was restored to them, having governed the Diocese of Erie for the short period of seven months.

His successor at Erie was the Rev. Josue Moody Young a member of an old Puritan, New England family, born 29 Oct., 1808, at Shapleigh, Maine. He became a convert from Congregationalism and was baptized in October, 1828, by the famous New England missionary, Father Charles D. French, O.P., when he then changed the Moody of his name to Maria. He was ordained priest 1 April, 1838, and consecrated second Bishop of Erie, in Cincinnati, by Archbishop
The outlook at his accession was gloomy. Many of the priests who were affiliated with Pittsburgh before the division, returned there with Bishop O'Connor. Among those who cast their lot with the new diocese the most noteworthy were the Very Revs. John D. Conaty, Revs. Anthony C. Hartman, M. A. De La Roque, John Berbegier, Andrew Skopek, Kieran O'Bonnigan, and also Messrs. John Koch and Thomas Lonnergen, at that time studying for the priesthood. There were but two churches in Erie city, St. Patrick's, the pro-cathedral, and St. Mary's, built for a German congregation by Rev. John Hartman. Outside the city there were twenty-eight churches, with eleven secular priests and three Benedictines for a Catholic population of 12,000.

The church buildings outside the city of Erie were mostly wooden structures. There was only one Catholic school. The discovery of petroleum on Oil Creek, 28 August, 1859, gave a great impetus to both secular and religious progress throughout the diocese. To accommodate the settlers that located in the valleys of Oil Creek and the Allegheny River, where towns sprang up as by magic, churches were hastily erected, but the number of priests was still inadequate. Almost no roads and Bishop Young's labours were in the beginning very heavy. He died suddenly 18 September, 1866. At his death the Catholic population had more than doubled, and several new churches and schools had sprung into existence.

The vicar-general, Very Rev. John D. Conaty, governed these during the first year, the third bishop, the Rev. Tobias Mullen, was consecrated, 2 August, 1868. He was born in the County Tyrone, Ireland, 4 March, 1818, and was ordained priest at Pittsburgh, 1 Sept., 1844, having gone there with Bishop O'Connor from Maymouth the previous year as a volunteer for the American mission. Under his direction a new era began; priests were ordained, new parishes sprang up, churches and schools were built, regular conferences for the clergy were held. Religious orders were introduced and new institutions arose for the maintenance and spread of religion, and for enlightenment, and comfort, and shelter of suffering humanity. The frame churches gave place to brick and stone structures. The bishop himself was a tireless worker and infused his own spirit into his priests. A Catholic weekly, the "Lake Shore Visitor", was issued, edited and written by the bishop himself, in the midst of labours that called him to every part of his extensive diocese. The Poles, the Slavs, the Hungarians, and the Italians had churches and priests provided for them, the orphans a large new home, the sick were provided with two large hospitals, and finally his crowning work, St. Peter's Cathedral, was finished, cleared of debt, and consecrated in 1893, the twenty-fifth anniversary of his consecration. In the following year he celebrated the golden jubilee of his priesthood. His strong active mind and body began to fail and on 19 May, 1897, he suffered a paralytic stroke and a convulsion, the Rev. John F. Fitz Maurice, president of St. Charles's Seminary, Overbrook, Philadelphia, was chosen by the Holy See and consecrated titular Bishop of Amisus with right of succession in Philadelphia, 24 February, 1898. Bishop Mullen resigned, 10 August, 1899, and died, 27 April, 1900. Bishop Fitz Maurice succeeded as fourth bishop of the diocese, on 19 September, 1899, and the good work inaugurated under the late bishop went on quietly and steadily. He was born at Newtown-Sandes, County Kerry, Ireland, 9 Jan., 1840, and ordained priest in Philadelphia, 21 Dec., 1862. After residing in several parishes he was appointed rector of the cathedral, 1886.

The religious orders in the diocese are the Benedictines, the Redemptorists, the Brothers of Mary, the Benedictine Nuns, the Sisters of St. Joseph, the Sisters of Mercy, and the Felician Sisters. At one time the Franciscans, the Bridgettines, and the Sisters of the Humility of Mary had houses in the diocese. The Benedictines settled at St. Mary's, Elk county, under Bishop O'Connor and in 1858 took charge of St. Mary's, Erie. The Redemptorists in 1875 began their foundation, purchasing a Presbyterian college—at New Orleans—which they made a seminary and college for young men who intended to join their order. They have 142 students.

The Sisters of St. Joseph entered the diocese in 1860, and have charge of the orphan asylum, the home for the aged, the two hospitals, the Academy of Villa Maria, the mother-house in the diocese, and of fifteen parochial schools. The Sisters of Mercy, who entered the diocese 24 September, 1870, besides the academy in Titusville, the mother-house, have charge of eight parochial schools. The Sisters of St. Benedict (St. Mary's, Penn.) (22 July, 1852) have St. Benedict's Academy, the mother-house at St. Mary's, and teach seven schools. The ( Erie) Sisters of St. Benedict, besides the academy and school of St. Mary's Church, teach five parochial schools, and also conduct an academy in Sharon. The Felician Sisters teach St. Stanislaus' Polish school, in the city of Erie.

There are in the diocese 100 churches, with resident priests, 46 missions with both churches, and 11 chapels; 160 priests—135 secular, 25 regular; 45 parochial churches, 3 academies for young ladies, 1 orphan asylum with 216 orphans, making a total of young people under the care of the Church, 10,385; two hospitals, and one home for the aged. The Catholic population of the diocese is estimated at 121,108.

Eriugena, John Scottus, an Irish teacher, theologian, philosopher, and poet, who lived in the ninth century.

Name.—Eriugena's contemporaries invariably refer to him as John Scottus or Ierugena. In the MSS. of the tenth and subsequent centuries the forms Eriugena, Ierugena, and Erigena occur. Of these, the oldest and most acceptable, philologically, is Erigena, which, as it was perhaps sometimes written Eriugena, was changed into Eriugena. It means 'a native of Ireland'. In the Oaths of the Popes, the name Eriugena occurs to signify the birthplace of the abbot Jodo, in his attempt to connect the first part of the name with the Greek word Ερηγέω and means 'a native of the Island of Saints'; the combination Joan(es) Scottus Erigena cannot be traced beyond the sixteenth century.

Birthplace.—At one time the birthplace of Eriugena was a matter of dispute. Eriugena in Wales and Ayr in Scotland claimed the honour, and each found advocates. Nowadays, however, the claim of Ireland to be considered the birthplace of John is universally admitted. All the evidence points that way, and leads us to conclude that when his contemporaries tauntingly referred to his having come to France from Ireland they meant not only that he was educated in the Isle of Saints but also that Ireland was his birthplace. Whatever doubt there may have been about the meaning of Scottus, there can be none as to the signification of the surname Erigena.

Life.—What is known of the life of Eriugena is very soon told. About 847 he appeared in France at the court of Charles the Bald, was received with special favour by that prince, appointed head of the palace school, which seems to have had some kind of permanent location at Paris, and was commissioned by the royal patron to translate the works of Pseudo-Dionysius into Latin. This translation brought him into prominence in the world of letters and was the occasion of his entering into the theological controversies of the day, especially into those concerning predestination and the Eucharist. His knowledge of
ERIUGENA

520

ERIUGENA

Greek is evident from his translations, and is also proved by the poems which he wrote. It is doubtful, on the other hand, whether he possessed the knowledge of Hebrew and other Oriental languages which is sometimes ascribed to him. In any case there is no evidence of his having travelled extensively in Africa and Asia Minor. After leaving Ireland he spent the rest of his days in France, probably at Paris and Laon. There was, as we know from the MSS., an important colony of Irish scholars at the latter place. The tradition that after the death of Charles the Bald he went to England at the invitation of Alfred the Great, that he taught for some time at Malmesbury, and was there set to death by his pupils, has no support in contemporary documents and may well have arisen from some confusion of names on the part of later historians. It is probable that he died in France, but the date is unknown.

From the evidence available it is impossible to determine whether he was a cleric or a layman, although it is difficult to deny that the general conditions of the time make it more than probable that he was a cleric and perhaps a monk.

Writings.—1. Translations of the works of Pseudo-Dionysius: “De Coelesti Hierarchia”; “De Ecclesiastica Hierarchia”; “De Divinis Nominebus”; “De Mystica Theologia”; “Epistola”; translations of the “Ambigua” of St. Maximus.—2. Commentaries: “Homilia in prolugum S. Evangelii sec. Joannem”, and a commentary on the Gospel of St. John, of which a few fragments only have come down to us; comments on the “Celestial Hierarchies” and the “Ecclesiastical History” of Pseudo-Dionysius; glosses on the work of Martianus Capella (still in MS.), and on the theological opuscula of Boethius (Rand ed., Munich, 1906), with which is connected a brief “Life” of Boethius (Pieper ed., “Consolatio Philosoph.”, Leipzig, 1871).—3. Theological works: “Liber de Predestinatione”, and very probably a work on the Eucharist, though it is certain that the tract “De Corpore et Sanguine Domini”, at one time believed to be Eriugena’s, is the work of Paschasius Radbertus.—4. Philosophical works: “De Divisione Nature”, his principal work, and a treatise, “De Egressu et Regressu Animae ad Deum”, of which we possess only a few fragments.—5. Poems: These are written partly in Latin and partly in Greek. Many of them are dedicated to Charles the Bald. The most complete edition of Eriugena’s works is that of Dr. Foss, which is printed as Vol. XXII of Migne’s P. L. A new edition embodying the results of recent discoveries of manuscripts is often spoken of, and will doubtless be forthcoming before long.

Doctrines.—Although the errors into which Eriugena fell both in theology and in philosophy were many and serious, there can be no doubt that he himself abhorred heresy, was disposed to treat the heretic with no small degree of harshness (as is evident from his strictures on Gotteschalk), and all through his life believed himself an unwaveringly loyal son of the Church. Seeking for grist for the mill, the works ascribed to Dionysius the Areopagite, he considered that the doctrines he discovered in them were not only philosophically true, but also religiously acceptable, since they carried with them the authority of the distinguished Athenian convert of St. Paul. He did not for a moment suspect that in those writings he had to deal with a loosely articulated system of thought in which Christian teachings were mingled with the tenets of a subtle but profoundly anti-Christian pantheism. To this remark should be added another in order that we may fully understand Eriugena’s attitude towards the philosophy accused by his contemporaries of leaning too much towards the Greeks. And, in fact, the Greek Fathers were his favourite authors, especially Gregory the Theologian, and Basil the Great. Of the Latins he prized Augustine most highly. The influence of these on the temperament of the venturesome Celt was towards freedom and not towards restraint in theological speculation. This freedom he reconciled with his respect for the teaching authority of the Church as he understood it. However, in the actual exercise of the freedom of speculation which he allowed himself, he fell into many errors which are incompatible with orthodox Christianity.

The “De Predestinatione” seems to have been written after the translation of the works of Pseudo-Dionysius. Nevertheless there is in it only one allusion to the authority of the Greek Fathers and very little of the burden of thought which Eriugena felt was abounding in the later works. It deals with the problem raised by Gotteschalk regarding the doctrine of predestination, and, more specifically, undertakes to prove that predestination is single, not double—in other words, that there is no predestination to sin and punishment but only to grace and eternal happiness. The authority of Augustine is used very extensively in the philosophical setting of the problem. However, the discussion of the true nature of evil—Eriugena appears to go back farther than St. Augustine and to hold the radical neo-Platonic view that evil is non-existent—this view is used as far as it goes, but it is rejected far further than St. Augustine in rejecting the doctrine of a double predestination. That he exceeded the bounds of orthodoxy is the contention of Prudentius of Troyes and Florus of Lyons who answered the “Liber de Predestinatione” in works full of bitter personal attacks on Eriugena. Their writings were printed in the Councils of Valencia (855) and Langres (859), in which Eriugena’s doctrine was condemned.

While the “De Corpore et Sanguine Domini” is not Eriugena’s, though ascribed to him, there can be no doubt that in some work, now lost, on that subject he maintained doctrines at variance with the Catholic doctrine of Transubstantiation. From the fragment which has come down to us of his commentary on St. John we infer that he held the Eucharist to be merely a type or figure. At least he insists on the spiritual, not the exclusion, nature, of the physical, “eating of the Flesh of the Son of Man.”

In the “De Divisione Nature”, his most important and systematic work, Eriugena treats in the form of a dialogue the principal problems of philosophy and theology. The meaning of the title is evident from the opening sentences in which he outlines the plan of the work: “Nature”, he says, “is divided into four species”; (1) “Nature which creates and is not created”—this is God, the Source and Principle of all things; (2) “Nature which is created and creates”—this is the world of primordial causes or (Platonic) ideas; (3) “Nature which is created and does not create”—this is the world of phenomena, the world of contingent, sense-perceived things; (4) “Nature which neither creates nor is created”—this is God, the Term to which all things are returning.

(1) “Nature”, then, is synonymous with reality, and also with God. “Codificacy,” whatever reality the world of ideas and the world of phenomena possess, is, in the truest and most literal sense, the reality of God Himself. “The being of all things is the over-being of God” (esse omnium est superesse Divinitatis) is a saying which he never tires of quoting from the works of Pseudo-Dionysius. So supremely perfect is the essence of the Divinity that God is incomprehensible not only to us but also to Himself. For if He knew Himself in any adequate sense He should place Himself in some category of thought, which would be to limit Himself. God is above all categories. When, therefore, we speak of orthodoxy in this (paraenest) mode of predication. That is, we are safer in predicated what He is not than in venturing to predicate what He is. If we have recourse to positive predication, we must use the prefix hyper and say God is hypersubstantia, i.e. more-than—
ERIUGENA 521

substance, etc. Similarly, when we say that God is the "Creator" of all things we should understand that predicate in a sense altogether distinct from the meaning which we attach to the predicate "maker" or "producer" when applied to finite agents or causes. The "creator" sense of the world is in reality a theopoietic one, or giving forth of the Essence of God in the things created. Just as He reveals Himself to the mind and the soul in higher intellectual and spiritual truth, so He reveals Himself to the senses in the created world around us. Creation is, therefore, a process of unfolding of the Divine Nature, and if we retain the word Creator we must also make the impossible, impossible, that is, the sense of nothing", we must understand that God "makes" the world out of His own Essence, which, because of its incomprehensibility, may be said to be "nothing"

(2) Nature in the second sense, "Nature which creates and is created", is the world of primordial causes, or ideas, which the Father "creates" in the Son, and which in tura, "create", that is determine the generic and specific natures of concrete visible things. These, says Eriugena, were called "prototypes", θέα θεϊκάτα, and "ideas", by the Greeks. Their function is that of exemplar and efficient causes. For since they are, though created, identical with God, and since their locus is the Word of God, the Second Person of the Blessed Trinity, they are operative causes and not merely static types. They are coeternal with the Word of God. From this, however, it is not necessary to infer, as some critics have done, that according to Eriugena there are primordial causae in the Word. As examples of primordial causes Eriugena enumerates goodness, wisdom, intuition (insight), understanding, virtue, greatness, power, etc. These are united in God, partly separate or scattered in the Word, and fully separate or scattered in the world of phenomena. For there is underlying the doctrine of the origin of things the image to which he often referred, namely, that of a circle, the radii of which are united at the centre. The centre is God, the radii at a point near the centre are the primordial causes, the radii at the circumference are phenomena.

(3) These phenomena are "Nature" in the third sense, "which is created and does not create". The stream of reality, setting out from the centre, God, passing through the ideas in the Word, passes next through all the genera suprema, media, and infima of logic; then enters the region of number and the realm of space and time, where the locus, the mundus, the image of all Eriugena's ideas. The radii of the circle, to which he refers, are the seens, the appearances of reality, that is phenomena. In the region of number the ideas become angels, pure incorporeal spirits. In the realm of space and time the ideas take on the burden of matter, which is the source of suffering, sickness, and sin. The material world, therefore, of our experience is composed of ideas clothed in matter—here Eriugena attempts a reconciliation of Platoism with Aristotelian notions. Man, too, is composed of ideas and matter, soul and body. He is the culmination of the process of things from God, and with him, as we shall see, begins the process of return of all things to God. He is the image of the Trinity in so far as he unites in one soul being, wisdom, and love. In the state of innocence in which he was created he was perfect in his work as man and independent of bodily needs, and without differentiation of sex. The dependence of man's mind on the body and the subjection of the body to the world of sense, as well as the distinction of male and female in the human kind, are all the results of original sin. The tendency of the soul towards the abstractions of mental existence has only one remedy, Divine grace. By means of this heavenly gift man is enabled to rise superior to the needs of the sensuous body, to place the demands of reason above those of bodily appetite, and from reason to ascend through contemplation to ideas, and thence by intuition to God Himself. The three faculties here alluded to as reason, contemplation, and intuition are designated by Eriugena as internal sense (διάνοια), rationization (λόγος), and intellect (νοῦς). These are the three degrees of mental perfection which man must attain if he is to free himself from the bond of sin. The bond was cast by sin, and attain that union with God in which salvation consists.

(4) Not only man, however, but everything else in nature is destined to return to God. This universal resurrection of nature is the subject of the last portion of Eriugena's work. He teaches that the nature which neither creates nor is created". This is God, the final Term, or Goal, of all existence. When Christ became man, He took on Himself body, soul, senses, and intellect, and when, ascending into Heaven, He took these with Him, not only the soul of man but His senses, His body, the animal and the vegetative natures, and even the elements were redeemed, and the final return of all things to God was begun. Now, as Heraclitus taught, the upward and the downward ways are the same. The return to God proceeds in the inverse order through all the steps which marked the downward course of the processes of nature. The elements become light, light becomes life, life becomes sense, sense becomes reason, reason becomes intellect, intellect becomes ideas in Christ, the Word of God, and through Christ returns to the oneness of God from which all the processes of nature began.

This "incorporation" of Christ takes place by means of Divine grace in the Church, of which Christ is the invisible head. The doctrine of the final return of all things to God shows very clearly the influence of Origen. In general, the system of thought just outlined is a combination of neo-Platonic mysticism, emanationism and pantheism which Eriugena was the first to articulate and reconcile with Aristotelian empiricism, Christian creationism, and theism. The result is a body of doctrines loosely articulated, in which the mystic and idealistic elements predominated, and in which there is much that is irreconcilable with Catholic dogma.

Influence.—Eriugena's influence on the theological thought of his own and immediately subsequent generations was doubtless checked by the condemnation to which his doctrines of predestination and of the Eucharist were subjected in the Councils of Valen-cia (859), Langres (859), and Verceil (1030). The doctrine of the "De Divisione Naturae" was formally condemned. The Council of Paris (1225) coupled the condemnation of Eriugena's work with the previous condemnations (1210) of the doctrines of Amalric of Chartres and David of Dinant, and there can be no doubt that the pantheists of that time were using Eriugena's treatise. While the great Scholastic teachers, Abelard, Alexander of Hales, St. Bonaventure, St. Thomas, and Albert the Great knew nothing, apparently, of Eriugena and his pantheism, certain groups of mystical theologians, even as early as the thirteenth century, were interested in his writings, especially in his treatise on the Albigenese, too, sought inspiration from him. Later, the Mystics, especially Meister Eckhart, were influenced by him. And in recent times great transcendental idealists, especially the Germans, recognize in him a kindred spirit and speak of him in the highest terms.

WILLIAM TURNER.

ERLAU. See AGRIA.

Ermland, or Ermland (Varangia, Warmia), a district of East Prussia and an exempt bishopric. St. Adalbert of Prague (d. 1019) and St. Bruno of Querfurt (d. 1099) converted the pagan inhabitants of the region, the heathen Prussians, to Christianity and two centuries later Teutonic Knights and members of the Cistercian Order introduced civilization also into the land. Among these latter was the saintly Bishop Christian of Oliva (d. 1215). In 1243 the territorial possessions of the Teutonic Knights were divided into the Dioceses of Culm, Pomesanien, Ermland, and Samland. Albert of Suerbeer, who came from Cologne, and who had been Archbishop of Armagh, Ireland, was appointed Archbishop of Prussia. In 1251 he took Riga for his see, a choice which was confirmed by Avignon in 1253, who in 1255 appointed bishop of the four dioceses just mentioned. A priest of the Order of Teutonic Knights, Heinrich of Strateich, was selected as the first Bishop of Ermland, but he was not able to enter upon his office. It was not until 28 August, 1251, that the first actual Bishop of Ermland, Anselm of Meissen, who was also a priest belonging to the Order of Teutonic Knights, was consecrated at Valenciennes by the papal legate Pietro of Albano. The diocese included the whole of the old Prussian districts of Warmien, Nutzgen, Barten, and Galindien, the northern part of Pomesanien and the southern homes of Niedersachsen and Samland. The bishops were given one-third of this territory as personal property for his support, and in this district he was the secular ruler and a prince of the Holy Roman Empire; these rights of the bishop were confirmed in the Golden Bull of the Emperor Charles IV. In 1260 Bishop Anselm founded a chapter of sixteen canons attached to the cathedral of St. Andreas at Braunsberg and transferred to the chapter the right of electing the bishop. But Braunsberg was ravaged by the heathen Prussians in 1262. And the second bishop, Heinrich I (1279–1300), was obliged in 1290 to transfer the chapter to Frauenberg where it has remained ever since.

From the thirteenth to the fourteenth the Ermland was one of constant wars. Repeated rebellions of the native Prussians, incursions of the Lithuanians, and frequent wars with Poland, in which the bishop was always the faithful ally of the Teutonic Order, checked the development of Christianity and the cultivation of the soil. To these disorders were added the constant encroachments and violence of the Teutonic Knights who sought to bring Ermland, like the other Prussian dioceses, under the domination of the order. Ermland, however, maintained its rights with great determination against such efforts, and would not allow the order to influence in any way the election of the bishops and the chapter. Yet in everything else the bishops held faithfully to the order, even when its star began to decline, and the whole territory ruled by the knights revolted in the so-called War of the Cities (1154–66). It was in this period that the celebrated Cardinal Enea Silvio de Piccolomini (Enea Silvius) was elected (1457) Bishop of Ermland; in the following year, however, he ascended the papal throne as Pius II. The Peace of Tewes (1460) removed the danger to the territory of the Teutonic Knights and placed it under the sovereignty of the King of Poland. This transfer caused the discord to break out afresh, for the King of Poland claimed for himself in Ermland the same right he exercised in the rest of his kingdom, that of naming the bishop. Bishop Nikolaus of Tungen (1467–89) and especially the determined Lukas Watzelrode (1489–1512) energetically opposed these unjust claims and guided the right of a free election of the bishop. In 1512 the latter bishop obtained from Pope Julius II the release of his suffragan connexion, always a loose one, with the metropolitan See of Riga. When this relationship was dissolved Ermland was declared an exempt bishopric and has remained such ever since. Bishop Watzelrode was equally successful in regulating the internal affairs of his diocese. In 1517, he held a diocesan synod at Heilsberg, where the bishops ruled until 1600; in 1503 he made new laws for his domain, reorganized the cathedral school at Frauenburg, selecting for it excellent teachers, among whom was his celebrated nephew Copernicus, published the Breviary (Nuremberg, 1514) and the Missal (Strasbourg, 1517). His work successor Fabian of Lonazine (1512–23), however, in the Treaty of Piotrkow (7 December, 1512), conceded to the King of Poland a limited influence in the election of bishops. Existing conditions were, however, entirely changed by the defection to Protestantism of Albrecht of Brandenburg, Grand Master of the Teutonic Knights, and the breaking of the order of the order who ruled Samland and Pomesanien, and the secularization of the dominion of the order by the Peace of Cracow (1525). Two-thirds of the former 220 parishes of Ermland went to the two apostate bishops. In these troubled times excellent episcopal rulers saved the diocese from complete decay. Among these bishops was the energetic Moritz Ferber (1523–37), who by the ordinances issued in 1536 restored order to his desolated territory; another such bishop was Joannes Dantisius (1537–48), a noted poet and diplomat, whose attention at the time of his duties as bishop and raised the intellectual life of his clergy (concerning Dantisius cf. Daplicki, De vitæ et carminibus J. de Curia Dantisici, Breslau, 1855; Geistliche Gedichte des Dantisicus übersetzt und herausgegeben von Franz Hipke, Münster, 1857).

But the bishops who deserve the greatest praise for holding the diocese to the Catholic Faith when threatened by the surrounding Protestantism were Stanislaus Hosius (1551–79), later a cardinal, who was distinguished for learning and virtue, and Martin Kromer (1579–89), a noted historian. Among the means successfully used for the preservation of the faith were the assembling of various diocesan synods, of which the most important was the one held by Hosius in 1565 for the purpose of carrying out the decisions of the Council of Trent; yearly visitations, and above all the founding of the Jesuit College at Braunsberg in 1565 (cf. Duhl, Geschichte des Jesuiten in den Ländern deutscher Zunge (Freiburg im Br., 1897), I, 179 sqq., 307 sqq.). In addition to these the Congregation of St. Catherine (Katharinerinnen), founded at Braunsberg in 1571 by Regina Prothmann, did effective work in the instruction and training of girls; since the an- nouncement of the right in 1768, however, by the legal decree of the Kulturkampf the congregation has devoted itself almost entirely to the nursing of the sick. In the seventeenth century (1626–30, 1655–56), and at the beginning of the eighteenth century (1703–09), the diocese was repeatedly ravaged by the Swedes, who forcibly suppressed the Catholic Church services and carried away its literary and artistic treasures. At the time of the First Partition of Poland (1772) the whole of Ermland fell to the share of the Kingdom of Prussia. In the Treaty of Warsaw (18 September, 1773), King Friedrich II, it is true, guaranteed the Catholic Church the privileges of the annexed provinces, nevertheless all schools and institutions for education and training under religious control were gradually suppressed, and the landed property of the Church secularized.

The Bull "De salute animarum", of 16 July, 1820,
ernan, name of four Irish saints. O'Hanlon enumerates twenty-five saints bearing the name Ernan, Erin, or Erin; it is, therefore, not surprising that their acts have become confused.

(1) St. Ernan, Son of Sogann, d. about 610. He is mentioned in the Martyrology of Tallagh on 1 January. He was a nephew of St. Columba, Feilim or Feidlimidh (St. Columba's father) being his paternal grandfather. Owing to this relationship, some writers have mistaken our saint for Erin of Hinba, an uncle of St. Columba. His monastery in Llandow was at Drum-Tomna in the district of Drumhome, County Donegal. Adamnan relates the wonderful vision he had on the night St. Columba died (Vit. S. Col., III, 23). Ernan, with some companions, was fishing in the River Finn, in Donegal. Suddenly at night he beheld a wondrous glory of the saint and was greatly astonished. Looking towards the east he perceived an immense pillar of fire shewing as the sun at noonday. This marvellous light then passed into the heavens, and a great darkness followed, as after the setting of the sun. This wonderful occurrence was related to Adamnan by Ernan, who at the time is described as "a very old man, a servant of Christ, whose name may be rendered Ferreolus, but in Irish Erine (of the clan Mucuirroide), who, himself also a holy monk, is buried in the Ring of Tomna (Drumhome) among the remains of St. Columba, awaiting the resurrection of the saints". Some writers style this St. Ernan, Abbot of Drum Tomna. It is uncertain whether he visited Scotland, nevertheless he is regarded as patron saint of Killermore, in Ross-shire; and it may be that the dedications of Kilveenough (church of the son of Eogan) in Mull, and of Killearmadale in Jura, Argyleshire, are in his honour. In the "Scottish Calendars", collected by Bishop Forbes, his name appears as Eranus, and his commemoration is assigned to 21 and 22 December (pp. 170, 222, 243).

(2) St. Ernan, Abbot of Hinba, lived in the sixth century. He was uncle of St. Columba, and one of the twelve who accompanied him from Ireland to Iona. He was brother of Ethne, St. Columba's mother, and son of Dima, the son of Noe of the race of Cathair Ivor (Reeves, notes, p. 263). St. Columba appointed him superior of the community which he himself had established on the island of Hinba. The identity of Hinba has not been established with certainty. It may be Cana, about four miles N. W. of Rum (ibid., p. 264); but more likely it is Illeean-na-Naomh, one of the Gavleoch Isles, between Scarba and Mull (Fowler's Adamnan, p. 87). Hinba was a favourite place of the Holy Mysteries had been completed (Adamnan, III, xvi). On another occasion, while visiting St. Ernan's monastery in Hinba, St. Columba was favoured with heavenly visions and revelations which lasted three days and nights (Adamnan, III, xviii). The death of St. Ernan was tragic. Being seated on an image, he desired to be carried to Iona. St. Columba, greatly
rejoiced at his coming, started to meet him. Ernan likewise hastened, but when he was twenty-four paces from his nephew he fell to the earth and died. Thus was the prophecy of St. Columba fulfilled, that he would never again see Ernan alive (Adamnan, I. xiv.).

Ernan died in 1748, and here the monkish chronicle says: "He has been deposed from his seat and is sitting in the house of death."

He was a man of considerable influence and was chosen by the people of the island of Tallagh. His demise was a great loss to the island, and he is commemorated in the island's records. The monastery was later moved to another location.

The monastery at Tallagh was later moved to another location.

Joseph Schroeder.

Ernulf, architect, b. at Beauvais, France, in 1010; d. 1124. He studied under Lanfranc at the monastery of Bec, entered the Benedictine Order, and lived long as a brother in the monastery of St.-Loup de Creuse. At the suggestion of Lanfranc he went to England, sometime after 1070, and joined the monks of Christ Church, Canterbury. He was made prior by Archbishop Anselm, and in 1107 Abbot of Peterborough; in 1114 he was appointed Bishop of Rochester.

While at Canterbury, he had taken down the eastern part of the church which Lanfranc had built, and erected a far more magnificent structure. This included the famous crypt (Our Lady of the Undercroft), as far as Trinity Tower. The chancel was finished by his successor Conrad. The chapel of St. Andrew is also part of Ernulf's work. At Peterborough and Rochester, Ernulf had the old buildings torn down and erected new dormitories, refectories, chapter house, etc. He is the author of "Textus Roffensis" (a large collection of documents relating to the church of Rochester), "Collectanea S. Andrew" and "Martyrology" in P. L., CLXIII, 1443 sqq., also of several canonical and theological treatises in D'Achéry, "Spicileg. III., 404 sqq.

Ernst, William, priest, founder of Sedgley Park School, b. 17 July, 1716; d. 28 September, 1768. He was the son of Mark Errington of Wiltshire, a descendant of the Erringtons of Walwick Grange, Northumberland; his mother's maiden name was Martha Baker. In 1737 he went to Douai, took the mission oath 28 December, 1741, and was ordained a priest in December, 1747. He was made a canon at Douai afterwards as Bishop of Wells and successor to Bishop Petre. Kirk states that Dr. Challoner "had a high opinion of Mr. Errington, both as an active and zealous missionary and as a man of business." He was on account of these qualities that when the bishop wished to found a good middle-class school in England he induced Errington to undertake the work. It was a most difficult undertaking, and Errington made three unsuccessful attempts, the first in Buckinghamshire, the second in Wales, and the third at Betley near Newcastle-under-Lyne in Staffordshire, before he succeeded in founding a permanent school at Sedgley Park in the neighbourhood of Wolverhampton. On Lady-Day, 1763, he opened this school with twelve boys in the house known as the Park Hall, till then the residence of John, Lord Ward, afterwards Viscount Dudley and Ward. The little foundation was at one attacked in Parliament, but Lord Dudley successfully defended himself, and the school was permitted to proceed. It developed into the famous Sedgley Park School which did good service to the Church for over a century, and is now represented by St. Wilfrid's College, Oakmoor, near Cheddle. Having founded the school, Errington's work there was done, and as soon as he secured the appointment of the Rev. Hugh Kendall as head-master in May, 1763, he returned to
Bishop Challoner in London. He was appointed archdeacon and treasurer of the "Old Chapter" and held offices till his death.

EDWIN BURTON.

Error, redundatively regarded, is in one way or another the product of ignorance. But besides the lack of information which it implies, it adds the positive element of a mental judgment, by which something false is held to be true, or something true avowed to be false. The subject-matter of error so far as morals go, like that of the want of knowledge whence it proceeds, is either (1) the law itself, or (2) a fact, or circumstance of a fact. In the first instance, one is astray in affirming or denying the existence of a law, or at any rate the inclusion of some individual case under its operation. In the second, one is labouring under an equal misapprehension, but with regard to some fact or aspect of a fact. Thus, for example, a Catholic, who in some unaccountable way would persuade himself that there was no law of abstinence on Friday, would be in error as to the law. If, although without avowed the precept of the Church, he is of the mistaken impression that a particular day, which happens to be Friday, is not Friday, he is in error as to the fact.

Taking account of the person in whom the error exists, it is said to be either venial or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's stand, or as to the necessity of an inquiry, or it may be that, having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase "moral diligence". It is not easy to state in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bring to bear upon the settlement of like matters. This notion may be set forth in more detail by the following considerations: (1) The moral diligence required does not mean that a person is to have recourse to every conceivable expedient. (2) It does imply that the errors made by an agent, to set himself right, should be such as are not produced by the serious involvements or business involved, as well as bear a proper ratio to his capacity and resources. Error is reckoned morally venial as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet has been studiously aimed at. When the error is the offspring of sheer unrelieved negligence, it is termed the influence of error on moral responsibility may be determined as follows. An act done in invincible error, whether the latter regard the fact or the law, is never impeachable as a sin. The reason is that, in this hypothesis, there is no knowledge of, consequently no volition of, evil. On the contrary, what is done in morally venial error is improperly imputed to the agent. This is so, because the error itself is then of the agent's own choosing and he is therefore accountable for its outcome. It is obvious, however, that the moral delinquency which has its rise in venial error will have various degrees of guilt, in proportion to the greater or lesser culpability of the error itself.

JOSEPH F. DELANY.

Erskine, CHARLES, Cardinal, b. at Rome, 13 Feb., 1739; d. at Paris, 20 March, 1811. He was the son of Colin Erskine of the Erskine family, who were Earls of Kellie and Mar; his mother was Agatha Gigi of the noble family of Gigi of Anagni. He was educated by Cardinal Henry, Duke of York, at the Scots College, Rome, and was afterwards a successful advocate, becoming Doctor of Laws in 1770. Pope Pius VI made him pro-auditor and Promoter of the Faith in 1782, also a domestic prelate, canon of St. Peter's, and dean of the college of consistorial advocates. He was ordained subdeacon, 28 August, 1763. In October, 1793, he was sent as papal envoy to England. By his tact and ability Mgr. Erskine established excellent relations with the Court and the ministry, diminished the dissensions among Catholics, and avoided stirring up any anti-Catholic demonstration against himself. During his stay in London the pope named him auditor, and in 1795 gave him additional powers as envoy extraordinary. He left London in 1801 and returned to Rome, where in January, 1803, he was created cardinal. As a member of the Propaganda he was especially useful to English Catholics, and was made protector of Scotland. On the French invasion of Rome in 1808 he was made pro-secretary of Briefs, and was shut up in the Quirinal with the pope. When Pius VII was taken prisoner Erskine was allowed to go free, but his property was now lost and he would have been reduced to beggary, but Protestant relations had not made him an allowance. In 1809 Napoleon ordered him to Paris and though ill he was forced from Rome in January, 1810. Shortly after his arrival in Paris he fell into a gradual decline and soon died. He was buried in the church of Saint-Geneviève, now the Pantheon.

EDWIN BURTON.

Erthal, FRANZ LUDWIG VON, Prince-Bishop of Würzburg and Bamberg, b. at Lohr on the Main, 16 September, 1730; d. at Würzburg, 16 February, 1795. After studying theology at Mainz, Würzburg, and Rome, and jurisprudence at Vienna he became president of the secular Government of Würzburg in 1762. When he was sent in 1768 as Ambassador to get the imperial investiture for Adam Friedrich, Count von Seinsheim, the Prince-Bishop of Würzburg, Emperor Joseph II made him imperial privy councilor and inspector of the Imperial Chamber (Supreme Court of the empire) at Wetzlar. In 1776 he took part as imperial commissioner in the Diet of Ratisbon. He succeeded Adam Friedrich as Prince-Bishop of Würzburg, 18 March, 1779, and as Prince-Bishop of Bamberg on the following 12 April. His rule was a blessing for Church and State. Being himself deeply religious, he endeavoured to imbue his clergy and people with the spirit of true faith and piety. As far as the Church and his episcopal position permitted, he yielded to the rationalistic tendencies of the age, but was a staunch defender of papal rights against the adherents of Febronianism. As temporal ruler he never allowed his personal considerations to outweigh the interests of the people, and used his private means for the erection and improvement of charitable institutions. At Bamberg he founded a hospital which at that time was a model of its kind, and at Würzburg he greatly improved and partly rebuilt the already existing hospital of St. Juliane. He improved the public education system, bettered the economic conditions of rural life and of the civil administration, and set the finances of his
principally on a firm basis. Von Erthal is the author of a work in German, refuting the revolutionary prin-
ciples of his age, which is entitled: "Über den herr-
schenden Geist dieser Zeiten und über das Verhalten des
rechtschaffenen Christen bei denselben" (Würz-
burg, 1798). Some of his sermons were collected and
published after his death (Bamberg, 1797).
Lerch, Franz Ludwig von Erthal, Fürstbischof von Bam-
burg und Würzburg, Herzog von Franken (Bamberg, 1894);
Erected biographies were written by Sprenke (Würzburg, 1829),
Bernhard (Tübingen, 1852), Rothlauf (Bamberge, 1885), Müller (Passau, 1889).

Michael Ott.

Erthal, Friedrich Karl Joseph, Freiherr von, last Elector and Archbishop of Mainz, b. 3 Jan., 1719,
at Mainz; d. 25 July, 1802, at Aschefenburg. He was an unworthy brother of Franz Ludwig, the Prince-
Bishop of Bamberg and Würzburg, received his educa-
tion at Reims, held prebends in Bamberg and Mainz at
an early age, became canon at the cathedral of
Mainz in 1733, rector of the university in 1754, presi-
dent of the Aulic Council in 1758, and custos of the
cathedral in 1765. From 1769-1774 he was plenipot-
entiary of the Electorate of the Palatinate at the
imperial court of Vienna. On 18 July, 1774, he succeeded
the deceased von Breidbach-Bürresheim as Elector and
Archbishop of Mainz and eight days later as Prince-
Bishop of Worms. He was ordained priest on 11
Sept., 1774, and received episcopal consecrations on 14
August, 1774, on the cathedral steps. At the begin-
ing of his reign it appeared as if he would try to stem the tide of
rationalism which had swept over the Church
of Mainz during the weak rule of von Breidbach-Bür-
resheim. One of his first acts as bishop was the dismis-
sal of the free-thinking councillors of his prede-
cessor. Soon, however, he became one of the most
notable supporters of free-thought in theology and of
Febronianism in the government of the Church.
(George Förster, a Protestant, became his librarian and
William Heine, another Protestant, and author of the
the learned journal "Arzneibüchel" was his official
reader. Erthal suppressed the Carthusian monastery
and two nunneries of Mainz and used their revenues to
meet the expenses of the university, in which he ap-
pointed numerous Protestants and free-thinkers as
professors. Notorious unbelievers such as Anthony
Frayn were invited to the university in 1784 to
supplant the Jesuits in the faculty of theology.

As a spiritual ruler, Erthal was guided by the prin-
ciples of Febronianism. In union with the Arch-
bishops Max Franz of Cologne, Clemens Wenzelhaus of
Trier, and Hieronymus Joseph of Salzburg he con-
voked the Congress of Embruns at which twenty
antipapal articles, known as the "Punctation of Enms", were
drawn up and signed by the plenipotentiaries of
the four archbishop on 25 August, 1786. The pur-
pose of the Punctation was to lower the papal dignity
to a merely honorary primary and to make the pope a
prince inter pares, with practically no authority over
the territories of the archbishops. In order to
increase his political influence he joined (25 October,
1785) the Confederation of Princes which was estab-
lished by King Frederick the Great. In 1787 he ap-
parently receded from the schismatical position of
Punctation of Emns and applied to Rome for a renewal
of his quinquennial faculties and for the approbation
of his new coadjutor, Karl Theodor von Dalberg.
Somewhat later, however, he resumed his opposition
to papal authority and continued to adhere to the
Punctation even after the other archbishops had re-
jected it. His opposition was made futile by the rev-
olutionary wars which raged in his electorate from
1792-1801. By the treaty of Campo-Formio in 1797
Erthal was deprived of his possessions west of the
Rhine and by the Concordat of 1801 he lost also spiritual
jurisdiction over that part of his diocese. The
negotiations concerning the reimbursement of Erthal
for the loss of his territory west of the Rhine were not
yet completed when he died.

Michael Ott.

Erwin of Steinbach, one of the architects of the
Strasbourg cathedral, date of birth unknown: d, at
Strasbourg, 17 January, 1318. According to a tradition
which arose in a later age he was called Erwin of Stein-
bach, and a monument has been erected to him in
the village of Steinbach near Baden-Baden. Two of his
sons, Erwin and Johannes, after him; von Erwin, Gerlach, from 1341-71 and, up to 1382, another son of
the family named Kunte, were also superintending
architects. Hence they were heads of the Strasbourg
guild of stone-masons, the influence of which extended
as far as Bavaria, Austria, and the borders of Italy.
It is written account exists as to the training for his
work which the elder Erwin received. It must, how-
ever, be taken for granted that he had proved his
abilities as a master-builder in other places before he
was entrusted with the construction of the façade of
the cathedral of Strasbourg about the year 1277.
His work shows the influence of the French Gothic. When Erwin took charge of the con-
struction the cathedral was completed except the
porch of the tower, and reflected in its parts the de-
velopment of architectural styles from the first quarter
of the fourteenth century. As a matter of fact, the west
front was now built by three masters, of whom one was
Erwin. At the same time a part of the nave that had
been badly damaged by fire in 1288 had to be repaired.
Three plans of the façade are still in existence; ac-
ording to Dehio the best design belongs to Erwin, to whom
it is customary to ascribe the entire construction.
Eichborn, it is true, has tried to prove that Erwin
drew the weakest of the three plans. In any case the
three master-architects by their joint work do
in some measure the praise that, especially since Goethe, has been assigned to Erwin alone; they are not responsible, however, for the ungraceful central order of the university build-
ing between the towers, nor for the pinnacle of the north
tower. This front offers a happy combination of hori-
zontal members in the French style with the German
principle of daring height. The rose-window, also
French in design and placed in the central one of the
nine towers, is a welcome point of rest to the eye.
The somewhat peculiar ornamentation consists of a
double tracery of bars and geometrical designs which
covers the façade like a net dividing and filling the
large surfaces. By the novelty and the daring of the
new style the individual members of this façade are
in marked contrast to the older parts of the building; the
front, moreover, is connected directly with the body
of the cathedral. The ornamental sculpture of the build-
ing, which is richer than that ordinarily found in German
cathedral, is attributed to Erwin's workshop,
from which came also the monument to Conrad of
Lichtenberg in the chapel of St. John. In this chapel
the early Gothic forms correspond to the carving in
the chapter-hall. Erwin's last work was the construc-
tion of the beautiful chapel of the Blessed Virgin. The
legend of the woman sculptor, Savina, who, it is as-
serted, was a daughter of Erwin, rests on a mistaken
interpretation of the sculptural emblems. These
emblems referring to Erwin, which along with tradition
are our only sources of information, have also given
rise to various doubts.

und Bildhauerkunst im Elsass-Lor. (1877);
Erythre, a titular see in Asia Minor. According to legend the city was founded by colonists from Crete. The name must have been derived from the red stone common in the country. Ruled by kings at first, the city passed through periods of oligarchy and democracy, became tributary to Creusus and Cyrus, submitted to Athens, then to Sparta, and finally obtained independence. After Alexander, it had various masters until 101 B.C., when it took sides with the Romans, though still preserving its autonomy. Finally it was incorporated with the province of Asia. Erythre was famous for its Sibyl Herophile and its temples of Heracles, Athena Polias, etc. At an early date it became a suffragan of Ephesus; to the bishops mentioned by Lequien (Or. christ., I, 727): Eutychius (+491), Dracomius (+541), Theoctistus (+553), Eustathius (+787), Arsaphius (+808), may be added Michael in 1229 (Revue des études grecques, VII, 80). By the sixteenth century the see had disappeared, together with the city and its port. A new village has arisen on its site, Litri or Rihri, not far from Tades, in the vilayet of Aidin or Smyrna. The ruins include walls which are about three miles in circuit, a theatre, aqueducts, columns, and a Byzantine fortress.

S. Vaille.

Ezrum (Theodosopolis), Diocese of (Erzerumisens Armienorum). The native name, Garin (Gr. Kapareus; Ar. Kalkelej), is still used by the Armenians. The kings of Armenia established there their summer residence. Later Garin fell into the power of the Byzantines, who named it Theodosopolis (+415), under which title it is still a Latin titular see. It became then a Greek bishopric, suffragan to Cæsarea of Cappadocia. Three bishops are known at this period, Peter (+448), Manasses (+451), and another Peter (+553). (See Lequien, Or. christ., I, 437.) This ecclesiastical situation lasted at least until the ninth century. In the eleventh century, owing to a confusion with another Theodosiopolis in Mesopotamia, the see passed under the jurisdiction of the Patriarch of Antioch. From 622 to 663, a great council, which brought about a temporary union of the Armenian and Greek Churches, was held at Garin; the Emperor Heraclius attended with the Armenian and Greek patriarchs and many bishops of both Churches (Hetele, III, 73, 152). In 1201 the city was plundered by the Soljuk Turks, who renewed Erzerum, which appears to mean "the country of the Romans", that is to say of the Greeks, though some think that the name is a corruption of Arzen er-Roum, Arzen being an ancient Armenian city in the neighbourhood. Erzerum was captured in 1214 by the sultans of Iconium, in 1387 by Timur-Leng, in 1450 by the Osmanli Turks. In 1450 it fell into the power of local dynasties, which held it under the hegemony of Persia until 1514, when it passed again to the Osmanlis. In 1828 and 1878 it was occupied by the Russians. In 1850 it was almost destroyed by an earthquake.

Erzerum is built at an altitude of over six thousand feet on a hill, which is surrounded by mountains of some ten thousand feet in height. The climate is healthful, but rigorous. Winter lasts eight and summer only four months. The Western Euphrates (Kara Su) is about four miles from the city. Garin is the capital of a vilayet and has a population of about 40,000, of whom 27,000 are Turks, the rest Armenians, and a few Europeans (about 900 Catholics, mostly Armenians). The city is divided into three parts: the citadel, near the centre of the city, the city proper surrounded by a double wall, and four suburbs. There are 65 mosques, many churches, and several large bazaars. The chief industries are blacksmiths' and coppersmiths' work. Besides the Greek metropolitan, still subject to the Patriarch of Antioch, Gregorian and Catholic Armenian bishops reside at Erzerum. The Diocese of Theodosopolis (Erzerum) was re-established in 1850 and on 10 July, 1883, divided into the Dioceses of Erzerum and Mush. The former diocese has (1900) 10,000 faithful, 38 priests, 30 parishes, 66 churches or chapels, 4 convents, 19 schools with about 1000 pupils, and a hospital. Armenian Sisters of the Immaculate Conception have a monastery. Two Capuchins conduct the Latin mission.

Esau (493), hairy, the eldest son of Isaac. The twin-brother of Jacob. The name of the twin-brother of the two brothers, when still within Rebecca's womb, was prophetic of the lifelong opposition, deepening at times into hatred, which marked the relations between Esau and Jacob. "Coming faint out of the field", and much moved by the sight and savour of the pottage boiled by his brother, Esau said to Jacob, "Give me this red pottage!". Esau, who came forth first, when grown up, became a skilful hunter, and was much loved by Isaac, who ate of his hunting (Gen., xxv, 24-28). The name of a red hound. Esau not only exchanged his first birthright for the red pottage, but even confirmed the sale by an oath, saying, "Lo, I die; what will the first birthright be to me, if I hold in taking bread and the pottage of lentils, he ate, and drank, and went his way; making little account of having sold his first birthright!" That this transaction was widely known is justly inferred from the very name (Ezrom, red), which, though rarely given to Esau himself, is almost universally applied to his descendants. "Esau, being forty years old, married wives, Judith, the daughter of Beeri the
Hethite, and Basemath the daughter of Elon of the same place" (Gen., xxvi, 34). This selection of Chanaanite wives, who "both offended the mind of Isaac and Rebecca" (Gen., xxvi, 35), seemed to have caused peculiar suffering to Rebecca, who, speaking with her husband, declared, "I am weary of my life because of the daughters of Heth: if Jacob take a wife of the stock of this land, I choose not to live" (Gen., xxvii, 46). Old and with eyes so dim he could not see, Isaac ordered Esau to take quiver and bow, so that after having prepared a savoury dish with the fruit of his hunting, he mightly speak of as partaking, belonging to the eldest son, Esau, yielding ready obedience, went into the field to fulfill his father's commandment" (Gen., xxvii, 1-5). Meanwhile, clothed with the very good garments of his older brother, with hands and neck so carefully covered under the tender hides of the kids as to resemble the hairy skin of Esau, Jacob, following in every detail the advice of Rebecca, knelt before Isaac, offered the savoury dish, and begged and obtained the coveted blessing. Great then was the astonishment, and genuine the indignation, of the disappointed Esau, who went out with a great weeping", on hearing received Isaac declare, "thy brother came deceitfully and got thy blessing'. Though sympathizing with his grief-stricken son, Isaac, realizing more fully the import of the oracle communicated to Rebekah, felt impelled to add: "I have blessed him, and he shall be blessed; I have appointed him lord, and have made all his brethren his servants' (Gen., xxvi, 6-37). The restraining influence of the father's presence is admirably portrayed in the few words uttered by Esau: "the days will come of the mourning of my father, and I will kill my brother Jacob" (Gen., xxvii, 41). The journey revealed a deeper purpose, the evident anxiety of Rebecca, the hasty flight of Jacob to Haran, and his long stay with his uncle Laban, clearly demonstrated. (Gen., xxvii, 42-xxx, 38.) Indeed, even after a self-imposed exile of twenty years, the carefully instructed messengers sent to Esau in the land of Seir (Gen., xxxii, 3) and the strategic division of his household and flocks and into two companies clearly indicate Jacob's abiding sense of distrust (Gen., xxxiii, 1-8).

After extending a cordial welcome to his returning brother, Esau parted from Jacob and returned, the day being "to Seir" (Gen., xvii, 16), where he and his descendants become exceedingly rich (Gen., xxxv, 1-8). The very name Edomite, given to the descendants of Esau (Edom), has served to perpetuate the remembrance of the circumstances attending Esau's birth and the sale of his birthright. From the noteworthy preference of Jacob to Esau (Gen., xxxv, 22 sq.), St. Paul (Rom., ix, 4-16) shows that in the mystery of election and grace God is bound to no particular nation and is influenced by no prerogative of birth or antecedent merit. When Isaac, old and full of days, had died, we find Esau with Jacob at Hebron, there to bury their father in the cave of Machpelah (Gen., xxv, 28-29).

DANIEL P. DUFFY.

ESCH (ESCHIUS), NICOLAUS VAN, a famous mystical theologian, b. in Oisterwijk near Hertogenbosch (Bois-le-Duc), Holland, in 1507; d. 19 July, 1578. In 1580, after having studied the classics in the school of the Hieronymites, he entered the philosophical faculty at Louvain, but refused to take his doctor's degree. In 1538 he was ordained priest, and then settled in Cologne in order to devote himself to higher studies and the practice of Christian perfection. At the same time he became the private tutor of a number of young men, mainly university students. Blessed Peter Canisius and Lawrence Sturius are the most celebrated of his pupils.

In Cologne, too, he contracted a close friendship with several members of the Carthusian Order, among whom Johann Landsberger, Gerhard Hamontanus, and Theodorich and Bruno Loher are worthy of special mention. Though his feeble health did not allow him to pursue his studies, he fixed in his mind the example of the Order, and, having retired to a Carthusian monastery for a time, at least, and followed its rule of life as closely as possible. In 1538 Nicolaus was appointed pastor of the Béguines at Diest; after a year he surrendered his charge for a time, but took it up again with such success that after his death he was conferred the title of Father of the Order. He was also instrumental in founding several diocesan seminaries according to the rules laid down by the Council of Trent. Among his literary works the following are worthy of note: "Introductio in vitam inviroseram", which is really an introduction to a new edition of the "Templum animae" (Antwerp, 1563 etc.); "Exercitatio theologiae mysticae, seu exercitia quaedam pia, quae compendio hominem ad vitam perfectam instiituendum juvare possunt" (Antwerp, 1563). EUTER, Nomenclator (Freiburg, 1592); HERMANNI IN KILOBREDIAZON (Freiburg, 1592), IV, 488.

A. J. MAAS.

ESCHATOLOGY, that branch of systematic theology which deals with the doctrines of the last things (apokatastasis). The Greek title is of comparatively recent introduction, but in modern times it has been plante...
Tongas; while the Greenlanders, New Guinea negroes, and others seem to hold the possibility of a second death, in the other world or on the way to it. The next world itself is variously located—on the earth, in the skies, in the sun or moon—but most commonly underground; and there is given either as a dull and shadowy and more or less important existence, or as an active continuation in a higher or idealized form of the pursuits and pleasures of earthly life. In most savage religions there is no very high or definite doctrine of moral retribution after death; but it is only in the case of one of the most degenerate races that the condition is admitted to be the result of degeneration, that the notion of retribution is claimed to be altogether wanting. Sometimes mere physical prowess, as bravery or skill in the hunt or in war, takes the place of a strictly ethical standard; but, on the other hand, some savage religions contain unexpectedly clear and elevated ideas of some primary moral duties.

(2) Coming to the higher or civilized races, we shall glance briefly at the eschatology of the Babylonian and Assyrian, Egyptian, Indian, Persian, and Greek religions. Confucianism can hardly be said to have an eschatology, except the very indefinite belief involved in the worship of ancestors, whose happiness was held to depend on the conduct of their living descendants. Mohammedan eschatology contains nothing distinctive except the glorification of barbaric sensuality.

(a) Babylonian and Assyrian.—In the ancient Babylonian religion (with which the Assyrian is substantially identical) eschatology never attained, in the historical period, any high degree of development. Retribution is confined almost exclusively to the present life, virtue being rewarded by the Divine bestowal of strength, prosperity, long life, numerous offspring, and the like, and wickedness punished by contrary temporal calamities. Yet the existence of an hereafter is believed in. A kind of semi-material ghost, or shade, or double (ekimmu), survives the death of the body, and when the body is buried (or, less commonly, cremated) the ghost descends to the underworld to join the company of the departed. In the "Lay of Ishtar" this underworld, to which she descended in search of her deceased lover and of the "waters of life," is described in gloomy colours; and the same is true of the other classical descriptions. It is the "pit," the "land of no return," the "house of darkness," the "place where dust is their bread, and their food is mud"; and it is infested with demons, who, at least in Ishtar's case, are empowered to inflict various chastisements for sins committed in the upper world.

Though Ishtar's case is held by some to be typical in this respect, there is otherwise no clear indication of a doctrine of moral penalties for the wicked, and no promise of rewards for the good. Good and bad are involved in a common dismal fate. The location of the realm of the deceased is a subject of controversy among Assyriologists, while the suggestion of a brighter hope in the form of a resurrection (or rather of a return to earth) from the dead, which some would infer from the belief in the "waters of life" and from references to the Nergal, Marduk, or Mesopotamian, as death is a kind of trial, is an extremely doubtful conjecture. On the whole there is nothing hopeful or satisfying in the eschatology of this ancient religion.

(b) Egyptian.—On the other hand, in the Egyptian religion, which for antiquity competes with the Babylonian, we meet with a highly developed and comparatively elevated eschatology. Leaving aside such difficult questions as the relative priority and influence of different, and even conflicting, elements in the Egyptian religion, it will suffice for the present purpose to refer to what is most prominent in Egyptian eschatology taken at its highest and best. In the first place, then, life in its fullness, unending life with Osiris, the sun-god, who journeys daily through the underworld, even identification with the god, with the right to be called by his name, is what the pious Egyptian looked forward to as the ultimate goal after death. The degenerate religion of the "chest of the living," and the tomb the "lord of life." It is not merely the disembodied spirit, the soul as we understand it, that continues to live, but the soul with certain bodily organs and functions suited to the conditions of the new life. In the elaborate anthropomorphism which underlies Egyptian eschatology, we find the most highly developed system of personality. For, in the human soul, doctrine, we find the most carefully distinguished the soul of the human being, and the other constituent elements of the person are distinguished, the most important of which is the Ka, a kind of semi-material double; and to the justified who pass the judgment after death the use of these several constituents, separated by death, is restored.

This judgment which each undergos is described in detail in chapter xxv of the Book of the Dead. The examination covers a variety of personal, social, and religious duties and observances; the deceased must be able to deny his guilt in regard to forty-two great categories of sins, and his heart (the symbol of conscience and moral character) must stand up to be weighed in the balance against the image of Maat, goddess of truth and justice. The new life that begins after a favourable judgment is not at first any better or more spiritual than life on earth. The justified is, like a wayfarer with a long and difficult journey to accomplish before he reaches bliss and security in the fertile fields of Aaru. On this journey he is exposed to a variety of disasters, for the avoidance of which he depends on the use of his revivified powers and on the knowledge he has gained in life of the directions and magical charms recorded in the Book of the Dead and also, and perhaps most of all, on the aids provided by surviving friends on earth. It is they who secure the preservation of his corpse that he may return and use it, who provide an indestructible tomb as a home or shelter for his Ka, who supply food and drink for his sustenance, offer up prayers and sacrifices for his benefit, and aid his memory by inscribing on the walls of the tomb, or writing on rolls of papyrus enclosed in the wrappings of the mummy, chapters from the Book of the Dead. It does not, indeed, appear that the dead were ever supposed to reach a state in which they were independent of these earthly aids. At any rate they were always considered free to revisit the earthly tomb, and in making the journey to and fro the blessed had the power of transforming themselves at will into various animal-shapes. It was this belief which formed the degenerate stage at which he encountered it, Herodotas mistook for the doctrine of the transmigration of souls. It should be added that the identification of the blessed with Osiris ("Osiris N. N." as a usual form of inscription) did not, at least in the earlier and higher stage of Egyptian religion, imply pantheistic absorption in the deity or the loss of individual personality. Regarding the fate of those who fail in the judgment after death, or succumb in the second probation, Egyptian eschatology is less definite in its teaching. "Second death" and other expressions applied to them might seem to suggest annihilation; but it is clear from the evidence and from the notion that continued existence in a condition of darkness and misery was believed to be their portion. And as there were degrees in the happiness of the blessed, so also in the punishment of the lost (see Book of the Dead, tr. Budge, London, 1901).

(c) Indian.—In the Vedas, the earliest historical form of the Indian religion, eschatological belief is simpler and purer than in the Brahministic and Buddhist forms that succeeded it. Individual immortality is dearly taught. There is a kingdom of the dead under the rule of Yama, with distinct realms for the good and the wicked. The good dwell in a realm
of light and share in the feasts of the gods; the wicked are banished to a place of "nethermost darkness". Already, however, in the later Vedas, where these beliefs find developed expression, retribution begins to be ruled more by ceremonial observances than by strict justice. On the one hand, therefore, the Sanskrit law contains every trace as yet of the dreary doctrine of transmigration, but critics profess to discover the germs of later pantheism.

In Brahmism (q. v.) retribution gains in prominence and severity, but becomes hopelessly involved in transmigration, and is made dependent either on sacrificial observances or on theological knowledge. Though after death there are numerous heavens and hells for the reward and punishment of every degree of merit and demerit, these are not final states, but only so many preludes to further rebirths in higher or lower forms. Pantheistic absorption in Brahma, the world-soul and only reality, with the consequent extinction of individual personality—this is the only final solution of the problem of existence, the only salvation to which man may ultimately look forward. But it is a salvation which only a very few can attain: to reach after the close of the present life, the few who have acquired a perfect knowledge of Brahma. The bulk of men who cannot rise to this high philosophic wisdom may succeed, by means of sacrificial observances, in gaining a temporary heaven, but they are destined to further births and deaths.

In Zoroastrianism (Avesta, Persia) a great prophet was to bring a second and final reform of the world. In his Name, Ahura Mazda, the Holy One, the Unconditioned, the Perfect, the Immortal, the Eternal, the All-Pervading was to be worshipped. Ahura Mazda is the highest real of the universe; he is the supreme deity above all Ahriman and Ormuzd. Morality has its sanction not merely in future retribution, but in the present assurance that every good and pious deed is a victory for the cause of Ahura Mazda; but the call to the individual to be active in this cause, though vigorous and definite enough, is never quite free from ritual and ceremonial conditions, and as time goes on becomes more and more complicated by these observances, especially by the laws of purity. Certain elements are holy (fire, earth, water), certain other unholy or impure (the body, and all that leaves the body, etc.; and to defile oneself or the holy elements by contact with the impure is one of the deadliest sins. Consequently corpses could not be buried or cremated, and were accordingly exposed on platforms erected for the purpose, so that birds of prey might devour them. When the soul leaves the body it has to cross the bridge of Chinvat (or Kinavd), the bridge of the Gatherer, or Accountant. For three days good and evil spirits contend for the possession of the soul, after which the reckoning is taken, and the just man is rejoiced by the apparition, in the form of a fair maiden, of his good deeds, words, and thoughts, and passes over safely to a paradise of bliss; while the wicked man is confronted by a hideous apparition of his evil deeds, and is dragged down to hell. If the judgment is neutral the soul is reserved in an intermediate state (so at least in the Pahlavi literature) till the decision of the last day, as it appears in the later literature, has certain remarkable affinities with Jewish Messianic and millennial expectations.

A time during which Ahriman will gain the ascendancy is to be followed by two millennial periods, in each of which a great prophet will bring a better conception of the world, a "prophetic" period in which the good and the evil spirits are in conflict, and of which the latter will perish, all except Ahriman and the serpent Azhi, whose destruction is reserved to Ahura Mazda and Seroshah, the priest-god. And last of all hell itself will be purged, and the earth renewed by purifying fire.

(b) Greek.—Greek eschatology as reflected in the Homeric poems remains at a low level. It is only very vaguely retributive and is altogether cheerless in its outlook. Life on earth, for all its shortcomings, is the highest good for the individual: to save a dreary and endless cycle of deaths and rebirths is not a desirable end. Yet death is not extinction. The ψυχα survives—not the purely spiritual soul of later Greek and Christian thought, but an attenuated, semi-material ghost, or shade, or image, of the earthly man; and the life of this shade in the underworld is a dull, impoverished, almost functionless existence. Nor is there any distinction of fates either by way of happiness or of misery in Hades. The judicial office of Minos is illusory, and has nothing to do with earthly conduct; and there is only one allusion to the Furies suggestive of their activity among the dead (Iliad, XIX, 258-60). The lowest, the lower heaven, is a place of judgment and of punishment for those who have been born as criminals and have not heeded the laws of the gods, the Elysian Fields for a few special favourites chosen by divine caprice.

In later Greek thought touching the future life there are notable advances beyond the Homeric stage, but it is doubtful whether the average popular mind ever reached a much higher level. Among early philosophers Anaxagoras contributes to the notion of a purely spiritual soul; but a more directly religious contribution is made by the Eleusinian and Orphic Mysteries, to the influence of which in brightening and moralizing the hope of a future life we have just referred. In the Eleusinian Mysteries there seems to have been no definite doctrinal teaching—merely the promise or assurance for the initiated of the fullness of life hereafter. With the Orphic, on the other hand, the divine origin and pre-existence of the soul, for
which the body is but a temporary prison, and the doctrine of a retributive transmigration are more or less closely associated. It is hard to say how far the common belief of the people was influenced by these mysteries, but in poetical and philosophical literature their influence is unmistakable. This is seen especially in their effect among the poets, and in Plato especially in the philosophers. Pindar has a definite promise of a future life of bliss for the good or the initiated, and not merely for a few, but for all. Even for the wicked who descend to Hades there is hope; having purged their wickedness they obtain rebirth on earth, and if, during three successive existences, they prove themselves worthy of the boon, they will finally attain to happiness in the Isles of the Blest. Though Plato's teaching is vitiated by the doctrine of pre-existence, metempsychosis, and other serious errors, it represents the highest achievement of pagan philosophic speculation on the subject of the future life. The divine dignity, spirituality, and essential immortality of the soul being established, the issues of the future for every soul are made clearly dependent on its moral conduct in the present life in the body. There is a divine judgment after death, a heaven, a hell, and an intermediate state for penitent and purged, and rewards and punishments are graduated according to the merits and demerits of each. The incurably wicked are condemned to everlasting punishment in Tartarus; the less wicked or indifferent go also to Tartarus or to the Acherusian Lake, but only for a time; the just for goodness go to a happy home, the highest reward of all being for those who have purified themselves by philosophy.

From the foregoing sketch we are able to judge both of the merits and defects of ethnic systems of eschatology. Their merits are perhaps enhanced when they are presented, as above, in isolation from the other features of the religions to which they belonged. Yet their defects are obvious enough; and even of those that were most and most promising turned out, historically, to be failures. The precious elements of eschatology which contained in the Egyptian religion were associated with error and superstition, and were unable to save the religion from sinking to the state of utter degeneration in which it is found at the approach of the Christian Era. Similarly, the still richer and more profound eschatology of the Persian religion, which was dualism and other corrupting influences, and failed to realize the promise it contained, and has survived only as a ruin in modern Parseeism. Plato's speculative teaching failed to influence in any notable degree the popular religion of the Graeco-Roman world; it failed to convert even the philosophical few; and in the hands of those who did profess to adopt it, Platonism, uncorrected by Christianity, ran to seed in Pantheism and other forms of error.

II. OLD-TESTAMENT ESCHATOLOGY.—Without going into details either by way of exposition or of criticism, it will be sufficient to point out how Old-Testament eschatology concurred as to the what and how, notwithstanding its deficiencies in point of clearness and completeness, it was not an unworthy preparation for the fullness of Christian Revelation.

(1) Old-Testament eschatology, even in its earliest and imperfect form, shares in the distinctive character which belongs to O.-T. religion generally. In the first place, as a negative distinction, we note the entire absence of certain erroneous ideas and tendencies that have a large place in ethnic religions. There is no pantheism or dualism, no doctrine of pre-existence (Wisdom, viii, 17-20, does not necessarily imply this doctrine has been contended) or of metempsychosis; nor is there any trace, as might have been expected, of Egyptian ideas or practices. In the next place, on the positive side, the O. T. stands apart from ethnic religions in its doctrine of God, and of man in relation to God. Its doctrine of God is pure and un-compromising monothelism; the universe is ruled by the wisdom, justice, and omnipotence of the one, true God. And man is created by God in His own image and likeness, and destined to relations of friendship and fellowship with Him. Here we have revealed in clear and definite terms the basal doctrines which are at the root of eschatological truth; it is in the two chief defects, or limitations, which attach to the earlier eschatology and continue, by their persistence in popular belief, to hinder more or less the correct understanding and acceptance by the Jewish people as a whole of the highest eschatological utterances of their own inspired teachers.

(2) The first of these defects is the silence of the earlier and of some of the later books on the subject of moral retribution after death, or at least the extreme vagueness of such passages in these books as might be understood to refer to this subject. Death is not understood as the end of the world, and purgation of sin is not under the Hebrew thought is not very different from the Babylonian Aralé or the Hasmene Hades, except that Yahr is God even there. It is a dreary abode in which all that is prized in life, including friendly intercourse with God, comes to an end without any definite promise of renewal. The idea of death, clings to a man in Sheol, like the honour he may have won by a virtuous life on earth; but otherwise conditions in Sheol are not represented as retributive, except in the vengeant way. Not that a more definite retribution or the hope of a life of bliss is formally denied and excluded; it simply fails to find utterance in earlier O.-T. records. Religion is pre-eminently an affair of this life, and retribution works out here on earth. This idea, which to us seems so strange, must, to be fairly appreciated, be taken in conjunction with the national as opposed to the individual viewpoint (see under (3) of this section); and allowance must also be made for its pedagogic value for a people like the early Hebrews. Christ Himself explains why Moses permitted divorce ("by reason of the hardness of your heart")—Matt., xix, 8); revelation and legislation had to be tempered to the capacity of a singularly practical and unimaginative people, who were more effectually confirmed in the worship and service of God by a vivid sense of His retributive providence here on earth than they would have been by a higher and fuller doctrine of future immortality with its postponement of moral awards. Nor must we exaggerate the insufficiency of this early point of view. It gave a deep religious value and significance to every event of the present life, and raised morality above the narrow, utilitarian standpoint. Not worldly prosperity as such was the ideal of the pious Israelite, but prosperity bestowed by God as the gracious reward of fidelity in keeping His Commandments. Yet, when all has been said, the inadequacy of this belief for the satisfaction of individual aspirations must be admitted; and this inadequacy was bound to produce itself sooner or later in experience. The substitution of the national for the individual standpoint could not indefinitely hinder this result.

(3) The tendency to sink the individual in the nation and to treat the latter as the religious unit was one of the most marked characteristics of Hebrew faith. And this helped very much to support and prolong the other limitation just noticed, according to which retribution was looked for in this life. Deferred and disappointed personal hopes could be soothed by the thought of their present or future realization in the nation. It was only when the national calamities, culminating in the exile, had shattered for a time the
people's hope of a glorious theocratic kingdom that the eschatology of the individual became prominent; and with the restoration there was a tendency to revert to the national point of view. It is true of the O.T. as a whole that the eschatology of the people is the one of the wilds, by reason of the contrast of the individual, though it is true at the same time that, in and through the former, the latter advances to a clear and definite assurance of a personal resurrection from the dead, at least for the children of Israel who are to share, if found worthy, in the glories of the Messianic Age.

It is beyond the scope of this article to attempt to trace the growth or describe the several phases of this national eschatology, which centres in the hope of the establishment of a theocratic and Messianic kingdom on earth (see Messias). However spiritually this idea may be found expressed in O.T. prophecies, as we read them now in the light of their progressive fulfilment in the N.T. Dispensation, the Jewish people as a whole clung to a material and political interpretation of the kingdom, coupling their own domination as a people with the triumph of God and the worldwide establishment of His rule. There is much, indeed, to account for the obscurity of the prophecies though.

The Messias as a distinct person is not always mentioned in connexion with the inauguration of the kingdom, which leaves room for the expectation of a theophany of Jahve in the character of judge and ruler. But even when the person and place of the Messias are described, he is overshadowed, the fulness of what we have learned to distinguish as His first and second coming tends to give to the whole picture of the Messianic kingdom an eschatological character that belongs in reality only to its final stage. It is thus the resurrection of the dead in Isaïes, xxvii, 19, and Daniel, xii, 2, is introduced among the descriptions foretelling 'the day of the Lord', the judgment on Jews and Gentiles, the renovation of the earth and other phenomena that usher in that day, while applicable in a limited sense to contemporary events and to the inauguration of the Christian Era, are much more appropriately understood at the end of the world. It is not, therefore, surprising that the religious hopes of the Jewish nation should have become so predominantly eschatological, and that the popular imagination, foreshortening the perspective of Divine Revelation, should have learned to look for the event (the resurrection of the dead) on earth of God, which Christians are assured will be realized only in heaven at the close of the present dispensation.

(4) Passing from these general observations which seem necessary for the true understanding of O.T. eschatology, a brief reference may be made to the passages which exhibit the growth of a higher and fuller doctrine of immortality. The recognition of individual as opposed to mere corporate responsibility and retribution may be reckoned, at least remotely, as a gain to eschatology, even when retribution is confined chiefly to this life; and this principle is repeatedly recognized in the earliest books (see Gen., xxvi, 25; Ex., xxxii, 33; Num., xvi, 22; Deut., vii, 10; xxiv, 16; II K., xxiv, 17; IV K., iv, 6; Is., iii, 10 sq.; xxxiii, 15 sq.; Jer., xii, 1 sq.; xvii, 5–10; xxxii, 18 sq.; Ezek., xiv, 12–20; xviii, 4, 18 sq.; Psalms, passim, Prov., ii, 21 sq.; xi, 2; xi, 19, 31; etc.) It is recognized also in the very terms of the problem dealt with in the Book of Job.

But, coming to higher things, we find in the Psalms and in Job the clear expression of a hope or assurance for the just of a life of blessedness after death. Here is voiced, under Divine inspiration, the innate craving for a righteous soul (for detailed fullest of the wicked, the protest of a strong and vivid faith against the popular conception of Sheol. Omitting doubtful passages, it is enough to refer to Psalms xv (A.V. xvi), xvi (A.V. xvii), xlviii (A.V. xlix), and lxxi (A.V. lxxiii). Of these it is not impossible to explain the first two as prayers for deliverance from some imminent danger of death, but the assurance they express is too absolute and universal to admit this interpretation as the most natural. And this assurance becomes still more definite in the other two, the contrast of the just and the wicked, and it is asserted to introduce between the fates of the just and the impious. The same faith emerges in the Book of Job, first as a hope somewhat questionably expressed, and then as an assured conviction. Despairing of vindication in this life and rebelling against the thought that the righteous should die as an accursed, the sufferer seeks consolation in the hope of a renewal of God's friendship beyond the grave: "O that ye wouldst hide me in Sheol, that ye wouldst keep me secret, until ye wrath be past, that ye wouldst appoint me a set time, and remember me. If a man die, shall he live again? All the days of my warfare would I wait, till my release should come" (xvii, 13 sq.). In xxxi, 18–xvii, 9, the expression of this hope is more absolute; and in xix, 23–27, it takes the form of a definite certainty that he will see God, His Redeemer: "But I know that my Redeemer liveth and that after this my departure he shall awake: some unto everlasting life, and others unto everlasting shame and contempt," etc., it is clearly a personal resurrection that is taught—Isaïes a resurrection of righteous Israelites; in Daniel, of both the righteous and the wicked. The judgment, which in Daniel is connected with the resurrection, is also personal; and the same is true of the judgment of the living (Jews and Gentiles) which in various forms the prophecies connect with the "day of the Lord". Some of the Psalms (e.g. xlvi) seem to imply a judgment on individuals after death; and the certainty of a future judgment of "every work, whether it be good or evil!", is the final solution of the moral enigmas of earthly life offered by Ecclesiastes (xvii, 13–14; cf. iii, 17). Coming to the later (deuterocanonical) books of the O.T., we have clear evidence in II Mach. of Jewish faith not only in the resurrection of the body (vii, 9–14), but in the efficacy of prayers and sacrifices for the dead who have died in godliness (xii, 43 sqq.). And in the second and first centuries B.C., in the Jewish apocalyptic literature, new eschatological developments appear, chiefly in the direction of a more definite doctrine of retribution after death. The word Sheol is still most commonly understood of the general abode of the departed awaiting the resurrection, this abode having different divisions for the reward of the righteous and the punishment of the wicked; in reference to the latter, Sheol is sometimes simply equivalent to hell. Gehenna is the name usually applied to the final place of punishment of the wicked after the last judgment, or even immediately after death; while paradise is often used to designate the intermediate abode of the souls of the just, and heaven their home on earth. See also apocalyptic literature as described by Charles, article "Eschatology" in "Encycl. Biblica", §§ 63, 70. Christ's use of these terms shows that the Jews of His day were sufficiently familiar with their N.-T. meanings.

III. Catholic Eschatology.—In this article there
is no critical discussion of N.-T. eschatology nor any attempt to trace the historical developments of Catholic teaching from Scriptural and traditional data; only a brief conspectus is given of the developed Catholic system. For critical and historical details and for the refutation of those who are punished for their errors the reader is referred to the special articles dealing with the various doctrines. The eschatological summary which speaks of the “four last things” (death, judgment, heaven, and hell) is popular rather than scientific. For systematic treatment it is best to distinguish between (A) individual and (B) universal and cosmic eschatology, including under (A): (1) death; (2) the particular judgment; (3) heaven, or eternal happiness; (4) purgatory, or the intermediate state; (5) hell, or eternal punishment; and under (B): (6) the approach of the end of the world; (7) the resurrection of the body; (8) the general judgment; and (9) the final consummation of all things. The superiority of Catholic eschatology consists in the fact that, without professing to answer every question that idle curiosity may suggest, it gives a clear, consistent, satisfying statement of all that need at present be known, or can profitably be understood, regarding the eternal issues of life and death for each man, personally, and the final consummation of the cosmos of which we are a part.

(A) Individual Eschatology.—(1) Death, which consists in the separation of soul and body, is presented under many aspects in Catholic teaching, but chiefly (a) as being actually and historically, in the present crisis of society, the consequence of the original sin and penalty of Adam’s sin (Gen., ii, 17; Rom., v, 12, etc.); (b) as being the end of man’s period of probation, the event which decides his eternal destiny (II Cor., v, 10; John, ix, 4; Luke, xii, 40; xvi, 19 sqq.; etc.), though it does not obviate immediate states of purification for the imperfect who die in God’s grace; and (c) as being universal, though as to its absolute universality (for those living at the end of the world) there is some room for doubt because of I Thess., iv, 14 sqq.; I Cor., xv, 51; II Tim., iv, 1, and the end of the Apocalypse (Mark, xiii, 32; Acts, i, 6 sqq.), and in the teaching of the Council of Florence (Denzinger, Enchiridion, no. 588) regarding the speedy entry of each soul into heaven, purgatory, or hell. (See Purgatory.)

(3) Heaven is the abode of the blessed, where (after the resurrection with glorified bodies) they enjoy, in the company of Christ and the angels, the immediate vision of God face to face, being supernaturally elevated by the light of glory so as to be capable of such a vision. There are infinite degrees of glory corresponding to degrees of merit, but all are unspeakably happy in the eternal possession of God. Only the perfectly pure and holy can enter heaven; but for those who have attained that state, either at death or after a course of purification in purgatory, entry into heaven is not deferred, as has sometimes been erroneously held, till after the General Judgment. (4) Purgatory is the intermediate state of unknown duration in which those who die imperfect, but not in unrepented mortal sin, undergo a course of penitential purification to qualify for admission into heaven. They share in the communion of saints (q. v.) and are benefited by our prayers and good works (see Dead, Prayers for the). The denial of purgatory by the Reformers introduced a dismal blank in their eschatology and, after the manner of extremes, has led to extreme reactions. (See Purgatory.)

(5) Hell, in Catholic teaching, designates the place or state of men (and angels) who, because of sin, are excluded for ever from the Beatific Vision. In this wide sense it applies to the state of those who die with only original sin on their souls (Council of Florence, Denzinger, no. 558), although this is not a state of misery or of subjective punishment of any kind, but merely implies the objective privation of supernatural bliss, which is compatible with a condition of perfect natural happiness. But in the narrower sense in which the name is ordinarily used, hell is the state of those who are punished eternally for unrepented personal mortal sin. Beyond affirming the existence of such a state, with varying degrees of punishment corresponding to degrees of guilt and its eternal or unending duration, Catholic doctrine does not go. It is a terrible and mysterious truth, but it is clearly and emphatically taught by Christ and the Apostles. Fundamentalists may deny the eternity of that which is separate from the authority of Christ, and professing, who are unwilling to admit it, may try to explain away Christ’s words; but it remains as the Divinely revealed solution of the problem of moral evil. (See HELL.) Rival solutions have been sought in some form of the theory of resurrection or, less commonly, in the theory of annihilation or conditional immortality. The restorationist view, which in its Origenist form was condemned at the Council of Constantineople in 543, and later at the Fifth General Council (see Apostataes), is the cardinal dogma of modern Universalists and most liberal Protestants and Anglicans. Based on an exaggerated optimism for which present experience offers no guarantee, this view assumes the all-conquering efficacy of the ministry of grace in a life of probation after death, and looks forward to the ultimate destruction of all sinners and the voluntary disappearance of moral evil from the universe. Annihilationists, on the other hand, failing to find either in reason or Revelation any grounds for such optimism, and considering immortality itself to be a grace and not the natural attribute of the soul, believe that the finally repentant will be annihilated or cease to exist—that God will thus ultimately be compelled to confess the failure of His purpose and power.

(B) Universal and Cosmic Eschatology.—(6) Notwithstanding Christ’s express refusal to specify the time of the end (Mark, xiii, 32; Acts, i, 6 sqq.), it was a common belief among early Christians that the end of the world was near. This seemed to have some support in certain sayings of Christ in reference to the destruction of Jerusalem, which are set down in the Gospels side by side with prophecies relating to the end (Matt., xxiv, Luke, xi, xvii), and in certain passages of the Apocalypse, which might, not unnaturally, have been so understood (but see II Thess., ii, 2 sqq., where St. Paul corrects this impression). On the other hand, Christ had clearly stated that the Gospel was to be preached to all nations before the end (Matt., xxiv, 14), and St. Paul looked forward to the ultimate conversion of the Jewish people as a remote event to be preceded by the conversion of the Gentiles (Rom., xi, 25 sqq.). Various other signs are spoken of as preceding or ushering in the end, as a great apostasy (II Thess., ii, 3 sqq.), or falling away from faith or charity (Luke, xvii, 8; Matt., xxiv, 12), the reign of Antichrist (q. v.), and great social calamities and terrifying physical convulsions. Yet the end will come unexpectedly and take the living by surprise.

(7) The visible coming (parousia) of Christ in power and glory will be the sign of the rising of the dead (see Resurrection). It is Catholic teaching that all the dead who are to be judged will rise, the wicked as well as the just, and that they will rise with the bodies they had in this life. But nothing is defined as to what is required to constitute this identity of the risen with the present body. Though not formally defined, it is sufficiently certain that there is to be only one general resurrection, simultaneous for the good and the bad. (See Millennium.) Regarding the qualities of the risen bodies in the case of the just we have St. Paul’s description in I Cor., xv (cf. Matt., xiii, 43; Phil., iii, 21) as a basis for theological
speculation; but in the case of the damned we can only affirm that their bodies will be incorruptible.

(8) Regarding the general judgment there is nothing of importance to be added here to the graphic description of the event given by Christ Himself, who is to be Judge (Matt., xvi, etc.). (See Judgment, General.)

(9) There is mention also of the physical universe sharing in the general consummation (II Pet., iii, 13; Rom., viii, 19 sqq.; Apoc., xxii, 1 sqq.). The present heaven and earth will be destroyed, and a new heaven and earth take their place. But what, precisely, this purging will involve, or what purpose the vast and awful plan of God will serve is not revealed. It may possibly be part of the glorious Kingdom of Christ of which “there shall be no end”. Christ’s militant reign is to cease with the accomplishment of His office as Judge (I Cor., xv, 24 sqq.), but as King of the elect whom He has saved He will reign with them in glory for ever.

A good bibliography of older works is given in Alzler, A Critical History of the Doctrine of the Future Life with complete Bibliography by Ezra Abbott (New York, 1871). See also: Christian Doctrine of Immortality (5th ed., Edinburgh, 1903)—very complete; OVERBECK, The Doctrine of the Last Things (London, 1877); for Christian eschatology the reader is referred to a fuller bibliography to the special articles on the various religions mentioned; it is enough to refer here, for the lower races, to publications in Luzon, On the Origin of Civilizations in the Primitive Condition of Man (3rd ed., London, 1880); Tylor, Primitive Religion (3rd ed., London, 1891); REVILLE, Religions des peuples non-civilisés (Paris, 1853); for higher races, to HALSTED, Religion of Babylonia and Assyria (Boston, 1885); J. KRAMER, Die babyloniisch-assyrischen Verstehungen der Ewigkeit (Leipzig, 1891); and stand nach dem Tode (Leipzig, 1887); BUDGE, Egyptian Ideas of the Future Life (London, 1903); PETRIE, Religion and Con science in the Ancient Egypt (London, 1884); STUART, The Religion of Ancient Egypt and Babylonia (Gifford Lectures, 1911); DILL, Religion in Babylonia and Assyria (London, 1882); JACOBS, Josephus, the Prophet of Ancient Israel (New York, 1888); ROIDE, Psuche, Seelenbund and Unterleibsbiographie der Griechen (2nd ed., Freiburg, 1905); besides general works on ancient religions like those of TIELE, DE LA SAUMOY, etc. For biblical eschatology see:ABBREVIATIONS IN BIBLE, DICTIONARY OF BIBLE, ARTICLES, v. s. CHARLES, Christian History of the Doctrine of a Future Life in Israel, in Judaism and in Christianity (London, 1899); I. FREIMANN, Messianismus, v. s. (this author is to be read with caution; he is extremely arbitrary in dating and interpreting documents); ANDERBERG, Die christliche Eschatologie in den Heiligen Schriften der Kirche und der neuen Testaments (Freiburg in Br., 1890); MANGORET, Les Quatre Monde en V., Dict. de la Bible. For the history of Catholic eschatology see ANDERBERG, Geschichte der christlichen Eschatologie innerhalb der eomini schen Zeit (Freiburg in Br., 1890); and for modern eschatological problems and controversies see bibliography of the several articles referred to in the last section of this article.

P. J. TONER.

Eskenhach, Wolfram von. See Wolfram.

Eschobar, Marina de, Venerable, mystic and foundress of a modified branch of the Brigittine Order b. at Valladolid, Spain, 8 Feb., 1534; d. there 9 June, 1633. Her father, Iago de Eschobar, was professor of civil and canon law and for a time governor of Osuna, a man noted for his learning and his saintly life, her mother was Margaret Montana, daughter of Charles V’s physician. She was an apt scholar and even in youth showed powers of reflection beyond her age. Until her forty-fifth year her attention was given mainly to her own perfection, then she devoted herself more to promoting the piety of others. At fifty her continual bodily afflictions became so severe that she was confined to her bed for the remainder of her life. Providence provided her with an admirable spiritual guide, in the Venerable Luis de Ponte (1554-1624). The special external work entrusted to her was to establish a branch of the Order of the Holy Saviour or of Brigittines but with the rules greatly modified to suit the times and the country. With the revelation of the work came the knowledge that she would not live to see its accomplishment. By divine command, as she believed, she wrote her revelations, and when too feeble to write herself she dictated them. When she was too weak to dictate them she had them left for publication after her death. In his preface he declares his belief in their genuineness because she advanced in virtue and was preserved free from temptations against purity, showed no pride, and had peace in prayer, feared deception, desired no extraordinary favours, loved suffering, was zealous for souls and, lastly, was obedient to her confessor. The writings were published in one large volume and are divided into six books containing his remarks and her own, interspersed between the visions themselves. Book I relates the visions she had when she was sixteen years old which God had led her; II contains revelations about the mysteries of redemption; III about God and the Blessed Trinity; IV about Guardian Angels and the B. V. Mary’s prerogatives; V gives means to help souls in purgatory and to save souls on earth; and VI reveals her perfection as shown under terrible sufferings. The style of the work is free and flowing and she speaks with simplicity and naive frankness. The visions, always picturesque, and pleasing or alarming according to their subject, are all instructive and at times distinctly curious; but the descriptions are mere outlines, leaving much to the imagination, and never going into details. Their variety is great. For some the following would have special interest: Daily communion and Satan’s objection to it; mystic espousals; how the bodies of saints can appear in visions; internal stigmata; some saints with whom modern magiciansartehave dealt harshly; how Christ’s Blood is given to the dying. Their brevity of detail may account in part for the oblivion into which they have fallen. Her life, so far as de Ponte had prepared it, was published at Madrid in 1664; the second part appeared there in 1673. It was translated into Latin by M. Hanel, S. J., and published again at Prague in 1672-1688, and in an enlarged edition at Naples 1690. All these editions are now very rare. A German translation, in four volumes, appeared in 1861. (See BRIGITTEINES.)

EDWARD P. GRAHAM.

Escobar y Mendoza, Antonio, b. at Valladolid in 1589; d. there 4 July, 1669. In his sixteenth year he entered the Society of Jesus. Talent and unriviling labour won him distinction for scholarship among the leaders of ecclesiastical science in his age. His writings are recognized as his classical and characteristically Jesuit writings are as far as their orthodoxy is concerned. For this reason Pascal’s efforts (fifth and sixth Provincial Letters) to fasten the charge of laxism on Escobar’s “Manual of Cases of Conscience”, together with his unerring insinuations of adroit hypocrisy on Escobar’s part, and too base and cowardly a conclusion. At the same time, it is only fair to add that Escobar’s writings are not entirely beyond the pale of criticism. Unprejudiced critics find him inexact in quotations, subtle in discussion, obscure and loose in reasoning. Besides the “Manual”, Escobar’s chief works are: “Summulae casuum confessionis” (Paris, 1610); “Examen et praxis confessarii” (Lyons, 1647); “Thesologia moralis” (Lyons, 1650; Venice, 1652); “Universe theologicae morales sententiae” (Lyons, 1663); “De triplici statu Ecclesiae” (Lyons, 1663); “De Justitia et de legibus” (Lyons, 1663).

Escobar was also a preacher of note. For fifty consecutive years he delivered a series of Lenten sermons with signal success.

J. D. O’NEILL.

Escarial, The, a remarkable building in Spain situated on the south-eastern slope of the Sierra Guadarrama about twenty-seven miles north-west of Madrid. Its proper title is El real Monasterio de San Lorenzo del Escorial, Escorial being the name of a small town in the vicinity. The structure comprises a monastery, church, pantheon or royal mausoleum, a palace intended as summer and autumn residence of the court, college, library, art-galleries, etc., and is called by Spaniards the eighth wonder of the world. It was begun in 1563, at the order of Philip II, by the
architect Juan Bautista de Toledo, assisted by Lucas de Esquital and Pedro de Tolosa, and was intended to commemorate the Spanish victory over the French at the battle of St.-Quentin in 1557. Probably another reason was that Philip II was obliged by the will of Charles V for the construction of a royal mausoleum.

Bautista’s plan was ambitious and eccentric; he was influenced by Renaissance ideals and used the Doric style in its severest forms. He died in 1557 and was succeeded by Juan de Herrera and Juan de Mijone. The plan of the building is somewhat in the shape of a gable, which was thought to be appropriate for the mausoleum of his patron saint, St. Laurence, upon whose feast day, 10 August, the battle of St.-Quentin was fought. The church was consecrated in 1586, and the pantheon was completed in 1654. Charles III built some additions and the building generally was restored under Ferdinand VII. The Escorial has twice been devastated by fire, and in 1807 it was looted by the French troops. It is built of a light-coloured stone resembling granite, for the most part highly polished. The general plan is a parallelogram with a perimeter of 3000 feet; its area is about 360,000 square feet. There are four domes, one of the finest external expression which is given to the southern side. The western or principal front is 744 feet long and 72 feet high, while the towers at each end rise about 200 feet. The main entrance is in the centre of this façade. Moncrogo’s figure of Saint Laurence stands above the door. The vestibule is about eight feet high and leads into an antechamber. To the right are the library, refectory, and convent; the college is on the left. The church is the finest of the several buildings contained within the walls of the Escorial. Its tall towers on either side, the immense dome, with its superimposed massive lantern and cross, and the portals of the vestibule, all belong to the Renaissance style. The church is of stone throughout, huge in plan, and severe in its Doric simplicity. Pompeo Leoni designed and cast the metal statues that ornament the splendid screen. A hall behind the ante-choir is known as the library. On the south side of the church is the Court of the Evangelista, a square of 166 feet with two-storied cloisters in the Grecian style. Adjoining it is the monastery of Saint Laurence. Both the monastery and the church were served by Hieronymite monks until 1533; in 1835 Augustinians took charge. The Augustinian monks also conduct the college, the building of which formed an important part of the structure. On 10 February, 1909, a fire destroyed this college. The small room which Philip II occupied during the latter part of his life and in which he died adjoins the choir of the church. Through an opening in the wall he could see the celebration of the Mass when ill. The corridor of the Hall of the Caryatides is supposed to represent the handle of the gridiron.

The Escorial is a treasure-house of art and learning. The civilized world was searched to stock the library with great books and fine manuscripts. Greeks, Arabs, and Palestine contributed, and the collection was at one time the finest in Europe, the Arabic documents being among the most remarkable of the manuscripts. From the Inquisition the library received about one hundred and forty works. It contains 7000 engraved plates and 300 volumes, including 1027 manuscripts among the last named are 1566 Arabic, 582 Greek, and 73 Hebrew manuscripts, besides 2036 in Latin and other languages (cf. Casiri, Bibliotheca arab.-hisb. Esg., Madrid, 1700–1770, 2 vols.). Among its manuscript treasures are a copy of the Gospels illuminated in Frankish style, and the Apocryphal Gospels of the Apocalypse, a very fine copy of 9 vols. The manuscript and the book were in 1628 given to the Royal Library by Philip IV, who was deeply interested in the Escorial. The manuscript is illuminated in the style of the 13th century, and was written in the 14th century for the King of France. It is a fine example of the Escorial style of illumination, and is one of the finest manuscripts in existence. It contains 4077 manuscripts, among which are compositions of the monks, del Valle, Torrijos, and Corduba, besides many of the musical works of Antonio Soler. The most important tapestries of the Escorial are in the palace; many of them were designed by Goya and Maella. The weaving was done chiefly in Madrid, but those designed by Teniers were made in Holland. Since 1837 the finest pictures of the large collection of paintings have been placed in the museum at Madrid. Among the famous artists whose works were or still are in the Escorial are: Carducci, Giordan, Goya, Holbein, Pan- toja, Hernández, Ribera, Teniers, Tintoretto, Titian, Velázquez, Zuccaro, Zurbarán.

THOMAS H. POOLE.

**ESDRAS**

I. A famous priest and scribe connected with Israel’s restoration after the Exile. The chief sources of information touching his life are the canonical books of Esdras and Nehemiah. A group of apocryphal writings is also much concerned with him, but they can hardly be relied upon, as they relate rather the legendary tales of a later age. Esdras was of priestly descent and belonged to the line of Sadoc (1 Esdr., vii, 1–5). He styles himself “son of Saraias” (vii, 1), an appellation which is not altogether understood in a broad sense, as purporting that Saraias, the chief priest, spoken of in IV K., xxxv, 18–21, was one of Esdras’ ancestors. Nevertheless he is known rather as “the scribe” than as “priest”: he was “a ready scribe [a scribe skilled] in the law of Moses”, and therefore qualified for the task to which he was destined among his people.

The chronological relation of Esdras’s work with that of Nehemiah is, among the questions connected with the history of the Jewish Restoration, one of the most mooted. Many Biblical scholars still cling to the view suggested by the traditional order of the sacred text (due allowance being made for the break in the narrative—1 Esdr., iv, 6–23), and place the mission of Esdras before that of Nehemiah. Others, among whom we may mention Professor Van Hooacker of Louvain, Dr. T. K. Cheyne in England, and Professor C. F. Kent in America, to do away with the numberless difficulties arising from the interpretation of the main sources of this history, maintain that Nehemiah’s mission preceded that of Esdras. The former view holds that Esdras came to Jerusalem about 438 B.C., some 50 years before Nehemiah first arrived; and the second view that Nehemiah preceded Esdras, and the mission of Esdras’s might have taken place as late as 397 B.C. However this may be, since we are here concerned only with Esdras, we will limit ourselves to summarizing the principal features of his life and work, without regard to the problems involved, which it suffices to have mentioned.

Many years had elapsed after permission had been given to the Jews to return to Palestine; amidst difficulties and obstacles the restored community had settled down again in their ancient home and built a new temple; but their condition, both from the political and the religious point of view, was most precarious: they chafed under the oppression of the Persian satraps and had grown indifferent and unobservant of the Law. From Babylon, where this state of affairs was well known, Esdras languard to go to Jerusalem and use his authority as a priest and interpreter of the Law to restore things to a better condition. He was in favour at the court of the Persian king; he not only obtained permission to visit Judea, but a royal edict clothing him with ample authority to carry out his purpose, and ample support from the royal treasury. This edict, moreover, ordered the satraps “beyond the river” to assist Esdras liberally and enabled that all Jewish temple officials should be exempt from toll, tribute, or custom. “And thou, Esdras, appoint judges and magistrates, that they may judge all the people, that is beyond the river” (I Esdr., vii, 25). Finally, the Law of God and the law of the king were
like to be enforced by severe penalties. The edict left all Jews who felt so inclined free to go back to their own country. Some 1800 men, including a certain number of priests, Levites, and Nethinathes, started with Esdras from Babylon, and after five months the combined Jewish life was laid down by him, and in a way in which, in the main, it never departed. There is probably a great deal of truth in the tradition which attributes to him the organization of the synagogues and the determination of the books hallowed as canonical among the Jews. Esdras's activity seems to have proceeded still further. He is credited by the Talmud with having compiled his own book (that is to say Esd.-Nehem.), and the genealogies of the book of Chronicles as far as himself" (Treat. "Baba bathra", 15th). Modern scholars, however, differ widely as to the extent of his literary work: some regard him as the last editor of the Hexateuch, whereas, on the other hand, his part in the composition of Esdras-Nehemias and Paralipomenon is doubted. At any rate, it is certain that he had nothing to do with the composition of the so-called Third and Fourth Books of Esdras. As is the case with many men who take an important part at an epoch of Historical events, in the course of time Esdras's personality and activity assumed, in the minds of the people, gigantic proportions; legend blended with history and supplied the scantiness of information concerning his life; he was looked upon as a second Moses to whom were attributed all institutions which could not possibly be ascribed to the former. According to Jewish traditions, he restored from memory—an achievement little short of miraculous—all the books of the O.T., which were believed to have perished during the Exile; he likewise replaced, in the copying of Holy Writ, the writing by the hand still in use. Until the Middle Ages, and even the Renaissance, the crop of legendary achievements attributed to him grew up; it was then that Esdras was hailed as the organizer of the famous Great Synagogue—the very existence of which seems to be a myth—and the inventor of the Hebrew vocal signs. 

II. Books of Esdras.—Not a little confusion arises from the titles of these books. Esdras A of the Septuagint is III Esdras of St. Jerome, whereas the Greek Esdras B corresponds to I and II Esdras of the Vulgate, which were originally united into one book. Protestant writers, after the Geneva Bible, call I and II Esdras of the Vulgate respectively Ezra and Nehemiah, and III and IV Esdras of the Vulgate respectively I and II Esdras. It would be desirable to have uniformity of titles. We shall follow here the terminology of St. Jerome.

1 Esdras (Gr. Esdras B, first part; A.V. Ezra).—A remarkable book, highly important in the Jewish canon, together with II Esdras, a single volume. But Christian writers of the fourth century adopted the custom—the origin of which is not easy to assign—of considering them as two distinct works. This custom prevailed to such an extent that it found its way even into the Hebrew Bible, where it has remained in use. Protestant writers, after the Geneva Bible, call I and II Esdras of the Vulgate respectively Ezra and Nehemiah, and III and IV Esdras of the Vulgate respectively I and II Esdras. It would be desirable to have uniformity of titles. We shall follow here the terminology of St. Jerome.
posed as fairly expressing its contents. Should these books be regarded as independent, or as parts of a larger work? There is little discussion as to the union of I and II Esd., which may well be considered as a single book. As to the opinion holding Esd.--Neh. and Par. to be only one work, although it seems gaining ground among Biblical students, yet it is still strongly opposed by many who deem its arguments unable to outweigh the evidence in the opposite direction. We should not expect to find in I Esd., any more than in II Esd., a complete account of the events connected with the Restoration, even a complete record of the lives of Esdras and Nehemias. The reason for this lies in the author's purpose of simply narrating the principal steps taken in the re-establisment of the theocracy in Jerusalem. Thus, in two parallel parts, our book deals (1) with the return of the Jews under the leadership of Zorobabel; (2) with the return of another band commanded by Esdras. In the former, with the decree of Cyrus (i, 1-4) and the enumeration of the most prominent members of the caravan (ii), we read a detailed account of the rebuilding of the Temple and its successful completion, in spite of bitter opposition (iii-vi). The events therein contained cover twenty-one years (536-515). The latter deals with facts belonging to a much later date (458 or 397). Opening with the decree of Artaxerxes (vii) and the census of the members of the party, it briefly relates the journey across the desert (viii), and gives all the facts connected with the enforcement of the law of marriages with foreign women (ix-x).

I Esd. is a compilation the various parts of which differ in nature, in origin, and even in language. At least three of the parts may be recognized: (1) the personal memoirs of Esdras (vii, 27-ix, 15); (2) lists very likely furnished by reliable documents (ii, 1-70; viii, 1-5); (3) Aramaic writings (iv, 7-16; vii, 12-26), supported with some probability to be a portion of a more comprehensive history of the restored community (Stade). These compilers put together into the present shape, adding, of course, now and then some remarks of their own or comments borrowed from sources otherwise unknown to us. This compilatory character does not, as some might believe, lessen in any way the high historical value of the work. True, the compiler was very likely not endowed with a keen sense of criticism, and he has indiscriminately transcribed side by side all his sources "as if all were alike trustworthy" (L. W. Batten); but we should not forget that he has preserved to us pages of the highest value; even those that might be deemed of inferior trustworthiness are the only documents available with which to reconstruct the history of those times; and the compiler, even from the standpoint of modern scientific research, could hardly do anything more praiseworthy than place within our reach, as he did, the sources of information at his disposal. The composition of the work has long been attributed without discussion to Esdras himself. This view, taught by the Talmud, and still admitted by scholars of good standing, is however, contradicted by several modern Biblical students, who, although their opinions are widely at variance on the question of the date, fairly agree, nevertheless, that the book is later than 330 B. C.

II Esd. See NEHEMIAH.

III Esdras (Gr. Esdras A; Prot. writers, I Esdras).—Although not belonging to the Canon of the Sacred Scriptures, this book is usually found, ne prorsus interret, in an appendix to the editions of the Vulgate. It is made up almost entirely from materials existing in the canonical books. The following scheme will show sufficiently the contents and point out the canonical parallels:

III Esd., i.—II Par., xxxv, xxxvi.—History of the Kingdom of Judah from the great Passover of Josias to the Captivity.
ion, the thirteenth year after the destruction of Jerusalem (the date given is wrong by about a century). In the first vision (iii, 1–v, 20), Esdras is lamenting over the affliction of his people. Why does not God fulfill his promises? Is not Israel the elect nation, and better end, despite her "evil heart" and her heathen labours? The Angel Uriel chides Esdras for inquiring into things beyond his understanding; the "prophet is told that the time that is past exceeds the time to come, and the signs of the end are given him.—In another vision (v, 21–vi, 34), he learns, with new signs of the end, why God "doth not" do as the prophet had desired. Then follow (vi, 35–ix, 25) a glowing picture of the Messianic age. "My son" shall come in his glory, attested by those who did not taste death, Moses, Henoch, Elias, and Esdras himself; they shall reign 400 years, then "my son" and all the living shall die; after seven days of "the old silence", the Resurrection and the Judgment.—Next (ix, 26–x, 14) Kadosh, the second chapter, furnishes the verse Reminissenz, or the Office of the Dead (25–25), the response Lux perpetua lucet in the Office of the Martyrs during Easter time (35), the introit Accepe jubitatem for Whitsunday (36–37), the words Modo coronatorum of the Office of the Apostles (45); in like manner the verse Christi die for Christmas eve, is borrowed from xvi, 53. However beautiful and popular the book, its origin is shrouded in mystery. The introductory and concluding chapters, containing evident traces of Christianity, are assigned to the third century (about A.D. 250). The main portion (i–xii) is understood to be the story of a Jew—whether Roman, or Alexandrian, or Palestinian, no one can tell; as to its date, authors are mostly widely at variance, and all dates have been suggested, from 30 b.c. to A.D. 218; scholars, however, seem to rally more and more around the year A.D. 97.

Charles L. Souvey.

Esglis, Louis-Philippe Mariauchau d', eighth Bishop of Quebec, Canada; b. Quebec, 24 April, 1710; d. 4 June, 1788. After completing his studies at the Quebec Seminary, he was ordained priest in 1734 and appointed pastor of Saint-Pierre-d'Orléans. After thirty-five years of humble ministry, he was called to the episcopal see. He died "and was buried at Saint-Pie, the fifteenth year of his priesthood and was buried at Saint-Pierre.

Lionel Lindsay.

Eskil, Archbishop of Lund, Skåne, Sweden; b. about 1100; d. at Clairvaux, 6 (77) Sept., 1181; one of the most capable and prominent princes of the Church in Scandinavia. A man of profound piety, he was always zealous for the welfare of the church, and was a courageous and unselfish defender of the Church's independence of the secular authority. His election to the hierarchy in 1130 was a turning point in the church's struggle for independence. He worked hard to establish the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority. He was a successful defender of the church's independence of the secular authority, and was a successful defender of the church's independence of the secular authority.

Jean-François Hubert was named coadjutor that same year, but the approval of the British Government was withheld till 1786. Bishop d'Esglis tried unsuccessfully to obtain the death of clergy by obtaining priests from France. The British Government favoured the ecclesiastical reforms in Sweden and settlments in Upper Canada and the Maritime Provinces. Pending the arrival of a missionary for the Arians, a layman was authorized to baptize and witness marriage contracts. Bishop d'Esglis issued (1787) a pastoral letter to all the faithful of the lower provinces, exhorting them to religious and charitable works. He died in the sixty-fifth year of his priesthood and was buried at Saint-Pierre.

TITU, Les Evénements de Quebec (Quebec, 1899); Archives of the Archdiocese of Quebec; Le Canada Eclesiastique (Montreal, 1908).
Eskimo, a littoral race occupying the entire Arctic coast and outlying islands of America from below Cook Inlet in Alaska to the mouth of the St. Lawrence, a distance of more than five thousand miles, including the coasts of Labrador, Baffin Land, and Ellesmere Land, with the west and south-east coasts of Greenland, the northern shores of Hudson Bay, and the Aleutian Islands, while one body, the Yuit, has even crossed Bering Strait, and is now permanently established on the extreme point of Siberia. Traditional and historical evidence go to show that the Eskimo formerly extended considerably farther south along Hudson Bay and the St. Lawrence, and perhaps even into New England. With the exception of the Aleuts, who differ very considerably from the rest, the various small bands scattered through the extreme stretch of territory are practically homogeneous, both linguistically and ethnologically, indicating long ages of slow development under similar and highly specialized conditions. In physique they are of medium stature, but strong and hardy, with yellow-brown skin and features, suggest some connection with the Mongoloid of the Indian, although there is no reason to suppose them of other than American origin. The only apparent admixture with the Indian occurs on their extreme southern frontier in Alaska. Owing to their constant exposure in the chilling waters, they are not long-lived. In character they are generally peaceable, cheerful, and honest, but with the common savage disregard of morality. The Aleut of the Alaskan peninsula and the Aleutian Islands speak a distinct language in two dialects, while all the others, including the Yuit of Siberia, speak practically but one language, in several dialects. The name Eskimo is a misnomer which is derived from an Algonkian term signifying "eaters of raw flesh". They call themselves Inuit, in various dialectic forms, meaning simply "people".

Living in a land of perpetual snow and ice, the Eskimo depend entirely upon the sea for a living, while the seafaring habit has made them perhaps the most expert and daring boatmen in the world. In summer they hunt the caribou and musk-ox on land; in winter they hunt the seal and polar bear in the water or on the ice floes. In travelling by sledge and skin-sleds, they rely much upon an intelligent breed of dogs trained to harness. Their houses are grouped into little settlements never more than a day's journey from the ocean. Those for temporary summer use are generally simple tents of deer or seal-skin. Their winter homes are either subterranean excavations roofed over with sod and earth laid upon a framework of timber or whale ribs, or are dome-shaped structures built of blocks cut from the hardened snow, with passage-ways and smaller rooms of the same material, with sheets of clear ice for windows. The roof of the snow-house is sometimes lined on the inside with skins to prevent dripping from the melting snow. Besides the bed platforms extending around the sides of the rooms, with the spears, harpoons, and other hunting equipment, the most important items of furniture are the stone lamps, fed with whale oil, for heating, lighting, and cooking purposes. The characteristic woman's tool is the ulu or skin-dressing knife.

Their clothing is of skins with the hair outside, or of the intestinal membranes of the larger sea animals, there being little difference between the costumes of men and women. Tattooing is common among the women, labrets are used in some tribes, but trinkets are seldom worn and the face is not painted. Their food consists of meat and fish, commonly boiled in a stone kettle, with an abundance of blubber and oil, together with berries gathered in the short summer season. From lack of running water in crowded quarters, and greyy environment, they are as a rule extremely filthy in person and habit. They are very ingenious and expert in the dressing of skins, the shaping of their fishing and hunting implements, and the construction of their skin canoes; they also display ability in the carving of designs in walrus ivory. The peculiar Eskimo kiaak or skin boat, made of dressed seal hides stretched around a framework of whale ribs or wood, with an opening in the top only large enough to accommodate the sitting body of one man, is one of the most perfect contrivances in the world for water travel, being light, swift,
and practically unsinkable. It is propelled by means
of a double paddle. The saddle is commonly a framework
of drift-wood, but is sometimes made from the rib
bones of whales, or even of a cigar-shaped mass of
dried salmon wrapped in skins and frozen solid. The
souls of the chief, or of the family head, in each little
tribal community being usually distinct and independent
from the others, with little of tribal cohesion or chiefly
authority, the head man being rather an adviser than a
ruler. Established custom, however, has all the force
of law. The bond of affection between parent and
children is very strong, children being seldom corrected
or even reprimanded, and old people are regarded
Monogamy is the rule, but polygamy and polyandry
are sometimes found. Violations of law, including
murder, are punished by the injured individual or his
nearest relations.

Their religion, like that of most primitive peoples, is
a simple animism, interpreted by the angakoks or
medicine-men and enforced by numerous taboos. All
the powers of nature, animate and inanimate, on sea
and land, are invoked or propitiated as the occasion
arises. A special deity in the central region is an old
woman of the sea, who presides over storms and sea-
and land, the latter having been created from her own
fingers. Some tribes believe in two souls, one of
which remains near the dead body until it can enter
that of a little child, while the other goes to one of
several soul lands, either above or below the earth.

There are numerous hunting and eating taboos and
contrabutions. Singing, music, story-telling, hand-games, mask-dances, and athletic competitions
make up a large part of the home life. A peculiar
institution among the central and eastern tribes is that
of the so-called "ninth song" (Norse nith, contention),
one of the first public functions, in which two rivals exhaust upon
each other their capacity for ridicule until one or the
other is declared victor by the company.

The history of the Eskimo goes back beyond the Columbian period as far as their first contact with
the Scandinavians about the year 1000, almost simultaneously in Greenland and on the coast of Labrador or New England. They do not seem to have approached the neighbourhood of the Scandinavian settlements
in South Greenland until about the end of the thirteenth century. In 1379 they made their first attack
upon the Greenland colony, and a war began, of which all details are lost, but which ended in the effective
destruction of the colony towards the close of the next century, so that even the way to Greenland was
entirely forgotten, and on the second discovery of the island in 1385, by Davis, it was found occupied only
by Eskimos, who remained in sole possession until the second colonization from Denmark in 1721, under the
leadership of the missionary Hans Egede. Since then most of the Greenland Eskimo have been gradually
civilized and Christianized under Lutheran and Moravian auspices.

In 1752 a Moravian missionary party made a landing on the Eskimo coast of Labrador, but was at once
attacked by the natives, who killed six of them. In
1771, however, they attempted a mission settlement at Nain, this time with success, Nain now being the
chief station on the Labrador coast, with five other
subordinate stations, counting altogether some 1200
Christian Eskimos. Regular mission work in Alaska
was begun among the Aleut by the Russian Orthodox
church in 1794, resulting in a few years in the com-
plete Christianization of the Aleut, who had already,
however, been terribly reduced by the wanton cruelty
of the fur traders. Russian mission work is still car-
ned on successfully both on the islands and on the
west coast of Alaska. Protestant workers entered the
field about 1880, beginning with the Presbyterians,
followed successively by the Moravians, Episcopalians,
the Swedish Evangelical Union, Congregationalists,
Lutherans, and Friends, numbering now altogether
about fifteen stations along the Eskimo coast of Alas-
ka, besides others among the neighbouring Indians.

Of special note in connexion with this work is the suc-
cessful introduction of Siberian reindeer by Rev.
Sheldon Jackson, Presbyterian, under government
patronage, to supplement the diminishing food sup-
ply of the natives. In 1865 the noted mission-
ary explorer Father Emil Petitot, descending the
Mackenzie, visited the Eskimo at the mouth of the
Anderson River on the Arctic coast of the British North-
West, preached to them, and afterwards to those at the
mouths of Mackenzie and Peel Rivers, and crossed over
sea to Nome, 980 miles, into Alaska. Among the ethnologic results of
his work in this region are a grammar and vocabulary
of the Teughit Eskimo (Paris, 1876). In 1886 the
Jesus entered Alaska, establishing their first mission
among the Indians at Nulato on the Yukon, and pro-
ceeding later to the Eskimo, among whom they have now a number of flourishing stations, the principal
one being those of Holy Cross (Koserefsky), St. Mary's (Akularak), and one at Nome. They are assisted
by the Sisters of St. Anne and the Lamasina Brothers,
and count some 1300 converts among the Eskimo,
exclusive of Indians. The Eskimo grammar and dic-
itonary of Father Father Egede, 1752, contains the
standard. No permanent mission work has ever been attempted by any denomination along the Arctic and
Hudson Bay coast from Alaska to Labrador (see
ALASKA). The total number of Eskimo is estimated
at about 29,000, Greenland 11,000; Labrador 1400; Central Region 1100; Alaska, of Eskimo proper
13,000; Aleut 1000; Yuit of Siberia 12000.

Esnambuc, Pierre Bélain, Sieur d', captain in the
French marine, b. 1565, at Allouville, near Yvetot
(Seine-Infrérieure); d. at St. Christopher in Dec.,
1636. He was the founder of the French colonies in the
Antilles, and their first governor. Sailing from Dieppe,
in 1625, on a brigantine of four guns with a crew of
destroy fifty-five men, he took possession of the island of St.
Christopher. Returning to France in the following
year he brought about the formation by Richelieu of
the Company of the American Islands (Oct., 1626).
At this time he was authorized to occupy St. Christo-
pher and Barbadoes. Once established at St. Christo-
pher he wished to make the influence of France felt
throughout the Antilles, and for ten years devoted his energies to the accomplishment of this great work.
Owing to his efforts, colonists were recruited through-
out Lower Normandy, chiefly in the vicinity of
Dieppe, Honfleur, and Havre-de-Grâce, and these es-

cablished flourishing settlements in Guadeloupe,
Dominica, Les Saintes, and Martinique, and estab-
lished several forts and fortifications. About the
second quarter of the year he embarked from Antilles
for Martinique, where he arrived on Jan. 21, 1627.
He died in the same year at St. Christopher,
leaving to his nephews the government of the
kingdom beyond the Seas, which he had more or
less. On hearing of his death Richelieu de-
clared that the king and his realm had lost one of their
best servants.

Du Tertre, Histoire Générale des isles de Saint-Christophe, de
Espejo, Antonio, a Spanish explorer, whose fame rests upon a notable expedition which he conducted into New Mexico and Arizona in 1582-3. According to his own statement, he was b. in Cordova, but the dates both of his b. and d. are unknown. Following the reports brought to Mexico from the north by Cabeza de Vaca and the Franciscan monk, Marcos de Niza, a powerful expedition had been fitted out under the governor, Coronado, in 1540, which after passing through the territories of the Pueblo tribes of the Rio Grande, had penetrated as far as the province of Quivira, probably the country of the Wichita Indians on the Middle Arkansas, returning in the summer of 1542. Two Franciscan volunteers, Father Juan de Padilla and a lay brother, Luis, remained behind, of whom the first was afterwards murdered by the tribe—the first missionary martyr of the United States—while of the fate of the other nothing was ever known.

Forty years later three other Franciscans undertook to establish missions among the Tigua, about the present city of El Paso, Texas, in New Mexico. Soon rumour of their death at the hands of the Indians came back to Mexico, and finding the authorities dilatory in the matter, Espejo, a wealthy mining proprietor, offered to equip and lead a search expedition at his own expense. The offer was accepted and, being regularly commissioned with only fourteen soldiers, a number of Christian Indians, and a cavalcade of horses and mules, he left San Bartolome, Chihuahua, for the north on 10 Nov., 1582. From the junction of the Concho with the Rio Grande he ascended the latter stream, through populous tribes, to the pueblo of Pura, where he learned definitely of the murder of the three missionaries. Fearing punishment, the Indians had deserted their pueblo, and fled to the mountains.

Having accomplished his first purpose, Espejo determined to visit the unknown country beyond. After visiting several of the neighbouring pueblos he crossed over to the Zuni, near the present Arizona line, where he found three Christian Indians of Coronado's earlier expedition. Here several of the party decided to return, and with only nine soldiers and a party of Indians he pushed on to the Hopi (Moqui) villages in northern Arizona, where he met a friendly reception and was given guides to a mountain country further on—apparently some fifty miles northward from the site of Prescott—where he procured some rich specimens of silver ore. Returning to the Rio Grande, he visited several other pueblos farther up the river and then went over to the Pecos, noting other mines by the way. In consequence of the threatening attitude of the Tanos tribe he finally decided to return to Mexico, arriving at his starting-point in September, 1583, having accomplished, without bloodshed and with 1,858 men, as great results as had been obtained by Coronado with a whole army and at the cost of an exterminating warfare upon the Indians.

He soon afterwards submitted a report, with a map of the region explored, but his later proposition to organize a colonizing expedition was defeated by the jealousy of the viceroys.

Espejo, Relacion del viaje, etc. in Pacheco, Coleccion de Documentos Eclesiasticos (Madrid, 1864—1881), XI; also a variant version, Renan and Guey, in Harlvy, Voyages (London, 1600), III; SHEA, The Catholic Church in Colonial Days (New York, 1886); H. H. BANCROFT, History of Arizona and New Mexico (San Francisco, 1889). XVII of complete works.

James Mooney.

Espen, Zeger Bernhard Van, also called Espeńus, a Belgian canonist, b. at Louvain, 9 July, 1648; d. at Amersfoort, Netherlands, 2 Oct., 1728. He completed his higher studies at Louvain, became priest in 1673, and doctor of civil and canon law in 1675. He soon began to teach canon law at the University of Louvain where he was obliged to lecture only for six weeks during the summer vacation. The professor might explain one or other important chapter of the decreets, at his choice. He never accepted any other chair at the university, and he resigned even this position in order to devote himself entirely to study. He was consulted by all classes on account of his profound learning in canon law, and his famous work "Unigenitus"... although it raised numerous just criticisms, still remains remarkable. The author is accused, not without reason, of having borrowed considerably from the works of his predecessors, notably from Thomasin, yet it must be recognized that Van Espen possessed the art of setting forth a truth in a limpid and intelligible way the discipline of the ancient Church; he also cast light upon questions which up to his time had been very obscure. His clear and concise style gives to his work a value which the labours of his predecessors do not possess. He collected the most recent legislative decisions of the Church and his judicious judgment, except where party spirit blinded him, had also the incontestable merit of showing with precision the special law of Belgium. Benedict XIV recognized his authority in this matter. On the other hand he was a strict defender of the usus and never misconstrued the right of religious authority and exaggerated beyond measure the right of the civil power. It may be added, however, that he exalted and combated in turn all power, even the civil power. He exalted the power of the bishops in order to lessen that of the religious orders, and the rights of the bishop in the district in order to combat the powers of the pope. He gained for himself unpleasant notoriety in the Jansenist conflicts, by denying the importance of the famous distinction between right and fact with regard to the doctrine of Jansen; he declared that it was of little consequence to admit that Jansen had taught the propositions condemned by the Bull "Unigenitus" (1713) provided the doctrine itself was rejected.

The Jansenist quarrels led to Van Espen's ruin. On being consulted by the Jansenists of Holland with regard to the ordination of the Jansenist bishop of Utrecht, Cornelius Steenoven, he pronounced in favour of this ordination, which had been performed without the authorization of the Holy See. An unsuccessful attempt has been made to justify Van Espen's conduct in this matter, on the ground that he merely declared that episcopal ordination performed by a single bishop was valid. This was not the whole question, nor was it indeed the principal question, viz. to determine whether an episcopal ordination, performed without the pope's consent, was admissible. His action in this matter and his Jansenist doctrine brought about his suspension a divinis by the Bishop of Mechlin. The latter summoned him to make a declaration of orthodox faith. At the order of the civil power, the University of Louvain condemned and deprived (1728) Van Espen of his universitv functions. In the meantime the he fled and sought refuge first at Maastricht, and afterwards at Amersfoort, where he found protection in the Jansenist community, and where he died. The Augustinian Desirant, professor at the University of Louvain, is accused of having fabricated false documents in the controversy with Van Espen. This struggle is known as "The Forgery of Louvain." Desirant was condemned by the academical authorities and banished forever from his native country. The best edition of the works of Van Espen, all of which are on the Index, is that published in four volumes at Louvain, 1753. A fifth volume, "Supplementum ad varias collect-
pinel also enjoyed some reputation. He translated Horace's "Art of Poetry," and published his own "Diversas Rimas" in Madrid in 1591. He was the inventor of the measure known at first as the "espinela" and later as the "decima," because it has ten syllables. He was also noted for his musical taste. He added the fifth string to the national guitar. The "Marces de Obregón" was translated into English by Algernon Langton (London, 1816), into German by Tiek (Breslau, 1827), with a preface and notes, and into French by Vidal d'Audiguier (1816).

VENTURA FUENTES.

Espinosa, ALONSO DE, Spanish priest and historian of the sixteenth century. Little is known of his early life. He is first heard of towards the end of the sixteenth century in Guatemala where he had become a Dominican. It was while he was in Central America that he first heard of the miracles of Our Lady of Candelaria. This was an incident in the same story that had been among the Guanches of Tenerife since long before their conversion to Christianity, and had been venerated not only by the Guanches, but later by their conquerors, the Spaniards. Inspired by the image of this image, Espinosa soon found a member of the fraternity which had possession of it, and made it agree to make researches and write a history of the image and its miracles. The result was his "Guanches of Tenerife" published at Seville in 1594. Although the author's main purpose was to record the history of Our Lady of Candelaria, the work is important as being on the whole the best account of the Guanches, a lost race which has left scarcely any remains, even of their language; and also, though less significant, because it gives a good account of the conquest and settlement of the Canary Islands by the Spaniards. He divides his work into four books, in the first of which he describes the Island of Tenerife, gives its early history, and an account of its inhabitants, their customs, food and dress, marriages, training for war, and mode of interment. The second book gives a detailed history of the image, from its mysterious appearance, on the east coast of the island, to Espinosa's own visit. The third book is devoted to the invasion, conquest, and settlement of the island by the Spaniards. The fourth and last book contains an enumeration of various cures and other miracles performed by the image. A reprint of Espinosa's book appeared at Santa Cruz in 1597, as one of the "Biblioteca de Autores Españoles." A translation by Sir Clements Markham was published by the Hakluyt Society in London in 1897.

Espirito-Santo, Diocese of. See Spirito Santo.

Espousals, a contract of future marriage between a man and a woman, who are thereby affianced. The ecclesiastical law governing this contract was amended by the pontifical decree "Ne Tenerem" on 20 June 1600. Espousals and marriages, which was published 2 Aug., 1907, and took effect 19 April (Easter), 1908. For the old legislation see BETRUTHAL; the present article will be confined to the new. Regarding espousals the decree enactas follows: "Only those espousals are held to be valid and to beget canonical effects which are made in writing, signed by both parties, and either by the parish priest or the ordinary of the place, or at least by two witnesses. In case one or both of the parties be unable to write, this fact is to be noted in the document, and another witness is to add his signature to the contract as above, together with that of the priest or the ordinary of the place, or the two witnesses. Until Easter of 1908, there was no written document prescribed for espousals, except for Spain. Like other contracts, the promise of marriage was supposed to bind the parties making it according to prevailing law
THE ESPOUSALS OF THE BLESSED VIRGIN (LO SPOSALIZIO)

RAPHAEL, SIREA GALLERY, MILAN
ESPousals

or customary. That caused many difficulties which necessitated this law. Private, clandestine espousals are henceforth of no value in the eyes of the Church. In the United States engagements were, as a rule, not considered sufficient to entice the impediment of public honesty. By which, unless the engagement were properly filled out, the Church would render null and void the marriage of either affianced party with a blood-relation in the first degree of the other affianced party, and make sinful marriage with any other person not so related, unless the engagement had been rightly broken. These are the canonical effects which are not begotten unless the espousals are made in writing, whether filling out a blank formula or by writing the document entirely.

As to the obligation of contracting espousals in writing, it is to be noted that the law does not concern itself with the promise of marriage as a matter of conscience; only with establishing the fact that espousals have no legal value and will not be considered in case of contention by ecclesiastical courts, unless they are in writing. Hence, in foro interno the Church leaves the matter to the confessor. The law suggests no particular formula for the contract of espousals. It must, however, express the promise of future marriage. There must be no condition attached contrary to the nature or laws of Christian marriage. No time is assigned by the law within which the promise must be fulfilled; still the time should be reasonable and accord with the common teaching of competent authorities. The document must be made by parties—man and woman—promising to marry each other on or within some definite date. If either or both are unable to write their names, that must be noted in the document. They must, of course, affix their signatures somehow, which must be attested by a qualified witness. In addition, either the parish priest or ordinary must sign it; both need not sign it; the signature of one only is required. By ordinary is meant the bishop of the diocese where the parties happen to be, or his vicar-general, or any one exercising episcopal jurisdiction, as for instance, the administrator when the see is vacant. By parish priest, as used in the present decree, is to be understood not only the priest who legitimately presides over a parish that is canonically erected, but also, in localities where parishes are not canonically erected, the priest to whom the care of souls has been legitimately entrusted in the specified district, and who is equivalent to a parish priest; and also, in missions where the territory has not yet been perfectly divided, every priest generally deputed for the care of souls in any station by the superior of the mission. The ordinary or parish priest cannot depute any other priest to sign in their stead (Reply of S. Congregation of Council, 30 March, 1908). If the signature of the ordinary or of the parish priest cannot be obtained, then at least two witnesses must sign. Their signatures are not needed if either of the foregoing have signed. The witnesses should of course be competent, though they differ in age and sex. The local ecclesiastical authorities are to decide where the document is to be deposited. The new law does not provide for the annulment of espousals. The reasons that formerly sufficed to annul them still remain. If espousals were made by prescribed by the new law, their force continued until they shall have been dissolved by proof of either or both parties claiming their dissolution.

JOSEPH SELINGER.

ESPousals of the Blessed Virgin Mary (De- 
Ponsatio Beatae Mariæ Virginis), a feast of the Latin Church. It is certain that a real marriage was contracted by Joseph and Mary. Still Mary is called "espoused" to Joseph ("his mother Mary was espoused to Joseph", Matt., i, 18) because the nuptials was never consummated. The term spouse is applied to married people until their marriage is consummated (Colovénier, Cal. Marian., 23 Jan.). Peter d'Ailly, chancellor of the University of Paris (d. 1420), and his famous disciple, Jean Chastellain, and Gerson, were the first energetic propagators of the devotion in honour of St. Joseph. Gerson worked many years to effect the institution of a special votive feast (Thursday of ember week in Advent), the object of which should be the virginal espousal of Mary and Joseph. Gerson's friend, Henry Chastel, canon of the cathedral chapter of Chartres, had bequeathed a certain sum for the celebration in the cathedral of this votive feast, for which Gerson had composed a proper Office. It seems that Gerson carried out the will of his friend, but tradition does not tell us on what day the feast was celebrated.

The first definite knowledge of a feast in honour of the espousals of Mary dates from 29 Aug., 1517, when with nine other Masses in honour of Mary, it was granted by Leo X to the Nuns of the Annunciation, founded by Saint Jeanne de Valois. This feast was celebrated on 22 October, as a double of the octave of the Nativity of Our Lady, by the Servites. Its Mass, however, honoured the Blessed Virgin exclusively; it hardly mentioned St. Joseph and therefore did not correspond to the idea of Gerson. Also purely as a feast of Mary it appears in the Missal of the Franciscans, to whom it was granted 21 Aug., 1907, for 7 March (by the Servites). At the same time the Servites obtained the feast for 8 March. The Office of the Nativity of Mary was recited, changing the word Nativitas to Desponsatio. After the religious orders, among the dioceses which adopted the feast of the Espousals of Mary, Arras takes the lead. It has been kept there since 23 Jan. (1556). The first Office was composed by Pierre Doré, O.P. (d. 1599), confessor of Duke Claude of Lorraine. This Office followed the outlines given by Gerson and commemorated both Joseph and Mary. Pierre Doré in 1546 successfully petitioned Paul III to extend the feast of the Desponsatio B.M.V. to the Universal Church. But even without the recommendation of the Apostolic See, the feast was adopted by many Churches. In Moravia it was in the sixteenth century kept on 18 July. In subsequent times Rome did not favour any feast in honour of espousals, but after the First Vatican Council it was refused (1655) to the King of Spain, it was granted to the German Emperor for Austria, 27 Jan., 1678 (23 Jan.); in 1680 it was conceded to Spain, but transferred (13 July, 1822) to 26 Nov., because in Spain the feast of St. Ildefonsus or St. Raymond is kept 23 Jan. In 1680 it was extended to the German Empire, 1689 to the Holy Land (double, second class), 1702 to the Cistercians (20 Feb.), 1720 to Tuscany, and 1725 to the Pontifical States. In our days it is kept in nearly the entire Latin Church on 23 Jan., in the Spanish-speaking countries on 26 Nov., but it has never been extended to the Universal Church. Since Pius V abolished the Office of Pierre Doré and introduced the modern Office, it is again a feast of Mary. The commemoration of St. Joseph in Mass, Vespers, Lauds (decree 5 May, 1730) can only be made by a special privilege.

FREDERICK G. HOLWECK.

ESSENCE

Essence and Existence (Lat. essentia, existentia).— Since they are transcendentals, it is not possible to put forward a strict definition of either of the subjects of the present article. Essence, however, is properly described as that whereby a thing is what it is, an equivalent of the ἐσθενος of Aristotle (Metaph., VII, 7). The essence is thus the radical ground from which the various properties of a thing emanate.
and to which they are necessarily referred. Thus the notion of the essence is seen to be the abstract counterpart of the concrete entity: the latter signifying that which is or may be (ens actu, ens potentiale), while the former points to the reason or ground why it is precisely that which it is in the first instance. As an answer to the question What? (Quid?)—as, e.g., What is man?—essence is equivalent to quiddity; and thus, as St. Thomas remarks (I, Q. iii, a. 3), the essence of a thing is that which is expressed by its definition. Essence and nature express the same reality envisaged from the two points of view of being or of being.

As the essence is that whereby any given thing is that which it is, the ground of its characteristics and the principle of its being, so its nature is that whereby it acts as it does, the essence considered as the foundation and principle of its operation. Hence again St. Thomas: "Nature is seen to signify the essence of a thing according as it has relation to its proper operation" (De ente et essentia, cap. i). Furthermore, essence is also in a manner synonymous with form, since it is chiefly by their formal principle that beings are segregated into one or other of the species. Thus, while spiritual things and their rationality, taken as a whole, are composed of matter and form, specifically what they are by reason of their essences or "forms" alone, the compounded beings of the corporeal world receive their specification and determination of nature, or essence, principally from their substantial forms. A further form of essence is to be carefully noted that essence in this connexion is used rather with a logical or metaphysical connotation than with a real or physical one. This distinction is of considerable importance. The real or physical essence of compound entities consists in, or results from, the composition of the component parts. When we consider man as a being composed of matter and form, body and soul, the physical essence will be the body and soul. Apart from any act of abstraction, body and soul exist in the physical order as the constituents of man. On the other hand, we may consider man as the result of a composition of genus proximum and differentia ultima, i.e., of his animality and his rationality. Here the essence, humanity, is metaphysical or logical. Thus, while the real essence, to speak still only of composite beings, consists in the composition of all those physical component parts which are required to constitute the entity, what it is, either actually or potentially existent, without which it can be neither actual nor potential, the logical essence is no more than the composition of ideas or notions, abstracted mentally and referred together in what is known as "second intention." This consideration provides a basis for the distinction of essences according to the degree of physical and metaphysical complexity or simplicity which they severally display. The Supreme Being has—or rather is—a unique and utterly simple essence, free from all composition, whether physical or metaphysical. Moreover, in God—otherwise, as we shall see, than in creatures—there is no distinction of any kind between His essence and His existence. Spiritual created beings, however, as free from the composition of matter and form, have physically simple essences, yet they are composite in that their essences result of a union of genus and differentia, and are not identical with their existence. In the angel the essence is the species consequent on this union. Corporal creatures not only share in metaphysical complexity of essence, but have, on account of their composition, a physical soul.

The characteristic attributes of the essence are immutability, indivisibility, necessity, and infinity.—Since the essence of anything is that whereby the thing is what it is, it follows directly from the principle of contradiction that essences must be immutable. This, of course, is not true in the sense that physical essences cannot be brought into being or cease to exist, nor that they cannot be decomposed into their constituent parts, nor yet that they are not subject to accidental modification. The essence of God alone, as stated above, is so entirely free from any sort of composition and parts that it is not essentially capable of any accidental change. All other essences, however, is immutable in this, that it cannot be changed or broken up into its constituent parts and yet remain the same essence. The attribute is transcendental and is applied to essence precisely as it is essence. Thus, while the essence of any given man may be broken up into body and soul, animality and rationality, man as man and humanity as humanity is changeless. One individual ceases to exist; the essence itself, whether verified or not in concrete actuality, persists. The definition, "man is a rational animal," is an eternally immutable truth, verifiable whenever and wherever the subject man is given, either as a concrete and existent entity, or as a mere potentiality. Similarly, essences are said to be indivisible; that is to say, an essence ceases to be what it is when it is broken up into its constituents. Neither body nor soul alone is man. Neither animality nor rationality is the essence of man; and therefore, precisely as essence, it is indivisible. In like manner necessity is predicated of essences. They are necessary in that, though they may be merely possible and contingent, each must of necessity always be itself. In the order of actual being, the real essence is what it is from the moment it is; but it is the thing as what it is; in the order of the merely possible, it must necessarily be identical with itself. Finally, essences are said to be eternal and infinite in the negative sense that, as essences, there is no reason for their non-existence, nor for their limitation to a given number of individuals. As has been said, the distinction between essence considered as physical and as metaphysical will be apparent. It is the metaphysical essence that is eternal, immutable, indivisible, necessary, etc.; the physical essence that is temporal, contingent, etc. In other words, the metaphysical essence is a formal universal, while the physical essence is that real particularization of the universal that provides the basis for the abstraction.

So far the present article has been occupied in exhibiting the Scholastic view with regard to essence, and in obtaining a certain precision of thought rather than in raising any problems in connexion with the subject. Notice must be taken, however, of a philosophical tradition which has found adherents mainly among British philosophers and which is at variance with the Scholastic. This tradition would assert that essence is flatly denied and what we conceive of under that name is relegated to the region of purely mental phenomena; or, what practically amounts to the same thing, that fact is judged to be doubtful and consequently irrelevant; or again, while the fact itself may be fully admitted, essence is declared to be unknowable, except in so far as we may be said to know that it is a fact. Of those who take up one or other of these positions with regard to the essence of things, the most prominent may be Hobbes and Locke, Mill, Hume, Reid, and Bain, the Positivists and the Agnostics generally, together with a considerable number of scientists of the present day, would not improperly be described as either doubtful or dogmatically negative as to the reality, meaning, and cognizability of essence. The proponents and defenders of such a position are no means always opponents of speculation, but state their case, based for the most part on purely subjective views of the nature of reality, that the essence of beings are nonentities, or at least unknowable, and, as a consequence, that the whole science of metaphysics is no more than a jargon of meaningless
terms and exploded theories, they, on the other hand, express opinions and make implicit admissions that tell strongly against their own thesis. Indeed, it would generally seem that these philosophers, to some extent at least, misunderstand the position which they attack, that they combat a sort of intuitive knowledge of essences, erroneously supposed by them to be claimed by Scholastics, and do not at all grasp the theory of the natures of things as derived from a pains-taking consideration of their characteristic properties. Thus even Bain admits that there may in all probability be some one fundamental property to which all others are reducible, and he even uses the words “real essence” to designate that property. Mill tells us that “to penetrate to the more hidden agreement on which these more obvious and superficial agreements (the distinguishing leading to the greatest number of interesting properties) depend, is one of the most difficult of scientific problems. And as it is among the most difficult, so it seldom fails to be among the most important.” Father Rickaby in his “General Metaphysics” gives the citations from both Mill and Bain, as well as an important admission from Comte, that the natural tendency of man is to inquire for primary types, a synonomy, in the context for essences. The philosophical tradition, or school, to which allusion is made—although we have anticipated its assertions by the admissions into which its professors have allowed themselves to be drawn by the exigencies of reason and human language—may be divided into two main types, with their representatives in Locke and Mill. Locke got rid of the old doctrine by making the “supposed essences” no more than the bare significations of their names. He does not, indeed, deny that there are real essences; on the contrary, he fully admits this. But he asserts that we can have no knowledge of essential natures unless we know the actual or logical essences which we form mentally for ourselves. Mill, though, as we have seen, he occasionally abandons his standpoint for one more in keeping with the Scholastic view, professedly goes further than Locke in utterly rejecting real essences, a rejection quite in keeping with his general theory of knowledge, which eliminates substance, causality, and necessary truth.

The considerations previously advanced will serve to indicate a line of argument used against scepticism in this matter. The Scholastics do not and never have divided any direct or perfect knowledge with the essences of all things. They recognize that, in very many cases, no more than an approximate knowledge can be obtained, and this only through accidental characteristics and consequently by a very indirect method. Still, though the existence of the mere essences, of which the essences are in question, is contingent and mutable, human knowledge, especially in the field of mathematics, reaches out to the absolute and necessary. For example, the properties of a circle or triangle are deducible from its essence. That the one differs specifically from the other, and such from other figures, that their diverse and necessary attributes, their characteristic properties, are dependent upon their several natures and can be inferred by a mathematical process from these—so much we know. The deductive character of certain geometrical proofs, proceeding from essential definitions, must not be urged as an indication that the human mind is capable of grasping and of dealing with essences.

Similarly, and even from the admissions of the opponents of the Scholastic tradition given above, it may reasonably be maintained that we have a direct knowledge of essences, and that the actual and logical knowledge of the physical natures existent in the world about us. The essences thus known do not necessarily point to the fact of existence; they may or may not exist; but they certify to us what the things in question are. The knowledge and reality of essences emerges also from the doctrine of univer-

sals, which, although formally subjective in character, are true expressions of the objective realities from which they are abstracted. As Father Rickaby remarks: “In the rough form of expression could hardly be rejected, that science seeks to arrive at the most nature of things and has something to do with success in the enterprise”; and again, “In short, the very admission that there is such a thing as physical science, and that science is cognitio rerum per causas—a knowledge of things, according to the rationale of them—is tantamount to saying that some manner of essences is possible; that the world does present its objects ranged according to at least a certain number of different kinds, and that we can do something to mark off one kind from another.” (General Metaphysics, c. III.)

Existence is that whereby the essence is an actuality in the line of being. By its actualization with the essence is removed from the merely possible, is placed outside its causes, and exists in the world of actual things. St. Thomas describes it as the first or primary act of the essence as contrasted with its secondary act or operation (I Sent., dist. xxxiii, q. 1, a. 1; and again, as “necesse est in se esse”—Summa I, Q. iii, a. 4). Whereas the essence or quiddity gives an answer to the question as to what the thing is, the existence is the affirmative to the question as to whether it is. Thus, while created essences are divided into both possible and actual, existence is always actual and opposed to potential (as distinct from the former); with this regard to the existence of things, the question has been raised as to whether, in the ideal order, the possible is antecedent to the actual. The consideration here does not touch on the real or physical order, in which it is conceded by Scholastics that the potentiality of created essences precedes their actuality. The universe is pure and simple (as against such theorists as von Hartmann, maintaining an absolute primitive potentiality of all existence), that necessarily precedes all potentiality, is that of God, in Whom essence and existence are identical. We are concerned with the question: Is the concept of a possible entity prior to that of an existing one? Rosmini answers this question in the affirmative. The School generally takes the opposite view, maintaining the thesis that the primitive idea is of existent essence—that is, essence as actualized and purely possible is that idea of essence as the concept, though confused and indeterminate. Such an idea is of narrow intension, but extensively it embraces all being. The thesis is supported by various considerations, such as that the essence is related to its existence as potential to actual, that the act generally is prior to potentiality, and that this latter is known, and only known, through its corresponding actuality. Or, we know the possible being as that which may be, or may exist; and this necessary relation to actual existence, without which the possible is not presented to the mind, indicates the priority, in the line of thought, of the actually existent over the merely possible. Existence is thus seen to be in some sense distinguished from the essence which it actuates.

The question agitated in the School arises at this point: What is the nature of the distinction that obtains between the physical essence and the existence of creatures? It is to be borne in mind that the controversy turns not upon a distinction between the merely possible essence and the same essence as actualized, and thus physically existent; but on the far different and extremely nice point as to the nature of the distinction to be drawn between the actualized and existent essence and its existence or actuality, by which it is existent in the physical order. That there is no such distinction in God is conceded by all. With regard to creatures, several opinions have been advanced. Many Thomists hold that a real distinction obtains here and that the essence and exist-
ence of creatures differ as different entities. Others, among them Dominicus Soto, Lepidi, etc., seem to prefer a distinction other than real. The Scotists, affirming their "formal distinction," which is neither precisely logical nor real, but practically equivalent to virtual distinction, they refused to join the point against a real distinction. Suarez, with many of his school, teaches that the distinction to be made is a logical one. The principal arguments in favour of the two chief views may be summarized as follows:—

Thomists: (a) If essence and existence were but one thing, they should be as one in other, the one not conceiving the other. But we are as a fact able to conceive of essence by itself. (b) If there be no real distinction between the two, then the essence is identical with the existence. But in God alone are these identical.

Suarez: (a) A real physical essence is actual in the line of being and not merely possible. But this actuality must belong to it, as a physical essence; for it is, ex hypothesi, neither nothing nor merely possible, and the actuality of an essence is its existence. Cardinal Franzen cast the argument in this form: "Est omnino evidens in re posita extra suas causas, in statu actualitatis, nec ratione aliquem absque formatione existentiam" (De Verbo Incarnato). (b) It is inconceivable how the existence of a real or physical essence should differ from the existence of its essence.

These positions are maintained, not only by argument, but by reference to the authority and teaching of the Church, to whose genuine doctrines there is considerable difference of opinion and interpretation. It does not, however, appear to be a matter of great moment, as Soto remarks, whether one holds or rejects the doctrine of a real distinction between essence and existence, so long as the difference between God and men is safe-guarded, in that existence is admitted to be of the essence of God and not of the essence of creatures. And this would seem to be sufficiently provided for even in the supposition that created essences are not distinct from their existences as one thing is from another, but as a thing from its mode.

FRANCIS AVELING.

Essenes, one of three leading Jewish sects mentioned by Josephus as flourishing in the second century B.C., the two others being the Pharisees and the Sadducees. Concerning their origin, history, and tenets there has been much inconclusive controversy. The only ancient authorities we have are a few paragraphs in Philo Judæus, a somewhat lengthy description in Josephus, and a scanty notice in Flinders. The former synoptic is derived mainly from the first two. They are styled Esseni by Philo, who derives it from keres, "holy," and Esseni and Esseni by Josephus. Their number according to both authors was about 4000 and their chief place of residence along the west side, but away from the shores, of the Dead Sea. Their also dwelt in other remote parts and small towns of Palestine; yet some were found in cities. The sect arose about 150 B.C. (the first-named Essene is Judas, 110 B.C.) and disappeared towards the end of the first century A.D. They worshipped one God, Creator and Ruler of all things, omnipotent and omniscient. Moses was held in very high esteem and to blaspheme his name meant death. The sun was held in such reverence as to awaken a suspicion of idolatry. An all-dismissing fate was admitted, yet free will, apparently, was not denied. The Temple was involved in the meeting-places, not because of fear of pollution, though they sent gifts thither; it seems that no blood-sacrifice was offered by them, as they claimed that a reverent mind was the best offering to God. The Sabbath was observed with most rigorous exactitude, not even the calls of nature being allowed to interrupt them. When they sat according to seniority, the Scripture was read and explained, generally in an allegorical manner, by some wise member. They washed frequently, as extreme importance was attached to ceremonial purity, and they followed scrupulously the prescriptions against Levitical defilements; even for a junior to touch a senior was pollution to the latter. What their esoteric doctrines were is not known. Death was welcomed, as they held that bodies are corruptible and the matter composing them is not lastling, but souls are immortal and live for ever, and proceeding from the most subtle ether have been drawn into prisons by some natural longing. But when they are set free from the bonds of the flesh then they rejoice as being freed from a long servitude and mount upwards. And agreeing with the opinions of the Greeks, they declare that the good dwell beyond the sea and in a place which is more rain-storms or intense heat, but is always calm and refreshed by a cool breeze breathing from the ocean. To the bad souls they allot a gloomy, tempestuous cave full of never-ending torments (Jos., Bell. Jud., I. ii. 8). Some conclude from the words just quoted that the Essenes disbelieved in the resurrection of the body.

Among the virtues the Essenes cultivated especially obedience, truthfulness, continence, justice, and temperance; they paid great attention to the sick, respect to the aged, and showed marked kindness and hospitality to strangers. All men were regarded as equal, and slavery was abhorred as contrary to the laws of nature. Those guilty of great crimes were punished by long exclusion or perpetual excommunication which, since they were not allowed to eat anything prepared by outsiders, entailed always great hardship and often death. The law was not useless and beyond man's capacity, but ethics was studied with zeal. They searched for medicinal remedies in nature, as they devoted special care to the sick irrespective of creed, and investigated the properties of minerals. They laid claim to magical powers and ability to predict. For the latter some cases are given by Josephus, among them that of the Essene, Mana-heim, who foretold Herod the Great's kingship when he was but a boy without any royal prospects. All things were held in common, their very houses not being their own. They laboured principally at agricultural pursuits or made farm implements and household articles, but never weapons of war, which they were not allowed to carry, except a staff for defence when travelling. Harvests and wages went to the stewards, who gave as each needed. Clothes and shoes were retained until worn out. No trading was allowed except barter. Anointing with oil was considered a defilement. Servants were forbidden as tempting men to injustice. Their rulers or presidents were elected, likewise their priests—if they can be so called—and their stewards. In towns an officer was appointed to look after travelling brethren. The only cow owned by them whose blood was not used. The unanimous decision was irrevocable. The members were divided into four classes. The daily routine is given as follows: They were up before daybreak and spoke of no profane subject before the sun, and to it they addressed a prayer as if soliciting it to rise. Each
was sent then to his appointed employment at which he worked until the fifth hour, i.e. eleven o'clock, when all assembled and having bathed in water specially excoriated, and clothed themselves in white, they entered the common dining-room quietly and silently. Before them a sort of food. A priest said grace and then, but not before, they might eat. At the end of the repast prayer was again said, the white garments laid aside, and resuming their ordinary attire they worked until evening, when they supped in the same manner. At the noonday meal, which was regarded apparently as a sacred feast, being prepared by their priests, no stranger was admitted, but at supper it was otherwise. As they spoke only in turn and observed great moderation in food and drink the silence at the meals appeared to outsiders, so we are told, something very solemn and mysterious. Many of the Essenes reached a great age and they acquired such fortitude of mind and body that the worst torments inflicted on them by the Romans failed to shake their constancy and they met death with a smile.

Most of the Essenes rejected marriage, not on account of any wrong in it but because they held divorce and the division of property necessary for the maintenance of those who were engaged in religious duties. They perpetuated their sect by adopting children and admitting adults who were "weary of battling with the rough sea of life", as Pliny says. At their coming they received an apron to wear during their ablutions, a white tunic, and a little purse made like a pomegranate, with which to dig a hole and cover their excrement from the rays of the sun. For one year their temperance was tested by observing outside the community its ascetic rules. Then came a fresh trial of two years, during which they shared in the lustral rites, but not in the meals, of the initiated. If found satisfactory they were chosen full members and bound themselves by sacred oaths to observe His commandments, and to conceal nothing from their fellows, and to reveal nothing to strangers, also to keep secret at all costs their books and the names of their angels. This was the only time when Essenes took oaths, their word being regarded by all as so sacred that Herod excused them from the oath of allegiance. Some of them observed the same rules yet married, and others for the ordinary purposes of life. There was a full three years' probation and if the woman appeared healthy and likely to bear children.

The Essenes have received an amount of attention during the last three centuries out of all proportion to their numbers, their influence upon contemporary life, or their importance as factors in religious development. This sprang from two causes, one external and the other internal. The latter was the curious mixture of Jewish and foreign elements in their tenets and customs. This peculiarity aroused the curiosity and exercised the ingenuity of the learned to account for the commotions. That they lived still, though speaking very likely Greek (Jews by race, says Josephus), was admitted. Their belief in one God, reverence for Moses, strict observance of the Sabbath, fastful adherence to circumcision (Hippolytus), etc. all the religious acts, were the result of a higher order of life, but the influence of the Pythagorean by Josephus himself, etc. seem to show outside influence. The source of this influence, like everything Essenic, begets controversy, but so far no one has succeeded in determining it satisfactorily. Buddhist, Parseean, Pythagoreanism (old, new, and Orphic), Hellene was Christianity is Christ.

The influence of the Greek tongue can amply account for foreign elements. The claim that these elements, if divested of their Greek external, could be proved to have their roots in Biblical ground is not lightly to be set aside. The external cause of attention was the bias of English deists and continental rationalists who strove to metamorphose the Gospels from what they regarded a literal into a progressive form and quite naturally Christians developed; and Freemasons pretended to find in Essenes pure Christianity. In reference to such chimeras it is enough to say that between Essенism in certain aspects and Christianity there are some points of resemblance; it could not very well be otherwise because Essenes was Judaic in its foundation and Christianity was partly its development but progressive. On the other hand, the differences are fundamental. That John the Baptist and Christ were Essenes are mere assumptions based on similarities which spring naturally and independently from asceticism and voluntary poverty. So likewise the pretended dependence between Essenism and monasticism can be resolved into necessary traits of any ascetic, communistic life (see "Wuku" in "Studien u. Mittheilungen der Ben. Cat. Orders", 1890, I, 223-30; Berliére in "Revue Budé", 1891, VIII, 12-190). The doctrine of Jesus and his disciples is a logical development of Esseneism" (Jewish Encyc.). The strict silence about any Messias is due partly perhaps to the secrecy of the Essenes and mainly no doubt to His rejection by their chronicler, Josephus. In fine, our present knowledge of the Essenes is slight and not all of it trustworthy, as its coloured and unhistorical. It has much weight. Ancient Authorities: Philo, Quod Omnis Probus Liber, xli, also extracts from his Apologia Jud, in Esseniut, Prop. Ewing, VIII, vi; Josephus, Bell. Jud., II, viii, London, 1841; Idem, Ant. Jud., XIII, v. 9; V. 4-5; XVIII, 5, etc., in tr. Complete Works (Paris, 1875), ed. Dendere: Pliny, Hist. Nat., VII, xvi-xvii; Hippolytus, Philosophumens (Cottoper, 1859), IX, Epiphanius, Harres, xix.

time he was frequently the bearer of pecuniary aid to his uncle, Nicolas Pieck, O.S.P., who was giving missions in Belgium; but the latter would not accept any help. In 1572, while Est was still at Louvain, a great catastrophe befell his native town, which was captured by the Calvinists. His father, brothers, and uncle were made prisoners and were in imminent danger of their lives. The father and brother escaped, but Nicolas Pieck, who was then Superior of the Franciscan convent at Gorecum and eighteen other ecclesiastics, were taken to Brielle, on the sea-coast, and put to death for the Catholic Faith with revolting brutality. Est wrote what is considered the best history of the Martyrs of Gorecum, who were canonized by Pius IX in 1867. From this history we learn many details about Est and his relatives.

When Est first arrived at Louvain he found the place in a ferment owing to the recently broached opinions of Busius (q. v.), one of the professors of Holy Scripture, and who held a leading position in the university all the time that Est was there. Violent controversy raged round the person of Busius during all that time. It is evident from the commentaries of Est that Busius was much influenced on questions of grace and free will by the teaching of his old professor, Busius; and on these points he has to be read with some caution. After having been made doctor, he continued teaching philosophy at Louvain two years longer. In 1582 he was made professor of theology at Douai, a position which he retained for three more years. He was also for many years rector of the diocesan seminary and during the last eighteen years of his life chancellor of the University of Douai. He was noted for his piety, modesty, and compassion for the poor, and greatly admired for his vast learning, solid judgment, and eloquence. He was afterwards styled *doctor funditusissimus* by the learned Pope Benedict XIV. Soon after he left Louvain a fresh controversy broke out there, into which he appears to have been drawn. About 1586 Lessius began to refute the errors of Busius in his ordinary course of lectures. The friends of Busius, who admired him for his edifying life, great learning, and manly submission, felt annoyed that his shortcomings should have been thus pointedly accentuated by their opponents. They attacked certain propositions of Lessius, resembling those of Molina and Suarez, and laid them condemned by the universal University of Louvain. The latter university of Douai added its condemnation (said to have been obtained under a misapprehension), and its terms were in still more violent language. It has been said, though on no very clear evidence, that the form of condemnation was drawn up by Est. There can be little doubt but that he was in favour of the condemnation. The whole controversy finally led up to the Congregatio de Auxiliis (q. v.). On mature examination the teaching of Lessius on grace etc. was found to be innocuous.

Most of Est's works, which were written in Latin, were not published until after his death. His greatest work is his "In omnibus Divi Pauli et Catholicae Epistolas Commentariis" (Douai, 1611-15; Mainz, 1858-60). There are several later editions, that of Mainz (1841-45, 7 vols.) being one of the best. To this work was prefixed the author's protestation of orthodoxy to the Church in which he declares that he desires to submit all things to the judgment of the Catholic Church and its supreme pastor and judge on earth, the Roman pontiff, and if anything has been spoken in error that it be considered as unadulterated. In his commentaries he everywhere endeavours to arrive at the literal meaning of the authorities, with great judgment, acumen, and erudition. He refutes objections, as occasion arises, with calmness and freedom from passion. No serious student of the Epistles can afford to neglect this work. Horne, a Protestant writer (Intro.d., London, 1834, II, 293), says that it is "a most valuable work, which Romanists and Protestants alike concur to recommend as an excellent critical help to the exposition of the Apostolic Epistles. The prefixed of Est are particularly valuable." His other works are: "Commentarii in IV libros Sententiarum Petri Lombardi" (Douai, 1615); "Annotationes in libros praecipuorum et difficilliorum historiarum" (Douai, 1617); "Historia Martyrum Gorcomiensium" (Douai, 1603); also in the "Acta SS." for July, II, 754-847. He also translated the life of Blessed Edmund Campion, S.J., from French into Latin, and left copious notes for a new edition of the works of St. Augustine. *Historia Martyrum Gorcomiensium* (Douai, 1603). HUTHER, Nomenclator, vol. i, Estius and Lessius. RAPIN, Histoire du Jansénisme (Paris, 1840), I.

C. AMHERNE.

**Establishment (or Established Church).** The union of Church and State setting up a definite and distinctive relation between the two is frequently expressed in English by the use of the word "establishment", applied to such union in both Catholic and Protestant States, in connection with the doctrines of principle which characterize them. "The Establishment", or "the Established Church" is often used as a distinctive name for the ecclesiastical system established by law in Scotland, in Ireland (until 1869), and especially in England. The pre-Reformation Catholic Church of England believed that its establishment was the spontaneous act of the people; the distinctive feature of the post-Reformation Church is that it was imposed upon the people by legal enactment, and based upon the principle of royal supremacy. Papal jurisdiction was not simply swept away but was transferred entire to the Crown. And except for the brief return to Catholic unity under Mary (1553-1558) and during the Commonwealth (1649-1660), the arrangements then made have continued to limit the liberty of action of the Anglican body alike in matters doctrinal and disciplinary. Convocation cannot meet, discuss, or enact new canons without royal permission (25 Hen. VIII, c. 19); the effective nomination of archbishops and bishops, etc., rests with the Crown (25 Hen. VIII, c. 19); supreme spiritual and ecclesiastical jurisdiction is annexed to the Crown (25 Hen. VIII, 19, cf. 1 Eliz., c. 1). Moreover the decrees of councils, synods, and litur- gies or doctrines has been permitted without the sanction of an act of Parliament. The term "by law established", as applied to the Church of England, is first met with in the canons of the Convocation of 1604 (c. iii), which declares that the Church of England by law established under the King's Majesty is a true and Apostolic Church. It is of frequent occurrence in subsequent statutes. The term "established" was applied to the prescribing and settling by law of the liturgical formularies of the English Church in the Act of Uniformity, 1558 (1 Eliz., c. 2, § 27). (See Anglicanism; Convocation of the English Clergy.)

BERNARD WARD.

**Eaangi** JEAN-BAPTISTE-CHARLES-HENRI-HECTOR, COMTE D„ MARQUES DE SAILLAN, a French General, b. at the chateau of Raymont Mouton, Nov. 27, 1729; d. at Paris, 28 April, 1794. He first served in the army as a colonel of infantry. In 1757, having obtained the rank of brigadier-general, he went to the East Indies, with Lally-Tollendal. Made a prisoner at the siege of Madras (1759), he was set free.
on parole, entered the service of the French East India Company, and (with two vessels) destroyed the British factories in Sumatra and the Persian Gulf. He was on his way to France, in 1769, when he fell into the hands of the English and was sent to Plymouth. Released a second time, he was appointed lieutenant-general of the navy in 1763, and vice-admiral in 1777. One year later, he left Toulon in command of a fleet of twelve battleships and fourteen frigates with the intention of assisting the struggling American colonies against Great Britain. Unfavourable winds delayed him and so Admiral Howe's fleet escaped his pursuit and d'Estaing took possession of Newport (28 August). A great naval battle was about to take place, when a violent storm arose and dispersed the two fleets. After a short sojourn in Boston harbour, he sailed to the West Indies where he took St. Vincent and Grenada (4 July, 1779) and badly damaged Admiral Byron's fleet. His attempts to retake Savannah, in concert with the Americans, were unsuccessful; a severe wound obliged him to give up the enterprise. On his return to France, in 1780, he fell into disfavour at the court. Three years later, however, he was placed at the head of the Franco-Spanish fleet assembled before Cadiz, but peace was signed and no operations took place. He was then made a grandee of Spain. When the French Revolution broke out, he favoured the new idea. A member of the Assembly of Notables, he was named commandant of the National Guard at Versailles in 1789, and admiral in 1792. He constantly endeavoured to protect the king, and at the trial of Marie Antoinette in 1793 spoke in her favour. He was charged with being a reactionary and was sent to the scaffold, 28 April, 1794. In his moments of leisure, he wrote a poem, "Le Rêve" (1755), a tragedy, "Les Thermopyles" (1789), and a book on the colonies. 

LOUIS N. DELAMARRE.

Esther (Heb. אסתר, star; happiness; Sept. "Esthēs"). Queen of Persia, and wife of Assuerus, who is identified with Xerxes (485-465 B.C.). She was a Jewess of the tribe of Benjamin, daughter of Abihail, and bore before her accession to the throne the name of Edissa (אִדִּיסָה, Haydēsāh, myrtle). Her family had been deported from Jerusalem to Babylon in the time of Jehochina (599 B.C.). On the day of her death her parents she was adopted by her father's brother, Mardochoai, who then dwelt in Susian, the capital of Persia. King Assuerus being angered at the refusal of his wife Vashti to respond to his invitation to attend a banquet begged her to use her influence with the king and thus avert the threatening danger. At first she feared to enter the presence of the king unsummoned, for to do so was a capital offence. But, on the earnest entreaty of her uncle, she consented to approach after three days, which with her maid she would pass in fasting and prayer, and during which she requested her uncle to have all the Jews in the city fast and pray.

On the third day Esther appeared before the king, who received her graciously and promised to grant her request whatever it might be. She then asked him and Aman to dine with her. At the banquet they accepted her invitation to dine with her again on the following day. Aman, carried away by the joy that this honour gave him, issued orders for the erection of a gallows on which he purposed to hang the hated Mardochoai. But that night the king, being sleepless, ordered the chronicles of the nation to be read to him. Learning that Mardochoai had never been rewarded for his service in revealing the plot of the eunuchs, he asked Aman, the next day, to suggest a suitable reward for one "whom the king desired to honour." Thinking it was himself that the king had in mind, Aman suggested the use of the king's apparel and insignia. These the king ordered to be bestowed on Mardochoai. At the second banquet, when the king returned to Esther his offer to grant her whatever she might ask, she informed him of the plot of Aman which involved the destruction of the whole Jewish
people to which she belonged, and pleaded that they should be spared. The king ordered that Aman should be hanged on the gibbet prepared for Mardochoai, and, confiscating his property, bestowed it upon the intended victim. He charged Mardochoai to address to all the governors of Persia letters to the Jews to defend themselves and to kill all those who, by virtue of the previous decree, should attack them. During two days the Jews took a bloody revenge on their enemies in Susan and other cities. Mardochoai then instituted the feast of Purim (lots) which he exhorted the Jews to celebrate in memory of the day which Aman had determined for their destruction, but which had been turned by Esther into a day of triumph. The foregoing story of Esther is taken from the Book of Esther as found in the Vulgate. Jewish traditions place the tomb of Esther at Hamadan (Echatana). The Fathers of the Church considered Esther as a type of the Blessed Virgin Mary. In her poems have found a favourite subject. (R. Schwartz, Esther im deutschen u. neulateinischen Drama des Reformationszeitalters, Oldenburg, 1894.)

Book of Esther.—In the Hebrew Bible and the Septuagint, the Book of Esther has been used by later writers under the title of "Esther," sometimes also as "the Esther." But the Jewish rabbis called it also the "volumen Esther," or simply "the volume" (meqillah) to distinguish it from the other four volumes (megilloth), written on separate rolls, which were read in the synagogues on certain feast days. As the body of the text furnished a number of facts about Purim and Esther, the Book of Esther was largely composed of epistles (cf. Esth., ix, 20, 29), which was called the "Epistle of Purim" in the Hebrew canon. The book was found in the Hagiographa and placed after Ecclesiastes. In the Latin Vulgate it has always been classed with Tobit and Judith, under which title it is put in the Vulgate, that is, the parts of the text which has come down to us varies considerably from those of the Septuagint and the Vulgate. The Septuagint, besides showing how many important divergencies, contains several additions in the body of the book or at the end. The additions are the portion of the Vulgate text after ch. x, 3. Although no trace of these fragments is found in the Hebrew Bible, they are most probably translations from an original Hebrew or Chaldaic text. Origen tells us that they existed in Theodotion's version, and that they were used by Josephus in his "Antiquities" (xv. i.). St. Jerome, finding them in the Septuagint and the Old Latin version, placed them at the end of his almost literal translation of the existing Hebrew text, and indicated the place where they occupy in the Septuagint. The chapters being thus rearranged, the book may be divided into two parts: the first relating the events which preceded and led up to the decree authorizing the extermination of the Jews (i-iii, 15; xi, 2; xiii, 7), the second showing how the Jews escaped from their enemies and avenged themselves (iv-v, 8; xi-xv).

The Book of Esther, thus taken in part from the Hebrew Canon in and part from the Septuagint, found a place in the Christian Canon of the O.T. The chapters taken from the Septuagint were considered deuterocanonical, and, after St. Jerome, were separated from the ten chapters taken from the Hebrew which were called protocanonical (see Canon of the Hebrew Scriptures). Among the Fathers many of the Greek and Latin Fathers clearly considered the entire work as inspired, although no one among them found it to its purpose to write a commentary on it. Its omission in some of the early catalogues of the Scriptures was accidental or unimportant. The first to reject the book was Luther, who declared that he could not find that it existed that it did not exist (Table Talk, 59). His first followers wished only to reject the deuterocanonical parts, whereupon these, as well as other deuterocanonical parts of the Scriptures, were declared by the Council of Trent (Dec. IV, de Can. Scripture) to be canonical and inspired. With the rise of rationalism the opinion of Luther found many supporters. When modern rationalists argue that the Book of Esther is irreverent in character, unlike the other books of the O.T., and therefore to be rejected, they have in mind only the first or proto- canonical part, not the entire book. The Jewish rabbis who declared that it contained nothing unworthy of a place in the Sacred Scriptures. And any way, as Driver points out (Introd. to the Lit. of the O.T.), there is no reason why every part of the Biblical record should be rejected if it is simply religious. But, although the first part is not explicitly religious, it contains nothing unworthy of a place in the Sacred Scriptures. And any way, as Driver points out (Introd. to the Lit. of the O.T.), there is no reason why every part of the Biblical record should be rejected if it is simply religious. But, although the first part is not explicitly religious, it contains nothing unworthy of a place in the Sacred Scriptures.

As to the authorship of the Book of Esther there is nothing but conjecture. The Talmud (Baba Bathra 19°) assigns it to the great Synagogue; St. Clement of Alexandria ascribes it to Mardochoai; St. Augustine suggests Esdras as the author. Many, noting the writer's familiarity with Persian customs and institutions and with the character of Assuerus, hold that he was a contemporary of Mardochoai, whose memoirs he used. But such memoirs and other contemporary documents showing this familiar knowledge could have been written only by a later author, and although the absence in the text of allusion to Jerusalem seems to lead to the conclusion that the book was written and published in Persia at the end of the reign of Xerxes I (485-465 b. c.) or during the reign of his son Artaxerxes I (465-425 b. c.), the text seems to show of reason in favour of a later date. They: (1) an implied statement that Susan had ceased to be the capital of Persia, and a vague description of the extent of the kingdom (i, 1); (2) an explanation of Persian usages that implies unfamiliarity with them (cf. Esth., ix, 13, 19, xiv, 17, 19; (3) the unimpassioned attitude of the Jews towards the Gentiles, by whom they felt they had been wronged, and with whom they wished to have little to do (iii, 8 sqq.); (4) a dictum showing many late words and a deterioration in syntax; (5) references to the Macedonians and to the plot of Aman as an attempt to transfer the "kingdom of the Persians to the Macedonians" (xvi, 10, 14). On the strength of these passages various modern critics have assigned late dates for the authorship of the book, as, 155 b. c., 167 b. c., 208 b. c., the beginning of the third century b. c., or the early years of the reign of the Great Antiochus, who began 332 b.c. The majority accept the last opinion. Some of the modern critics have fixed upon dates for the composition of the book that it has any historical value whatever, and declare it to be a work of the imagination, written for the purpose of popularizing the feast of Purim. In support of their contention they point out in the text what appear to be historical improbabilities, and attempt to show that the narrative has all the characteristics of a romance, the various incidents being artfully arranged so as to form a series of contrasts and to develop into a climax. But what seem to be historical improbabilities are in many cases trivial. Even advanced critics do not agree as to those which seem quite serious. While some, for instance, consider it wholly improbable that Assuerus and Aman should have been ignorant of the great waste of the Great Antiochus in frequent communication with Mardochoai, a well-known Jew, others maintain that it was quite possible and probable that a young woman, known to a Jewess, should be taken into the harem of a Persian king, and that with the assistance of a relative she could have influenced the people with high official had endeavoured to effect. The seeming improbability of other passages, if not entirely explained, can be sufficiently explained to destroy the conclusion, on this ground, that the book is not historical. As to artful contrasts and climax which appeal is made as evidences that the book is the work
of a mere romancer, it may be said with Driver (op. cit.) that fact is stranger than fiction, and that a conclusion based upon such appearances is precarious. There is undoubtedly an exercise of art in the composition of the work, but no more than any historian may undertake: rearranging and arranging the incidents of history. A more generally accepted opinion among contemporary critics is that the work is substantially historical. Recognizing the author’s close acquaintance with Persian customs and institutions, they hold that the main elements of the work were supplied to him by tradition, but that, to satisfy his taste for dramatic effect, he introduced details which were not strictly historical. But the opinion held by most Catholics and by some Protestants is, that the work is historical in substance and in detail. They base their conclusions especially on the following: (1) the vivacity and simplicity of the narrative; (2) the precise and circumstantial details, as, particularly, the naming of unimportant personages, the noting of dates and events; (3) the references to the annals of the Persians; (4) the absence of anachronisms; (5) the agreement of proper names with the time in which the story is placed; (6) the confirmation of details by history and archaeology; (7) the celebration of the feast of Purim in commemoration of the deliverance of the Jews by Esther and Mardochai at the time of the Machabees (II Mach., xv, 37), at the time of Josephus (Antiq. of the Jews, XI, vi, §3), and suc- cession, limit and tradition, as well as by the Schoolmen. The Jews were, it is true, of the opinion that the story of Esther was engrafted on a Jewish feast already existing and probably connected with a Persian festival, is only a surmise. Nor has any one else suc- ceeded better in offering an explanation than that it had its origin as stated in the Book of Esther.

A. L. McMAHON.

Etiennot de la Serre, CLAUDE, Benedictine of the Congregation of Saint-Maur, b. at Varennes, France, 1639; d. at Rome, 1899. He joined the Benedictines at Vendôme and was professed there in 1658. After teaching humanities for a short time to the junior monks at Pontlevoy, he was, at the instance of Dom Luc d’Achéry, sent to the Abbey of St-George-des-Prés, Paris, where his aptitude for study and research was quickly discovered by Dom Mabillon, whose intimate friend and fellow-worker he became. Together they journeyed on foot through Flanders, visiting all its chief monastic libraries. In 1670 he was made sub-prior of St-Martin’s, Pontoise, a history of which abbey, in three volumes, was his first published work. Between 1673 and 1682 he compiled his chief work, entitled “Antiquités Bénédictines”, in which the monastic traditions of France are recorded under the headings of the different dioceses. In 1684 he was ap- pointed procurator for his congregation in the Curia Romana, which post required his residence in Rome for the remainder of his life. On his way thither from Paris he visited numerous monasteries and collected a great quantity of material, which he sent back to Dom Mabillon and most of which found its way into the “Annales O.S.B.” or the “Gallia Christiana.” During the fifteen years he lived in Italy he laboured faithfully on behalf of his congregation, and he was also greatly trusted by the French bishops, for whom he acted in many matters of ecclesiastical business. He enjoyed the entire confidence of several popes and other high officials of the Church, and he is described as combining all the qualities of a man of letters with great business ability. Besides the history of Pontlevoy and the “Antiquités”, he already mentioned, he collected sixteen volumes of fragments historicorum, but though he did not publish much under his own name, he worked incessantly in the chief libraries of Italy, all of which were open to him, and the results of his researches he forwarded to Dom Mabillon and others at St-George-des-Prés, to whom they were of the greatest service. He was buried in the church of the Minims of SS. Trinité de’ Monti.

Eternal Gospel. See Joachim of Flora.

Eternity (aternum, originally aveternum, adavoy, son-long) is defined by Boecius (De Consol. Phil., VI, vi) as “possession, without successor and perfect, of interminable life” (interminabilis vitae tota simul et perfecta possitio). The definition, which was adopted by the Schoolmen, and least and especially for the determination of the faith properly so called, that of God, implies four things: that eternity is (1) a life, (2) without beginning or end, (3) or succession, and (4) of the most perfect kind. God not only is or exists, but lives. The notion of life, like all notions, is a product of the human mind; is, when applied to God, but analogously. He not only does not live precisely as anything else with which we are acquainted lives; He does not even exist as anything else exists. Our notions of life and existence are derived from creatures, in which life implies change, and it is therefore necessary that we should coinside with God in involving composition. In God there can be no composition or change or imperfection of any kind, but all is pure act or being. The agnostic, however, is not thereby justified in saying that we can know nothing and should predicate nothing of God. It is true that, however we conceive Him or in whatever terms we speak of Him, our ideas and terminology are utterly barren and unworthy of Him. Yet, even while arguing in this way, the agnostic thinks and speaks of Him as really as we do; nor can he or we do otherwise, compelled as we are to trace things back to their first cause. Yielding to this necessity, we can talk and speak of Him in the highest and most spiritual terms known to us; not merely as existing, for instance, but as living; correcting at once, as far as we can, the form of our thought and predication, by adding that the Divine life is perfect, free from the least trace of defect. That is how and why we represent the Di- vine existence as a life. It is a life, moreover, not only without beginning or end but also without succession —tota simul, that is without past or future; a never-changing instant or “now”. It is not so difficult to form some faint notion of a duration which never be- gins, but it is not easy to form an image of a duration which never ends. We hope that our own life shall be endless; and materialists have accustomed us to the notion of a series stretching backward without limit in time, to the notion of a material universe that never came into being but was always there. The Divine existence is that, and much more; it has a past, a success into right line—a line of separate dots; then a continuous line within two limits, beginning and end. The line can be, is not, divided into parts, shorter lines or dots, and the whole is finite both ways. It is like and yet unlike a finite spirit; like, since it has no actual parts or divisions and is limited; yet unlike since it
Eternity may be divided, whereas a spirit cannot be divided. Spirit exists whole and entire wherever it exists at all; and though it may fill the space occupied by a human body, let us say, it is whole and entire in every possible part of it; not quite unlike the continuous line. If we further suppose the end or limits of the line to be moved, of the earth’s axis, for instance, as extending indefinitely into space, the line is not only continuous or unbroken but infinite, without end or beginning, yet still divisible; like, but so unlike, the immensity of God. For God is a spirit, and as the human soul fills the space occupied by the body to which it is united, yet is whole and entire in every possible part of that space, so God fills all space whatsoever, extending without limit in all directions, and yet is whole and entire everywhere, in the smallest conceivable point, in the very loose or improper sense in which we may think or speak of God as being “whole.” Even the spatial relations of the soul to the body are far removed as compared to those which God’s existence bears to that of creatures and the spaces in which they exist or may exist. For however free from extension created spirits may be, they are not incapable of real internal change, real motion within themselves; whereas God, filling all space, is incapable of the least change or motion, but is so truly the same throughout that He is best conceived as an infinitely extended point, the same here, there, everywhere.

If, now, we apply to the time-line what we have been affording of that of space, the infinite, unchangeable point which was immensity before the real succession of separate acts or changes (which is known as “time”); nor even the continuous duration of a being which is changeless in its substance, however it may vary in its actions (which is what St. Thomas understands by “eternity”); but an endless line of existence and action which not only is not actually interrupted, but is incapable of interruption or of the least change or movement whatsoever. And as, if one instant should pass away and another succeed, the present becoming past and the future present, there is necessarily a change or movement of instances; so, if we are not to be irreverent in our concept of God, but to represent Him as best we can, we must try to conceive Him as excluding all, even the least, change or succession; and his duration, consequently, as being without even a possible past or future, but a never beginning, never-ending, absolutely unchangeable “now.” That is how eternity is presented in Catholic philosophy and theology. The notion is of special interest in helping us to realize, however faintly, the relations of God to created things, especially with regard to His foreknowledge. In Him there is no before or after, and therefore no foreknowledge, objectively; the distinction which we are wont to draw between His knowledge of intelligence or science or previsions and His knowledge of vision is merely our way of representing things, natural enough to us, but not by any means objective or real in Him. There is no real objective distinction between His intention, nor between either of these and the Divine substance, in which there is no possibility of difference or change. That infinitely perfect substantial intelligence, immense as it is eternal, and withinal existing entire and immutable as an indivisible point in space and as an indivisible instant in time, is coextensive, in the sense of being intimately present, with the space-extension and the time-succession of all creatures; not beside them, nor parallel with them, nor before or after them; but present in and with them, sustaining them, co-operating with them, and therefore seeing—not foreseeing; and this every point in the space-extension, or at any instant of the time-extension, in which they may exist or operate. God may be considered as an immovable point in the centre of a world which, whether as a more or less closely connected group of granulated individuals, or as an absolutely continuous ether mass, turns round Him as a sphere may be supposed to turn in all directions round its centre (St. Thomas, Cont. Gent., I, c. lxi). The imagery, however, must be corrected by noting that in the time-line God’s duration is an ever-moving, though here and there continuous, circle. The space and time relations are constantly changing between Him and the moving things around Him, not through any change in Him, but only by reason of the constant change in them. In them there is before and after, but not in Him. Who is equally present to them all, no matter how or when they may have come into being, or how they may succeed one another in time or in space. Some of them are free acts; and almost from the time the human mind began to speculate on these questions, and whereas there are any even of rudimentary speculations of the question has arisen and does arise as to how an act can be free not to happen if, as we suppose, God’s absolutely infallible foresight saw from all eternity that it was to be. To this Catholic philosophy supplies the only answer which can be given; that it is not true to say that God either saw or foresaw an act which He will see, but only that He sees it. And as my seeing you act does not interfere with your freedom of action, but I see you acting freely or necessarily, as the case may be, so God sees all finite things, quiescent or active, of necessity or freely, according as what may be objectively real, without the least interfering thereby with the mode or quality of their existence or of their action. Here again, however, care must be taken not to conceive the Divine knowledge as being determined by what the finite may be or do; somewhat as we see things because the knowledge is borne in upon us from what we see. It is not from the finite that God gets His knowledge, but from His own Divine essence, in which all things are represented or mirrored as they are, existing or merely possible, necessary or free. On this aspect of the question see God. When, if asked or tempted to ask, what God did or where He was before time and place began, with the creation of the world, the answer must be a denial of the legitimacy of the supposition that He was “before.” It is only in relation to the finite and mutable that there can be a before and after. And when we say, that, as faith teaches, the world was created in time and was not from eternity, our meaning should not be that the existence of the Creator stretched back infinitely before He brought the world into being; but rather that while His existence remains an unchangeable present, without possibility of before or after, of change or succession outside the Divine existence, to each instant of which it corresponds as the centre does to any point in the circumference, had a beginning, and might have extended indefinitely further backward, without, however, escaping the omnipresence of the eternal “now.” (See Billot, De Deo Uno et Trino, p. 222).

So far for the strict or proper notion of eternity, as applying solely to the Divine existence. There is a wide or improper sense in which we are wont to represent as eternal what is merely endless succession in time, without any instant of the time-line being a point of the space-extension, or at any instant of the time-extension, in which they may exist or operate. God may be considered as an immovable point in the centre of a world which, whether as a more or less closely connected group of granulated individuals,
ETHELBERT
represented as standing with one foot on sea and one on land, and swearing by Him that liveth forever that time shall be no more. Whatever the meaning of the oath may be, it has found an echo in our religious terminology, and we are wont to think and say that with death, and especially with the Last Judgment, time shall be no more.

The meaning is not that there will be no more succession of any kind; but that there will be no substantial change or corruption in what survives death, the soul; or in the body that shall have been raised from the dead; or in the heavens and earth as they shall be renewed after Christ's second coming. Therefore, no matter what an individual life may be, the doctrine that in the future life of souls, whether in heaven or in hell, succession will be accidental, the act in which their essential happiness or misery will consist being continuous and unbroken vision and love, or blinded wrong vision and hatred, of God. This kind of duration is in our ordinary language spoken of as life or death eternal, by a kind of participation, in a wide or improper sense, in the character of the Divine eternity (Billot, op. cit., 119).

Questions of the greatest importance have been raised as to the possibility of an eternal world, in the sense of a world of matter, such as we know, having never had a beginning and therefore not needing a first cause; also as to the possibility of eternal creation, in the sense of a being, with or without succession, having had no beginning of existence and yet having been created by God (see Creation). For other questions as to eternity see Heave. Held, "Eternal life" is a term applied times applied to the state and life of grace, even before death; this being the initial stage or seed, as it were, of the never-ending life of bliss in heaven, which, by a species of metonymy, is regarded as present in it, of the state of grace. This, if we are true to ourselves and to God, is sure to pass into the second stage, the true life eternal.

The basis of all later treatment of the question of eternity is that of St. Thomas, I, Q. N. For a fuller exposition, see Suarez, De Deo, I, iv.; Ibid., Metaphysics, disp. I. ii. sq.; Lessius, De perfectionibus divinum, I. For the teaching of such non-Christian philosophers as (Baly, Arisotle, and the Neo-Platonists), see also of the Fathers, see Petavius, De Deo, III, iii. iv. In the same chapters he discusses the meaning of the term dorm. For the testimony of the Fathers as to the possibility of creation from eternity, see Petavius, op. cit., vi. But the doctrine may be found in the ordinary handbooks of philosophy, on ontology and natural theology; also in the various treatises De Deo Uno.

WALTER MCDONALD.

ETHELBERT, SAINT, date of birth unknown; d. 794; King of the East Angles, was, according to the "Speculum Historiale" of Richard of Cirencester (d. about 1401), the son of King Ethelred and Leofrâne, a lady of Mercia. Brought up in piety, he was elected king on Ethelred's death, ruled wisely, and was a man of singular humility. Urged to marry, he declared his preference for a life of celibacy, but at length consented to woo Alithra (Aldrêce), daughter of Offa, King of the Mercians. Leofrâne foreboded evil and told Ethelbert to decline the princess; but in spite of an earth quake, an eclipse of the sun, and a warning vision, he proceeded from Bury St. Edmunds to Villa Australis, where Offa resided. On his arrival Alithra expressed her admiration for Ethelbert, declaring that Offa ought to accept him as suzerain. Cynethryth, the queen-mother, urged by hatred of Ethelbert, so poisoned Offa's mind against him, that he accepted the offer of a certain Grimbert to murder their guest. Ethelbert, having come for an interview with Offa, was bound and beheaded by Grimbert. The body was buried ignominiously, but, revealing itself by a heavenly light, it was translated to the cathedral of Hereford, where many miracles attested Ethelbert's sanctity. The head was enshrined at Westminster Abbey.

The "Chronicon" of John Brompton (fl. 1437) adds a few particulars: the body with the head was first buried on the banks of the Lugg. On the third night the saint commanded one Brittrid, a nobleman, to convey his relics to Stratus-way. During the journey the head fell out of the cart and healed a man who had been blind for eleven years. Finally the body was translated to Farnley, the present Hereford. According to Brompton, Althair, Ethelred's son, became a saint of that land. Offa repented of his sin (Matthew of Paris relates Offa as ignorant of the plot till after Ethelbert's murder), gave much land to the martyr, "which the church of Hereford holds to the present day", founded St. Albans and other monasteries, and made his historic pilgrimage to the shrine of St. Ethelbert. St. Ethelbert figures largely in the Missal, Breviary, and Hymnal of the Use of Hereford. His feast is on 20 May. Thirteen English churches, besides Hereford cathedral, are dedicated in honour of Ethelbert; and one of the gateways of Norwich cathedral bears his name.

PATRICK RYAN.

ETHELBERT, SAINT, King of Kent, b. 552; d. 24 February, 616; son of Eormenric, through whom he was descended from Hengest. He succeeded his father, in 560, as King of Kent and made a successful attempt to win from Cæanwulf of Wessex the overlordship of Britain. His political importance was doubtless advanced by his marriage with Bertha, daughter of Charibert, King of the Franks (see Benicia). A noble disposition to fair dealing is argued by his giving her the old Roman church of St. Martin in his capital of Cantwarburgh (Canterbury) and offering her every opportunity for the exercise of her religion, although he himself had been reared, and remained, a worshipper of Odin. The same natural virtue, combined with a quaint spiritual caution and, on the other hand, a large instinct of hospitality, appears in his message to St. Augustine when, in 597, the Apostle of England landed on the Kentish coast (see Augustine of Canterbury).

In the interval between Ethelbert's defeat by Cæanwulf and the arrival of the English missionaries, the death of the Wessex king had left Ethelbert, at least virtually, supreme in southern Britain, and his baptism, which took place on Whitensunday next following the landing of Augustine (2 June, 597) had such an effect in deciding the minds of his wavering countrymen that as many as 10,000 are said to have followed his example within a few months. Thenceforward Ethelbert became the watchful father of the infant Anglo-Saxon Church. He founded the church which in after-ages was to be the primate cathedral of all England, besides other churches at Rochester and Canterbury. But, although he permitted, and even helped, Augustine to convert a heathen temple into the church of St. Pancras (Canterbury), he never compelled his heathen subjects to accept baptism. Moreover, as the lawgiver who issued their first written laws to the English people (the nine "Books of Ethelbert", A. D. 604) he holds in English history a place thoroughly consistent with his character as the temporal founder of that see which did more than any other for the upbuilding of free and orderly political institutions in Christendom. When St. Mellitus had converted Siebert, King of the East Saxons, whose capital was London, and it was proposed to make that see the metropolitan, Ethelbert, supported by Augustine, successfully resisted the attempt, and thus fixed for more than nine centuries the individual character of the English Church. He left three children, of whom the only son, Eadbald, lived and died a pagan.
Ethelbert, ARCHBISHOP OF YORK, England, date of birth uncertain; d. 8 Nov., 781 or 782. The name also appears as AELBERT, ALDERBERT, AELBERHT, ALDERBERT, ALBERHT, EADBERHT, and EALBERT.

He was the teacher and intimate friend of Alcuin, whose poem on the saints and prelates of the Church of York, "De Santi et Pontificibus Ecclesiae Eboracensis," is the principal source of information concerning Ethelbert's life. He was a kinsman of his predecessor Archbishop Egbert (brother to Eadberht, King of Northumbria) and a pupil in the school which Egbert founded at York. When he reached man's estate, Egbert ordained him priest and made him master of the school. Among his pupils was Alcuin, who has left us an affectionate description of him, from which we learn how varied his erudition was—grammar, rhetoric, law, poetry, astronomy, natural history, and Sacred Scripture being all mentioned as subjects in which he instructed his pupils. He is described as a small, thin-statured, gentle to the docile, while of those who were scholars after his own heart it is said "hos sibi conjuxit, docius, nutritiv, amat ivi!" His ready sympathy won the affection of his students, while his strenuous energy urged them on to further progress. Even after Egbert became archbishop, he continued himself the duty of lecturing on the New Testament, while he entrusted the work of explaining the Old Testament to Ethelbert. As a keen scholar he loved books ardent and spared no pains in forming a library at York, which was probably the largest collection of books to be found outside Rome. Among the books enumerating many of these, mentions several Latin and Greek classical authors, as well as the Fathers and other Christian writers. Ethelbert, in his search for books, travelled far, and we know that he visited Rome among other places. Everywhere his learning and power of sympathy won for him friends, so that his influence for good was widespread and he ranks as one of the foremost among the promoters of education in the eighth century.

In 766 Archbishop Egbert died, and Ethelbert was unanimously chosen to succeed him. He was consecrated 707, and received the pallium from Adrian I in 773. As archbishop he continued his simple and laborious life, working with such success that he is regarded as one of the founders of the Church of York. He set himself to rebuild the minster which had been destroyed by fire in 741. It is impossible to obtain certain information as to the extent of his work, but Alcuin speaks as though he began, finished, and consecrated it:

Ast nova basilicie minre structura diebus
Presulis hujus erat jam capta, peracta, sacra.

He then retired to a cell where he spent some time in devotion. Shortly before his death, in the autumn of 781 or 782, he appeared once more in public that he might consecrate the cathedral which was now complete. Ten days later he died and was buried in his church at York. Alcuin, his father, and composed in his honour the splendid panegyric (lines 1394–1595) which is the gem of the poem on the Church of York. To him Ethelbert—or Elbert, as he calls him—was both pontiff and saint, "Jam cui Christus amor, potus, cibus, omnin Christus?"

Edwin Burton.
Ethelhard (ÆTHELHARD, ETHELHARD), fourteenth Archbishop of Canterbury, England, date of birth unknown; d. 12 May, 805. Much obscurity surrounds the details of his life previous to his election. He is described by Symeon of Durham as “Abbas Hludensis” but it is uncertain what monastery he is thus designated. It has been variously located at Louth in Lincolnshire (the most probable identification), Lydd, and Luddesdown in Kent, and at Malmesbury. William of Malmesbury is certainly mistaken in identifying him with Ethelhard, ninth Bishop of Winchester.

The rise of Offa, King of the Mercians (757–796), had divided England into three great states: Northumbria, Mercia, and Wessex. The king sought to consolidate his kingdom by giving it an independent ecclesiastical organization; for although Northumbria had its own archbishopric at York, Mercia, after conquering Kent, was still ecclesiastically subject to the powerful see of Canterbury, then ruled over by Jaenbert (760–791). Offa’s scheme was to weaken Canterbury’s influence by dividing the southern province, and creating a Mercian archbishopric at Lichfield: this he successfully accomplished when on the occasion of the Legatine visit of George and Theophylact, sent by Pope Hadrian I (772–795) in 786–788, Higbert received the pallium as Archbishop of Lichfield, and Canterbury was left with only London, Winchester, Sherborne, Rochester, and Selsey as suffragan sees. On the death of Jaenbert (12 Aug., 791), Ethelward was raised to the see through the influence of Offa, which makes it likely that he was a Mercian abbot. Although he was elected in 791, his consecration only took place on 21 July, 793: the delay being probably due to the unwillingness of the Kentish clergy and people to receive a Mercian archbishop, and to his being consecrated by the Archbishop of Lichfield. Had Offa’s policy of separate ecclesiastical organization prevailed, it would have impeded the attainment of national unity, and its defeat by Ethelhard is an event of the greatest importance in the history of the making of the English nation. During Offa’s time little could be done to restore Canterbury’s rights and prestige. The year 796 was full of incident: the nobles of Kent rose in arms, and rallying round Eadbert Præna, a cleric and a member of their royal house, endeavoured to shake off the yoke of the Mercian Offa. To Ethelward’s difficulties increased Alethea had entreated him not to desert his Church; but after taking severe ecclesiastical measures against the recalcitrant cleric he was obliged to flee. Ethelward was consecrated by the Archbishop of Lichfield, and in the fore going year, about 13 Dec., Cenwulf succeeded in Mercia, but the struggle continued in Kent until the capture of Eadbert in 798.

The co-operation of Ethelhard and Cenwulf in deposing Eadbert, and in upholding the Mercian cause in Kent, increased the importance of Canterbury, and the archiepiscopal authority of Higbert waned. Cenwulf retained an estate taken from Canterbury by Offa, and wrote in 798 to Pope Leo asking him to examine into the question of the diminution of the rights of that see, and enclosing a letter from Ethelhard and his suffragans. Ethelward meanwhile had returned to Mercia, and Alfcild having increased his power was entertaining the idea of conquering the land and deserting the Church. The success of Abbot Wada’s mission to Rome, the tone of the letter of Leo III to Cenwulf, and the successful conference with Eanbald II of York, with reference to the restoration of the rights of his see, determined Ethelward to set out for Rome in 801. Although he stood in good stead; he sent a servant to meet him at St. Jossa-sur-mer, and furnished him with letters of recommendation to Charles the Great. Success attended his efforts in Rome. Pope Leo III (795–816) granted his request, and ended the dispute between Canterbury and Lichfield by depriving Lichfield of its recently acquired honours and powers. The pope’s decision was officially acknowledged by the Council of Clovesho on 12 Oct., 803, in presence of Cenwulf and his Witan, and Higbert was deprived of his pallium, in spite of Alcuin’s plea that so good a man should be spared that humiliation.

It is during Ethelward’s occupancy of the See of Canterbury that we first meet with official records of the profession of faith and obedience made by the English bishops-elect to their metropolitan. The first document of that type is the profession of obedience to the See of Canterbury made in 796 by Bishop Wulf of Linsay, who, as a suffragan of Lichfield, ought to have been consecrated by Higbert: it would appear to coincide with the collapse of Higbert’s archiepiscopal authority at the death of Offa.

Edward Myers.

Ethelwold, Saint, Bishop of Winchester was born there of good parentage in the early years of the tenth century; d. 1 Aug., 984. After a youth spent at the court of King Athelstan, Ethelwold placed himself under Elphege the Bald, Bishop of Winchester, who gave him the tonsure and consecrated him with Dunstan. At Glastonbury, where he was dean under Saint Dunstan, he was a mirror of perfection. In 955 he became Abbot of Abingdon; and 29 November, 963, was consecrated Bishop of Winchester by Dunstan, with whom and Oswald of Worcester he worked zealously in combating the general corruption occasioned by the Danish invasions. At Winchester, both in the old and in his new minster (see Swineth), he replaced the evil-living seculars with monks and refounded the ancient nunnery. His labours extended to Chertsey, Milton (Dorsetshire), Ely, Peterborough, and Thorney, expelling the unworthy, rebuilding and restoring: to the rebellious “terrible as a lion”, to the meek “gentler than a dove”. The epithet “father of monks” and “benevolent bishop” summarize Ethelwold’s character as reformer and friend of Christ’s poor. Though he suffered much ill-health, his life as scholar, teacher, and royal counsellor was ever austere. He was buried in Winchester cathedral, his body being translated later by Elphege, his successor. Abingdon monastery in the twelfth century had relics of Ethelwold. He is said to have written a treatise on the origin of law, translated the “Regularia Concordia”. His feast is kept on 1 August.

Not to be confounded with the foregoing are (2) St. Ethelwold, monk of Ripon, anchoret at Lindisfarne, d. about 720; feast kept 23 March; and (3) St. Ethelwold, Abbot of Melrose, Bishop of Lindisfarne, d. c. 740; feast kept 12 February.

Primary sources for Ethelwold of Winchester are Chronicon de Abingdon, in Rolls Series, passim, especially his Life, by Edmund Stubbs, in E. D. L., VII, 187–192; and the Life of Ethelwold, in The Life and Times of the Bishops of Winchester, in Acta SS., August, I, 83 sqq. Of. also Memorials of Dunstan, in Rolls Series, 6, 43 (Lond., 1849). Bollandists, Bibl. hagiog., 398; Chevaller, Répertoire, 1867; Stanton, 376; Hunt, in Dict. Nat. Biog., XVIII, 37. For Ethelwold’s beneficentus, see Archaeologia, XXIV, 1841; and Considerations of Dunstan, in Rolls Series, 6, 43 (Lond., 1849), 190; Bollandists, Bibl. hagiog., 398; Chevaller, Répertoire, 1867, 316; and Stanton, 376; Hunt, in Dict. Nat. Biog., XVIII, 37.

For Ethelwold’s Benedictional, see Archaeologia, XXIV, 1841; and Considerations of Dunstan, in Rolls Series, 6, 43 (Lond., 1849), 190; Bollandists, Bibl. hagiog., 398; Chevaller, Répertoire, 1867, 316; and Stanton, 376; Hunt, in Dict. Nat. Biog., XVIII, 37.

For (2) Acta SS., March, III, 448, with citations from Bede, Life of St. Cuthbert; Stanton, Mevlesi, Chevaller, Répertoire, 1867, 316.

For (3) Acta SS., Feb., II, 604; Stanton, 63; Chevaller.

Patrick Ryan.

Ethernianus, Hugh and Leo, brothers, Tuscan by birth, employed at the court of Constantineople under the Emperor Manuel I (Comnenus, 1143–1180). Their name is spelled in various ways: Ethernianus, Etherianus, Erothianus, etc. Leo is of little importance. We know from his brother (Adv. Graec. I, 290) that he was “occupied in translating the imperial
letters", evidently an interpreter for Latin correspondence. Hugh, who does not seem to have held any official post at court, but was a very learned theologian, had many opportunities of discussing the questions at issue between the Orthodox and Catholics (see note on Dr. Grose, p. 165, col. 1). As a result of these disputes he wrote a work in three books: "De heresibus quas Graeci in Latinos devolvunt, sive quod Spiritus Sanctus ex utroque Patre et Filio procedit" (P. L., CCII, generally quoted as "Adv. Graecos"). This work, the first exhaustive and scientific defence of the doctrine of the Trinity, was composed in both languages, Latin and Greek. The author sent copies to the Orthodox Patriarch of Antioch, Aimerikos, and to Pope Alexander III (1159-1181), whose letter of acknowledgement is still extant (Ep. xlix, Baroinius, an. 1177, n. 37, 38). Hugh Etherius by this treatise obtains a very important place among Catholic controversialists against the Eastern Church. It appears that the emperor, who was well disposed towards Latins, had suggested that he should write it, having asked him whether they have "any authorities of saints who say that the Holy Ghost proceeds from the Son" (ib. Praef. 1. CCII, col. 1). Hugh had used his knowledge of Greek and his opportunities of studying their Fathers so well that he was able to produce texts from nearly all the recognized authorities on both sides. He quotes especially Sts. Athanasius, Cyril of Alexandria, Basil, Gregory NAZIANZEN. CHRYSOSTOM, JOHN Chrysostome, etc. From the Latins he produced witnesses from Sts. Augustine, Jerome, Gregory I, Ambrose. Hilary. He was also well acquainted with the writings of his adversaries and quotes Photius, Nicaea of Thessalonica, Theophylactus of Achiara, etc. The Latin version is very free and untrustworthy. There are also some incorrect expressions noted by the later editors, such as that God the Father is the cause of the Son (this is a concession to the Greeks that was, however, written, tolerated by the Council of Florence: Denzinger, Enchiridion, n. 567). Nevertheless, since it was written this work has been the foundation of nearly all Latin controversy with the Greeks. St. Thomas Aquinas used it for his "Opusc. I, contra errores Graecorum" and Cardinal Bessarion refers to it with great praise (Ep. ad Alex. P. L., CLXI, 328). Hugh Etherius also wrote a treatise "De regresso animarum ab inferno in infernum". There is another natural science of ethics; and (probably) a short work "De Graecorum malis consuetudinibus," "A Liber de immortali Deo," written by him, is lost.

ADRIAN FORTESCUE.

ETHICS. I. DEFINITION.—Many writers regard ethics (Gr. ἔθικη) as an any scientific treatment of the moral order and divide it into theological, or Christian, ethics (moral theology) and philosophical ethics (moral philosophy). What is usually understood by ethics, however, is philosophical ethics, or moral philosophy, and in this sense the present article will treat the subject. Moral philosophy is a division of practical philosophy. Theoretical, or speculative, philosophy has to do with being, or with the order of things, dependent upon reason, and its object is to attain by the natural light of reason a knowledge of this order in its ultimate causes. Practical philosophy, on the other hand, concerns itself with what ought to, or with the order of acts which are human and which therefore depend upon reason. It is also divided into two parts: (a) the former orders the intellectual activities and teaches the proper method in the acquirement of truth, while the latter directs the activities of the will; the object of the former is the true; that of the latter, the good. Hence ethics may be defined as the science of the moral rectitude of human acts in accordance with the first principles of natural reason. Logic and ethics are normative and practical sciences, because they prescribe norms or rules for human activities and show how, according to these norms, a man ought to direct his actions. Moreover, ethics is pre-eminent, for it determines what it orders the activities of the will, and the latter it which sets all the other faculties of man in motion. Hence, to order the will is the same as to order the whole man. Moreover, ethics not only directs a man how to act if he wishes to be morally good, but sets before him the absolute obligation he is under of doing good and avoiding evil.

A distinction must be made between ethics and morals, or morality. Every people, even the most uncivilized and uncultured, has its own morality or sum of prescriptions which govern its moral conduct. Nature has so provided that each man establishes for himself a code of moral concepts and principles which are applicable to the details of practical life, without the necessity of awaiting the conclusions of science. Ethics is the scientific or philosophical treatment of morality. The subject-matter proper of ethics is the deliberate, free actions of man; the latter, such actions as are performed without deliberation, or through ignorance or coercion. Besides this, the scope of ethics includes whatever has reference to free human acts, whether as principle or cause of human actions (morality, justice, law, and so forth), or as effect or circumstance of action (merit, punishment, etc.). The particular aspect (formal object) under which ethics considers free acts is that of their moral goodness or the rectitude of order involved in them as human acts. A man may be a good artist or a good Christian, but not necessarily a good man, and conversely, a morally good man and a poor artist or technician. Ethics has merely to do with the order which relates to man as man, and which makes of him a morally good man.

Like ethics, moral theology also deals with the moral actions of man; but unlike ethics, it has its origin in supernaturally revealed truth. It presupposes man's elevation to the supernatural order, and, though it avails itself of the scientific conclusions of ethics, it draws its knowledge for the most part from Christian Revelation. Ethics is distinguished from the former and the latter natural sciences of ethics by the fact that it deals with the actions of man, as jurisprudence and pedagogy, in this, that the latter do not ascend to first principles, but borrow their fundamental notions from ethics, and are therefore subordinate to it. To investigate what constitutes good or bad, just or unjust, what is virtue, law, justice, science, duty, etc., what obligations are common to all men, does not lie within the scope of jurisprudence or pedagogy, but of ethics; and yet these notions and principles must be presupposed by the former, must serve them as a ground-work and guide; hence they are subordinate to ethics. The latter is true of political economy. The latter is indeed immediately concerned with man's social activity insomuch as it treats of the production, distribution, and consumption of material commodities, but this activity is not independent of ethics; industrial life must develop in accordance with the moral law and must be dominated by justice, equity, and love. Political economy was wholly wrong in trying to emancipate itself from the requirements of ethics. Sociology is at the present day considered by many as a science distinct from ethics. If, however, by sociology is meant a philosophical treatment of society, it is also divided into two parts: (a) the former for the inquiry into the origins of society in general, into the origin, nature, object, and purpose of natural societies (the family, the state) and their relations to one another forms an essential part of Ethics. If, on the other hand, sociology be regarded as the aggregate of the sciences which have reference to the social
life of man, it is not a single science but a complexus of sciences; and among these, so far as the natural order is concerned, ethics has the first claim.

II. Sources and Methods of Ethics.—The sources of ethics are partly man’s own experience and partly the principles and truths proposed by other philosophic disciplines (logic, metaphysics, history, science). Ethics takes its origin from the empirical fact that certain general principles and concepts of the moral order are common to all peoples at all times. This fact has indeed been frequently disputed, but recent ethnological research has placed it beyond the possible question. All nations, whether we draw from them good or evil, are nevertheless agreed in this: that the good is worth striving for, and that evil must be shunned, that the one deserves praise, the other, blame. Though in individual cases they may not be one in denouncing the same thing good or evil, they are nevertheless agreed as to the general principle, that good is to be done and evil avoided. Vice everywhere seeks to hide itself or to put on the mask of virtue; it is a universally recognized principle, that we should not do to others what we would not wish them to do to us. With the aid of the truths laid down in logic and metaphysics, ethics proceeds to give a thorough explanation of this undeniable fact, to trace it back to its ultimate causes, then to gather from fundamental moral principles certain conclusions which will direct men, in the various circumstances and necessities of life, how to shape his own conduct towards the attainment of the end for which he was created. Thus the proper method of ethics is at once speculative and empirical; it draws upon experience and metaphysics. Supernatural Christian Revelation is not a proper source of ethics. Only those conclusions properly belonging to ethics need be reached with the help of experience and philosophical principles. The Christian philosopher, however, may not ignore supernatural revelation, but must at least recognize it as a negative norm, inasmuch as he is not to advance any assertion in evident contradiction to the revealed truth of Christianity. God is the fountain-head of all truth—whether natural, as made known by Creation, or supernatural as revealed through Christ and the Prophets. As our intellect is an image of the Divine Intellect, so is all certain scientific knowledge the reflex and interpretation of the Creator’s thoughts, which are inscribed in His creatures in His eternal wisdom. God cannot reveal supernaturally and command us to believe on His authority anything that contradicts the thoughts expressed by Him in His creatures, and which, with the aid of the faculty of reason which He has given us, we can discern in His works. To assert the contrary would be to deny God’s omniscience and veracity, or to suppose that God was not the source of all truth. A conflict, therefore, between faith and science is impossible, and hence the Christian philosopher has to refrain from advancing any assertion which would be evidently antagonistic to certain revealed truths. Should his researches lead to conclusions out of harmony with faith, he is to take it for granted that some error has crept into his deductions, just as the mathematician whose calculations openly contradict the facts of experience must be satisfied that his demonstration is at fault.

After what has been said, the following methods of ethics must be rejected as unsound. (1) Pure Rationalism.—This system makes reason the sole source of truth, and therefore at the very outset excludes everything revealed by Christian Revelation, branding it with the anathema, and hampering free scientific investigation. The supreme law of science is not freedom, but truth. It is not derogatory to the true dignity and freedom of science to abstain from asserting what, according to Christian Revelation, is manifestly erroneous. (2) Pure Empiricism, which would erect the entire structure of ethics exclusively on the foundation of experience, must also be rejected. Experience can tell us merely of present or past phenomena; but as to what, of necessity, and universally, must, or ought to, happen in the future, experience cannot give us any notion. All that is necessary and universal principles. Closely allied to Empiricism is Historicism, which considers history as the exclusive source of ethics. What has been said of Empiricism may also be applied to Historicism. History is concerned with what has happened in the past and is intended to explain the moral aberrations of mankind. (3) Positivism is a variety of Empiricism; it seeks to emancipate ethics from metaphysics and base it on facts alone. No science can be constructed on the mere foundation of facts, and independently of metaphysics. Every science must set out from evident principles, which form the basis of all certain cognition. Ethics is partially impossible without metaphysics, since it is according to the metaphysical view we take of the world that ethics shapes itself. Whoever considers man as nothing else than a more highly developed brute will hold different ethical views from one who believes that man, as the image and likeness of God, possesses a spiritual, immortal soul and destined to eternal life; whoever refuses to recognize the freedom of the will destroys the very foundation of ethics. Whether man was created by God or possesses a spiritual, immortal soul will, or is essentially different from brute creation, all these are questions pertaining to metaphysics. Anthropology, moreover, is necessarily presupposed by ethics. No rules can be prescribed for man’s actions, unless his nature is clearly understood. (4) Another untenable system is Transcendentalism, which in the nineteenth century, counted many adherents (among others, de Bonald, Bautain), and which advanced the doctrine that complete certainty in religious and moral questions was not to be attained by the aid of reason alone, but only by the light of revelation as made known to us through tradition. They failed to see that for all reasonable belief certain knowledge of the existence of God and of the fact of revelation is necessarily presupposed, and this knowledge cannot be gathered from revelation. Fideism, or, as Paulsen designated it, the Irrationalism of many Protestants, which denies the ability of reason to function in matters relating to God and religion. With Kant, it teaches that reason does not rise above the phenomenon of the visible world; faith alone can lead us into the realm of the supersensible and instruct us in matters moral and religious. This faith, however, is not the acceptance of truth on the strength of external authority, but rather consists in certain appreciative judgments, i.e. assumptions or convictions which are the result of each one’s own inner experiences, and which have, therefore, for him a precise worth, and correspond to his own peculiar temperament. Since these persuasions are not supposed to come within the range of reason, exception to them cannot be taken on scientific grounds. According to this opinion, religion and morals are relegated to pure subjectivism and lose all their objectivity and universality of value.
of ethics; for, though they proposed various moral truths and principles, they did so in a dogmatic and didactic, and not in a philosophically systematic manner. Ethics properly so called is first met with among the Greeks, i.e., in the teaching of Socrates (470–399 B.C.), and then continued by Plato (427–347 B.C.), whose disciple Aristotle (384–322 B.C.), declares that the *sumnum bonum* consists in the perfect imitation of God, the Absolute Good, an imitation which cannot be fully realized in this life. Virtue enables man to order his conduct, as he properly should, according to the dictates of reason, and acting thus he becomes like unto God. But Plato differed from Socrates in that he did not consider virtue to consist in wisdom alone, but in justice, temperance, and fortitude as well, these constituting the proper harmony of man's activities. In a sense, the State is man writ large, and its function is to train its citizens in virtue. For his ideal State he provided the community of women, and also the public education of children. Though Socrates and Plato had been to the fore in this mighty work and had contributed much valuable material to the upbuilding of ethics; nevertheless, Plato's illustrious disciple, Aristotle (384–322 B.C.), must be considered the master of systematic ethics. Yet leaving characteristic keenness he solved, in his ethical and political writings, most of the problems with which ethics concerned itself. Unlike Plato, who began with ideas as the basis of his observations, Aristotle chose rather to take the facts of experience as his starting-point; thus he arrived at conclusions that accorded very accurately, though not always, with their highest and ultimate causes. He set out from the fact that all men tend to happiness as the ultimate object of all their endeavours, as the highest good, which is sought for its own sake, and to which all other goods merely serve as means. This happiness cannot consist in external goods, but only in the activity proper to human nature—not indeed in such a lower activity of the vegetative and sensitive life as man possesses in common with plants and brutes, but in the highest and most perfect activity of his reason, which is a training in turn from virtue. This activity, however, has to be exercised in a perfect and enduring life. The highest pleasure is naturally bound up with this activity, yet, to constitute perfect happiness, external goods must also supply their share. True happiness, though prepared for him by the gods as the object and the reward of virtue, can be attained only through a man's own individual exertion. With keen penetration, Aristotle then proceeds to investigate in turn each of the intellectual and moral virtues, and his treatment of them must, even at the present time, be regarded as in great part correct. The nature of the State and of the family were, in the main, rightly explained by him. The only pity is that his vision did not penetrate beyond this earthly life, and that he never saw clearly the relations of man to God.

A more hedonistic (ἀριστος, "pleasure") turn in ethics begins with Democritus (about 460–370 B.C.), who considers a perpetually joyous and cheerful disposition as the highest good and happiness of man. The means thereto is virtue, which makes us independent of external goods—so far as that is possible—and which wisely discriminate between the pleasures that are to be sought after and those that are to be shunned. Hedonism was first taught by Aristippus of Cyrene (435–354 B.C.), according to whom the greatest possible pleasure, especially sensual pleasure, is the end and supreme good of human endeavour. Epicurus (341–270 B.C.) differs from Aristippus in holding that the largest sum total possible of spiritual and sensual enjoyments, with the greatest possible freedom from displeasure and pain, is man's highest good. Virtue is the proper directive norm in the attainment of this end.

The Cynics (440–300 B.C.) and Diogenes of Sinope (414–324 B.C.), taught the direct contrary of Hedonism, namely, that virtue alone suffices for happiness, that pleasure is an evil, and that the truly wise man is above human laws. This teaching soon degenerated into haughty arrogance and open contempt for law and for the remainder of men (Cynics, 336–296 B.C.). The Stoics, that is, Socrates, Cleanthes, Chrysippus, and others, strove to refine and perfect the views of Antisthenes. Virtue, in their opinion, consists in man's living according to the dictates of his rational nature, and, as each one's individual nature is but a part of the entire natural order, virtue is, therefore, the harmonious agreement with the Divine Reason, which shapes the whole course of nature. Whether they conceived this relation of God to the world in a pantheistic or a theistic sense, is not altogether clear. Virtue is to be sought for its own sake, and it suffices for man's happiness. All other things are indifferent and are, according to them, require, to be striven after or shunned. The passions and affections are bad, and the wise man is independent of them. Among the Roman Stoics were Seneca (4 B.C.–A.D. 65), Epictetus (born about A.D. 60), and the Emperor Marcus Aurelius (A.D. 121–180), upon whom the last-mentioned Stoic's influence had already begun to make themselves felt. Cicero (106–43 B.C.) elaborated no new philosophical system of his own, but chose those particular views from the various systems of Greek philosophy which appeared best suited to him. He maintained that human influences had already begun to make themselves felt. Cicero gives an exhaustive exposition of the cardinal virtues and the obligations connected with them, and especially the obligations of the gods, without which human society could not exist.

Parallel with the above-mentioned Greek and Roman ethical systems runs a sceptical tendency, which rejects every natural moral law, bases the whole moral order on custom or human arbitrariness, and frees the wise man from subjection to the ordinary precepts of the moral order. This tendency was furthered by the Sophists, against whom Socrates and Plato arrayed themselves, and later on by Carneades, Theodore of Cyrene, and others.

A new epoch in ethics begins with the dawn of Christianity. Ancient man never had a clear and definite concept of the relation between God and the world, of the unity of the human race, of the destiny of man, of the nature and meaning of the moral law. Christianity first shed full light on these and similar questions. As St. Paul teaches (Rom., ii. 24 sq.), God has written His moral law in the hearts of all men, even of those outside the influence of Christian Revelation; this law manifests itself in the conscience of every man and is the norm according to which the whole human race will be judged on the day of reckoning. In consequence of their perversive inclinations, those that have it to a great extent corrupted and distorted the pagan; Christianity, however, restored it to its pristine integrity. Thus, too, ethics received its richest and most fruitful stimulus. Proper ethical methods were now unfolded, and philosophy was in a position to follow up and
develop these methods by means supplied from its own store-house. This course was soon adopted in the early ages of the Church by the Fathers and ecclesiastical writers, as Justi Martyr, Ireneus, Tertullian, Clement of Alexandria, Origen, but especially the three Doctors of the Church, Ambrose, Jerome, and Augustine, who, in the exposition and defense of Christian truth, made use of the principles laid down by the pagan philosophers. True, the Fathers had no occasion to treat moral questions from a purely philosophical standpoint, and independently of Christian Revelation; but in the explanation of Catholic doctrine their discussions naturally led to philosophical investigations. This is particularly true of St. Augustine, who proceeded to thoroughly develop along philosophical lines and to establish firmly most of the truths of Christian morality. The eternal law (lex aeterna), the original type and source of all temporal laws, the natural law, conscience, the ultimate end of man, the cardinal virtues, sin, marriage, etc., were treated by him in the clearest and most penetrating manner. Hardly a single portion of ethics does he present to us but is enriched with his keen philosophical commentary. Later ecclesiastical writers followed in his footsteps.

A sharper line of separation between philosophy and theology, and in particular between ethics and moral theology, is first met with in the works of the great Schoolmen of the Middle Ages, especially of Aquinas (1225–1274), Bonaventure (1221–1274), and Duns Scotus (1274–1308). Philosophy and, by means of it, theology reaped abundant fruit from the works of Aristotle, which had until then been a sealed treasure to Western civilization, and were first elucidated by the learned and profound commentaries of Bl. Albert the Great and St. Thomas Aquinas, and pressed into the service of Christian philosophy. The same is particularly true as regards ethics. St. Thomas, in his commentaries on the political and ethical writings of the Stagirite, in his "Summa contra Gentiles" and his "Questions disputate", treated with his wonted clearness and penetration nearly the whole range of ethics in a purely philosophical manner, so that even to the present day his works are an inexhaustible source whence ethics draws its supply. On the foundations laid by him the Catholic philosophers and theologians of succeeding ages have been able to build. It is true that in the fourteenth and fifteenth centuries, thanks especially to the influence of the so-called Nominalists, a period of stagnation and decline in philosophy set in, but the sixteenth century is marked by a revival. Ethical questions, also, though largely treated in connexion with theology, are again made the subject of careful investigation. We mention as examples the great theologians Victoria, Dominicus Soto, L. Molina, Suarez, Lessius, and De Lugo. Since the sixteenth century special chairs of ethics (morale philosophy) have been erected in many Catholic universities. The larger purely philosophical works on ethics, however, do not appear until the seventeenth and eighteenth centuries, as an example of which we may instance the production of Ign. Schwarz, "Institutiones juris universalis naturae et gentium," Doctors of General Theology.

Far different from Catholic ethical methods were those adopted for the most part by Protestants. With the rejection of the Church's teaching authority, each individual became on principle his own supreme teacher and arbiter in matters appertaining to faith and morals. But the subjective doctrine from his#endif
ward von Hartmann, though the latter regards culture and progress merely as means to the ultimate end, which, according to him, consists in delivering the Abstract from the torment of existence.

The system of Cumberland, who maintained the concept of mankind and the conditions of moral conduct, was renewed on a positivist basis in the nineteenth century by Auguste Comte and has counted many adherents, e.g., in England, John Stuart Mill, Henry Sidgwick, Alexander Bain; in Germany, G. T. Fechner, F. E. Beneke, F. Paulsen, and others. Herbert Spencer (1820-1903) sought to effect a compromise between social Utilitarianism (Altruism) and private Utilitarianism (Egoism) in accordance with the theory of evolution. In his opinion, that conduct is good which serves to augment life and pleasure without any admixture of displeasure. In consequence, however, of man's lack of adaptation to the conditions of life, such absolute goodness of conduct is not as yet possible, and hence various compromises must be made between Altruism and Egoism. With the progress of evolution, however, this adaptability to existing conditions will become more and more evident, and consequently the benefits attending to the individual from his own conduct will be most useful to society at large. In particular, sympathy (in joy) will enable us to take pleasure in altruistic actions.

The great majority of non-Christian moral philosophers have followed the path of utilitarianism, starting with the assumption that man, by a series of transformations, was gradually evolving from the brute, and therefore differs from it in degree only, they seek the first traces and beginnings of moral ideas in the brute itself. Charles Darwin had demonstrated this process by showing that man's ethical tendencies have never been subject to the influence of the brute.

Present-day Evolutionists follow his view and attempt to show how animal morality has in man continually become more perfect. With the aid of analogies taken from ethology, they relate how man kind originally wandered over the face of the earth in semi-savage hordes, knew nothing of marriage or the family, and only by degrees reached a higher level of morality. These are the merest creations of fancy. If man is nothing more than a highly developed brute, how is it possible for him to possess a spiritual existence? This question can be answered by referring to the fact that there can no longer be any question of the freedom of the will, of the future retribution of good and evil, nor can man in consequence be hindered from ordering his life as he pleases and according to the way of life of the people only in so far as it redounds to his own profit.

As the Evolutionists, so too the Socialists favour the theory of evolution from their ethical viewpoint; yet the latter do not base their views on scientific principles, but on social and economical considerations. According to K. Marx, P. Engels, and other exponents of the so-called "materialist interpretation of history", all social, juridical, and religious concepts are the reflex of the economic conditions of society in the minds of men. Now these social relations are subject to constant change; hence the ideas of morality, religion, etc., are also continually changing. Every age, every people, and even each class in a given people forms its moral and religious ideas in accordance with its own peculiar economical situation. Hence, no universal code of morality exists binding on all men at all times; the morality of the present day is not of Divine origin, but the product of history, and will soon have to make room for another system of morals. This new system was to be in accordance with the materialist interpretation, though derived from other sources, is the system of Relativism, which recognizes no absolute and unchangeable truths in regard either to ethics or to anything else. Those who follow this opinion aver that nothing objectively true can be known by us. Men differ from one another and are subject to change, and with them, the manner and means of viewing the world about them also change. Moreover the judgments passed on matters religious and moral depend essentially upon the inclinations, interests, and character of the end judge, while the judgments of the theoretic moralist are constantly varying. Pragmatism differs from Relativism inasmuch as that only is to be considered true which is proven by experience to be useful; and, since the same thing is not always useful, unchangeable

view of the church of opinions and systems just described, it need not surprise us that, as regards ethical problems, skepticism is extending its sway to the utmost limits, in fact many exhibit a formal contempt for the traditional morality. According to Max Nordau, moral precepts are nothing but "conventional lies"; according to Max Stirner, that alone is good which serves my interests, whereas the common good, the love for all men, etc. are but empty phantoms. Men of genius and superiority in particular are coming more and more to be regarded as exempt from the moral law. Nietzsche is the originator of a school of thought founded on these doctrines and its exponents have made the system of individualism the foundation of their philosophy. According to him, goodness was originally identified with nobility and gentility of rank. Whatever the man of rank and power did, whatever inclinations he possessed, were good. The down-troddden proletariat, on the other hand, were bad, i.e. lowly and ignoble, their only duty being to render service and to obey the man of rank and power. Therefore, the term "bad" was only by a gradual process that the oppressed multitude through hatred and envy evoked the distinction between good and bad, in the moral sense, by denominating the characteristics and conduct of those in power and rank as bad, and their own behaviour as good. And thus arose the opposition between the morality of the master and that of the slave. Those in power still continued to look upon their own egoistic inclinations as noble and good, while the oppressed populace lauded the "instincts of the common herd", i.e. all those qualities necessary and useful to its existence—such as patience, meekness, obedience, and love of one's neighbour. Weakness became goodness, craving obsequiousness became humility, subjection to hated oppressors was obedience, cowardice meant patience. All morality is one long and audacious deception. Hence, the foundations of our existing social and ethical conceptions must be entirely re-arranged. Intellectual superiority is above and beyond good and evil as understood in the traditional sense. There is no higher moral order to which men of such calibre are amenable. The end of society is not the common good of its members; the intellectual aristocracy (the "over-man") is its own end; in its behalf the common herd, the "too many", must be reduced to slavery and dejected. As it rests with each individual to decide who belongs to this intellectual aristocracy, so each one is at liberty to emancipate himself from the existing moral order. In conclusion, one other tendency in ethical philosophy may be noted, which has manifested itself far and wide: namely, the effort to make morality independent of all religion. It is clear that many of the above-mentioned ethical systems essentially exclude all regard for God and religion, and this is true especially in the materialistic, agnostic, and, in the last analysis, of all pantheistic systems. Apart, also, from these systems, "independent morality", called also "lay morality", has gained many followers and defenders. Kant's ideas formed the basis of this tendency, for he himself founded a code of morality on the categorical imperative, expressly declared to be of sufficient power for itself, and therefore has no need of religion. Many modern moral philosophers—Herbert, Eduard von Hartmann, Zeller, Wundt, Paulsen, Ziegler, and a number of others—have followed Kant in this respect. For several decades practical attempts have been made
to emancipate morality from religion. In France religious instruction was banished from the schools in 1882 and moral instruction substituted. This tendency manifests a lively activity in what is known as the "ethical movement", whose home, properly speaking, was the United States. In 1870, P. P. P. Audisio, professor at Cornell University, founded the "Society for Ethical Culture", in New York City. Similar societies were formed in other cities. These were consolidated in 1887 into the "Union of the Societies for Ethical Culture". Besides Adler, the chief propagator of the movement by word of mouth and in writing, were W. M. Sulter and Stockl. The purpose of these societies is declared to be the improvement of the moral life of the members of the societies and of the community to which they belong, without any regard to theological or philosophical opinions. In most of the European countries ethical societies were founded on the model of the American organization. All these were combined in 1894 into the "International Ethical Association". Their purpose, i.e. the amelioration of man's moral condition, is indeed praiseworthy, but it is erroneous to think that any such movement can be brought about without taking religion into consideration. In fact many members of the ethical societies are openly antagonistic to all religions, and would therefore do away with denominational schools and supplant religious teaching by mere moral instruction. Even upon purely ethical considerations such attempts must be held to be unwise, if not inadvisable. In the case of adults moral instruction without religion, without any higher obligation or sanction, is a nonentity, a meaningless sham, how much more so is it in the case of the young? It is evident that, judged from the standpoint of Christianity, these efforts must meet with a still more decided condemnation. Christians are bound to observe not only the prescriptions of the natural law, but also all the precepts given by Christ concerning faith, hope, love, divine worship, and the imitation of Himself. The Christian, moreover, knows that without Divine grace and, hence, without prayer and the frequent reception of the sacraments, a morally good life for any considerable length of time is impossible. From their earliest years, therefore, the young must not only receive thorough instruction in all the Commandments, but must be exercised directly and truly in the practical use of the means of grace. Religion must be the soil and atmosphere in which education develops and flourishes.

While, among non-Catholics ever since the Reformation, and especially since Kant, there has been an increasing tendency to divorce ethics from religion, and to dissolve it into countless venturesome and frequently contradictory systems, Catholics for the most part have remained free from these errors, because, in the Church's infallible teaching authority, the guardian of Christian Revelation, they have always found secure orientation. It is true that towards the end of the eighteenth, and at the beginning of the nineteenth century, Illuminism and Rationalism penetrated here and there into Catholic circles and attempted to replace moral theology by purely philosophical ethics, and in turn to transform the latter. In the Catholic sense of the word, the ethical movement, however, was but a passing phase. With a reawakening of the Church's activity, fresh impetus was given to Catholic science, which was of benefit to ethics also and produced in its domain some excellent fruit.

Recourse was again had to the illustrious past of Catholicism, while, at the same time, modern ethical systems gave occasion to a thorough investigation and verification of principles of the moral order. Taparelli d'Azeglio led the way with his great work "Saggio teoretico di diritto naturale appoggiato sul fatto" (1840-43). Then followed, in Italy, Audisio, Rosmini, Liberatoro, Sanseverino, Roselli, Zighiara, Sig- moriello, Schifini, Ferretti, Talamo, and others. In Spain this revival of ethics was due to, among others, J. Balmes, Donoso Cortés, Zefirio González, Mendive, R. de Céspedes; in France and Belgium, to de Lehen (Institutes de droit naturel), de Margerie, Onearl, Ath. Villet, Charles Fépin, Plaget, Mouhart, Basilele; in England and America, to St. John, Jouin, Russo, Holland, J. J. Ming. In German-speaking countries the reawakening of Scholasticism in general begins with Kleutgen (Theologie der Vorzeit, 1853; Philosophie der Vorzeit, 1880), and of ethics in particular with Th. Meyer (Die Grundzüge der Religiosität und des Weltbegriffs, 1868; Institutiones juris naturalis seu philosophiae moralis universae, 1886-1900). After them came A. Stöckl, Ferd. Walter, Moy de Sona, C. Gitterlet, Fr. J. Stein, Brandis, Costa-Rosetti, A. M. Weiss, Renninger, Lehmen, Willens, V. Frins, Heinrich Pech, and others. We pass over numerous Catholic writers, who have made a specialty of sociology and political economy.

IV. OUTLINES OF ETHICS.—It is clear that the following statement cannot pretend to treat thoroughly all ethical questions; it is intended rather to afford the reader an insight into the most important problems of ethics, as well as into the methods adopted in their treatment. Ethics is usually divided into two parts: general, or theoretical ethics, and special, or applied ethics. General ethics expounds and verifies the general principles and concepts of the moral order; special ethics applies these general principles to the various situations of man, and determines his duties in particular.

Reason itself can rise from the knowledge of the visible creation to the certain knowledge of the existence of God, the origin and end of all things. On this fundamental truth is constructed all of morality. God created man, and He created all things else, for His own honour and glory. The ultimate end is the proper motive of the will's activity. If God were not the ultimate object and end of His own activity, He would depend upon His creatures, and would not be infinitely perfect. He is, therefore, the end of all things, they are created for His sake, not, indeed, that He can derive any benefit from them, which would be repugnant to an infinitely perfect being, but for His glory. They are to manifest His goodness and perfection. Irrational creatures cannot manifest themselves directly or naturally, for they are incapable of knowing Him. They are intended as means to the end for which rational man was created. The end of man, however, is to know God, to love Him and serve Him, and thereby attain to perfect and unending happiness. Every man has within him an irresistible, indestructible desire for perfect happiness; he seeks to be free from every evil and to possess every obtainable good. This impulse to happiness is founded on man's nature; it is implanted there by His Maker; and hence will be duly realized, if nothing is wanting on the part of man's own individual endeavour. But perfect happiness is unattainable in the present life, if for no other reason, at least for this, that inexorable death puts an early end to all earthly happiness. There is reserved for man a better life, if he freely chooses to glorify God here on earth. It will be the reward of victory to be conferred upon him thereafter. As present he remains subject to God and keeps His Commandments. Only from the viewpoint of eternity do this earthly life and the moral order acquire their proper significance and value. But how does man, considered in the natural order, or apart from every influence of supernatural revelation, come to know what God requires of him here below, or how he is to serve and glorify Him, in order to arrive at eternal happiness?—By means of the natural law.

From eternity there existed in the mind of God the idea of the world, which He freely determined to create, as well as the plan of government according to
which He wished to rule the world and direct it to its end. This ordination existing in the mind of God from all eternity, and depending on the nature and essential relations of rational beings, is the eternal law of God (Dei aeterna legis), the source from which all temporal laws derive. God does not move and change as their creator by a mere external directive impetus, as the archer does the arrow, but by means of internal impulses and inclinations, which He has bound up with their natures. Irrational creatures are urged, by means of physical forces or natural impulses and instincts, to exercise the activity peculiar to them and to keep the order designed for them. Man, on the other hand, is a being endowed with reason and free will; as such, he cannot be led by blind impulses and instincts in a manner conformable to his nature, but must needs depend upon practical principles and judgments, which point out to him how he is to order his conduct. These principles must somehow or other be manifested to him by nature. All created things have implanted in their natures certain guiding principles, necessary to their corresponding activities. Man must be no exception to this rule. He must be led by a rational light, manifested to him which shows him what to do or not to do. This natural light is the natural law. When we speak of man as possessing a natural, inborn light, it is not to be understood in the sense that man has innate ideas. Innate ideas do not exist. It is true, nevertheless, that the Creator has endowed man with the power to reason and the inclination to form concepts and develop principles. As soon as he comes to the use of reason, he forms, by a natural necessity, on the basis of experience, certain general concepts of a theoretical reason—e.g., those of being and not being, of cause and effect, of space and time—and so he arrives at universal principles, e.g., that "nothing can exist and not exist at the same time", that "every effect has its cause", etc. As it is in the theoretical, so also in the practical order. As soon as reason has been sufficiently developed, and the individual can somehow or other practically judge that he is something more than a mere animal, by an intrinsic necessity of his nature he forms the concept of good and evil, i.e., of something which is proper to the rational nature which distinguishes him from the brute, and which is therefore worth striving for, and something which is unbecoming and therefore to be avoided. Around about him he perceives that all things are well ordered, so that it is very easy for him to discern in them the handiwork of a superior and all-wise power. He himself has been appointed to be the guardian of nature, the protector of lord and master; he, too, must lead a well regulated life, as befits a rational being, not merely because he himself chooses to do so, but also in obedience to his Creator. Man did not give himself his nature with all its faculties and inclinations; he received it from a superior being, whose wisdom and power are everywhere manifest to him in Creation.

The general practical judgments and principles: "Do good and avoid evil", "Lead a life regulated according to reason", etc., from which all the Commandments of the Decalogue are derived, are based on the general principles of practical reason. Paul (Rom. ii, 14) says, it is written in the hearts of all men. This law is an emanation of the Divine law, made known to all men by nature herself; it is the expression of the will of nature's Author, a participation of the created rational being in the eternal law of God. Hence the obligation it imposes does not arise from man's own autonomy, as Kant held, nor from any other human authority, but from the Will of the Creator; and man cannot violate it without rebelling against God, his master, offending Him, and becoming amenable to His judgments. How deeply rooted in nature the conviction that the violation of the higher origin of the natural law was, is shown by the fact that for various violations of it (as murder, adultery, perjury, etc.) they did their utmost to propitiate the angered deity by means of prayers and sacrifices. Hence they looked upon the penalty as an act of divinity as the guardian and protector of the moral order, who would not allow the contempt of it to go unpunished. The same conviction is manifested by the value all nations have attached to the moral order, a value far surpassing that of all other earthly goods. The noblest among the nations maintained that it was better to undergo any hardship, even death itself, rather than prove recreant to one's duty. They understood, therefore, that, over and above earthly treasures, there were higher and more lasting goods whose attainment was dependent upon the observance of the moral order, and this not by reason of any ordinance of man, but necessarily by reason of the nature of the things. This being so, it is clearly impossible to divorce morality from religion without robbing it of its true obligation and sanction, of its sanctity and inviolability and of its importance as transcending every other earthly consideration.

The natural law consists of general practical principles (commands and prohibitions) and of practical judgments, necessarily flowing therefrom. It is the peculiar function of man to formulate these conclusions himself, though instruction and training are to assist him in doing so. Besides this, each individual has to take these principles as the guide of his conduct and apply them to his particular actions. This, to a certain extent, everybody does spontaneously, by virtue of an innate tendency. As in the case of all practical things, so in regard to what concerns the moral order, reason uses syllogistic processes. When a person, e.g., is on the point of telling a lie, or saying what is contrary to his convictions, there rose before his mental vision the general precept of the natural law: "Lying is wrong and forbidden." Hence he avoids himself, at least virtually, of the following syllogism: "Lying is forbidden; what you are about to say is a lie; therefore, what you are about to say is forbidden." The conclusion thus arrived at is his conscience, the proximate norm of our conduct. Conscience, therefore, is not an obscure feeling or a sort of moral instinct, but a practical judgment of our reason on the moral character of individual acts. If we follow the voice of conscience, our reward is peace and calm of soul; if we resist this voice, we experience disgust and remorse.

The natural law is the foundation of all human laws and precepts. It is only because we recognize the necessity of authority for human society, and because the natural law enjoins obedience to regularly constituted authority, that it is possible for a human super- man to impose laws and regulations in conscience. Indeed all human laws and precepts are fundamentally the conclusions, or more minute determinations, of the general principles of the natural law, and for this very reason every deliberate infringement of a law or precept binding in conscience, i.e., the violation of a Divine commandment, a rebellion against God, an offence against Him, which will not escape punishment in this life or in the next, unless duly repented of before death.

The problems hitherto mentioned belong to general, or theoretical, ethics, and their investigations in nearly all cases bear upon the origin and nature, as well as the scope of ethics to explain thoroughly and verify. The general philosophical doctrine of right is usually treated in general ethics. Under no circumstances may the example of Kant and others be imitated in
sovering the doctrine of right from ethics, or moral philosophy, and developing it as a separate and independent science. The juridical order is but a part of the moral order, even as justice is but one of the moral virtues. The first principles of right: “Give every man his due”, “Commit no injustice” and the necessary conclusions from these: “Thou shalt not steal”; “Thou shalt not commit adultery”, and the like, belong to the natural law, and cannot be divested from without violating one’s duty and one’s neighbour’s rights, and staning one’s conscience with guilt in the sight of God. The general ethics applies the principles of general, or theoretical, ethics to the various relations of man, and thus deduces his duties in particular. General ethics teaches that man must do good and avoid evil, and must inflict injury upon no one. Special ethics descends to particulars and demonstrates what is good or bad, right or wrong, and therefore to be done or avoided in the various relations of human life. First of all, it treats of man as an individual in his relations to God, to himself, and to his fellow-men. God is the Creator, Master, and ultimate end of man; from these relations arise man’s duties toward God. Presupposing his own individual efforts, he is, with God, endowed for eternal happiness from Him; he must love God above all things as the highest, infinite good, in such a manner that no creature shall be preferred to Him; he must acknowledge Him as His absolute lord and master, adore and reverence Him, and resign himself entirely to Him. The first, intrinsic business of man is to serve God. In case it is God’s good pleasure to reveal a supernatural religion and to determine in detail the manner and means of our worship of Him, man is bound by the natural law to accept this revelation in a spirit of faith, and to obey it accordingly. Hence the question is raised, in what manner shall morality be divested from religion? Religious duties, those, namely, which have direct reference to God, are man’s principal and most essential moral duties. Linked to these duties to God are man’s duties regarding himself. Man loves himself by an intrinsic necessity of his nature. From this fact Schopenhauer drew the conclusion that the commandment concerning self-love was superfluous. This would be true, if it were a matter of indifference how man loved himself. But such is not the case; he must love himself with a well-ordered, and therefore not solicitous for the welfare of His soul, and to do what is necessary to attain to eternal happiness. He is not his own master, but was created for the service of God; hence the deliberate arbitrary destruction of one’s own life (suicide), as well as the freely intended mutilation of self, is a criminal attack upon the proprietary right God has to man’s person. Furthermore, every man is supposed to take a reasonable care to preserve his health. He has certain duties also as regards temperance; for the body must not be his master, but an instrument in the service of the soul, and hence must be cared for in so far only as is conducive to this purpose. A further duty concerns the acquisition of external material goods, as far as they are necessary for man’s support and the fulfilment of his other obligations. This again involves the obligation to work; furthermore, God has endowed man with the capacity for the exercise of all functions; for it is possible that he might live in a state of indigence. The Creator might of himself have chosen to become a member of society; for idleness is the root of all evil. Besides these self-regarding duties, there are similar ones regarding our fellow-men: duties of love, justice, fidelity, truthfulness, gratitude, etc. The commandment of the love of our neighbour first received its practical application in the development of the Christian society. Though doubtless contained to a certain extent in the natural law, the pagans had so lost sight of the unity of the human race, and of the fact that all men are members of one vast family dependent upon God, that they looked upon every stranger as an enemy. Christianity restored to mankind the consciousness of its unity and solidarity, and supernaturally transfigured the natural precept to love our neighbour, by demonstrating that all men are children of the same Father in heaven, were redeemed by the blood of the same victim, and are destined to the same supernatural felicity. Better still, provided man with the grace necessary to the fulfillment of this precept and thus renewed the face of the earth. In man’s intercourse with his fellow-men the precepts of justice and of the other allied virtues go hand in hand with the precept of love. There exists in man the natural tendency to assert himself, and there is question of his goods or property. He expects his fellow-men to respect what belongs to him, and instinctively resists any unjust attempt to violate this proprietorship. He will brook an injury from no one in all that regards his health, his wife or child, his honour or good name; he resents faithlessness and ingratitude on the part of others, and the lie by which they would lead him into error. Yet he clearly understands that only then can he reasonably expect others to respect his rights when he in turn respects theirs. Hence the general maxim: “Do not do to others what you would not have them do to you.” And, not less naturally deduced are the general commandments known to all men: “Thou shalt not kill, nor commit adultery, nor steal, nor bear false witness against thy neighbour”, etc. In this part of ethics it is customary to investigate the principles of right as regards private ownership and property. Has every man the right to dispose of his property? Or, at least, may not society (the State) abolish private ownership and assume possession and control of all material goods either wholly or in part, in order thus to distribute among the members of the community the products of their joint industry? This question is discussed in the affirmative by the Socialists; and yet, it is the experience of all ages that the community of goods and of ownership is altogether impracticable in larger commonwealths, and would, if realized in any case, involve widespread slavery.

The second part of special, or applied, ethics, called by many sociology, considers man as a member of society, as far as this can be made the subject of philosophical investigation. Man is by nature a social being; out of his innate needs, inclinations, and tendencies the family and State necessarily arise. And first of all the preservation of the human species, the world would soon become an uninhabited solitude, a well-appointed abode without occupants. Hence God has given man the power and propensity to propagate his kind. The generative function was not primarily intended for man's individual well-being, but for the general good of his species, and in its exercise, therefore, he must be guided accordingly. This general good cannot be perfectly realized except in a lasting, indissoluble monogamy. The unity and indissolubility of the marriage bond are requirements of the natural law, at least in the sense that man may not on his own authority set them aside. Marriage is a Divine institution, for which God Himself has provided by means of definite laws, and in regard to which, therefore, man has not the power to make any change. The Creator might, of course, dispense for a time from the unity and indissolubility of the marriage tie; for, though the perfection of the married state demands these qualities, they are not of absolute necessity; the principal end of marriage may be attained to a certain degree without them. God could, therefore, for wise reasons grant a dispensation in the marriage tie for a certain length of time. Christ, however, restored marriage to the original perfection consonant with its nature. Moreover, He raised marriage to the dignity of a sacrament and made it symbolic of His own union with the Church; and had He done nothing more in
this respect than restore the natural law to its pristine integrity, mankind would be bound to Him by an eternal debt of gratitude. For it was chiefly by means of the unity and indissolubility of the married life that the sanctity of the Christian family was established, for the better accomplishment of this chief blot and compared with which paganism has no equivalent to offer. This exposition of the nature of marriage from the theistic standpoint is diametrically opposed to the views of modern Darwinists. According to them, man did not originally recognize any such institution as the married state, but lived together in complete promiscuity. Marriage was the result of gradual development, woman was originally the centre about which the family crystallized, and from this latter circumstance there arises an explanation of the fact that many savage tribes reckon heredity and kinship between families according to the lineal descent of the female. We cannot dwell long upon these fantastic speculations, because they do not consider man as essentially different from the brute, but as gradually developed from a purely animal origin. Although marriage is of Divine institution, not every individual is obliged, as a human being, to enter the married state. God intends marriage for the propagation of the human race. To achieve this purpose it is by no means necessary for each and every member of the human family to enter upon marriage, and this particularly at the present time, when the question of over-population presents so many difficulties to social economists. In this connexion certain other considerations from a Christian point of view arise, which do not, however, belong to philosophical ethics. Since the principal end of marriage is the procreation and education of children, it is incumbent upon both parents to co-operate according to the requirements of sex in the attainment of this end. From this it may readily be gathered what duties mutually exist between husband and wife, and between parents and their children.

The second natural society, the State, is the logical and necessary outcome of the family. A completely isolated family could scarcely support itself, at all events it could never rise above the lowest grade of civilization. Hence we see that at all times and in all places, owing to natural needs and tendencies, larger groups of families are formed. A division of labour thus occurs. Each family devotes itself to co-operate according to the industry in which it may improve and develop its resources, and then exchanges its products for those of other families. And now the way is opened to civilization and progress. This grouping of families, in order to be permanent, has need of authority, which makes for security, order, and peace, and in general provides for what is necessary to the common good. Since God intends men to live together in harmony and order, He likewise desires such authority in the community as will have the right to procure what is needful for the common good. This authority, conscious of its task and apart from the hurrying world in which it is placed, comes immediately from God, and hence, within its proper sphere, it imposes upon the conscience of the subjects the duty of obedience. In the light of this interpretation, the exercise of public power is vested with its proper dignity and inviolability, and at the same time is circumscribed by necessary limitations. A group of families under a common authoritative head, and not subject to any similar aggregation, forms the primitive State, howeversmall this may be. By further development, or by coalition with other States, larger States gradually come into existence. What is not the purpose of planting the families, but to safeguard their rights, to protect them, and to supplement their efforts. It is not to forfeit their right or to abandon their proper functions that individuals and families combine to form the State, but to be secured in these rights, and to find support and encouragement in the discharge of the various duties assigned them. Hence the State may not deprive the family of its right to educate and instruct the children, but must simply lend its assistance by supplying, wherever needful, opportunities for the better accomplishment of this chief blot. As the order and prosperity of the body politic requires it, the State circumscribes individual effort and activity. In other words, the State is to posit the conditions under which, provided private endeavours be not lacking, each individual and each family may obtain true earthly happiness. By true earthly happiness is meant such as not only does not interfere with the free performance of the individual's moral duties, but even upholds and encourages him therein.

Having defined the end and aim of the State, we are now in a position to examine in detail its various functions and their extent. Private morality is not subject to State interference; but it is the proper function of the State to concern itself with the interests of public morality. It must not only prevent vice from parading in public and becoming a snare to many (e. g. through immoral literature, theatres, pubs, or other means being, to enforce the married state), but also ensure that the public ordinances and laws facilitate and advance morally good behaviour. The State must not affect indifference as regards religion; the obligation to honour God publicly is binding upon the State as such. It is true that the direct supervision of religious affairs is superannuated. It is referred to, trusted by Christ to His Church; nevertheless, it is the duty of the Christian State to protect and uphold the Church, the one true Church founded by Christ. Of course, owing to the unfortunate division of Christians into numerous religious systems, such an intimate relation between Church and State is at the present day but rarely maintained. The separation of Church and State, with complete liberty of conscience and worship, is often the only practical modus vivendi. In circumstances such as these the State must be satisfied to leave the affairs of religion to the various bodies, and to protect the latter in those rights which have reference to the general public order. The education and instruction of children belongs per se to the family, and should not be monopolized by the State. The latter has, however, the right and duty to suppress schools which disseminate immoral or subversive practices of faith. By state control it may not set limits to free individual endeavours. It may, however, assist the individual in his efforts to secure an education, and, in case these do not suffice, it may establish schools and institutions for his benefit. Finally, the State has to exercise important economical functions. It must protect private property and see to it that in man's industrial life the laws affecting justice be carried out in all their force and vigour. But its duties do not stop here. It should pass such laws as will enable its subjects to procure what is needed for their respectable sustenance even to attain a middle rank of comfort. But excessive wealth and extreme poverty involve many dangers to the individual and to society. Hence, the State should pass such laws as will favour the sturdy middle class of citizens and add to their numbers. Much can be done to bring about this desirable condition by the enactment of proper tax and inheritance laws, of laws which protect the labouring, manufacturing, and agricultural interests, and which supervise and control trusts, syndicates, etc.

Although the authority of the State comes immediately from God, the person who exercises it is not directly from God. The immediate origin of the State is left to the circumstances of men's progress and development or of their modes of social aggregation. According as the supreme power resides in one individual, or in a privileged class, or in the people collectively, governments are divided into three forms: the
monarchy; the aristocracy; the democracy. The monarchy is hereditary or elective, according as succession to supreme power follows the right of primogeniture of a family (dynasty) or is subject to suffrage. At the present day the only existing kind of monarchy is the hereditary, the elective monarchs, such as Poland and the old German Sovereignty, having long since disappeared. Those States in which the sovereign power resides in the body of the people, are called polyarchies, or more commonly, republics, and are divided into aristocracies and democracies. In republics the sovereignty is vested in the people. The latter elected from among their number to frame their laws and administer the affairs of government in their name. The almost universally prevailing form of government in Europe, fashioned upon the model created by England, is the constitutional monarchy, a mixture of the monarchical, aristocratic, and democratic forms. The law-making power is vested in the king and two chambers. The members of one chamber represent the aristocratic and conservative element, while the other chamber, elected from the body of citizens, represents the democratic element.

The monarch himself is responsible to no one, yet his government acts require the consent of the ministers, who in turn are responsible to the chamber.

With regard to its appointed functions the government of the State is divided into the legislative, judiciary, and executive powers. Of primary importance is the fact that the State must enact general and stable laws governing the activities of its subjects, as far as this is required for the good order and well-being of the whole body. For this purpose it must possess the right to legislate; it must, moreover, carry out these laws and punish, by means of the administrative, or rather, executive, power for what is needful to the general good of the community; finally, it has to infringe the laws and authoritatively settle legal disputes, and for this purpose it has need of the judiciary power (in civil and criminal courts). This right of the State to impose penalties is founded on the necessity of preserving good order and of providing for the security of the whole body politic. In a community there are always found those who can in no other way be effectually forced to observe the laws and respect the rights of others than by the infliction of punishment. Hence the State must have the right to enact penal statutes, calculated to deter its subjects from violating the laws, and the right, moreover, to actually inflict punishment after the violation has occurred. Among the legitimate modes of punishment is capital punishment. It is considered, and rightly so, a step forward in civilization, that nowadays a milder practice has been adopted in this regard, and that capital punishment is more rarely inflicted, and then only for such heinous crimes as murder and treason. Nevertheless, humanitarian sentiment has no doubt been carried to an exaggerated degree, so that many would on principles away with capital punishment altogether. And yet, this is the only sanction sufficiently effective to deter some men from committing the gravest crimes.

When it is asserted, with Aristotle, that the State is a sufficient for itself, this is to be considered true in the sense that the State needs no further development to complete its organization, but not in the sense that it is independent in every respect. The greater the advance of mankind in progress and civilization, the more necessary and frequent the communication between nations becomes. Hence the question arises as to what rights and duties mutually exist between nation and nation. That portion of ethics which treats this question from a philosophical standpoint is called the theory of international law, or of the law of nations. Of course, many writers of the present day deny the propriety of a philosophical treatment of international law. According to them the only international rights and duties are those which have been established by some positive measure either implicitly or explicitly agreed upon. This, indeed, is the position that must be taken by all who reject the natural law. On the other hand, this position precludes the possibility of any international law whatever, for lasting and binding compacts between various States are possible only when the primary principle of right is recognized—that it is just and obligatory to stand by lawful agreements. Now this is a principle of natural law; hence, those who seek to deny the existence of representations (E. C. Hartmann) must consequently reject any international law properly so called. In their opinion international agreements are mere conventions, which each one observes as long as he finds it necessary or advantageous. And so we are eventually led back to the principles of ancient paganism, which, in the intercourse between nations, too often identified right with might. But Christianity brought the nations into a closer union and broke down the barriers of narrow-mindedness. It proclaimed, moreover, the duties of love and justice as binding on all nations, thus restoring them to the primary principle of natural law. These principles: "Give each one his due", "Do injury to no man", "Do not to others what you would not have them do to you", etc., have an absolute and universal value, and hence must obtain also in the intercourse between nations. Purely natural duties and rights are common to all nations, and the acquired ones may vary considerably. Various, too, are the rules and duties of nations in peace and in war. Since, however, there are, under this head, many details of a doubtful and changeable character, the codification of international law is an earnest subject of discussion. Besides this an international court should be established to attend to the execution of the various measures promulgated by the law and to arbitrate in case of dispute. The foundations of such an international court of arbitration have been laid at The Hague; unfortunately, its competence has been limited to very much restricted, and besides, it exercises its functions only when the Powers at variance appeal to it of their own accord. In the codification of international law no one would be more competent to lend effective cooperation and to maintain the principles of justice and love which should exist between nations than in intercourse with one another, than the Pope. No one can offer sounder guarantees for the righteousness of the principles to be laid down, and no one can exert a greater moral influence towards carrying them into effect. This is even recognized by unreconciled Protestants. At the Vatican Council, not only the many Catholic bishops present, but the Protestant David Urquhart appealed to the pope to draw up a schedule of the more important principles of international law, which were to be binding on all Christian nations. Religious prejudice, however, places many difficulties in the way of realizing this plan.

V. CATFHEM.

Ethiopia.—The name of this region has been derived, through the Greek form ethiôsia, from the two words ethiôs, "face", and ëthos, "race". It would thus mean the coloured man's land— the land of the scorchèd faces. But a different origin is claimed for the name by many modern writers: some of whom say that the Egyptians borrowed the word from the Egyptians, and that as early as the Twelfth Dynasty the Egyptians called Ethiopia by the name of Kosti. One form of this word, with the suffix. ethos, (the Coptic ethos, ethos, ethos), would thus be the real root-word. Others again maintain that it is derived from the Arabic word ethbis, the plural form of ethb, which means "spices", "perfumes" (Glaser, "Etymologiae," p. 305). It is also used in Arabic and Afrikan. Mention is made of it in 1896, or from an Arabic-Sabeian word, ethbis, which has the same meaning. (Haller in "Revue Sémithique," IV.)

Geography.—It is not easy to determine precisely to what part of the world the name of Ethiopia properly applies in the course of history. The word was at first used more loosely, and even the use of the word to denote a territory, have varied in various ages and at the hands of different writers. In the early pages of the Bible Ethiopia is used to designate the lands inhabited by the sons of Cush, and is therefore applied to all the scattered regions inhabited by that family. Such a use of the word is purely ethnographical. Elsewhere, however, in the Bible it is applied to a definite region of the globe without consideration of race, and is thus used geographically. It is in this sense that we find it mentioned in all Egyptian documents (Brugsch, Geography of the Egyptians, "et hippocrea" and "et hippocrea") and in documents of the Pharaohs. It denoted the region of Africa south of Egypt, and its boundaries were by no means constant. Generally speaking, it comprised the countries known in our own day as Nubia, Kordofan, Senaar, and Northern Abyssinia. It had one unvarying landmark, however: its northern boundary always began at Syene. We know from the writings of Pliny, Strabo, and Pomponius Mela that in the eyes of Greek geographers Ethiopia included not only all the territory south of Syene on the African Continent, but embraced all that part of Asia below the same parallel of latitude. Hence it came to pass that there were two regions with but one name: Eastern Ethiopia, including all the regions dwelling to the vast Red Sea as far as India; Western Ethiopia stretching southward from Egypt and westward as far as the southern boundary of Mauretania. Of all the vast tracts of country to which the name Ethiopia was given at one or other period of history, there are two to which the name has more peculiarly attached itself: the one is modern Nubia and the Egyptian Sudan (the ancient Ethiopia of the Pharaohs); the other modern Abyssinia (the Ethiopia of our own day), the last of all those regions to preserve the same name.

Nubian Ethiopia.—In Egyptian inscriptions the name Ethiopia is applied to the region of the Upper Nile lying between the First Cataract and the sources of the Albar and of the Blue Nile. Greek writers often call this region the Kingdom of Napatá, or of Meroë, after two cities that were successively the centres of its political life during the second period of its history. The name Island of Meroë, sometimes met with, is an allusion to the rivers which enclose it.

Ethiopia.—The races which occupied these regions differed considerably in their national characteristics. A small, dark-skinned population, the junction of the Atbara the population consisted for the most part of fishermen of Egyptian extraction. In the plains of the Upper Nile, side by side with some negro tribes, were a people allied to the Himyarites, and who had migrated thither from Southern Arabia, while others again showed that they owed their origin to the Egyptians and Berbers.

History.—Of the history of this country we know only what has been handed down to us through the monuments of Egypt and those erected by the inhabitants of the country itself in the vicinity of the Cataracts. It was the almost unanimous opinion of ancient historians that this was the cradle of the people occupying all the Nile Valley; and in proof thereof they pointed out the evident analogy of manners and religion between the Kingdom of Meroë and Egypt proper. But to-day we know without a doubt that the origin of Ethiopia, far from being the cradle of Egyptian civilization, owed to itself all the civilization she ever had. The chronological evidence of the monuments makes this quite clear. Whereas many of the ancient monuments are to be found on the delta, those of the neighbourhood of Meroë are common-sensically modern. Ethiopia's civilization was disordered as soon as the hieroglyphs had been interpreted. What its beginnings were, we do not know.

During the first five Egyptian Dynasties—i.e. for nearly thirteen centuries—its history is hidden behind the blackened face of the Siltluhkeit. It is only under the Sixth Dynasty that the history or the country comes within the ken of history. At that time King Mayrya, better known as Popi I, marched as far south as the Second Cataract, but did not establish a permanent foothold. Ethiopia's real occupation by Egypt did not begin till the Twelfth Dynasty, when the Pharaohs, being once more in peaceful possession of the Nile Valley, began an era of conquest, and the country of the Cataracts became their earliest prey. Amenemhat I and his son Petset I, having driven out the priests of Amun-Ra who ruled at Thebes, and having exiled them beyond Philé, continued their march as far as Wady-Halfa. The conquerors, encouraged by these victories, carried on the work of conquest, and established III pushed as far as the Fourth Cataract and even beyond Napatá, as far as the junction of the Atbara. At his death the frontiers of the Egyptian Empire extended as far as Semneh, and Ethiopia was a tributary province of Egypt. The darkness which envelops the history of the Thirteenth Dynasty does not permit of our tracing the results of this conquest, but it would seem that the victories of the Egyptian monarchs were far from decisive, and that Ethiopia always retained enough liberty to openly aspire to independence. Up to the time of the Eighteenth Dynasty this aspiration persisted, if, indeed, the country did not at times enjoy independence.

After the advent of the Eighteenth Dynasty, and the overthrow of the Shepherd Kings, Egypt undertook a series of wars against her isolated neighbours. The tribes along the Upper Nile, though harassed by her troops, resisted stubbornly. In spite of the campaigns of Amenhotep I, son of Amosis, who advanced as far as Napatá and Senaar—in spite of the violence of Thothmes I, his successor, who covered the country with devastation and ruin, it was not until the days of Thothmes II that Ethiopia was reduced to the loss of her liberty. The country was thereupon divided into nomes on the Egyptian system, and was placed under a viceroys with power extended from the First Cataract to the Mountains of Abyssinia. The office, entrusted at first to high function-
ries, soon became one of the most important in the State, and the custom arose at court of nominating to it the heir presumptive to the throne, with the title of Prince of Cush. The glorious reigns of Rameses II, of the Nineteenth Dynasty, and of Rameses III, of the Twentieth Dynasty, served to consolidate this contest for a time, but for a time only. Egypt, worn out, was weary of war, and even of victory, and the era of her campaigns ended with the Rameseid dynasty. Ethiopia, always alert to note the doings of her enemy, profited by this respite to recover her strength. She collected her forces, and soon, having won back her independence, an unexpected event left her mistress of her former conqueror.

The descendants of the royal priesthood of Amun-Ra, exiled from Thebes to Ethiopia by the Pharaohs of the Twenty-second Dynasty, had infused a new life into the land of their exile. They had reorganized its political institutions and centralized them at Napata, which city, in the hands of its new lords, became a sort of Ethiopian Thebes modelled on the Thebes of Egypt. With the co-operation of the native peoples Napata was soon reckoned among the great political powers. While Ethiopia was developing and flourishing, Egypt, so disintegrated as to be a mere collection of feudal States, was being more and more weakened by incessant revolutions. Certain Egyptian princes having at this period appealed to the King of Napata for help, he crossed over into the Thebaid, and established order there; then, to the surprise of those who had appealed to him, he continued his way northwards and went as far as Memphis, nor did he halt until he had subdued the country and proclaimed the suzerainty of Ethiopia over the whole Nile Valley. Piankhy, to whom belongs the honour of this achievement, caused an account of it to be engraved at Jebel-Barkal, near Napata. After his reign the throne passed to a native family, and during the Twenty-fourth and Twenty-fifth Dynasties Ethiopia had the glory of giving birth to the Pharaohs who ruled all the land from Abyssinia to the shores of the Mediterranean.

But at the very time when the Ethiopian armies were advancing from the South to subdue the North, the victorious Assyrian armies of the King of Nineveh were already encamped on the borders of Phoenicia. Menaced by Sargon II in the days of Shabaka, Egypt was invaded for the first time by Sennacherib's army during the reign of Shabataka. Taharqa, his succes-

sor, was defeated by Esarhaddon, and forced to retreat as far as Napata, pursued by the Ninevite hosts. The victory, however, was dearly bought by the Assyrians, and the Ethiopians, even in retreat, proved so dangerous that the pursuit was abandoned. Taharqa, encouraged by the fear he inspired in his enemies, tried to win back the Nile Valley. He assumed the offensive a few years after this, and soon entered Memphis almost without striking a blow. But the princes of the Delta, of whom Necho was the most powerful, far from extending him a welcome, joined forces with the King of Nineveh. Asurbanipal, who had now succeeded his father, Esarhaddon, straightway attacked Taharqa, and the King of Ethiopia fell back once more towards the Cataracts. His son-in-law, Tanuat-Amen, once more victorious, went up as far as Memphis, where he defeated the Delta princes, allies of the Assyrians, but a fresh expedition under Asurbanipal completely broke his power. Thereafter Tanuat-
Institutions.—The only civilization we know of in Ethiopia is that which was borrowed from Egypt. We find no record of really native institutions on any of the monuments that have come down to us, and the earliest records extant do not take us beyond the fourth century, when the priestly dynasty of Thebaid,—Napata Amun-Ra, King of the Gods, ruled supreme with Maut and Khonsu. The temple there was built on the model of the Karnak sanctuaries; the ceremonies performed were those of the Theban cult. The priest-kings, above all, as formerly in their native land, were the heads of a purely ecclesiastical polity. It was only later in history that the monarchy became elective in Ethiopia. The election took place at Napata, in the great temple, under the supervision of the priests of Amun-Ra, and in the presence of a number of special delegates chosen by the magistrates, the literati, the soldiers, and the officers of the palace. The members of the reigning family, the royal brethren, were brought into the sanctuary and presented one after another to the statue of the god, who indicated his choice by a signal previously agreed upon. The choice of the priests could undertake nothing without the royal consent, and was subject to them for life. Arq-Amem set out to have broken and secured complete independence for the throne.

Language.—The tongues in the land of Cush were as varied as the peoples who dwelt there, but Egyptian is the language of the Ethiopian inscriptions. On a number of dates dating from the epoch of Ethiopian history we find a mixed idiom. It is written in hieroglyphs, of which the alphabetical values, however, have been modified. Hitherto undecipherable, this language has recently been held to be related to Egyptian, with a large admixture of foreign (doubtless Nubian) words. The development of the study of demotic, as well as a more intimate knowledge of the speech of later times, will, perhaps, eventually bring a fuller knowledge of this idiom.

Abyssinian History.—Geography.—This region corresponds to the group of territories nowadays known as Abyssinia, descending from the Italian colony of Eritrea to the shores of the Great Lakes. Yet the ancient empire of this name did not by any means permanently occupy the whole of this area, the boundaries of which rather indicate its greatest extent at any period of its history. Among all the countries that are commonly known under the name of Ethiopia this alone took the name for itself, and calls itself by that name to this day. It rejects the name Abyssinian which is constantly given it by Arab writers. Western writers have often employed both terms, Abyssinian and Ethiope, indifferently, but in our own day a distinction seems to be growing up in their use. It seems that with the name of Ethiopia we should connect that portion of the country's history the documents of which are supplied by Greek literature alone; with that of Abyssinian, what belongs to the modern period since the definitive appearance of Amharic among the written languages. The modern Tigre, formerly the Kingdom of Axum, would seem to have been the kernel of this State. It was founded by refugees who came to the African continent when the Arsacidae were extending their sway in the Arabian peninsula, and the power of the Ptolemies was declining in Egypt. These refugees belonged to the Salban tribes engaged in the gold and spice trade between Arabia and the Roman Empire; their dealings with civilized races had developed them, and, thanks to their more advanced stage of mental culture, they acquired a preponderating influence in the country among whom they then dwelt. Still, the descendants of these immigrants form a minority of the Ethiopian people, which is mainly composed of Cushite tribes, together with members of an aboriginal race called by the Ethiopians themselves Shangana.

History.—From native sources we know nothing accurately of the political beginnings of the State. Its annals open with the rule of monsters in that land, and for many centuries Arue, the serpent, is the only ruler mentioned. Many writers see in this a but a perverted manifestation of idolatry or barbarism, and the explanation seems probable. According to certain traditions written in Gheez, Ethiopia embraced the Jewish religion at the time of Solomon, and received a prince of that monarch's family to rule over it. The Queen of Saba (Sheba), spoken of in the First Book of Kings, was an Ethiopian queen, according to the legend of Krahaboab and the Khing, and it was thought that Ethiopia received this double honour. But this tradition is of comparatively recent origin, and finds no confirmation in the most ancient native documents, nor in any foreign writings. History still waits for some foundation on which to base this appropriation of the sacred text, as well as for proofs to justify the variants with which Ethiopian chroniclers have embellished it.

The first thing that we know with certainty as to the history of Ethiopia is its conversion to Christianity. This work was accomplished in the early part of the fourth century by St. Frumentius, known in that country as Abba Salama. Rufinus of Aquileia has preserved the story for us in his history. According to him, a Christian of Tyre, named Merope, had gone on a journey to India with a large number of children, Eudesi and Frumentius, his nephews. On their return journey the ship was captured by pirates off the Ethiopian coast, and every one on board was put to death except the two children. These were sent as captives to the king, and were afterwards appointed tutors to his son, whom they converted to Christianity. Later, they returned to their own country. But Frumentius had still another ambition: to be consecrated bishop by the Patriarch of Alexandria. This wish having been fulfilled, he returned to Axum, organized Christian worship, and, under the title of Abba Salama, became the first metropolitan of the Ethiopian Church. Missionary monks (coming later from neighbouring countries in the sixth century) completed the work of his apostolate by establishing the monastic life. National traditions speak of these missionaries as the Nine Saints: they are the abbis Ale, Tienna, Aragawi, Girma, Panta, Haxo, Liganos, Amlak, and Afti. From this time forth Ethiopia takes its place among the Christian States of the East. One of its kings, Culeb, contemporary with the Nine Saints, and canonized as St. Eleazar, is famous in Oriental literature for an expedition he led against the Jewish kingdom of Yemen. The authority of the Ethiopian kings then extended over Tigre, Shoa, and Amhara, and the seat of government was the Kingdom of Axum.

But from this time forward the history of this country is enveloped in darkness, and remains almost unknown to us until the thirteenth century. We have nothing to guide us but the long and confused conflicting lists of kings with the indication of a dynastic revolution, which perhaps explains the brevity of the chronicles. Perhaps, in the midst of these troubles, the historical documents of preceding ages were purposely destroyed; and this seems likely since the foreign dynasty of the Zagwees, which at that time usurped the throne of the pretended descendants of the son of Solomon, would feel constrained to destroy the prestige of the supplanting dynasty in order to establish itself. According to the abridged chronicle published by Bruce, the Palasias, a tribe professedly Arabian, were the founders of this dynasty, and the fact is that we have no other evidence in support of this assertion. The chronicles we have are silent about the matter; they merely tell us that at the close of the thirteenth century, in the reign of Yekuno Amlak, after a period of exile, the length of which we do not know, the Solo-
monian dynasty regained power through the aid of the monk Takla Haymanot. After the restoration of the ancient national dynasty, the country, once more at peace within itself, had to concentrate its whole energy upon resisting the southward progress of Mohammedanism. For nearly three centuries Ethiopia had to wage wars without respite for liberty and faith, and it alone, of all the African kingdoms, was able to maintain both. The most famous of these wars was against the Emperor of Harar, Ahmed Ibn Ibrahim, surnamed the Left-handed. It took place during the reign of King Lebna Dengel (1508-40) and Galawdegn (1540-56), and the exhausted country was only saved by the timely help of Portuguese armies. Delivered from its foes, it might have become a great power in the East, but it lacked a capable leader, and its people, deriving but little moral support from a corrupt religion, fell rapidly away until, after a long series of civil wars, Ethiopia became a land of anarchy.

Under Menas (1559-63), Sarse Dengel (1563-97), and Ya'qob Za Dengel (1597-1607), civil war was incessant. There was a brief respite under Susneas (1607-32), but war broke out afresh under Fasiladas (1622-67), and the clergy, moreover, increased the trouble by their theological disputes as to the two natures of Christ. These disputes, often, indeed, but a cloak for ambitious intrigues, were always occasions of revolution. Under the successors of Fasiladas the general disorder passed beyond all bounds. Of the seven kings who followed him two died a natural death. Then there was a short period of peace under Bakafa (1721-30), and Yass II (1730-55), Yos (1755) and Yohannes (1755-69) were again victims of an ever-spreading revolution. The end of the eighteenth century left Ethiopia a feudal kingdom. The general government belonged to its king, or provincial chieftains. The unity of the nation had disappeared, and its kings reigned, but did not govern. The Ras became veritable Mayors of the Palace, and the monarchs were content to be roi fantômes. Side by side with these kings who have left in history only their names, the real masters of events, as the popular whim happened to favour them, were Ras Mikael, Ras Abeto of the Godjam, Ras Gabriel of the Samen, Ras Ali of Begameder, Ras Gabra Masqal of Tigre, Ras Walda-Sellasse of the Shoa, Ras Ali of Ambars, Ras Oubah of Tigré, and the like. Among these chief was incessant; ever dissatisfied, jealous of each other's power, each one sought to be supreme, and it was only after a century of strife that peace was at length established. A son of the governor of Kowara, named Kasa, succeeded in bringing it about, to his own profit; and he made it permanent by causing himself to be proclaimed king under the name of Theodore (1855).

With him the ancient Ethiopia took its place as one of the nations to be reckoned with in the international affairs of the West, and Abyssinia may be said to date its origin from his reign.

Religion.—Previous to the conversion of the country to Christianity, the worship of the serpent was perhaps the religion of a portion of Ethiopia, i.e. of the aboriginal Cushite tribes. From inscriptions at Asum and Adulis it would seem that the Semite, on the other hand, had a religion similar to that of Chaldeans and Syria. Among the gods mentioned we find Astar, Beher, and Medir—perhaps representing the triad of sky, sea, and land. As to the Jewish religion, and its introduction in the time of Solomon, we have only the assertion found in some recent documents, which we have already received as representatives of a national religion which has disappeared. After the evangelization by St. Frumenius, and in spite of the resulting general conversion of the people, Pananism always retained some adherents in Ethiopia, and has its representatives there even to this day. Moreover, at the time of the Muslim wars Islam succeeded in securing a foothold here and there. Nevertheless Christianity has always been the real national religion, always practised and defended by the rulers of the nation.

Although converted to Christianity by missionaries of the Catholic Church, Ethiopia to-day professes Monophyism. Being subject to the influence of Egypt, it has adopted in the course of time the theory of the Egyptian Church concerning the human nature of Christ. Our lack of information about the country prior to the thirteenth century hinders us from following the history of its separation from Rome, or even fixing the date of that event. Like the Egyptian, the Ethiopian Church anathematizes Eutyches as a heretic, yet remains Monophysite and rejects the Catholic teaching as to the two natures. United in the statement of their belief, the Ethiopian theologians have divided into two great schools in its explanation. On the one hand, the Walda-Qeb ("Sons of Union"), as they are nowadays called) hold that the most radical unification (tawehedho) exists between the two natures, such as the absorption of the human by the Divine nature that the former may be said to be merely a fantasm. This unification is the work of the union of the von Himself according to the general teaching of the Walda-Qeb. Some among them, however, known as the Qebat ("Union), teach that it is the work of the Father. Others again, the Segel-selel, or Walda-sega ("Sons of Grace), hold that the unification takes place in such a way that the nature of Christ becomes a special nature (babrey), and this is attributed to the Father, as in the teaching of the Qebat. But, as the mere fact of the union does not effect a radical unification (for this school rejects absorption), the unification is made perfect, according to them, by what they call the adoptive birth of Christ—the ultimate result of the union of the Father. In effect, they recognize in the Incarnation three kinds of birth: the first, the Word begotten of the Father; the second, the Son of Mary: the third, the Son of Mary, begotten the Son of God the
Father by adoption, or by His elevation to the Divine dignity—the work of the Father anointing His Son with the Holy Spirit, whence the name Sons of Grace. However, while rejecting absorption, this latter school refuses to admit the distinction of the two natures. Both schools, moreover, assert that the unification takes place without any blending, without change, without confusion. It is contradiction itself set up as a dogma.

The difficulties following from this teaching in regard to the reality of Redemption, the Monophysite Church of Ethiopia calls mysteries; her theologians confess themselves unable to explain them, and simply dismiss them with the word Ḫaqada; it is, so they say, “by the will of God.” In sympathy with the Church of Constantinople, as soon as it was separated from Rome, the Ethiopian Church in course of time adopted the Byzantine teaching as to the procession of the Holy Ghost; but this question never was as popular as the mystery of the Incarnation, and in reference to it the contradictions to be found in the texts of native theologians are even more numerous than those touching on the question of the two natures. Adrift from the Catholic Church on the dogma of the humanity of Christ and the procession of the Holy Spirit, the Ethiopian Church professes all the other articles of faith professed by the Roman Church. We find there the seven sacraments; the cultus of the Blessed Virgin and of the saints; prayers for the dead are held in high honour, and fasts without number occur during the liturgical year.

The Bible, translated into Gheez, with a collection of decisions of the Councils, called the Synodo, make up the groundwork of all moral and dogmatic teaching. The work of translating the Bible began in Ethiopia about the end of the fifth century, according to some authorities (Guidi; G. Rossini), or, in the opinion of others (Méncheau), in the fourth century at the very beginning of the evangelization. Notwithstanding the native claims, their Old Testament is not a translation from the Hebrew, neither is its Arabic origin any more capable of demonstration; Old and New Testaments alike are derived from the Greek. The work was done by many translators, no doubt, and the unity of the version seems to have been brought about only by deliberate effort. At the time of the Solomonian restoration in the thirteenth century, the whole Bible was revised under the care of the Metropolitan Abba Salama (who is often confounded with St. Frumentius), and the text followed for the Old Testament was the Arabic of Rabbi Sandjas Gaon of Pjryam. There was perhaps a second revision in the seventeenth century at the time of the Portuguese missions to the country; it has recently been noticed (Littmann, Geschichte der äthiopischen Literatur). But, just as the great number of translators employed caused the Bible text to be unequal, so also the revision of it was not uniform and official, and consequently the number of variant readings became multiplied. Its canon, too, is practically unsettled and fluctuating. A host of apocryphal or falsely ascribed writings are placed on the same level on the one hand, and on the other the most esteemed of which we may mention the Book of Henoch, the Ḫufale, or Little Genesis, the Book of the Mysteries of Heaven and Earth, the Combat of Adam and Eve, the Ascension of Isaiah. The “Ḥaymanot Ahaw” (Faith of the Fathers), the “Melkat Ḫalita” (Book of the Mysteries), the “Melkat Ḫaymanot” (Book of the Compilation), “Qēlos” (Cyrillus), “Ẓēnāḥéymanot” (Tradition of the Faith) are among the principal works dealing with matters moral and dogmatic. But, besides the fact that many of the quotations from the Fathers in these works have been modified, many of the canons of the “Ẓāḥmā” are, to say the least, not historical.

Liturgy.—In the general effect of its liturgical rules the Ethiopian Church is allied to the Coptic Rite. Numerous modifications, and especially additions, have, in the course of time, been introduced into its ritual, but the basic text remains that of Egypt, which, in many places, it differs only in the language. Its calendar and the distribution of festivals are regulated as in the Coptic Church, though the Ethiopians do not follow the era of the martyrs. The year has 365 days, with a leap year every four years, as in the Julian calendar. Its ordinary year begins on 29 August of the Julian calendar, which corresponds to 11 September of the Gregorian calendar. After a leap year the new year begins on the 30th of August (our 12 September). The year has twelve months of 30 days each, and an added thirteenth month of six days or of five days—according to the year or not. The era followed is seven years behind ours during the last four months of our year, and eight years during the remaining months. The calendar for each year is arranged in an ecclesiastical synod held in the springtime. It is at this gathering that the dates of the principal movable feasts are settled, as well as the periods for the fasts to be observed during the course of the year. The greater feasts of the Ethiopian Church are Christmas, the Baptism of Christ, Palm Sunday, Holy Week, Ascension Day, Pentecost, the Transfiguration. A great number of feasts are scattered throughout the year, either on fixed or movable dates, and their number, together with the two days every week (Saturday and Sunday) on which work is forbidden, reduces by almost one-third the working-days of the year. Festivals are observed every Wednesday and Friday, and five times annually during certain periods preceding the great festivals; the fast of Advent, is kept during forty days; of Ninivé, three days; of Lent, fifty-five days; of the Apostles, fifteen days; the fast of the Assumption, fifteen days. Most of the saints honoured in Ethiopia are to be found in the Roman Martyrology. Among the native saints (about forty in all), only a few are recognized by the Catholic Church—St. Frumentius, St. Elesban, the Nine Saints, and St. Takuł Háymanot. But, deprived of religious instruction, the Ethiopian people mingle with their Christianity many practices which are often opposed to the teaching of the Gospel; some of these seem to have a Jewish origin, such, for instance, as the keeping of the Sabbath, the distinction of animals as clean and unclean, circumcision, and the custom of marrying a widow to the nearest relative of her deceased husband.

Ecclesiastical Hierarchy.—The Ethiopian hierarchy is subject to the Coptic Patriarch of Alexandria, who has some degree of dependence on the Coptic Church is regulated by one of the Arabic canons found in the Coptic edition of the Council of Nicea. A delegate from this patriarch, chosen from among the Egyptian bishops, and called the Abouna, governs the Church. All-powerful in
masters spiritual, his influence is nevertheless very limited in other directions, owing to the fact that he is a stranger. The administrative authority is vested in the Etchagei, who also has jurisdiction over the regular clergy. This functionary is always chosen from among the monks and is a native. Legislation concerning the clergy is always regulated by a special code, of which the fundamental principles are contained in the Petha negashit. Only the regular clergy observe celibacy, and the facility with which confessions are made numbers the priests very large.

Language and Literature.—Although the races inhabiting Ethiopia have very different origins, only the Semitic family of tongues is represented among them. This is one of the results of the conquest made in olden days by the immigrants from the African Continent. Two dialects were spoken by these tribes, the Ghee, which is akin to Amhar, and a speech more akin to Me'lin, the tongue which later developed into Amharic. In the course of time Ghee ceased to be a spoken language, but it gave rise to two vernacular dialects, Tigre and Tigrai, which have supplanted it.

No longer in popular use, Ghee has always remained the language of the Church and of literature. Amharic, on the other hand, became a literary language in the fifteenth century, and its origin, Ghee literature has remained so in its productions, mostly of which are apocrypha, hagiographical compositions, or theological works. History and poetry have only a secondary place in it, and these are the only subjects in which we find any original effort; and as for the Amharic language itself, its evolution is traced from the Greek, Coptic, or Arabic. Most of its manuscripts have come down to us without date or author's name, and it is not an easy task to follow the history of letters in this country. As far as we know at present, the five hundred seems to have been the great literary century of Ethiopia. To the reign of Zara Yaqob (1454-68) belong the principal compositions of which we know the history. The wars against Adal and against Ahmed Ibn Ibrahim, in the sixteenth century, arrested this literary movement. The decline began after the civil wars of the sixteenth and seventeenth centuries, and the coming of Amharic as a language led to its decline. The earliest writing in Amharic date from the fourteenth century, and the period of the Portuguese missions it was beginning to supplant Ghee. The Jesuits made use of it to reach the people more surely, and henceforward Ghee tended to become almost exclusively a liturgical language. At the present day it is nothing else, Amharic having altogether taken its place in other departments, and it may be that at no distant date Amharic will supplant Ghee even as the language of the Church.

Job Ludolf, a German, in the eighteenth century, was the first to organize the study of Ethiopian subjects. To him we owe the first grammar and the first dictionary of the Ghee language. After a period of neglect these studies were taken up once more in the second half of the nineteenth century by Professor Dillmann, of Berlin, who, after many years of study, compiled a work, which begins the series of works on the grammar and lexicography, which are indebted to him for his publication of many texts. Thanks to the extension of philological, historical, and patristic studies, the study of this language has spread in our own time to a greater and greater degree. Of works of the first class, which have been published on the literature by Professors Bassett, Buzold, Guidi, Littmann, and Pretorius, as also by Charles, Evesque Pereira, Perruchon, and Touraise. The Amharic, too, has inspired a number of studies, whether of its grammar, of its lexicography, or of its texts; the works of Massaja, Isenberg, d'Abbadié, Pretorius, Guidi, Mondon-Kidalith, and Afevork have served to definitely place it within the domain of Oriental studies.

Etschmiadzin, a famous Armenian monastery, since 1441 the ecclesiastical capital of the schismatic Armenians, and seat of their patriarch or catholicoi (q. v.), whom the greater part of the Non-Unit Armenian Church acknowledge as their head. It is situated in Russian territory, in the extreme south of the Caucasus, on the River Arpa (Arpa), five miles south of Tiflis. As early as the fifth or sixth century, if not earlier, a monastery existed there attached to the royal residence of Vancharapat, itself the immemorial national centre of Armenia. According to national tradition, more or less reliable, the primatial see of Armenia and the see of Gregory the Thracian was founded here in the fourth century. On the site of his famous vision of “the descent of the only Begotten One” (Descendit Unigenitus in Arm. Etschmiadzin), the anniversary of which is still kept as a national feast, he built a chapel, and in time a splendid church and monastery arose, which centred the national and religious life of Armenia until the middle of the fifth century, when, owing first to the invasions of Caucasian hordes and thence to Persian ambition and persecution, there began the long series of wanderings which recall the story of the monks of Durham with St. Cuthbert's body. During these centuries both clergy and people valued most highly the right arm of St. Gregory; his possession was practically considered the legitimate patriarch. After many removals, first to Down (Duin, Tvin) and then to another place, the monastery was finally settled in or near the city of Sis, in Cilicia (Lesser Armenia), where it remained from 1293 to 1441; at the former date the relic was said to have been miraculously brought to Sis from Egypt, whether it had been taken by the Mamelukes. When the small Christian principality of Lesser Armenia, long upheld by the Crusades (1097-1375), was at last destroyed, the national and religious life of its people naturally turned again towards the earlier venerable centre, in Northern or Greater Armenia. After the death, at Sis (1410), of Patriarch Joseph II, irregularities occurred in the election of the new patriarch, Gregory Muspepekian, which northern bishops were willing to overlook if he would transfer his see to Greater Armenia. On his refusal a new election was held at Etschmiadzin where, it is said, about seven hundred bishops and archpriests (vertapods) assembled and elected Erazor, with whom begins the series of patriarchs of Etschmiadzin. By some stratagem the monastery is said to have secured from Sis the possession of the famous relic of St. Gregory. A patriarchal succession, however, was, and is still, maintained at Sis, where what purport to be the selfsame relics are shown and venerated.

There are, moreover, Armenian (schismatic) patriarchs at Aghamar, Jerusalem (1311) and Constantinople (1461), the latter for the Armenians of the Ottoman Empire, also an independent Archbishop of Lemberg. Several patriarchs of Etschmiadzin, Stephen V (1541), Michael of Sebastia (1564), David IV
Eucharist, a titular see of Phrygia Salutaris in Asia Minor. Eucarpii (Eucharis), mentioned by Strabo (XII, 579) and several other geographers, was situated on a road from Doryleum to Eumenia, between the Doryleum-Aemonia and Doryleum-Synnada roads, probably at the modern village of Emin Hisor, in the vilayet of Brussa. The imposing ruins, seen by Hamilton in 1837, have almost disappeared. Nothing is known about the history of the city, except that it is suggested by the coins from the time of Augustus till the reign of Volusianus. The bishopric, being a suffragan of Synnada, figures in the "Notitiae episcopatuum" until the twelfth or thirteenth century. Six bishops are known: Eugenius, present at the Council of Ephesus in 431, Ambroseus, consecrated by Dionysius in 536, Constantine or Constantius in 587 (not mentioned by Lequien), and Constantine in 879.

S. Pătridză.

Eucharist (Gr. εὐχαριστία, thanksgiving), the name given to the Blessed Sacrament of the Altar under its twofold aspect of sacrament and Sacrifice of the Mass, and in which, whether as sacrament or sacrifice, Jesus Christ is truly present under the appearances of bread and wine. Other titles are used, such as the "Lord's Supper" ( Corpus Domini), "Table of the Lord" (Menia Domini), the "Lord's Body" (Corpus Domini), and the "Holy of Holies" (Sollitatem), to which may be added the following expressions, now obsolete and somewhat altered from their primitive meaning: Aspe (Love-Feast), Enlogia (Blessing), "Table of Bread", "Synaxis", but the ancient title "Eucharistia", appearing in writers as early as Ignatius, Justin, and Irenaeus, has taken precedence in the technical terminology of the Church and her theologians. The expression "Blessed Sacrament of the Altar", introduced by Augustine, is at the present day almost entirely restricted to catechetical
The Church honours the Eucharist as one of her most exalted mysteries, since for sublimity and incomprehensibility it yields in nothing to the allied mysteries of the Trinity and Incarnation. These three mysteries constitute a wonderful triad, which causes the intellectual character of Christianity, as a religion of mysteries far transcending the capabilities of reason, to shine forth in all its brilliance and splendour, and elevates Catholicism, the most faithful guardian and keeper of our Christian heritage, far above all pagan and non-Christian religions.

The organic connection of this mysterious triad is clearly discerned, if we consider Divine grace under the aspect of a personal communication of God. Thus in the bosom of the Blessed Trinity, God the Father, by virtue of the eternal generation, communicates His Divine Nature to the Son; “the only begotten Son who is in the bosom of the Father” (John, i, 18), while the Son, by virtue of the hypostatic union, communicates in turn the Divine Nature received from His Father to His human nature formed in the womb of the Virgin Mary (John, i, 14), in order that thus as God-man, hidden under the Eucharistic Species, He might deliver to His Church, by means of the Eucharist, a mystery of immeasurably, and daily places it before her children as the spiritual food of their souls. Thus the Trinity, Incarnation, and Eucharist are really united together like a precious chain, which in a wonderful manner links heaven with earth, uniting them most intimitely and keeping them thus united. By the very fact that the Eucharistic mystery does transcend reason, no rationalistic explanation of it, based on a merely natural hypothesis and seeking to comprehend or of the sublime truths of the Christian religion as the spontaneous conclusion of logical processes, may be attempted by a Catholic theologian.

The modern science of comparative religion is striving wherever it can, to discover in pagan religions the natural prototypes of the theoretical and practical elements of Christianity, and thus by means of the former to give a natural explanation of the latter. Even were an analogy discernible between the Eucharistic repast and the ambrosia and nectar of the ancient Greek gods, or the haoma of the Indians, or the soma of the ancient Hindus, we should nevertheless be very cautious not to stretch a mere analogy to a parallelism strictly so called, since the Christian Eucharist has nothing at all in common with these pagan foods, whose origin is to be found in the crassest idol- and nature-worship. What we do particularly discover is a new proof of the reasonableness of the Catholic religion, from the circumstance that Jesus Christ in a wonderfully condescending manner responds to the natural craving of the human heart after a food which nourishes unto immortality, a craving expressed in many pagan religions, by dispensing to mankind His own Flesh and Blood. All that is beautiful, all that is true in the religions of nature, Christianity has appropriated to itself, and like a conch mirror has collected the dispersed and not infrequently distorted rays of truth into their common focus, and again sent them forth resplendently in perfect beams of light.

It is the Church alone, “the pillar and ground of truth”, imbued with and directed by the Holy Spirit, that guarantees to her children through her infallible teaching the full and unadulterated revelation of God. Consequently, it is the first duty of Catholics to adhere to what the Church proposes as the “proximate norm of faith” (regula fidei proxima), which, in reference to the Eucharist, is set forth in a particularly clear and detailed manner in Sessions XIII, XXI, and XXII of the Council of Trent. The quintessence of these doctrinal decisions consists in this, that in the Eucharist the Body and Blood of our Lord Jesus Christ is truly, and substantially present for the nourishment of our souls, by reason of the transubstantiation of the bread and wine into the Body and Blood of Christ, and that in this change of substances the unbloody Sacrifice of the New Testament is also contained. Since the humblest Christian is acquainted with the doctrine of transubstantiation from his childhood, there remain here for a more detailed consideration two principal truths: (I) The Real Presence of Christ in the Eucharist; and (II) The Eucharist as a Sacrament.

1. The Real Presence of Christ in the Eucharist. — In this section we shall consider, first, the fact of the Real Presence, which is, indeed, the central dogma; then the several dogmas grouped about it, namely, the Totality of Presence, Transubstantiation, Permanence of Presence and the Adorableness of the Eucharist; and, finally, the speculations of reason, which, so far as speculative investigation regarding this august mystery under its various aspects is permissible, and so far as it is desirable to illumine it by the light of philosophy.

1. The Real Presence as a Fact. — According to the teaching of theology a revealed fact can be proofed, as a tendency to the faith, viz. Scripture and Tradition, with which is also bound up the infallible magisterium of the Church.

(a) Proof from Scripture. — This may be adduced both from the words of promise (John, vi, 26 sqq.) and, especially, from the words of Institution, as recorded in the Synoptics and St. Paul (I Cor., xi, 23 sqq.). By the miracles of the loaves and fishes and the walking upon the waters, on the previous day, Christ not only prepared His hearers for the sublime discourse containing the promise of the Eucharist, but also proved to them that He possessed, as Almighty God-man, a power superior to and independent of the laws of nature, and could, therefore, provide such a supernatural food, none other, in fact, than His own Flesh and Blood. This discourse was delivered at Capernaum (John, vi, 26–72), and is divided into two distinct parts, corresponding to the revelation of the truth: the first elucidates the nature of the Eucharist, the second the relation of the Eucharist to the Mysteries: the former, in the light of the Old Testament, the latter, in the light of the New Testament. Two kinds of food and three periods, there are as many dispensers—Moses dispensing the manna, the Father nourishing man’s faith in the Son of God made flesh, finally Christ giving His own Flesh and Blood. Although the manna, a type of the Eucharist, was instituted as a food, it could not, being a transitory food, ward off death. The second food, that offered by the Heavenly Father, is the bread of heaven, which He dispenses hic et nunc to the Jews for their spiritual nourishment, inasmuch as by reason of the Incarnation He holds up His Son to them as the object of their faith. If, however, the third kind of food, which Christ Him-
self promises to give only at a future time, is a new refection, differing from the last-named food of faith, it can be none other than His true Flesh and Blood, to be really eaten and drunk in Holy Communion. This is why Christ was so ready to use the realistic expressions (John, vi, 54, 55, 58): re-reading the phrase, "to eat" (John, vi, 51, 53: τρωγε). Cardinal Bellarmine (De Euchar., I, 3), moreover, calls attention to the fact, and rightly so, that if in Christ's mind the manna was a figure of the Eucharist, the latter must have been something more than that merely blessed bread, as otherwise the prototype would not substantially excel the type. The same holds true of the other figures of the Eucharist, as the bread and wine offered by Melchisedech, the loaves of proposition (panes propositionis), the paschal lamb. The impossibility of a figurative interpretation is brought home more forcibly by an analysis of the following text: "Except you eat the flesh of the Son of man, and drink his blood, you shall not have life in you. He that eateth my flesh and drinketh my blood, hath everlasting life: and I will raise him up in the last day. For my flesh is meat indeed: and my blood is drink indeed" (John, vi, 54-56). It is true that even among the Nomites, and in Scripture itself, the phrase, "to eat some one's flesh", has a figurative meaning, namely, "to persecute, to bitterly hate some one". If, then, the words of Jesus are to be taken figuratively, it would appear that Christ had promised his enemies eternal life and raise them up in the last day, to a most solemn manner, in the texts quoted above (John, vi, 54 sq.). In consequence, many of His Disciples were scandalized and said: "This saying is hard, and who can hear it?" (John, vi, 61); but instead of retracting what He had said, Christ rather reproached them for their want of faith, by alluding to His sublimer origin and His future ascension into heaven. And without further ado He allowed these Disciples to go their way (John, vi, 62 sq.). Finally He turned to His twelve Apostles with the question: "Will you also go away?" Then Peter stepped forth and with humble faith replied: "Lord, to whom shall we go? thou hast the words of eternal life. And we have believed and have known, that thou art the Christ, the Son of God" (John, vi, 68 sq.).

The entire scene of the discourse and murmurings against it proves that the Zwinglian and Anglican interpretation of the passage "It is the spirit that quickeneth", etc., in the sense of a glossing over or retraction, is wholly inadmissible. For in spite of these words the Disciples severed their connexion with Jesus, while the Twelve accepted with simple faith a mystery which as yet they did not understand. Nor did Christ say: "My flesh is spirit", i.e., to be understood figuratively, but: "My words are spirit and life". There are two views regarding the sense in which this text is to be interpreted. Many of the Fathers declare that the true Flesh of Jesus (τὸ σῶμα) is not to be understood as separated from His Divinity (σωματικά), and hence not in a cannibalistic sense, but as belonging entirely to the supernature of the economy. The second and more scientific explanation asserts that in the Scriptural opposition of "flesh and blood" to "spirit", the former always signifies carnal-mindedness, the latter mental perception illumined by faith, and that the expression of Jesus in this passage to give prominence to the fact that the sublimity of the Eucharist can be grasped in the light of supernatural faith alone, whereas it cannot be understood by the carnal-minded, who are weighed down under the burden of sin. Under such circumstances it is not to be wondered at that the Fathers and several ecumenical councils (Ephesus, 431; Nicea, 787) adopted the literal sense of the words, though it was not dogmatically defined (cf. Council of Trent, Sess. XXI, c. i). If it be true that a few Catholic theologians (as Cajetan, Ruardus Tapper, Johann Hessel, and the elder Jansenius) preferred the figurative interpretation, it was merely for controversial reasons, because in their perplexity they imagined that otherwise the claims of the Hussite and Protestant Utraquists for the partaking of the Chalice by the laity could not be answered by argument from Scripture. (Cf. Patrizi, "De Christo pane vitae", Rome, 1551, Schmitt, "Die Verheissung der Eucharistie bei den Vatizen", 2 vols., Wurzburg, 1900-03.)

The Church's Magna Charta, however, are the words of Institution, "This is my body—this is my blood", whose literal meaning she has uninterruptedly adhered to from the earliest times. The Real Presence is evinced, positively and negatively, by showing, not only that the literal sense of these words, and negatively, by refuting the figurative interpretations. As regards the first, the very existence of four distinct narratives of the Last Supper, divided usually into the Petrine (Matt., xxvi, 26 sq.; Mark, xiv, 22 sq.) and the Pauline (Luke, xxii, 19 sq.; Cor., xii, 24 sq.) favours the literal interpretation. In spite of their striking unaniinity as regards essentials, the Petrine account is simpler and clearer, whereas the Pauline is richer in additional details and more involved in its citation of the words that refer to the Chalice. It is but natural and justifiable to expect that, when four different narrators in different countries and at different times relate the words of Institution to different circles of readers, the occurrence of an unusual figure of speech, as, for instance, that bread is the sign of Christ's Body, would, somewhere or other, betray itself, either in the difference of word-setting, or in the unequivocal expression of the meaning really intended, or at least in the addition of some such remark as: "He spoke, however, of the sign of His Body." But nowhere do we discover the slightest ground for a figurative interpretation. If, then, the natural, literal interpretation were false, the Scriptural record alone would have to be considered as the cause of a pernicious error in faith and of the grievous crime of rendering Divine homage to bread (artolatria)—a supposition little in harmony with the character of the four Sacred Writers and with the inspiration of the Sacred Text. Moreover, we must not omit the very important circumstance, that one of the four narrators has interpreted his own account literally. This is St. Paul (I Cor., xi, 27 sq.), who, in the most vigorous language, brands the unworthy recipient as "guilty of the body and of the blood of the Lord". There can be no question of a grievous offence against Christ Himself, unless we suppose that the true Body and the true Blood of Christ are really present in the Eucharist. Further, if we attend only to the words themselves, their natural sense is so forceful and clear that even the most extreme of the Catholic Fathers would, somewhere or other, say: "I am caught, I cannot escape, the text is too forcible" (De Wette, I, 577). The necessity of the natural sense is not based upon the absurd assumption that Christ could not in general have resorted to the use of figures, but upon the evident requirements of
the case, which demand that He did not, in a matter of such paramount importance, have recourse to meaningless and deceptive metaphors. For figures enhance the clearness of speech only when the figurative meaning is obvious, either from the nature of the case (e. g from a reference to a statute of Lincoln, by saying: "This is Lincoln reefed," or from uttering nonsense by one means or another (e. g. in the case of this synecdoche: "This glass is wine"). Now, neither from the nature of the case nor in common parlance is bread an apt or possible symbol of the human body. Were one to say of a piece of bread: "This is Napoleon"; he would not be using a figure, but uttering nonsense. There is but one means of rendering a symbol improperly so called clear and intelligible, namely, by conventionally setting beforehand what it is to signify, as, for instance, if one were to say: "Let us imagine these two pieces of bread before us to be Socrates and Pluto." Christ, however, instead of informing His Apostles that He intended to use such a figure, told them rather the contrary in the discourse containing the promise: "the bread that I will give, is my flesh, for the life of the world" (John, vi, 52). Such language, of course, could be used only by a God-man; so that belief in the Person necessarily necessarily renders belief in the true Divinity of Christ. The foregoing rules would of themselves establish the natural meaning with certainty, even if the words of Institution, "This is my body"—this is my blood", stood alone. But in the original text corpus (body) and sanguis (blood) are found in the presence of the people, who without knowledge of the words of their Master and with deep faith accepted whatever He proposed to them. This childlike disposition to be reckoned with by Christ, particularly on the eve of His Passion and Death, when He made His last will and testament and spoke as a dying father to His deeply afflicted children. In such a moment of awful solemnity, the only appropriate mode of speech would be one which, stripped of unintelligible figures, made use of words corresponding exactly to the meaning to be conveyed. It must be remembered, also, that Christ as omniscient God-man, must have foreseen the error into which He would have led His Apostles and His Church by adopting an unheard-of metaphor; for the Church down to the present day appeals to the words of Christ in her teaching and practice. If then she practices idolatry by the adoration of mere bread and wine, this crime must be laid to the charge of the God-man Himself. Besides this, Christ intended to institute the Eucharist as a most holy sacrament, to be solemnly celebrated in the Church even to the end of time. But the content and the constituent parts of a sacrament had to be stated with such clearness of terminology and to exclude all error in liturgy and worship. As may be gathered from the words of consecration of the Chalice, Christ established the New Testament in His Blood, just as the Old Testament had been established in the typical blood of animals (cf. Ex., xxiv, 8; Heb., ix, 11 sqq.). With the true instinct of justice, jurists prescribe that in all debatable points the words of a will must be taken in their natural, literal sense; for they are led by the correct conviction, that every testator of sound mind, in drawing up his last will and testament, is deeply concerned to have it done in language at once clear and unmistakable. From this common purpose, Christ, according to the literal purport of His testament, has left us as a precious legacy, not mere bread and wine, but His Body and Blood. Are we justified, then, in contradicting Him to His face and exclaiming: No, this is not your Body, but mere bread, the sign of your Body!

The refutation of the so-called Sacramentarians, a name given by Luther to those who opposed the Real Presence, evinces as clearly the impossibility of a figurative meaning. Once the manifest literal sense is abandoned, occasion is given to interminable controversies about the meaning of an enigma which Christ supposedly offered His followers for solution. There were no limits to the dispute in the sixteenth century, for at that time Christopher Rasperger wrote a whole book on some 200 different interpretations: "Duoent verborum, 'Hoc est corpus meum' interpretationes" (Frankfort, 1577). If we confine ourselves to an examination of the most current and widely known disturbances of the literal sense, which were the butt of Luther's bitter ridicule even as early as 1527. The first group of interpreters, with Zwingli, discovers a figure in the corpus and rends the sentence: "This signifies (that is, is significant) my body." A proof of this interpretation, examples are quoted from Scripture, as: "The seven kine are seven years" (Gen., xli, 26) or: "Sara and Agar are the two covenants" (Gal., iv, 24). Waiving the question whether the verb "to be" (esse) or the verb "to signify" is the true interpretation of the words of Institution, there remains a fourth and last of decisive significance, namely: when a complete substance is predicated of another complete substance, there can exist no logical relation of identity between them, but only the relation of similarity, inasmuch as the first is an image, symbol, of the other. Now this last-named criterion is inapplicable to the Scriptural examples brought forward by the Zwinglians, and especially so in regard to their interpretation of the words of Institution; for the words are not: "This bread is my Body", but indefinitely: "This is my Body!" In the story of the Zwinglian conception of the Lord's Supper, certain "sacramental expressions" (locuciones sacramentales) of the Sacred Text, regarded as parallelisms of the words of Institution, have attracted considerable attention. The first is to be found in 1 Cor., x, 4: "And the rock was [signified] Christ." And the rock was [signified] Christ. In this evident that, if the subject rock is taken in its material sense, the metaphor, according to the fourth criterion just mentioned, is as apparent as in the analogous phrase: "Christ is the vine". If, however, the word rock in this passage is stripped of all that is material, it may be understood in a spiritual sense, because the Apostle himself is speaking of that "spiritual rock"
The traces of the Institution; It is well known how Zwingli by a clever manipulation of the latter phrase succeeded in one day in winning over to his interpretation the entire church of Zurich. And yet it is clear that no parallelism can be discerned between the aforesaid expressions and the words of Institution; no real parallelism, because there is question of entirely different matters. Not even a verbal parallelism can be pointed out, since in both texts of the Old Testament the subject is a ceremony (circumcision in the first case, and the rite of the paschal lamb in the second), while the predicate involves a mere abstraction (covenant, Passover of the Lord). A more weighty consideration is this, that on closer investigation the copula est will be found to retain the former meaning of "signum corporis", rather than "signum actus". For just as the circumcision not only signified the nature or object of the Divine covenant, but really was such, so the rite of the paschal lamb was really the Passover (Phase) or Pasch, instead of its mere representation. It is true that in certain Anglican circles it would be considered the custom to speak of the words of Institution, not as the poverty of the Aramaic tongue, which was spoken by Christ in the company of His Apostles; for it was maintained that no word could be found in this language corresponding to the concept "to signify". Yet, even precluding from the fact that in the Aramaic tongue the copula est is usually omitted and an omission rather makes for its strict meaning of "to be", Cardinal Wiseman (Note Syriaec, Rome, 1828, pp. 3-73) succeeded in producing no less than forty Syriac expressions conveying the meaning of "to signify" and thus effectually exploded the myth of the Semitic tongue's limited vocabulary.

A second group of Sacramentarians, with Oecolamphadius, shifted the diligently sought-for metaphor to the concept contained in the predicate corpus, giving to the latter the sense of "signum corporis", so that the words of Institution were to be rendered: "This is a body of Christ", imagine, in a sense tallying with the Zwinglian interpretation, this new meaning is entirely untenable. In all the languages of the world the expression "my body" designates a person's natural body, not the mere sign or symbol of that body. True it is that the Scriptural words "Body of Christ" not unfrequently have the meaning of "Church", which is called the mystical Body of Christ, a figure easily and always discernible as such from the text or context (cf. Col., I, 24). This mystical sense, however, is impossible in the words of Institution, for the simple reason that Christ did not give the copula est, but His Body, and that "body and blood", by reason of their real and logical association, cannot be separated from one another, and hence are all the less susceptible of a figurative use. The case would be different if the reading were: "This is the bread of Christ, the wine of my Blood". In order to prove at least this much, that the contents of the Chalice are merely wine and, consequently, a mere sign of the Blood, Protestants have recourse to the text of St. Matthew, who relates that Christ, after the completion of the Last Supper, declared: "I will not drink henceforth of this fruit of the vine, unless it be the fruit of the Kingdom of God" (Matt., xxvi, 29). It is to be noted that St. Luke (xxii, 18 sqq.), who is chronologically more exact, places these words of Christ before his account of the Institution, and that the true Blood of Christ may with right still be called (consecrated) wine, on the one hand, because the Blood was partaken of after the manner in which wine is drunk, and, on the other, because the Blood continues to exist under the outward appearances of the wine. In its multifarious wanderings from the old beaten path, being consistently forced with the denial of Christ's divinity to abandon the words of Institution, and in the interpretation of the words of Institution also, modern criticism seeks to account for the text along other lines. With utter arbitrariness, doubting whether the words of Institution originated from the mouth of Christ, it traces them to St. Paul as their author, whose in ardent soul something original supposed to be inserted in the traditions of the Church, the value attached to "Body" and on the "repetition of the Eucharistic banquet". From this troubled fountain-head the words of Institution first found their way into the Gospel of St. Luke and then, by way of addition, were woven into the texts of St. Matthew and St. Mark. It stands to reason that the latter assertion is nothing more than a wholly unwarrantable conjecture, which may be passed over as gratuitously as it was advanced. It is, moreover, essentially untrue that the value attached to the Sacrifice and the repetition of the Lord's Supper are mere reflections of the words of Institution. Attached a sacrifice to His Death (cf. Mark, x, 45) and celebrated His Eucharistic Supper in connexion with the Jewish Passover, which it itself had to be repeated yearly. As regards the interpretation of the words of Institution, there are at present three modern explanations connected with the symbolism of the Eucharist—ecological, and the eschatological. According to the symbolic interpretation, corpus is supposed to designate the Church as the mystical Body and sanguis the New Testament. We have already rejected this last meaning as impossible. For is St. Paul brand the partaking of the Church and of the New Testament as a heinous offence committed against the Body and Blood of Christ? The case is not much better in regard to the parabolical interpretation, which would discern in the pouring out of the wine a mere parable of the shedding of the Blood on the Cross. This again is a purely arbitrary explanation, an invention, unsupported by any objective foundation. Then, too, it would follow from analogy, that the breaking of the bread was a parable of the slaying of Christ's Body, a meaning utterly inadmissible, seeing that we are out of our depth and labouring to take on a definite form, the incomplete eschatological explanation would make the Eucharist a mere anticipation of the future heavenly banquet. Supposing the truth of the Real Presence, this consideration might be opened to discussion, inasmuch as the partaking of the Bread of Angels is really the foretaste of eternal beatitude and the anticipated transformation of earth into heaven. But as implying a mere symbolic anticipation of heaven and a meaningless manipulation of un consecrated bread and wine, the eschatological interpretation is diametrically opposed to the text and finds not the slightest support in the life and character of Christ.

Concerning the entire matter, see Helf, Die Einsetzung des Abendmahls als Ritus für die Gottesdienstpraxis der Kirche (Würzburg, 1899); Körner, Die heilige Communie als Gegenstand der Kirchenrechtsgeschichte (Leipzig, 1909); also LOHÉ, Abendmahl in der neuzeitlichen Liturgien (Münster, 1900); H. Bernier, Die Einsetzung der hl. Eucharistie, in ihr ursprünglicher Form (Münster, 1901); and R. M. Polli, "Concerning the Eucharist in the Early Church", in The Catholic Encyclopedia (New York, 1910), vol. 1, p. 155.

(b) Proof from Tradition.—As for the cogency of the argument from tradition, this historical fact is of decided significance, namely, that the dogma of the Real Presence remained, properly speaking, unchallenged throughout the time of the heretic Berengarius of Tours (d. 1088), and so could claim even at that time the uninterrupted possession of ten centuries. In the course of the dogma's history there arose in general
three great Eucharistic controversies, the first of
which, begun by Paschalis Radbertus, in the ninth
century, scarcely extended beyond the limits of his
audience and concerned itself solely with the philoso-
phical question, whether the Eucharistic Body of
Christ is spiritual in its natural Body He had
received, and now and then in heaven. Such a numerical
identity could well have been denied by Ratramnus,
Rabanus Maurus, Ratherus, Lanfranc, and others,
since even nowadays a true, though accidental, distinc-
tion between the sacramental and the natural condi-
tion of Christ’s Body must be rigorously maintained.
The first occasion for an official decision in the
Church was offered when Berengarius of Tours, in
fluenced by the writings of Scotos Eriugena (d. about 884),
the first opponent of the Real Presence,
rejected both the latter truth and that of Transubstan-
tiation. He repaired, however, the public scandal he
had given by a sincere repudiation made in the presence
of Pope Gregory VII at a synod held in Rome in 1079,
and died reconciled to the Church. The third and the
sharpest controversy was that opened by the Riforma-
tion in the sixteenth century, in regard to which it
must be remarked that Luther was the only one among
the Reformers who still maintained the Catholic
doctrine, and, though subjecting it to manifold
misrepresentations, defended it most tenaciously. He
was diametrically opposed by Zwingli of Zurich, who,
as was seen above, reduced the Eucharist to an empty,
meaningless symbol. Having gained over to his views
some of the Reformers of the day, as Calvin, Bucer, and
Ecolampadius, he later on secured influential
allies in the Arminians, Menonites, Socinians, and
Anabaptists, and even to-day the rationalistic con-
ception of the doctrine of the Lord’s Supper does not
differ substantially from that of the Zwinglians.
In this statement, at Geneva, Calvin and Bucer sought to
bring about a compromise between the extremes of
the Lutheran literal and the Zwinglian figurative
interpretations, by suggesting instead of the substantial
presence in one case or the merely symbolical in the
other, a “dynamis” presence, which consists essentially in
this, that at the moment of recep-
tion, the efficacy of Christ’s Body and Blood is
communicated from heaven to the souls of the presen-
ted and spiritually nourishes them. Thanks to
Melanchthon’s pernicious and dishonest double-deal-
ing, this attractive intermediary position of Calvin
made such an impression even in Lutheran circles that
it was not until the Formula of Concord in 1577 that
the “crypto-Calvinistic venom” was successfully re-
jected from the body of Lutheran doctrine. The
Council of Trent met these widely divergent errors of
the Reformation with the dogmatic definition, that
the God-man is “truly, really, and substantially”
present under the appearances of bread and wine,
purposely intending thereby to oppose the expression
sacramentorum differentiae (Sess. XIII, can. 1). And this teaching of the Council of Trent has
never been and is now the unavailing position of the
whole of Catholic Christendom.

As regards the doctrine of the Fathers, it is not pos-
sible in the present article to multiply patristic texts,
which are usually characterized by wonderful beauty
and clarity. Suffice it to say that, beside the
Didache (i, x, xiv), the most ancient Fathers, as
Ignatius (Ad Smyrn., vii; Ad Ephes., xx; Ad Philad.,
iv), Justin (Apol., I, lxvi), Irenæus (Adv. Hær., IV,
xvii, 5; IV, xvii, 4; V, ii, 2), Tertullian (De resurrection.
carn., viii; De pudice, ix; De orat., xix; De bapt., xvii),
and Cyril of Jerusalem (Catech. xvi, 17), have
not without the slightest shadow of a misunderstanding
what is the faith of the Church, while later patristic
theology bears witness to the dogma in terms that ap-
proach exaggeration, as Gregory of Nyssa (Orat.
catech., xxxvii), Cyril of Jerusalem (Catech. myst., iv,
2 sqq.), and especially the Doctor of the Eucharist,
Chrysostom (Hom. lxxiii (lxxxiii), in Matt., I, sqq.;
Hom. xlii, in Joan., 2 sqq.; Hom. xxiv, in I Cor., 1
sq.; Hom. ix, de pentic., 1), to whom may be added
the Latin Fathers, Hilary (De Trinit., VIII, iv, 13)
and Ambrose (De myst., viii, 49; ix, 51 sq.). Concern-
ing the Syrian Fathers, Th. Lincot (”Dagom.
Dictionnaire de la Science de l’Eucharistie,” 4th ed., Halle, 1906, p. 409), St. August-
usine never gives the “reception of the true Body and
Blood of Christ” a thought; and this view Ad. Har-
nack (Dagomérgeschichte, 3rd ed., Freiburg, 1897, III,
148) emphasises when he declares that St. August-
usine “undoubtedly was one in this respect with the
so-called pre-Reformation and with Zwingli.” Against
this rather hasty conclusion Catholics first of all ad-
vance the undoubted fact that Augustine demanded
that Divine worship should be rendered to the Eucha-
ristic Flesh (In Ps. xxxiii, enarr., 1, 10), and declared
that the Last Supper was a true Body and Blood of
Christ, and that he believed “in His own hands” (In Ps. xcvi, v. 9). They
insist, and rightly so, that it is not fair to separate
this great Doctor’s teaching concerning the Eucharist
from his doctrine of the Holy Sacrifice, since he clearly
and unmistakably asserts that the true Body and Blood
of Christ are indeed offered in the Holy Sacrament.
The various views just mentioned requires that an attempt
be made at a reasonable and unbiased explanation, whose
verification is to be sought for and found in the
acknowledged fact that a gradual process of development
took place in the mind of St. Augustine. No one will deny that cogently and convincingly he
asserts Augustine as forcibly realistic as those of Tertullian and
Cyprian or of his intimate literary friends, Ambrose,
Optatus of Milevi, Hilary, and Chrysostom. On
the other hand, it is beyond question that, owing to the
determing influence of Origen and the Platonist
philosophy, which, as is well known, attached slight
value to visible matter and the sensible pheno-
mena of the world, Augustine did not refer what was
properly real (res) in the Blessed Sacrament to the
Flesh of Christ (caro), but transferred it to the quicken-
ing principle (spiritus), i. e. to the effect produced by
a worthy Communion. A logical consequence of this
was that he allowed to caro, as the vehicle and
antitype of res, not indeed a mere symbolical worth,
but at best a transitory, intermediary, and subordinate
worth (signum), and placed the Flesh and Blood of
Christ, present under the appearances (fictura) of
bread and wine, in too decided an opposition to His
natural, historical Body. Since Augustine was a strenuous defender of personal co-operation and effort
in the work of salvation and an enemy to mere me-
chanical activity and supernatural routine, he omitted
insisting upon a lively faith in the real personality of
Jesus in the Eucharist, and called attention to the
spiritual efficacy of the Flesh of Christ instead. His
mental vision was fixed, not so much upon the saving
caro, as upon the spiritus, which alone possessed
worth. Nevertheless a turning-point occurred in this
conflict with Pelagianism and the diligent perusal of
the Chrysostom freed him from the bondage of Platonism,
and he thenceforth attached to caro a separate, indi-
vidual value independent of that of spiritus, going so
far, in fact, as to maintain too strongly that the Com-
union of children was absolutely necessary to salva-
tion. If, moreover, the reader finds in some of the
other Fathers difficulties, obscurities, and a certain
inaccuracy of expression, this may be explained on
three general grounds: (1) because of the peace
and security there is in their possession of the Church’s
truth, whence resulted a certain want of accuracy in
their terminology; (2) because of the strictness with which the Discipline of the Secret, expressly concerned with the Holy Eucharist, was maintained in the East until the end of the fifth, in the West down to the middle of the sixth century; (3) because of the preference of the Fathers for the allegorical interpretation of Scripture, which was especially in vogue in the Alexandrian School (Clement of Alexandria, Origen, Cyril), but which found a salutary counterpoise in the emphasis laid on the literal interpretation by the School of Antioch (Theodore of Mopsuestia, Theodore of Mopsuestia, who, by his allegorical sense of the Presence in the Eucharist, which the Alexandrians did not exclude the literal, but rather supposed it as a working basis, the realistic phraseology of Clement (Ped., i, vi), of Origen (Contra Celsum, VIII, xiii, 32; Hom. ix, in Levit., x), and of Cyril (in Matt., xxvi, xxvii; Contra Nestor., IV, 5) concerning the Real Presence is readily accounted for.

(For the solution of patristic difficulties, see Pfeiffer, "Dogmatik," 3rd ed., Paderborn, 1908, II, 209 sqq.)

The argument from tradition is supplemented and completed by the argument from prescription, which traces the constant belief in the dogma of the Real Presence through the Middle Ages back to the Council of Antioch, AD 156; and proves the anti-Eucharistic heresies to have been capricious novelties and violent ruptures of the true faith as handed down from the beginning. Passing over the interval that has elapsed since the Reformation, as this period receives its entire character from the Council of Trent, we have for the time of the Reformation the important testimony of Luther (Wider etliche Rottengeister, 1532) for the fact that the whole of Christendom then believed in the Real Presence. And this firm, universal belief can be traced back uninterruptedly to Berengarius of Tours (d. 1088), in fact—omitting the sole exception of the Nestorians—to Paschalis Radbertus (831). On these grounds, therefore, we may confidently maintain that the Church has been in legitimate possession of this dogma for fully eleven centuries. When Photus started the Greek Schism in 867, he took over to his Church the inalienable heritage of the Catholic Eucharist, a treasure which the Greeks, in the negotiations for reunion at Lyons in 1274 and at Florence in 1439, could show to be still intact, and which they vigorously defended in the schismatical Synod of Jerusalem (1672) against the sordid machinations of the Calvinistic Mandelsloh. Patriarch of Constantinople (1629). From this it follows conclusively that the Catholic dogma must be much older than the Eastern Schism under Photius. In fact, even the Nestorians and Monophysites, who broke away from Rome in the fifth century, have, as is evident from their literature and liturgical books, preserved their faith in the Eucharist as unswervingly as the Greeks, and this in spite of the dogmatic difficulties which, on account of their denial of the hypostatic union, stood in the way of a clear and correct notion of the Real Presence. Therefore the Catholic dogma is at least as old as Nestorianism (311 A.D.) But is it not of even greater antiquity? To decide this question one has only to examine the oldest Liturgies of the Mass, whose essential elements date back to the time of the Apostles (see articles on the various liturgies), to visit the Roman Catocombs (see Catacombs, Roman), where Christ is shown as present in the Eucharistic food under the symbol of a fish (see Eucharist, Early Symbols of the), to decipher the famous Inscription of Ariburus (see Abercius, Inscription of), of the second century, which, though composed under the influence of the Discipline of the Secret, plainly attests the faith of that age. And thus the argument from prescription has a basis back to the dim and distant past and thence to the time of the Apostles, who in turn could have received their faith in the Real Presence from no one but Christ Himself.

On the argument from tradition, cf. Ernst, Die Lehre des Pachiasius Radbertus von der Eucharistie (Freiburg, 1896).

(2) The Totality of the Real Presence.—In order to forestall at the very outset the unworthy notion, that in the Eucharist we receive merely the Body and not the Soul and Divinity of Christ, the Council of Trent defined the Real Presence to be such as to include with Christ's Body and Blood His Soul and Divinity as well. A strictly logical conclusion from the words of promise: "he that eateth me, the same also shall live by me", this totality of Presence was also the constant property of the dogma which characterized the partaking of separated parts of the Saviour as a sacrophagy (flesh-eating) altogether derogatory to God. Although the separation of the Body, Blood, Soul, and Logos, is, absolutely speaking, within the allpowerful power of God, yet their actual inseparability is firmly established in the dogma of the indissolubility of the hypostatic union of Christ's Divinity and Humanity. In case the Apostles had celebrated the Lord's Supper during the fieri dim sum mortis (the time during which Christ's Body was in the tomb), when a real separation took place between the constitutive elements of Christ, there would have been really present in the Sacred Host only the bloodless, immaculate Body of Christ as it lay in the tomb, and in the chalice only the Blood separated from His Body and absorbed by the earth as it was shed, both the Body and the Blood, however, remaining hypostatically united to His Divinity. If the Mystical Body, which sojourned in Limbo, would have remained entirely excluded from the Eucharistic presence. This unreal, though not impossible, hypothesis, is well calculated to throw light upon the essential difference designated by the Council of Trent (Sess. XIII., c. 6), between the meanings of the words Institution and Consecration, or ex viti verbo, that only is made present which is expressed by the words of Institution, namely the Body and the Blood of Christ. But by reason of a natural concomitance (per concomitatem), there are sometimes simultaneously present all that which is physically inseparable from the parts just named, and which must, from a natural connexion with them, always be their accompaniment. Now, the glorified Christ, who "dieth now no more" (Rom., vi, 9), has an animate Body through whose veins circulates His life's Blood under the vivifying influence of the soul. Consequently, together with His Body and Blood and Soul, His whole Humanity also, and, by virtue of the hypostatic union, His Divinity, i. e. Christ whole and entire, must be present. Hence Christ is present in the sacrament with His Flesh and Blood, Body and Soul, Humanity and Divinity.

This general and fundamental principle, which entirely abstracts from the duality of the species, must, nevertheless, be extended to each of the species of bread and wine. For we do not receive in the Sacred Host one part of Christ and in the Chalice the other, as though our reception of the totality depended upon our partaking of both forms; on the contrary, under
the appearance of bread alone, as well as under the appearance of wine alone, we receive Christ whole and entire (cf. Council of Trent, Sess. XIII, can. iii). This, the only reasonable conception, finds its Scriptural verification in the fact, that St. Paul (1 Cor., xi. 27, 29) attaches the phrase of “the body and the blood” to the “Lord” as the unworthy “eating or drinking”, understood in a disjunctive sense, as he does to “eating and drinking”, understood in a copulative sense. The traditional foundation for this is to be found in the testimony of the Fathers and of the Church’s liturgy, according to which the glorified Saviour can be present on earth only in His two natural essences, not divided into parts or distorted to the form of a monstrosity. It follows, therefore, that supreme adoration is separately due to the Sacred Host and to the consecrated contents of the Chalice. On this last truth are based especially the permissibility and intrinsic propriety of Communion only under one kind for the laity and for priests not celebrating Mass (see Communion under both kinds). But in particularizing upon the dogma, we are naturally led to the further truth, that, at least at the actual division of either Species into parts, Christ is present in each part in Host and Chalice, and not only in His two natural essences, but also in His two natural states. They may only judge it improbable that Christ conserved separately each particle of the bread He had broken, we know with certainty, on the other hand, that He blessed the entire contents of the Chalice and then gave it to His disciples to be partaken of distributively (cf. Matt., xxviii. 26; Mark, xvi. 23). It is only on the basis of the Tridinium dogma that we can understand how Cyril of Jerusalem (Catech. myst. v. n. 21) and later councils of Alexandria and of Autun (516), and of Avignon (d. 1439), and of Blois (d. about 1200), whereupon several ecumenical councils also adopted this significant expression, as the Fourth Council of the Lateran (1215), and the Council of Lyons (1274), in the profession of faith of the Greek Emperor Michael Palaeologus. The Council of Trent (Sess. XIII, can. iv, can. ii) not only accepted as an inheritance of faith the truth contained in the idea, but authoritatively confirmed the “aptitude of the term” to express most strikingly the legitimately developed doctrinal concept. In a closer logical analysis of Transubstantiation, we find the first and fundamental notion to be that of conversion, which may be defined as “the transition of one thing into another in some aspect of being”. As is immediately evident, conversion (conversio) is something more than mere change (mutatio). Whereas in mere changes one of the two extremes may be expressed negatively, as “to turn from the light into the darkness”, in the Sacrament of Christ, it concerns two positive extremes, which are related to each other as thing to thing, and must have, besides, such an intimate connexion with each other, that the last extreme (terminus ad quem) begins to be only as the first (terminus a quo) ceases to be, as, e. g., in the conversion of water into wine. A thing which is usually required, known as the commune tertium, which, even after conversion has taken place, either physically or at least logically unites one extreme to the other; for in every true conversion the following condition must be fulfilled: “What was formerly A is now B”. A very important question is raised as to whether the definition should further postulate the previous non-existence of the last extreme, for it seems strange that an existing terminus a quo, A, should be converted into an already existing terminus ad quem, B. If the act of conversion is to become a mere process of substitution, as in a sight-of-hand performances, the terminus ad quem must unquestionably in some manner newly exist, just as the terminus a quo must in some manner really cease to exist. Yet as the disappearance of the latter is not attributable to the substance, but only to the substance acquired, it is altogether new and previously non-existing mode of being. Thus in the resurrection of the dead, the dust of the human bodies will be truly converted into the bodies of the risen by their previously existing souls, just as at death they had been truly converted into corpses by the departure of the souls. This much as regards the general notion of conversion. Transubstantiation, however, is not a conversion simply so called, but a substantial conversion (conversio substantialis), inasmuch as one thing is substantially or essentially converted into another. Thus from the concept of Transubstantiation is excluded every sort of mere accidental conversion, whether it is purely natural (e. g. the metamorphosis of insects) or supernatural (e. g. the Transfiguration of Christ on Mount Tabor). Finally, Transubstantiation differs from every other substantial conversion in this, that only the substance is converted into another—the accidents remaining the same—just as would be the case if the bread were miraculously converted into iron, the substance of the iron remaining hidden under the external appearance of the wood.

The application of the foregoing to the Eucharist is an easy matter. First of all the notion of conversion is verified in the Eucharist, not only in general, but in
all its essential details. For we have the two extremes of conversion, namely, bread and wine as the terminus a quo, and the Body and Blood of Christ as the terminus ad quem. Furthermore, the intimate connexion between the cessation of one extreme and the apparition of the other seems to be preserved by the Church that both events are the results, not of two independent processes, as, e.g. annihilation and creation, but of one single act, since, according to the purpose of the Almighty, the substance of the bread and wine departs in order to make room for the Body and Blood of Christ. Lastly, we have the commune tertium in the unchanged appearance of bread and wine, under which appearances the pre-existent Christ assumes a new, sacramental mode of being, and without which His Body and Blood could not be parted of by men. That the consequence of Transubstantiation, as a conversion of the total substance, is the transition of the entire substance of the bread and wine into the Body and Blood of Christ, is the express doctrine of the Church (Council of Trent, Sess. XIII, can. ii). Thus were condemned as contrary to faith the antiquated view of Durandus, that only the substantial form (forma substantialis) of the bread and wine is transformed, while the primary matter (materia prima) remained, and, especially, Luther's doctrine of Consubstantiality, i.e. the coexistence of the substance of the bread with the true Body of Christ. Thus, too, the theory of Impanation advocated by Oslander and certain Reformed writers, and the doctrine of the static union is supposed to take place between the substance of the bread and the God-man (impantatio Deus panis factus), is authoritatively rejected. So the Catholic doctrine of Transubstantiation sets up a mighty bulwark around the dogma of the Real Presence and constitutes in itself a distinct doctrine of Its own, which is not involved in that of the Real Presence, though the doctrine of the Real Presence is necessarily contained in that of Transubstantiation. It was for this very reason that Pius VI, in his dogmatic Bull "Auctorem fidelis" (1784) against the Jansenistic pseudo-Synod of Pistoia (1780), protested most vigorously against suppressing this "scholastic question", as the synod had advised pastors to do.

(b) In the mind of the Church, Transubstantiation has been so intimately bound up with the Real Presence, that both dogmas have been handed down together. The Real Presence to this generation is not entirely ignore a dogmatico-historical development. The total conversion of the substance of bread is expressed clearly in the words of Institution: "This is my body". These words form, not a theoretical, but a practical proposition, whose essence consists in this, that the objective identity between subject and predicate is effected and verified only after the words have all been uttered, not unlike the pronouncement of a king to a subject: "You are a major", or, "You are a captain", which would immediately cause the promotion of the officer to a higher command. When, therefore, the Pope is All Power and All Might, and says: "This is my body", the bread became, through the utterance of these words, the Body of Christ; consequently, on the completion of the sentence the substance of bread was no longer present, but the Body of Christ under the outward appearance of bread. Hence the bread must have become the Body of Christ, i.e. the former must have been converted into the latter. The words of Institution were at the same time the words of Transubstantiation. Indeed, the actual manner in which the absence of the bread and the presence of the Body of Christ is effected is not read into the words of Institution, but strictly and exegetically deduced from them. The Calvinists, therefore, are perfectly right when they reject the Lutheran doctrine of Consubstantiality as a fiction, with no foundation in Scripture. For had Christ intended to assert the coexistence of His Body with the substance of the bread, He would not have expressed a simple identity between locos and corpus by means of the copula est, but would have resorted to some such expression as: "This bread contains my body", or, "In this bread is my body." The doctrine of Transubstantiation, as the theory that the bread becomes the Body of Christ, He would have had to state this expressly, for neither from the nature of the case nor according to common parlance can a piece of bread be made to signify the receptacle of a human body. On the other hand, the synedechism is plain in the case of the Chalice: "This is my blood" i.e., the contents of the Chalice are my blood, and hence no longer wine.

Regarding tradition, the earliest witnesses, as Tertullian and Cyprian, could hardly have given any particular consideration to the genetic relation of the natural elements of bread and wine to the Body and Blood of Christ, or to the manner in which the former were converted into the latter; for even Augustine was deprived of a clear conception of Transubstantiation, so long as he was held in the bonds of Platonism. On the other hand, complete clearness on the subject had been attained by writers as early as Cyril of Jerusalem, Gregory of Nyssa, Cyprian of Carthage, and Cyril of Alexandria in the East, and by Ambrose and the later Latin writers in the West. Eventually the West became the classic home of scientific perfection in the difficult doctrine of Transubstantiation. The claims of the learned work of the Anglican Dr. Pusey (The Doctrine of the Real Presence as contained in the Fathers, Oxford, 1855), who denied the cogency of the patristic argument for Transubstantiation, have been met and thoroughly answered by Cardinal Franzelin (De Euchar., Rome, 1887,thes. xiv). The argument from tradition is strikingly confirmed by the ancient liturgies, whose touching and beautiful prayers express the idea of conversion in the clearest manner. Many examples may be found in Renadou, "Liturgie orient." (2nd ed., Frankfort, 1847); Assenman, "Codex liturg." (13 vols., Rome, 1749-66); Denzinger, "Ritus Orientalium" (2 vols., Wurzburg, 1864). Concerning the Adduction Theory of the Scotists and the Production Theory of the Thomists, see Pohle, "Dogmatik" (3rd ed., Paderborn, 1908), III, 237 sqq.

(4) The Permanence and Aadoxableness of the Blessed Eucharist.—Since Luther arbitrarily restricted the operation of transubstantiation to the moment of reception (e.g., Wengert), the Council of Trent (Sess. XIII, can. iv) by a special canon emphasized the fact, that immediately after the Consecration Christ is truly present and, consequently, does not make His Presence dependent upon the act of eating or drinking. On the contrary, He continues His Eucharistic Presence even in the consecrated Hosts and Sacred particles that remain on the altar or in the ciborium after the distribution of Holy Communion. In the deposit of faith the Real Presence and the Permanence of Presence are so closely allied, that in the mind of the Church both conformed to and defined the whole. The object of this doctrine is to answer the question, whether just as Christ promised His Flesh and Blood as meat and drink, i.e. as something permanent (cf. John, vi. 50 sqq.), so, when He said: "Take ye and eat. This is my body", the Apostles received from the hand of the Lord His Sacred Body, which was already objectively present and did not first become so in the act of partaking. This non-dependence of the Real Presence upon the actual reception is manifested very clearly in the case of the Chalice, when Christ said: "Drink ye all of this. For [e-nim] this is my Blood." Here the act of drinking is evidently neither the cause conditio sine qua non for the presence of Christ's Blood.

Much as he disliked it, even Calvin had to acknowledge the evident force of the argument from tradition (Instit. IV, xvii, §39). Not only have the Fathers, and among them Chrysostom with special vigour, de-
fended in theory the permanence of the Real Presence, but the constant practice of the Church has also established its truth. In the early days of the Church the faithful frequently carried the Blessed Eucharist with them to their homes (cf. Tertullian, "Ad uxor."); II, 12; Cyprian, "De lapsis", II, 19; De excessu fratris, I, 43, 40), while the deacons were accustomed to take the Blessed Sacrament to those who did not attend Divine service (cf. Justin, Apol., I, n. 67), as well as to the martyrs, the incarcerated, and the infirm (cf. Eusebius, Hist. Eccl., VI, xiv). The deacons were also obliged to transfer the particles that remained to specially prepared repositories called Postphorion (cf. Apostolic Constitutions, VIII, xiii). Furthermore, it was customary as early as the fourth century to celebrate the Mass of the Presanctified (cf. Synod of Laodicea, can. xliii), in which were received the Sacred Hosts that had been consecrated one or more days previously. In the Latin Church the celebration of the Mass of the Presanctified is nowadays restricted to Good Friday, whereas, ever since the Trullan Synod (692), the Greeks celebrate it during the whole of Lent, except on Saturdays, Sundays, and the feast of the Annunciation (25 March). The Act of Consecration, however, is celebrated before the Mass, and the time at which the Mass is celebrated is found in the fact, that some time elapses between the consecration and the reception of the sacrament, i. e. between the Consecration and the Communion, whereas in the case of the other sacraments both the consecration and the reception take place at the same instant. The term which is longer, the time required for the baptismal action or ablation with water, and is, therefore, a transitory sacrament; on the contrary, the Eucharist, and the Eucharist alone, constitutes a permanent sacrament (cf. Council of Trent, Sess. XIII, can. ii). The permanence of Presence, however, is limited to an interval of time of which the beginning is determined by the instant of Consecration and the end by the corruption of the Eucharistic Species. The host has become moulder or the contents of the Chalice sour, Christ has discontined His Presence therein. Nor in the process of corruption those elementary substances return which correspond to the peculiar nature of the changed accidents, the law of the indestructibility of matter, notwithstanding the miracle of the Eucharistic conversion, remains in force without any interruption.

The unchangeableness of the Eucharist is the practical consequence of its permanence. According to a well-known principle of Christology, the same worship of Latia (cultus latina) as is due to the Divine Word is due also to the Divine Word, the God-man Christ, and in fact, by reason of the hypostatic union, to the humanity of Christ and its individual component parts, as, e. g., His Sacred Heart. Now, identically the same Lord Christ is truly present in the Eucharist as is present in heaven; consequently He is to be adored in the Blessed Sacrament, and just as long as He remains present under the appearances of bread and wine, namely, from the moment of Consecration, is the moment in which the species are decomposed (cf. Council of Trent, Sess. XIII, can. vi).

In the absence of scriptural proof, the Church finds a warrant for, and a propriety in, rendering Divine worship to the Blessed Sacrament in the most solemn and constant tradition, though of course a distinction must be made between the dogmatic principle and the varying discipline regarding the outward form of worship. While even the East recognized the unchangeable principle from the earliest ages, and, in fact, as late as the Euchologium of Jerusalem in 672, the West has furthermore shown an untiring activity in establishing and investing with more and more solemnity, homage and devotion to the Blessed Eucharist. In the early Church, the adoration of the Blessed Sacrament was restricted chiefly to Mass and Communion, just as it is to-day among the Orientals and the Greeks. Even in his time Cyril of Jerusalem insisted just as strongly as did Ambrose and Augustine on an attitude of adoration and homage during Holy Communion (cf. Ambrose, De Sp. Sancto, III, ii, 79; Augustine, In Ps. cviii, n. 9). In the West the way was opened to a more and more exalted veneration of the Blessed Sacrament by the use of the corporal and chalice and by the assigning of them to Communicants even outside of the liturgical service. After the Berengarian controversy, the Blessed Sacrament was in the eleventh and twelfth centuries elevated for the express purpose of repairing by its adoration the blasphemies of heretics and strengthening the inward rule of faith. In the thirteenth century were introduced, for the greater glorification of the Most Holy, the "theophoric processions" (circumvestiatio), and also the feast of Corpus Christi, instituted under Urban IV at the solicitation of St. Julian of Lèges. In honour of the feast, sublime hymns, such as the "Panne Lingua" of St. Thomas Aquinas, were composed. In the fourteenth century the practice of the Exposition of the Blessed Sacrament arose. The custom of the annual Corpus Christi procession was warmly defended and recommended by the Council of Trent (Sess. XIII, cap. v). A new impetus was given to the veneration of the Eucharist through the visits to the Blessed Sacrament (Visitatio SS. Sacramenti), introduced by St. Alphonsus Liguori; in later times the numerous orders and congregations devoted to Perpetual Adoration, the institution in many dioceses of the devotion of "Perpetual Prayer", the founding of International Eucharistic Congresses, e. g. that of London in September, 1908, have all contributed to keep alive faith in Him Who has said: "Behold I am with you all days, even to the consummation of the world" (Matt., xxi, 20).

On this whole matter see Bellarmine De Euchar., disp. n. 20, sect. 3; Bonaparte, Die Eucharistie der Mittel-punkt des Glaubens, der Moral der Kirchen und des Lebens der Welt, 1883; Wolter, Die Eucharistie der Mittel-punkt des Glaubens, der Moral der Kirchen und des Lebens der Welt, 1882; Hoffmann, Die Verehrung und Anbetung des Sakraments des Altars geschichtlich dargestellt (Kempten, 1897).

(5) Speculative Discussion of the Real Presence.—The principal aim of speculative theology with regard to the Eucharist, should be to discuss philosophically, and seek a logical solution of, three apparent contradictions, namely: (a) the continued existence of the Eucharistic Species, or the outward appearances of bread and wine, without their natural object (accidentia sine subjecto); (b) the spatially uncircumscribed, spiritual mode of existence of Christ's Eucharistic Body (existens corporis ad modum spiri- tus); (c) the simultaneous existence of Christ in heaven and in many places on earth (multilocular).

(a) The study of the first problem, viz. whether or not the accidents of bread and wine continue their existence without their proper substance, must be based upon the clearly established truth of Transubstantiation, in consequence of which the entire substance of the bread and the entire substance of the wine are converted respectively into the Body and Blood of Christ in such a way that "only the appearances of bread and wine remain" (Council of Trent, Sess. XIII, can. ii: manentibus dumtaxat speciebus panis et vini). Accordingly, the continuance of the appearances without the substance of both bread and wine as their connatural substratum is just the reverse of Transubstantiation. If it be further asked, whether these appearances have any subject at all in which they inhere, we must answer with St. Thomas Aquinas (III, Q. lxvii, a. 1), that the idea is to be rejected as unbecoming, though the Body of Christ, in addition to its own accidents, should also assume those of bread and wine. The most that may be said is, that from the Eucharistic Body proceeds a miraculous sustaining power, which supports the appearances bereft of their natural substances and preserves them from collapse.

The position of the Church in this regard may
be readily determined from the Council of Constance (1414–1418). In its eighth session, approved in 1418 by Martin V, this synod condemned the following articles of Wyclif: (1) "Substantia panis materialis et simillimia substantia vini materialis remanens in Sacramentis altaris," i.e. the material substance of the bread is not altered and likewise the material substance of wine remain in the Sacrament of the Altar; (2) "Accidentia panis non manent sine subjecto," i.e. the accidents of the bread do not remain without a subject. The first of these articles contains an open denial of Transubstantiation altogether, i.e. the true substance of the bread and wine is not changed. This, however, might be considered as merely a different wording of the first, were it not that the history of the council shows that Wyclif had directly opposed the Scholastic doctrine of "accidents without a subject" as absurd and even heretical (cf. De Angelus, De sacramento, Rome, 1830, II, 573 sqq.). Hence it was the intention of the council to condemn the second article, not merely as a conclusion of the first, but as a distinct and independent proposition; wherefore we may gather the Church's teaching on the subject from the contradictory proposition: "Accidentia panis manent sine subjecto," i.e. the accidents of bread do remain with the subject. Such, at least, is the statement of contemporary theologians regarding the matter; and the Roman Catechism, referring to the above-mentioned canon of the Council of Trent, tersely explains: "The accidents of bread and wine inhere in no substance but continue existing by themselves. But being the case, some theologians in the seventeenth and eighteenth centuries, who inclined to Cartesism, as e.g., Maigman, Drouin, and Vitasse, but little theological penetration when they asserted that the Eucharistic appearances were optical illusions, phantasms, and not true accidents, ascending to Divine omnipotence an immediate influence upon the five senses, whereby a mere subjective impression of what seemed to be the accidents of bread and wine was created. Since Descartes (d. 1650) places the essence of corporeal substance in its actual extension and recognises only material accidents united to it, Eucharistic appearances are as clear and as unobstructed as are corporeal accidents. This, and not merely optical, continuance of the Eucharistic accidents was repeatedly insisted upon by the Fathers, and with such excessive vigour that the notion of Transubstantiation seemed to be in danger. Especially against the Monophysites, who based on the Eucharistic conversion an a pari argument in behalf of the supposed conversion of the Humanity of Christ into His Divinity, did the Patristic Fathers, by concluding from the continuance of the unconverted Eucharistic accidents to the unconverted Human Nature of Christ. Both philosophical and theological arguments were also advanced against the Cartesians, as, for instance, the infallible testimony of the senses, the necessity of the commune tertium to complete the idea of Transubstantiation [see above, (3)], the idea of the Sacrament of the Altar as the visible sign of Christ's invisible Body, the physical significance of Communion as a real partaking of food and drink, the striking expression "breaking of bread" (fractio panis), which supposes the divisible reality of that food, etc. For all these reasons, the Eucharist was considered the physical reality of the accidents as an incontrovertible truth, which cannot without temerity be called in question.

As regards the philosophical possibility of the accidents existing without their substance, the older school drew a fine distinction between modal and absolute accidents. By the modal accidents were understood such as could not, being mere modes, be separated from their substance without involving a metaphysical contradiction, e.g. the form and motion of a stone. Those, however, whose objective reality was adequately distinct from the reality of their substance, in such a way that no intrinsic repugnance was involved in their separability, as, e.g., the quantity of a body. Aristotle himself taught (Metaph., VI, 3rd ed. of Becker, p. 1029, a. 34), that quantity was a proper substance, but only a phenomenon of substance. Modern philosophy, on the other hand, has endeavored since the time of John Locke, to reject altogether from the realm of ideas the concept of substance as something imaginary, and to rest satisfied with qualities alone as the excitants of sensation, a view of the material world which the so-called psychology of association and actuality is trying to carry out in its various details. The Catholic Church does not feel called upon to follow up the ephemeral vagaries of these new philosophical systems, but bases her doctrine on the everlasting philosophy of sound reason, distinguishing between the thing in itself and its characteristic qualities (colour, form, size, etc.).

The "thing in itself" may ever remain imperceptible to the senses and therefore be designated in the language of Kant as a noumenon, or in the language of Spener, the "Unknown". We cannot determine by that of seeking beneath the appearances the thing which appears, beneath the colour that which is coloured, beneath the form that which has form, i.e. the substratum or subject which sustains the phenomena. The older philosophy designated the appearances by the name of accidents, the subject of the appearances by that of substance. It matters little what the terms are, provided the things signified by them are rightly understood. What is particularly important regarding material substances and their accidental qualities, is the necessity of proceeding cautiously in this discussion, since in the domain of natural philosophy the greatest uncertainty reigns even at the present day concerning the nature of matter, one system pulling down what another has reared, as is proved in the latest theories of atomism and energy, of ions and electrons.

The theology tried with St. Thomas Aquinas (III, Q. lxxvii) to prove the possibility of absolute accidents on the principles of the Aristotelian-Scholastic hylomorphism, i.e. the system which teaches that the essential constitution of bodies consists in the substantial union of materia prima and forma substantialis. Some theologians of to-day would seek to come to an understanding with modern science, which bases all natural processes upon the very fruitful theory of energy, by trying with Leibniz to explain the Eucharistic accidenta sine subjecto according to the dynamism of natural philosophy. Assuming, according to this view, that the corporeal substance of the body is a manifestation of energy, the effect of energy and its effects, it may be seen that under the influence of the First Cause the energy (substance) necessary for the essence of bread is withdrawn by virtue of conversion, while the effects of energy (accidents) in a miraculous manner continue. For the rest it may be said, that it is far from the Church's intention to restrict the Catholic's investigation regarding the doctrine of the Blessed Sacrament to any particular view of natural philosophy or even to require him to establish its truth on the principles of medieval physics; all that the Church demands is, that those theories which do not contradict the material substance of the accidents, thereby not only contradict the teaching of the Church, but also are repugnant to experience and sound reason, as Pantheism, Hylozoism, Monism, Absolute Idealism, Cartesianism, etc.
Presence, which means that Christ in His entirety is present in the whole of the Host and in each smallest part thereof, as the spiritual soul is present in the human body [see above, (2)]. The difficulty reaches its climax when we consider that there is no question here of the Divine Body, but of His Body upon earth, with its head, trunk, and members, having assumed a mode of existence spiritual and independent of space, a mode of existence, indeed, concerning which neither experience nor any system of philosophy can have the least inclining. That the idea of conversion of corporeal matter into a spirit can in no way be entertained, is clear from the material substance of the Eucharistic Body itself. Even the above-mentioned separability of quantity from substance gives us no clue to the solution, since according to the best-founded opinions not only the substance of Christ's Body, but by His own wise arrangement, its corporeal quantity, i.e. its full size, with its complete organization of integral members and limbs, is present within the diminutive limits of the Host and in each portion thereof. Later theologians (as Rossignol, Legrand) resorted to the unexplainable explanation, according to which Christ is present in diminished form and stature, a sort of nature-body; what Osvald Fernandez, Casasajona assumed with no better sense of fitness the mutual compensation of the members of Christ's Body to within the narrow compass of the point of a pin. The vagaries of the Cartesians, however, went beyond all bounds. Descartes had already, in a.d. 1637, expressed the opinion, that the identity of Christ's Eucharistic with His Heavenly Body was preserved by the identity of His Soul, which animated all the Eucharistic Bodies. On this basis, the geometrical Varignon suggested a true multiplication of the Eucharistic mode of the space, as well as, be it most faith, though greatly reduced, miniature copies of the prototype, the Heavenly Body of Christ. Nor does the modern theory of n-dimensions throw any light upon the subject; for the Body of Christ is not capable or impalpable to us because it occupies the fourth dimension, but because it transcends and is wholly independent of space. Such a mode of existence, it is clear, does not come within the scope of physics and mechanics, but belongs to a higher, supernatural order, even as does the Resurrection from the sealed tomb, the passion in and out through the doors, the Transfiguration of the future glorified risen Body. What explanation may, then, be given of the fact?

The simplest treatment of the subject was that offered by the Schoolmen, especially St. Thomas (III, Q. xxxvi, a. 4). They reduced the mode of being to the mode of becoming, i.e. they traced back the mode of existence peculiar to the Eucharistic Body to the Transubstantiation; for a thing has to so "be" as it was in "becoming". Since ex vi verborum the immediate result is the presence of the Body of Christ, its actuality present merely per communitionem, must follow the mode of existence peculiar to its substance, and, like the latter, must exist without division and extension, i.e. entirely in the whole Host and entirely in each part thereof. In other words, the Body of Christ is present in the sacrament, not after the manner of "a part" (ratio), but by "substance" (per modum substantiae). Later Scholasticism (Bellarmine, Suarez, Billuart, and others) tried to improve upon this explanation along other lines by distinguishing between internal and external quantity. By internal quantity (quantitas interna seu in acto secundo), is the same entity, but in so far as it follows its natural tendency to occupy space and actually extends itself in the three dimensions. While aptitudinal extension or internal quantity is so bound up with the essences of bodies that its separability from them involves a metaphysical contradiction, external quantity is, on the other hand, only a natural consequence and effect, which never is or can be withheld by the First Cause, that the corporeal substance, retaining its internal quantity, does not extend itself into space. At all events, however plausibly reason may seem to explain the matter, it is neverthe less face to face with a great mystery.

The third and last problem has to do with the multilocation of Christ in heaven and upon thousands of altars throughout the world. Since in the natural order of events each body is restricted to one position in space (unilocatio), so that before the law proof of an albii immediately frees a person from the suspicion of crime, multilocation without further question belongs to the supernatural order. First of all, no intrinsic repugnance can be shown in the concept of multilocation. For if the objection be raised, that no being can exist separated from itself or show forth local distances between its various selves, the sophism is readily answered, for no matter how an individual object, but only its external relation to and presence in space. Philosophy distinguishes two modes of presence in creatures: (1) the circumscriptive and (2) the definitive. The first, the only mode of presence proper to bodies, is that by virtue of which an object is considered as a determinate figure, e.g. a circle, sphere, face, in such wise that its various parts (atoms, molecules, electrons) also occupy their corresponding positions in that space. The second mode of presence, that properly belonging to a spiritual being, requires the substance of a thing to exist in its entirety in the space, e.g. as a whole and at a given part of that space. The latter is the soul’s mode of presence in the human body. The distinction made between these two modes of presence is important, inasmuch as in the Eucharist both kinds are found in combination. For, in the first place, there is a continuous definitive multilocation, called also replication, which consists in this, that the Body of Christ is totally present in each part of the continuous and as yet unbroken Host and also totally present throughout the whole Host, just as the human soul is present in the human body. And precisely this latter analogy is the one which gives us an insight into the possibility of the Eucharistic miracle. For if, as has been seen above, Divine omnipotence can in a supernatural manner impart to a body such a spiritual, unextended, spatially unencircumscribed mode of presence, which is natural to the soul as regards the human body, one may well surmise the possibility of Christ's Eucharistic Body being present in its entirety in the whole Host, and whole and entire in each part thereof.

There is, moreover, the discontinuous multilocation, whereby Christ is present not only in one Host, but in numerable separate Hosts, whether in the chalice or upon all the altars throughout the world. The intrinsic possibility of discontinuous multilocation seems to be based upon the non-repugnance of continuous multilocation. For the chief difficulty of the latter appears to be that the same Christ is present in two different parts, A and B, of the continuous Host, it being material whether we consider the distant parts A and B joined by the continuous line AB or not. The marvel does not substantially increase, if by reason of the breaking of the Host, the two parts A and B are now completely separated from each other. Nor is it matter how great the distance between the parts may be. Whether or not the fragments of a Host are distant one inch or a thousand miles from one another is altogether immaterial in this consideration; we need not wonder, then, if Catholics adore their Eucharistic Lord at one and the same time in New
Eucharist

York, London, and Paris. Finally, mention must be made of mixed multilocation, since Christ with His natural dimensions reigns in heaven, whence He does not depart, and at the same time dwells with His Sacramental Presence in innumerable places throughout the world. As a third case we may be in possession of the two foregoing, were we per impossibile permitted to imagine that Christ were present under the appearances of bread and wine as in heaven, and that He had relinquished His natural mode of existence. This, however, would be but one more marvel of God's omnipotence. Hence no contradiction is noticeable in the fact, that Christ retains His natural dimensional relations in heaven and at the same time takes up His abode upon the altars of earth.

There is, furthermore, a fourth kind of multilocation, which, however, has not been realized in the Eucharist, but would be, if Christ's Body were present in its natural mode of existence both in heaven and on earth. Such a miracle might be assumed to have occurred in the conversion of St. Paul before the gates of Damascus, when Christ in person said to him: "Saul, Saul, why persecutest thou me?" So, too, the bread and wine, or sacraments, provided in the pagans as the equivalent of the Eucharist, if not in the pagans themselves, at least in the case of St. Alphonsus Liguori, cannot be arbitrarily cast aside as untrustworthy. The Thomists and some later theologians, it is true, reject this kind of multilocation as intrinsically impossible and declare bicollion to be nothing more than a "phantasm." But Cardinal De Lugo is of opinion, and justly so, that to deny its possibility might reflect unfavourably upon the Eucharistic multilocation itself. If there were question of the vagaries of many Nominalists, as, e.g., that a bicollion person could be living in Paris and at the same time dying in London, hatting in Paris and at the same time loving in London, the impossibility would be as plain as day, since an individual, remaining such as he is, cannot be the subject of contrary propositions, since they exclude one another. The case assumes a different aspect, when wholly external contrary propositions, relating to position in space, are used in reference to the bicollion individual. In such a bicollion, which leaves the principle of contradiction intact, it would be hard to discover an intrinsic impossibility.

For further matter see Witzel, Explanatio miraculis, quae divina potentia in Eucharistia Sacrament opera evit (Bonn, 1860); Raynaud, Examen, en cours de rite (Lyons, 1868). Velarde, De sacramento Eucharistico et nubre sacrifici (Louvain, 1893); Reinhold, Die Lehre von der eterlichen Gegenwart Christi (Freiburg, 1934).

II. The Blessed Eucharist as a Sacrament.—Since Christ is present under the appearances of bread and wine in a sacramental way, the Blessed Eucharist is unquestionably a sacrament of the Church. Indeed, in the Eucharist the definition of a Christian sacrament "an outward sign of inward grace instituted by Christ" is verified. The investigation into the precise nature of the Blessed Sacrament of the Altar, whose existence Protestants do not deny, is beset with a number of difficulties. Its essence certainly does not consist in the Consecration or the Consecrated substance, but in the latter the reception of the sacrament, and not the sacrament itself. The question may eventually be reduced to this, whether or not the sacramentality is to be sought for in the Eucharistic species or in the Body and Blood of Christ hidden beneath them. The majority of theologians rightly respond to the query by saying, that neither the species themselves nor the Body and Blood of Christ by themselves, but the union of both factors constitute the moral whole of the Sacrament of the Altar. The species undoubtedly belong to the essence of the sacrament, since it is by them and for them that it is consecrated. However, the apprehension of Christ, that the Eucharist possesses the outward sign of the sacrament. Equally certain is it, that the Body and the Blood of Christ belong to the concept of the essence, because it is not the mere unsubstantial appearances which are given for the food of our souls, but through the appearance of the Body and Blood of Christ, the twofold number of the Eucharistic elements of bread and wine does not interfere with the unity of the sacrament; for the idea of refection embraces both eating and drinking, nor do our meals in consequence double their number. In the doctrine of the Holy Sacrifice of the Mass (see Mass), there is a question of even a higher relation, in that the separated species of bread and wine also represent the mystical separation of Christ's Body and Blood or the unbloody Sacrifice of the Eucharistic Lamb. The Sacrament of the Altar may be regarded under the same aspects as the other sacraments, by every one of them which by the Eucharist is a permanent sacrament [see above I, (4)]. Every sacrament may be considered either in itself or with reference to the persons whom it concerns. Passing over the Institution, which was discussed above in connexion with the words of Institution, the only essential matter of which is the outward sign (matter and form) and inward grace (effects of Communion), to which may be added the necessity of Communion for salvation. In regard to the persons concerned, we distinguish between the minister of the Eucharist and its recipient or subject.

(a) The first element is wheaten bread (panis triticus), without which the "consecration of the sacrament does not take place" (Missale Romanum: De defunctis, § 3). Being true bread, the Host must be baked, since mere flour is not bread. Since, moreover, the bread required is that for which no leaven has been used, every kind of flour is allowed for validity, such, e.g., as is ground from rye, oats, barley, Indian corn or maize, though these are all botanically classified as grain. The necessity of wheaten bread is deduced immediately from the words of Institution: "The Lord took bread" (tuv ἄρων), in connexion with which it may be remarked, that in Scripture bread (ἄρων) means with, without any qualifying addition, always signifies wheaten bread. No doubt, too, Christ adhered unconditionally to the Jewish custom of using only wheaten bread in the Passover Supper, and by the words, "Do this for a commemoration of me," commanded its use for all succeeding times. In addition to this, uninterrupted tradition, whether it be the test of verity or the practice of the Church, shows wheaten bread to have played an essential part, that even Protestants would be loath to regard rye bread or barley bread as a proper element for the celebration of the Lord's Supper.

The Church maintains an easier position in the controversy use of fermented or unfermented bread. By leavened bread (fermentum, άρων) is meant such wheaten bread as requires leaven or yeast in its preparation and baking, while unleavened bread (azyma, άζυμον) is formed from a mixture of wheaten flour and water, which has been kneaded to dough and then baked. After the Greek
Patriarch Michael Cerularius of Constantinople had sought in 1053 to palliate the renewed rupture with Rome by means of the controversy concerning unleavened bread, the two Churches, in the Decree of Union at Florence, in 1439, came to the unanimous dogmatic decision, that the distinction between leavened and unleavened bread did not interfere with the consecration of the sacrament, though for just reasons based upon the Church's discipline and practice, the Latins were obliged to retain unleavened bread, while the Greeks still held on to the use of leavened (cf. Denzinger, Enchirid., Freiburg, 1908, no. 692). Since the Synoptists, on the one hand, and the Catholic and Oriental Fathers, on the other, entertained doubts as to the validity of the Latin custom, a brief defence of the use of unleavened bread will not be out of place here. Pope Leo IX had as early as 1054 issued a protest against Michael Cerularius (cf. Migne, P. L., CXVIII, 775), in which he referred to the Scriptural fact, that according to the three Synoptics the Last Supper was celebrated "on the first day of the aymmes" and so the custom of the Western Church, received its solemn sanction from the example of Christ Himself. The Jews, moreover, were accustomed even the day before the fourteenth of Nisan to get rid of all the leaven which had been used in their dwellings, that so they might from that time on partake exclusively of the so-called mazzoth as bread. As regards tradition, it is not for us to settle the dispute of learned authorities, as to whether or not in the first six or eight centuries the Latins also celebrated the unleavened bread (St. Isidore), or have observed the present custom ever since the time of the Apostles (Mabillon, Probst). Against the Greeks it suffices to call attention to the historical fact that in the Orient the Maronites and Armenians have used unleavened bread from time immemorial, and, according to Origen (H. Thom., I, xlxv, 3), the people of the East "sometimes", therefore not as a rule, made use of leavened bread in their Liturgy. Besides, there is considerable force in the theological argument that the fermenting process with yeast and other leaven, does not affect the substance of the bread, but merely its quality. The reasons of consanguinity advanced by the Greeks in behalf of leavened bread, which would have us consider it as a beautiful symbol of the hypostatic union, as well as an attractive representation of the savour of this heavenly Food, will not be now willingly accepted, provided only that due consideration be given to the fact that the bread, as set forth by the Latins with st. Thomas Aquinas (III, Q. lxix, a. 4) namely, the example of Christ, the aptitude of unleavened bread to be regarded as a symbol of the purity of His Sacred Body, free from all corruption of sin, and finally the instruction of St. Paul (1 Cor., v, 8) to keep the Pasch "not with the leaven of malice and wickedness, but with the unleavened bread of sincerity and truth".

(b) The second Eucharistic element required is wine of the grape (vitum de vite). Hence are excluded as invalid, not only the juices extracted and prepared from other fruits (as cider and perry), but also the so-called artificial wines, even if their chemical constitution is identical with the genuine juice of the grape. The necessity of wine of the grape is not so much the result of the authoritative decision of the Council of Florence, as the Church's tradition, the expression of which is found in the Synod of Paderborn (1891), I, 278 sqq.; Schrenkler, Die Elemente der Eucharistie in den ersten drei Jahrhunderten (Mainz, 1903).

In this connection, see Giese, Streifzüge durch den Gebrauch der Aymmen (Münster, 1853); HARNACK, THE ABENDMÄHLE UND IHRE ANFÄNGE, (Paderborn, 1897), I, 278 sqq.; Schwenkler, Die Elemente der Eucharistie in den ersten drei Jahrhunderten (Mainz, 1903).

(2) The Sacramental Form or the Words of Consecration.—In proceeding to verify the form, which is always made up of words, we may start from the indubitable fact, that Christ did not consecrate by the mere fiat of His omnipotence, which found no expression in articulate utterance, but by pronouncing the words of Institution: "This is my body . . . this is my blood", and that by the addition: "Do this for a commemoration of me", He commanded the Apostles to follow His example. Were the words of Institution a mere declarative utterance of the conversion of the elements which have taken place in the "benediction" unanounced and articulately unexpressed, the Apostles and their successors would, according to Christ's example and mandate, have been obliged to consecrate in this mute manner also, a consequence which is altogether at variance with the deposit of faith. It is true, that Pope Innocent III (De Sacro altaris myst., IV, vi) before his elevation to the pontificate held the opinion, which later theologians branded as "temerarious", that Christ consecrated without words by means of the mere "benediction". Not many theologians, however, followed him in this regard, among the few being Ambrose of *caurinus, Chrysostom, and Hoppe, by far the greater number preferring to stand by the unanimous testimony of the Fathers. Meanwhile, Innocent III also insisted most urgently that at least in the case of the celebrating priest, the words of the sacramental form. It was, moreover, not until its comparatively recent adherence in the seventeenth century to the famous "Confessio fidei orthodoxa" of Peter Moglas (cf. Kimmel, "Monum. fidei eccl. orient.", Jena, 1580, I, p. 180), that the Schismatical Greek Church adopted the practice of excluding the priest from the act of consecration, according to which the priest does not at all consecrate by virtue of the words of Institution, but only by means of the Epiklesis occurring shortly after them and expressing in the Oriental Liturgies a petition to the Holy Spirit, "that the bread and wine may be converted into the Body and Blood of Christ."
Were the Greeks justified in maintaining this position, the immediate result would be, that the Latins who have no such thing as the Epiklesis in their present Liturgy, would possess neither the true Sacrifice of the Mass nor the Holy Eucharist. Fortunately, however, the obvious can be shown that for certain periods of their own writing, since it can be proved, that they themselves formally placed the form of Transubstantiation in the words of Institution. Not only did such renowned Fathers as Justin (Apol., I, iv, 2), Irenæus (Adv. haer., V, ii, 3), Gregory of Nyssa (Or. cathex., xxxvii, Ch. 10, Hom. i, 6), and John Damascene (De fide orthodoxa, IV, xiii) hold the view, but the ancient Greek Liturgies bear testimony to it, so that Cardinal Bessarion in 1439 at Florence called the attention of his fellow-countrymen to the fact, that as soon as the words of Institution have been pronounced, supreme homage and adoration are due to the Holy Eucharist, even though the famous Epiklesis follows some time after.

The objection that the mere historical recitation of the words of Institution taken from the narrative of the Last Supper possesses no intrinsic consecratory force, would be well founded, did the priest of the Latin Church merely intone by means of the ancient Liturgy of the Church, and not some historical event rather than pronounce them with the practical purpose of effecting the conversion, or if he pronounced them in his own name and person instead of the Person of Christ, whose minister and instrumental cause he is. Neither of the two superseded the ancient rite. The Greek words of Institution may in the best of faith go on erroneously maintaining that they consecrate exclusively in their Epiklesis, they do, nevertheless, as in the case of the Latins, actually consecrate by means of the words of Institution as contained in their Liturgies, if Christ has instituted these words as the words of Consecration and the form of the sacrament. We may in fact go a step farther and assert, that the words of Institution constitute the only and wholly adequate form of the Eucharist as such. Consequently, the words of the Epiklesis possess no inherent consecratory value. The content that the words of the Epiklesis have a joint essential value and constitute the partial form of the sacrament, was indeed supported by individual Latin theologians, as Toullec, Renaudot, and Lebrun. Though this opinion cannot be shared by the Greeks, it is not erroneous in faith, since it allows to the words of Institution their essential, though partial, consecratory value, it appears nevertheless to be intrinsically repugnant. For, since the act of Consecration cannot remain, as it were, in a state of suspense, but is completed in an instant of time, there arises the dilemma: Either the words of Institution alone and, therefore, not the Epiklesis, are productive of the conversion, or the words of the Epiklesis alone have such power and not the words of Institution. Of more considerable importance is the circumstance that the whole question came up for discussion in the council held at Florence in 1439. Pope Eugene IV urged the Greeks to come to a unanimous agreement with the Roman faith and subscribe to the words of Institution as alone constituting the sacramental form, and to drop the contention that the words of the Epiklesis also possessed a partial consecratory force. But when the Greeks, not without foundation, pleaded that a dogmatic decision would reflect with shame upon their whole ecclesiastical past, the ecumenical synod was satisfied with the oral declaration of Cardinal Bessarion recorded in the minutes of the council for 5 July, 1439 (XXVI, 411), namely, that the Church has always and in every place referred to the universal teaching of the Fathers, especially of "blessed John Chrysostom, familiarly known to us," according to whom the "Divine words of Our Redeemer contain the full and entire force of Transubstantiation".

The venerable antiquity of the Oriental Epiklesis, its peculiar position in the Canon of the Mass, and its interior spiritual union, oblige the theologian to determine its dogmatic value and to account for its use. Take, for instance, the Epiklesis of the Ethiopian Liturgy: "O Lord, send forth the Holy Spirit and His Power upon this Bread and Chalice and convert them into the Body and Blood of Our Lord Jesus Christ." Since this prayer always follows after the words of Institution have been pronounced, the theological question arises, as to how it may be made to harmonize with the words of Christ, which alone possess the consecratory power. Two explanations have been suggested, which, however, can be merged in one. The first view considers the Epiklesis to be a mere declaration of the fact, that the conversion has already taken place, and that in the conversion just as essential a part is to be attributed to the Holy Spirit as to Consecrator as in the inlaid mystery of the Incarnation. Since, however, because of the brevity of the actual instant of conversion, the part taken by the Holy Spirit could not be expressed, the Epiklesis takes us back in imagination to the previous moment and regards the Consecration as just about to occur. A similar purely psychological retrospective transfer is met with in other portions of the Liturgy, as in the Mass for the Dead, wherein the Church prays for the departed as if they were still upon their bed of agony and could still be rescued from the gates of hell. Thus considered, the Epiklesis refer us back to the Consecration as the centre about which all the significance contained in its words revolves. A second explanation is based, not upon the enacted Consecration, but upon the approaching Communion, inasmuch as the latter, being the effective means of uniting us more closely in the organized body of the Church, brings forth in our hearts the mystical Christ, as is read in the Roman Canon of the Mass: "Ut nobis corpus et sanguis fiat", i.e. that it may be made for us the body and blood. It was in this purely mystical manner that the Greeks themselves explained the meaning of the Epiklesis at the Council of Florence (Mansi, Collect. Concil., XXXI, 106). Yet since much more is contained in the plain words than this true and deep mysticism, it is desirable to combine both explanations into one, and so we may regard the Epiklesis, both in point of liturgy and of time, as the significant connecting link, placed midway between the Consecration and the Communion in order to emphasize the part taken by the Holy Spirit in the Consecration of bread and wine, and, on the other hand, with the help of the same Holy Spirit to obtain the realization of the true Presence of the Body and Blood of Christ by their fruitful effects on both priest and people.

On the subject-matter of the foregoing section, see Oras, De invocatione S. Spiritus in Liturgia Graecæ et orientaliæ (Milan, 1821); Hoppel, Die Epiklesis in der griechischen und orientalischen Liturgie (Schaffhausen, 1864); Franz, Die eucharistische Wordlung und die Epiklesis (Würzburg, 1880); Schenker, Mysterien des Chrestismus (Freiburg, 1889); Kardinal Guzzoni, Zeitschrift für kathol. Theologie (1890), pp. 745 sqq.; (1897); pp. 253 sqq.; Semeru, La Messa nella sua storia e nei suoi simboli (Rome, 1904), 158 sqq.

(3) The Effects of the Holy Eucharist.—The doctrine of the Church regarding the effects of the Holy Communion centres around two ideas: (a) the union with Christ by love and (b) the spiritual repast of the soul. Both ideas are often verified in one and the same effect of Holy Communion.

(a) The first and principal effect of the Holy Eucharist is union with Christ by love (Deer. pro Arca), which does not consist in the sacramental reception of the Host, but in the spiritual and mystical union with Jesus by the theological virtue of love. Christ Himself designated the idea of Communion as a union by love: "He that eateth my flesh, and drinketh my
blood, abideth in me, and I in him” (John, vi. 57). St. Cyril of Alexandria (Hom. in Joan., IV, xvii) beautifully represents this mystical union as the fusion of our being into that of the God-man, as “when melted wax is fused with other wax.” Since the Sacrament of Love is received with affection, it tends especially to fan the flame of actual love to an intense ardour, the Holy Eucharist is specifically distinguished from the other sacraments, and hence it is precisely in this latter effect that Suarez recognizes the so-called “grace of the sacrament,” which otherwise is so hard to discuss, and shows that the essence of this union by love consists neither in a natural union with Jesus analogous to that between soul and body, nor in a hypostatic union of the soul with the Person of the Word, nor finally in a pantheistical defacement of the communicant, but simply in a moral but wonderful union with Christ by the bond of the most ardent charity. Hence the chief effect of a worthy Communion is to a certain extent a foretaste of heaven, in fact the anticipation and pledge of our future union with God by love in the Beatific Vision. He alone can properly estimate the precious boon which Catholics possess in the Holy Eucharist, who know the true ideas of Holy Communion to their utmost depth. The immediate result of this union with Christ by love is the bond of charity existing between the faithful themselves, as St. Paul says: “For we, being many, are one body, all parts taking partake of one bread” (I Cor., x. 17). And of Saints is not merely an ideal union by faith and grace, but an eminently real union, mysteriously constituted, maintained, and guaranteed by partaking in common of one and the same Christ. The fruit of this union with Christ by love is an increase of sanctifying grace in the soul of the worthy communicant. Here let it be remarked at the outset, that the Holy Eucharist does not per se constitute a person in the state of grace as do the sacraments of the dead (baptism and penance), but presupposes such a state. It is, therefore, one of the sacraments of the living. It is as impossible for the soul in the state of mortal sin to receive this Heavenly Bread with profit, as it is for a corpse to assimilate food and drink. Hence the Council of Trent (Sess. XIII, can. v), in opposition to Luther and Calvin, purposely defined, that the chief fruit of the Eucharist is the forgiveness of sins” (Sess. XIII, can. iv). For though Christ said of the Chalice: “This is my blood of the new testament, which shall be shed for many unto remission of sins” (Matt., xxvi, 28), He had in view an effect of the sacrifice, not of the sacrament; for He did not say that His Blood would be drunk unto remission of sins, but shed for that purpose. It is for this very reason that St. Paul (I Cor., xi, 28) demands that rigorous “self-examination”, in order to avoid the heinous offence of being guilty of the Body and the Blood of the Lord by “eating and drinking unworthily”, and that the Fathers insist upon the subjection of the will as on a pure and innocent conscience. In spite of the principles just laid down, the question might be asked, if the Blessed Sacrament could not at times per accidens free the communicant from mortal sin, if he approached the Table, “a Lord unconscious of the sinful state of his soul. Presupposing what is self-evident, that there is question neither of a conscious sacrilegious Communion nor a lack of imperfect contrition (attritio), which would altogether hinder the justifying effect of the sacrament, theologians incline to the opinion, that in such exceptional cases the Eucharist can remove the sin of the state of grace, but all without excepting deny the possibility of the reviviscence of a sacrilegious or unfruitful Communion after the restoration of the soul’s proper moral condition has been effected, the Eucharist being different in this respect from the sacraments which impart a character upon the soul (baptism, confirmation, and Holy orders). Together with the increase of sanctifying grace there is associated another effect, namely, a certain spiritual relish or delight of soul (delectatio spiritualis). Just as food and drink delight and refresh the heart of man, so does “Heavenly Bread containing within itself all sweetness” produce in the soul of the communicant ineffable bliss, which, however, is not to be confounded with an emotional joy of the soul or with sensitive sweetness. Although both may occur as the result of a special grace, its true nature is manifested in certain cheerful and willing fervour in all that regards Christ and His Church, and in the consideration of the duties of one’s state of life, a disposition of soul which is perfectly compatible with interior desolation and spiritual dryness. A good Communion is recognized less in the transitory sweetness of the emotions than in its lasting practical effects on the conduct of our daily lives.

(c) Though Holy Communion does not per se remit mortal sin, it has nevertheless the third effect of “blotting out venial sin and preserving the soul from mortal sin” (Council of Trent, Sess. XIII, cap. i). The Holy Eucharist is not merely a food, but a medicine as well. The destruction of venial sin is powerfully produced by the holy bread. Our Lord and Saviour, and all the Apostles and Saints, is clearly understood on the basis of the two central ideas mentioned above. Just as material food banishes minor bodily weaknesses and preserves man’s physical strength from being impaired, so does this food of our souls remove our lesser spiritual ailments and preserve us from the danger of spiritual death. As a result, based upon love, the Holy Eucharist cleanses with its purifying flame the smallest stains which adhere to the soul, and at the same time serves as an effective prophylactic against grievous sin. It only remains for us to ascertain the manner in which this conservative influence against relapse into mortal sin is exerted. According to the teaching of the Roman Catechism, it is effected by the allaying of concupiscence, which is the chief source of deadly sin, particularly of impurity. Therefore it is that spiritual writers recommend frequent Communion as the most effective remedy against impurity, since its powerful influence extends even after other means have proved unavailing (cf. St. Thomas, III, Q. lxix, a. 6). Whether or not the Holy Eucharist is directly conducive to the remission of the temporal punishment due to sin, is disputed by St. Thomas and all the Fathers. The Sacrament of the Altar was not instituted as a means of satisfaction; it does, however, produce an indirect effect in this regard, which is proportioned to the communicant’s love and devotion. The case is different as regards the effect of grace in behalf of the dead. The pious custom of the faithful of “offering their Communion” for relations, friends, and the souls departed, is to be considered as possessing unquestionable value, in the first place, because an earnest prayer of petition in the presence of the Spouse of our souls will readily find a hearing, and then, because the fruits of Communion, as a means of satisfaction for sin may be applied to a third person, and especially per modum suffragii to the souls in purgatory.

(d) As a last effect we may mention that the Eucharist is the “pledge of our glorious resurrection and of eternal happiness” (Council of Trent, cap. ii), according to the promise of Christ: “He that eateth my flesh and drinketh my blood, hath everlasting life: and I will raise him up on the last day.” Hence the chief reason why the ancient Fathers, as Ignatius (Ephes., 20), Irenaeus (Adv. haer., IV, xviii, 4), and Tertullian (De resurr. carn., vii), as well as later patristic writers, insisted so strongly upon our future resurrection, was the circumstance that it is the door by which we enter upon unending happiness. There can be nothing incongruous or improper in the fact that the body also shares in this effect of Communion, since by its physical contact with the Eucharistic species,
and hence (indirectly) with the living Flesh of Christ, it acquires a moral right to its future resurrection, even as the Blessed Mother of God, inasmuch as she was the former abode of the Word made flesh, acquired a moral claim to her own bodily assumption into heaven. The further discussion as to whether some "physical quality" (Contension) or a "sort of germ of immortality" (Heinburcher) is imputed in the body of the communicant, has no sufficient foundation in the teaching of the Fathers and may, therefore, be dismissed without any injury to dogma.

We distinguish two kinds of necessity, (1) the necessity of means (necessitas medii) and (2) the necessity of precept (necessitas precepti). In the first sense a thing or action is necessary because without it a given end cannot be attained; the eye, e.g., is necessary for vision, because man possesses only a second sort of vision, which is imposed by the free will of a superior, e.g., the necessity of fasting. As regards Communion a further distinction must be made between infants and adults. It is easy to prove that in the case of infants Holy Communion is not necessary to salvation, either as a means or a precept. Since they have not as yet acquired the power of reason, they are free from the obligation of positive laws; consequently, the only question is whether Communion is, like Baptism, necessary for them as a means of salvation. Now the Council of Trent under pain of anathema solemnly rejects such a necessity (Sess. XXI, c. 15) and derives the custom of the primitive Church of giving Holy Communion to children was not based upon the erroneous belief of its necessity to salvation, but upon the circumstances of the times (Sess. XXI, cap. iv).

Since according to St. Paul's teaching (Rom., vii, 4) there is "no condemnation" for those who have been baptized, every child that dies in its baptismal innocence, even without Communion, must go straight to heaven. This latter position was that usually taken by the Fathers, with the exception of St. Augustine, who from the universal custom of the Communion of children drew the conclusion of its necessity for salvation (see COMMUNION OF CHILDREN). On the other hand, Communion is prescribed for adults, not only by the law of the Church, but also by a Divine command (John, vi, 50 sqq.), though for its absolute necessity as a means to salvation there is no more evidence to my knowledge of this necessity than the evidence that was established only on the supposition that Communion per se constituted a person in the state of grace or that this state could not be preserved without Communion. Neither supposition is correct. Not the first, for the simple reason that the Blessed Eucharist, being a sign of Christ's body and blood, presupposes the state of sanctifying grace; nor the second, because in case of necessity, such as might arise, e.g., in a long sea-voyage, the Eucharistic graces may be supplied by actual graces. It is only when viewed in this light that we can understand how the primitive Church, without going over to the Divine command, withheld the Eucharist from certain sinners even on their deathbeds. There is, however, a moral necessity on the part of adults to receive Holy Communion, as a means, for instance, of overcoming violent temptation, or as a viaticum for persons in danger of death. The dogma of Communion Exigentes in vehementer confessione (Freiburg, 1903) claims that the Eucharist, if not absolutely necessary, is at least a relatively and morally necessary means to salvation, in the sense that no adult can long sustain his spiritual, supernatural life who neglects or omits to approach Holy Communion. This view is supported, not only by the solemn and earnest words of Christ, when He promised the Eucharist, and by the very nature of the sacrament as the spiritual food and medicine of our souls, but also by the fact of the helplessness and perversity of human nature and by the daily experience of confessors and directors of souls.

Since Christ has left us no definite precept as to the frequency with which He desired us to receive Him in Holy Communion, it belongs to the Church to determine the Divine command more accurately and prescribe what the limits of time shall be for the reception of the sacrament. In the process of centuries the Church's discipline in this respect has undergone considerable change. Whereas the early Christians were accustomed to receive at every celebration of the Liturgy, which was probably not celebrated daily in all places, or were in the habit of communicating privately in their own homes every day of the week, a falling-off in the frequency of Communion is noticeable since the fourth century. Even in his time Pope Fabian (236–250) made it obligatory to approach the Holy Table three times a year, viz. at Christmas, Easter, and Pentecost, and this custom was still prevalent in the sixth century (cf. ep. 45 to Bishop Paul of Tarsus). Although St. Augustine left daily Communion to the free choice of the individual, his admission, in force even at the present day, was: Sicut in almo, at quotidie hoc obtendere (De dono persev., c. xiv), i.e., "So live, that you may receive every day." From the tenth to the thirteenth century the practice of Holy Communion more frequently during the year was rather rare among the laity and obtained only in cloistered communities. St. Bonaventure reluctantly allowed the lay brothers of his monastery to approach the Holy Table weekly, whereas the rule of the Canons of the Lateran Councils required it. St. Philip Neri, the founder of the Third Order of St. Francis, and St. Alphonso Liguori were zealous champions of frequent Communion; whereas the Jansenists, under the leadership of Antoine Arnauld (De la frequence communicatio, Paris, 1643), strenuously opposed them and demanded as a condition for every communication that the "most perfect penitential dispositions and the purest love of God." This rigorism was condemned by Pope Alexander VIII (7 Dec., 1690); the Council of Trent (Sess. XIII, cap. viii; Sess. XXII, cap. vi) and Innocent XI (12 Feb., 1679) had already emphasized the permissibility of even daily Communion. To root out the last vestiges of Jansenistic rigorism, Pius X issued a decree (24 Dec., 1905) wherein he allows and recommends daily Communion to the entire laity and requires but two conditions for its permissibility, namely, the state of grace and a right and pious intention. Concerning the non-requirement of the twice-daily species as a means necessary to salvation see COMMUNION (SUNDAY) UNDER BOTH KINDS.

See Hoffmann, Geschichte der Laiencommunion bis zum 19. Jahrhundert (Speyer, 1893); Hoffmann, Laiencommunion in ihrem Wirkungen und ihrer Heilwirkungsfähigkeit (Ratisbon, 1898); BARTSCH, De frequenti quotidiane Communio (Freiburg, 1907).

(5) The Minister of the Eucharist—The Eucharist, being a permanent sacrament, and the consecration (consecratio) and reception (suscipio) thereof being separated from each other by an interval of time, the minister may be and is in fact twofold: (a) the minister of consecration and (b) the minister of administration.
(a) In the early Christian Era the Populists, Collyridians, and Montanists attempted priestly powers even to women (cf. Epiphanius, De haer., xlix, 79); and in the Middle Ages the Albignenses and Waldenses ascribed the power to consecrate to every layman of upright disposition. So, in the Fourth Lateran Council (1215) confirmed the ancient Catholic teaching, that "no one but the priest [sacerdos], regularly ordained according to the keys of the Church, has the power of consecrating this sacrament". Rejecting the hierarchical distinction between the priesthood and the laity, Luther freely declared, in accord with his ideal of a "universal priesthood" (cf. I Peter, ii, 7), that every layman was qualified, as the appointed representative of the faithful, to consecrate the Sacrament of the Eucharist. The Council of Trent opposed this teaching of Luther, and not only confirmed anew the existence of a "special priesthood" (Sess. XXIII, can. i), but authoritatively declared that "Christ ordained the Apostles true priests and commanded them as well as other priests to offer His Body and Blood in the Holy Sacrifice of the Mass" (Sess. XXII, can. ii).

By this decision it was also declared that the power of consecrating and that of offering the Holy Sacrifice are isolated from each other. Both ideas are mutually reciprocally defined; the category of "priest" (sacerdos, legeis) belongs, according to the teaching of the Church, only bishops and priests; deacons, subdeacons, and those in minor orders are excluded from this dignity.

Scripturally considered, the necessity of a special priestly power with the power of publicly consecrating is derived from the fact that Christ did not address the words, "Do this", to the whole mass of the laity, but exclusively to the Apostles and their successors in the priesthood; hence the latter alone can validly consecrate. It is evident that this tradition has underlie the mandate of Christ in this sense and in no other. We learn from the writings of Justin, Origen, Cyprian, Augustine, and others, as well as from the most ancient Liturgies, that it was always the bishops and priests, and they alone, who appeared as the properly constituted celebrants of the Eucharistic Mysteries, and that the deacons merely acted as assistants in these functions, while the faithful participated passively therein. When in the fourth century the abuse crept in of priests receiving Holy Communion at the hands of deacons, the First Council of Nicaea (325) issued a strict prohibition to this effect. To offer the Holy Sacrifice shall not receive the Body of the Lord from the hands of those who have no such power of offering", because such a practice is contrary to "rule and custom". The sect of the Luciferians was founded by an apostate deacon named Hilary, and possessed neither bishops nor priests; wherefore St. Jerome concluded (DiaI. adv. Lucifer., n. 21), that for want of celebrants they no longer retained the Eucharist. It is clear that the Church has always denied the laity the power to consecrate. When the Arians accused St. Athanasius (d. 373) of sacerdotal, because suspecting him of bidding the Consecrated Chalice had been destroyed during the Mass which was celebrated by a certain Ischares, they had to withdraw their charges as wholly untenable when it was proved that Ischares had been invalidly ordained by a pseudo named Callathos and, therefore, could neither validly consecrate nor offer the Holy Sacrifice.

(b) The dogmatic interest which attaches to the minister of administration or distribution is not so great, for the reason that the Eucharist being a permanent sacrament, any communicant having the proper dispositions could receive it validly, whether he did then the work of a priest, or layman, or woman. Hence the question is concerned, not with the validity, but with the licit of administration. In this matter the Church alone has the right to decide, and her regulations regarding the Communion rite may vary according to the circumstances of the times.

In general it is of Divine right, that the laity should as a rule receive only from the consecrated hand of the priest (cf. Trent, Sess. XIII, cap. viii.). The practice of the laity giving themselves Holy Communion was formerly, and is to-day, allowed only in case of necessity. In ancient Christian times it was customary for the faithful to take the Blessed Sacrament to their homes and Communicate privately, a practice (Tertullian, Ad uxor., II, v), to which, even as late as the fourth century, St. Basil makes reference (Ep. xiiii, ad Caesariam). Up to the ninth century, it was usual for the priest to place the Sacred Host in the right hand of the communicant, who kissed it and then transferred it to his own mouth; women, from the fourth century onward, were required in this ceremony to have a cloth wrapped about their right hand. The Precious Blood was in early times received directly from the Chalice, but in Rome the practice, after the eighth century, was to receive it through a small tube (fistula); at present this is observed only in the pope's Mass. The latter method of drinking the Chalice spread to other localities, in particular to the Cistercian monasteries, where the practice was partially continued into the eighteenth century.

Whereas the priest is both by Divine and ecclesiastical right the ordinary dispenser (minister ordinarius) of the sacrament, the deacon is by virtue of his order the extraordinary minister (minister extraordinarius), yet he may not administer the sacrament except ex delegatone, i. e., with the permission of the bishop or priest. As has already been mentioned above, the deacons were accustomed in the Early Church to take the Blessed Sacrament to those who were absent from Divine service, as well as to present the Chalice to the laity during the celebration of the Sacred Mysteries (of Cyprian, De isip., n. 17, 25), and this practice was observed until Councils had intervened. It is observed that in St. Thomas's time (III, Q. lxxxiii, a. 3), the deacons were allowed to administer only the Chalice to the laity, and in case of necessity the Sacred Host also, at the bidding of the bishop or priest. After the Communion of the laity under the species of wine had been abolished, the deacon's powers were more and more restricted. According to a decision of the Sacred Congregation of Rites (25 Feb., 1777), still in force, the deacon is to administer Holy Communion only in case of necessity and with the approval of his bishop or prohibition of the pope. A "human being" in his "KirchengeschichtI. Abhandlungen und Untersuchungen" (Paderborn, 1897, I, pp. 293 sqq.; see also Theol. praktische Quartalschrift", Linz, 1906, LIX, 95 sqq.)

(6) The Recipient of the Eucharist.—The two conditions of objective capacity (capacitas, aptitudo) and subjective worthiness (dignitas) must be carefully distinguished. Only the former is of dogmatic interest, while the latter is treated in moral theology (see COMMUNION AND COMMUNICATION OF THE BLOOD). The first requisite of aptitude or capacity is that the recipient be a "human being", since it was for mankind only that Christ instituted this Eucharistic food of souls and commanded its reception. This condition excludes not only irrational animals, but angels also; for neither possess human souls, which alone can be nourished by this food until eternal life. The expression "Bread of Angels" (Ps. lxxxvii, 25) is a mere metaphor, which indicates that in the Beatific Vision where He is not concealed under the sacramental veils, the angels spiritually feast upon the God-man, this same prospect being held out to those who shall gloriously rise on the Last Day. The second requisite, the immediate deduction from the first, is that the recipient be still in the "state of pilgrimage" to the next life (status victoria), since it is only in the present life that man can validly Communicate. Exaggerating the Eucharist's necessity as a means to salvation, Rosmini advanced the untenable opinion that at the moment of death
EUCHARIST 590 EUCHARIST

This heavenly food is supplied in the next world to children who had just departed this life, and that Christ could have given Himself in Holy Communion to the holy souls in Limbo, in order to ‘render them apt for the vision of God’. This evidently impossible view was condemned by Leo XIII (14 Dec., 1887). In the fourth century the Synod of Hippo (393) forbade the practice of giving Holy Communion to the dead as a gross abuse, and assigned as a reason, that “corpses were no longer capable of eating”. Later synods, as those of Augustine (438) and of Trier (615) took very energetic measures to put a stop to a custom so difficult to eradicate. The third requisite, finally, is baptism, without which no other sacrament can be validly received; for in its very concept baptism is the “sacrament of grace” and contains within itself the whole of Christian grace, which can only be admitted to communion with Christ.

The venerable and ancient practice of the Sacrament of the Eucharist, at least in its shape of the Roman and Sub-Apostolic rites, was renewed under the Edicts of Gratianus (1282), of Sixtus V (1586), of Clement IX (1669), of Pius IX (1870); and in our own day, by the Pope of 1879, the session of which also marked the beginning of the liturgical reform. The Church of the apostolic fathers, who repeated, as constituting the True Church, the Armenians and the Nestorians, are the only ones who do not have the Sacrament of the Eucharist in their divine worship.

I. THE SACRAMENT OF THE EUCHARIST.—On two occasions Christ fed with loaves and fishes, miraculously multiplied, a crowd of five thousand people. He sent the multitude away, and having taken the five loaves and the two fishes followed Him into the desert. On the first of these occasions, recorded by all four Evangelists, five loaves and two fishes supplied the needs of five thousand people, while on the second occasion, mentioned only by St. Matthew (xxv. 32 sq.), seven loaves and a few fishes were sufficient for four thousand people. In accordance with the practice of depicting only those features which were necessary to convey the meaning of a symbol, the Christian artists of the catacombs represented the miraculous multiplication as a banquet, in which the guests are seen partaking of a repast of loaves and fishes, the remarkable number of them. According to St. Augustine (Tract. exxiii, in Joan.), the number seven represented the totality of the Christian world. The most vigorous representations of the Eucharist in the catacombs are the fresco known as the “Fratro Panis”, a monument of the Capella Greca, in the cemetery of St. Prisca. Wilpert attributes this, with other paintings of that chapel, to the early part of the second century, and his opinion is generally accepted.

The scene represents seven persons at table, reclining on a semi-circular dian, and is depicted on the wall above the arch of this little underground chapel, consequently in close proximity to the place where once stood the altar. One of the banqueters is a woman. The place of honour, to the right (in corn dexter), is occupied by the “president of the Brethren” (described about 150–155 by Justin Martyr in his account of the Christian worship), i.e. the bishop, who is seen in his place for the occasion (Apol., I, xvi). The “president” (πρεσβύτερος), a venerable, bearded personage is depicted performing the function described in the Acts of the Apostles (ii, 42, 46; xx, 7) as “breaking bread”; hence the name “Fratro Panis” (μαύρον ἐπάτημα), properly given to the place of its discoverer. It is to be noted that these words are frequently used in the earliest non-inspired Christian literature as a synonym for the Eucharist (for the texts see Wilpert, Fractio Panis, Freiburg, 1851).

The moment represented, therefore, is that immediately before the Communion, when the celebrant, then

J. Pohle.

Eucharist, EARLY SYMBOLS OF THE.—Among the symbols employed by the Christians of the first ages in decorating their tombs, those which relate to the Eucharist hold a place of the first importance. The monuments of greatest consequence on which these symbols are depicted exist, principally, in the subterranean tombs of early Christian Rome, and are known as the Roman catacombs (see Catacombs, Roman; Cemetery, Early Roman Christian Churches). Their discovery and reopening in the latter half of the nineteenth century have thrown great light on more or less obscure allusions in early Christian literature. In this way Catholic theology now possesses supplementary information of appreciable value bearing on the belief in, and the manner of celebrating, the Eucharist in the sub-Apostolic age. According to Wilpert, an expert scholar in this field of Christian archaeology, the symbolic representations of the Eucharist which refer to the Eucharist form three groups, inspired by three of Christ’s miracles, namely the miraculous multiplication of the loaves and fishes, the banquet of the seven Disciples by the Sea of Galilee after the Resurrection, and the miracle of Cana. It is to the first two of these miracles, probably the most famous fish symbol, which briefly summed up the chief articles of the Christian belief (see Fish, Symbolism of the). The earliest and always the favourite symbol of the Eucharist in the catacombs was that inspired by the miracle of the multiplication of the loaves and fishes; the banquet of the seven Disciples appears only in one (second-century) catacomb scene; the miracle of Cana in two, one of which is of the early third, the other of the fourth century.

I. THE MIRACLE OF THE MULTIPLICATION.—On two occasions Christ fed with loaves and fishes, miraculously multiplied. The first of these occasions, recorded by all four Evangelists, five loaves and two fishes supplied the needs of five thousand people; while on the second occasion, mentioned only by St. Matthew (xxv. 32 sq.), seven loaves and a few fishes were sufficient for four thousand people. The Church of the apostolic fathers, who repeated, as constituting the True Church, the Armenians and the Nestorians, are the only ones who do not have the Sacrament of the Eucharist in their divine worship.

The venerable and ancient practice of the Sacrament of the Eucharist, at least in its shape of the Roman and Sub-Apostolic rites, was renewed under the Edicts of Gratianus (1282), of Sixtus V (1586), of Clement IX (1669), of Pius IX (1870); and in our own day, by the Pope of 1879, the session of which also marked the beginning of the liturgical reform. The Church of the apostolic fathers, who repeated, as constituting the True Church, the Armenians and the Nestorians, are the only ones who do not have the Sacrament of the Eucharist in their divine worship.

I. THE SACRAMENT OF THE EUCHARIST.—On two occasions Christ fed with loaves and fishes, miraculously multiplied, a crowd of five thousand people. He sent the multitude away, and having taken the five loaves and the two fishes followed Him into the desert. On the first of these occasions, recorded by all four Evangelists, five loaves and two fishes supplied the needs of five thousand people, while on the second occasion, mentioned only by St. Matthew (xxv. 32 sq.), seven loaves and a few fishes were sufficient for four thousand people. In accordance with the practice of depicting only those features which were necessary to convey the meaning of a symbol, the Christian artists of the catacombs represented the miraculous multiplication as a banquet, in which the guests are seen partaking of a repast of loaves and fishes, the remarkable number of them. According to St. Augustine (Tract. exxiii, in Joan.), the number seven represented the totality of the Christian world. The most vigorous representations of the Eucharist in the catacombs are the fresco known as the “Fratro Panis”, a monument of the Capella Greca, in the cemetery of St. Prisca. Wilpert attributes this, with other paintings of that chapel, to the early part of the second century, and his opinion is generally accepted.

The scene represents seven persons at table, reclining on a semi-circular dian, and is depicted on the wall above the arch of this little underground chapel, consequently in close proximity to the place where once stood the altar. One of the banqueters is a woman. The place of honour, to the right (in corn dexter), is occupied by the “president of the Brethren” (described about 150–155 by Justin Martyr in his account of the Christian worship), i.e. the bishop, who is seen in his place for the occasion (Apol., I, xvi). The “president” (πρεσβύτερος), a venerable, bearded personage is depicted performing the function described in the Acts of the Apostles (ii, 42, 46; xx, 7) as “breaking bread”; hence the name “Fratro Panis” (μαύρον ἐπάτημα), properly given to the place of its discoverer. It is to be noted that these words are frequently used in the earliest non-inspired Christian literature as a synonym for the Eucharist (for the texts see Wilpert, Fractio Panis, Freiburg, 1851).

The moment represented, therefore, is that immediately before the Communion, when the celebrant, then
as now, divided the Sacred Host. And, as though to exclude all doubt as to the character of his subject, the artist added a detail found in no other representation of the Eucharist; in front of the celebrant he placed a two-handed cup, evidently the chalice (calix ministerialis) of the second century. Such is the earliest representation, in Christian art, of the offering of the Mass. A recent writer regards the scene as representing the celebration of the Eucharist in connexion with the funeral agape on the anniversary of some person interred in the chapel. The guests partaking of the banquet, in this view, represent the relations of the deceased assisting at an anniversary Mass (sacrificium pro dormitione) for the repose of his soul (Wieland, Mensa und Confesso, p. 139). In addition to these unique details showing a real celebration of the Mass in the early second century, the author of this fresco depicted, side by side with the reality, a symbol of the Eucharist. In the centre of the table are two plates, one containing five loaves, the other two fishes, while on the right and left of the divan seven baskets of bread are distributed symmetrically.

After the "Fractio Panis" the most remarkable frescoes in which the miraculous multiplication is employed as a symbol of the Eucharist are two in the crypt of Lucina, the most ancient part of the catacomb of St. Callistus. Each consists of a fish and a basket of bread on a green field. At first view it would seem as though the fishes were represented each carrying a basket of bread, in the act of swimming. A closer examination of the frescoes made by Wilpert, however, has shown that the baskets are placed very close to, but not on, the fishes, and that the surpassing blue surface is really green. The subject, therefore, is the miraculous multiplication, the green surface representing a field. As a symbol these pictures are particularly striking from the introduction of two glasses, containing a red substance, into the baskets. Evidently the artist in this detail had in mind the Eucharistic matter of wine. Consequently, the frescoes as a whole conveyed to an onlooker in the second century a meaning somewhat as follows: the miraculously multiplied bread, together with wine, formed the matter of the Eucharist, which, in turn, by a still greater miracle, became the substance of the Body and Blood of the Divine Iethys, Jesus Christ. The various Eucharistic banquet scenes of the catacombs appropriately symbolized the reception of Holy Communion. In one early instance the artist portrayed, besides a representation of this character, a new symbol having special reference to the Consecration. This consists of a scene showing two persons beside a tripod, on which are placed a loaf and fish. One of the figures is clad in the tunic and pallium reserved in early Christian art to persons of sacred character, while the other, at the opposite side of the tripod, stands in the attitude of an orans. The sacred personage holds his hands extended over the loaf and the fish, somewhat after the manner of a priest holding his hands over the chalice before the Consecration. Wilpert's interpretation of the scene is that the figure with extended hands represents Christ performing the miracle of the multiplication, which act, in the intention of the artist, is symbolic of the Consecration. The orans, on the other hand, is a symbol of the one who, through the reception of Holy Communion, has obtained eternal happiness: "He that eateth this bread shall live forever" (St. John, vi, 59). The representation described forms one of a series comprising three subjects, all relating to the Eucharist. The second of the series is the usual banquet of seven persons, symbolizing Communion, while the third depicts Abraham and Isaac in the orans attitude. In the symbolism of the time Isaac was regarded as a figure of Christ, whence the inference that this representation of Abraham's sacrifice was figurative of the Sacrifice of the Cross.

II.—The Banquet of the Seven Disciples.—The repast of the seven Disciples by the Sea of Galilee is recorded by the Evangelist St. John (xxxi, 9 sq.). St. Peter and his fellow-fishermen, seven altogether, after taking the miraculous draught of fishes, drew their boats on shore, where they found "hot coals

![Fractio Panis](image)

Capella Greca, Catacomb of St. Priscilla

lying, and a fish laid thereon, and bread". The risen Saviour then invited them to eat, "and none of them... durst ask him: Who art thou? knowing that it was the Lord!". The incident thus recorded was just as appropriate a symbol of the Eucharist as the miracle of the multiplication, and as such it is once depicted in a painting of the second century. In this, as in all Eucharistic frescoes, the symbol of Communion appears in close proximity with a baptismal symbol. The banquet scene itself at first view seems in no wise different from the category of Eucharistic representations already described: seven persons are partaking of food, which consists of loaves and fishes. Two details, however, differentiate this particular picture (Sacrament Chapel A 2, cemetery of Callistus), from the symbolic banquets based on the miraculous multiplication. The first of these details is the absence of the basket of fragments always present in frescoes inspired by the latter subject, and the second consists in the fact that the seven banqueters are depicted nude, the manner in which fishermen were invariably represented in classic art. The author of this fresco, we may safely conclude, drew his inspiration from the repast by the Sea of Galilee, which he depicted as a symbol of the Eucharist. St. Augustine alludes to this symbol when he speaks of the "roasted fish" on the hot coals as representing Christ crucified (Pascas aspinus Christus est passus, Tract. cxxii, in Joan.).

During the first and second centuries, with the one exception noted, the only symbol of the Eucharist adopted in Christian art was that inspired by the miraculous multiplication. The mode of representing the symbol, also, during this period severely varied: seven guests partake of the symbolic loaves and
fishes, while baskets of bread are distributed at the sides. In one instance, however, the guests are omitted, and only a tripod with loaves and fishes and the baskets of bread are depicted. This fresco, which occupies a lunette of the Sacrament Chapel containing the relics of the bishop St. Dionysius, Wilpert regards as a sort of compendium of the two symbols of the Consecration and the Communion described above. In the third century a new mode of representing the favourite Eucharistic symbol was adopted in a number of frescoes. This consisted in a scene showing Christ performing the miracle of multiplication by touching with a rod one of several baskets of bread placed before Him. In the loaves, also, incisions, sometimes made in the form of a cross, are seen. Paintings of this class were symbols of the Consecration. One of them (chamber III in the catacomb of St. Domitilla) is of more than ordinary interest. Unfortunately it has suffered serious injury at the hands of collectors. By the aid of a design made for Bosio, Wilpert has been able to reproduce the picture. It consists of three scenes. In the centre Christ is performing the miracle of multiplication. To the right of this He is again represented, His hand raised in the oratorio gesture, while within the folds of His pallium five loaves marked with a cross are visible. Balancing this figure on the left is the Samaritan woman drawing water from the well of Jacob. According to the general principles underlying Christian art, scenes relating to events intended between the three groups. Ordinarily the Samaritan woman was a symbol of the refregium (refriment) petitioned for in the Memento for the Dead at Mass. In the present instance Wilpert regards it as more probable that she is intended as a symbol of the soul in the enjoyment of eternal happiness: the Eucharist, like the fountain of water (John, iv, 14) "springing up into life everlasting", being a pledge of immortality. In the catacomb of St. Callistus there is a fourth painting of the miracle of the multiplication which conforms more closely to historical narrative than the representations of an earlier date: Christ is here depicted with both hands held over the loaves and fishes presented to Him by two Apostles. It may be added that more than thirty frescoes of the miraculous multiplication still exist in the Roman catacombs. For an exact and reliable reference to them see St. Paul, "Le Piture delle catacombe Romane", Rome, 1903.

III.—THE WEDDING AT CANA.—The custom introduced in the third century of representing the multiplication of the loaves to the exclusion of the fishes is thought to have been indirectly instrumental in bringing about a new and beautiful symbol of the Eucharist in early Christian painting. Previous to this time only two frescoes contained any allusions to the Eucharistic wine: the chalice of the "Fractio Panis" and the red substance in the baskets of the Eucharist, in the crypt of Lucina. The epitaph of the multiformity of the chalice, alluding to the offering of the fishes (leaving only bread, one of the two species required for the Eucharist) probably suggested the idea of a special symbol for the Eucharistic wine. No more appropriate symbol for this purpose was to be desired than the miracle of Cana (John, ii, 1-11), which was next adopted. As Christ at the marriage feast changed water into wine, so on another occasion He changed wine into His blood. Quite apropos in this relation is a statement of St. Cyril of Jerusalem to the effect that, since the Lord "in Cana of Galilee changed water into wine, which is akin to blood", why should He not have accepted the chalice as incredible that He should have changed wine into blood? (cary. XXII. 2) Two frescoes representing the miracle of Cana exist in the Roman catacomb of Sts. Peter and Marcellinus. The more ancient of these, which dates from the middle of the third century, represents four men and three women partaking of a repast. Before the couch on which they are reclining is a table, while on the left a servant is carrying a dish to the person occupying the post of honour at the right extremity. The servant's hands are covered by a cloth. On the right Christ is seen touching with a rod one of six water pots that stand in front of Him. Taken as a whole, there can scarcely be any doubt that here we have a Eucharistic scene, with the symbol of wine substituted for the symbol of bread. The number of guests is the invariable number in Eucharistic representations. The servant with veiled hands is the bearer of some sacred object (elsewhere St. Peter receiving the Law from Christ has his hands similarly veiled). Finally, as in all other Eucharistic frescoes, the Sacraments of Baptism and Holy Communion are brought into close relationship; on the right of the scene described is the fountain of Moses and on the left a representation of the administration of baptism. In the centre of the vault or a veiled orans is an allusion to the effects of Communion (a pledge of eternal life).

The second fresco of this subject belongs to the middle of the fourth century. Here Christ is twice represented, once touching the loaves, and again, in the act of changing water into wine. A banquet scene, which has suffered serious injury, occupies the lunette; five of the seven participants can still be recognized as men. The discovery in 1864 at Alexandria of an ancient Christian subterranean cemetery similar in catacombs of Rome to those at Catacomb of St. Marcellus light a fresco in which two Eucharistic symbols of the first Christian age are reproduced in a new and striking manner. The picture occupies the frieze of the apse in a small cemetery basilica and is, consequently, above the place formerly occupied by the altar. The scene is separated by trees, are represented. The central subject is the miraculous multiplication: Christ, identified by the nimbus, is seated on a throne and is in the act of blessing loaves and fishes presented by St. Peter and St. Andrew (identified by inscriptions). At his feet twelve baskets of bread are distributed symmetrically. To the right and left of this picture were two banquet scenes. The former is almost wholly destroyed, but a Greek inscription gives a clue to the subject. This reads: _Those partaking of the eulogia of Christ._ Eulogia is the term used by St. Paul (1 Cor. x. 18) in reference to the Eucharist: "the chalice of eulogia [beneficence] which we bless, is it not the communion of the blood of Christ?" The application of this term, therefore, to the food set before the banqueters, points to the inference that here was depicted a Eucharistic scene in which the guests partook of the symbolic loaves and fishes. The scene on the right, we learn from inscriptions ("Jesus", "Mary", "Servants"), represented the miracle of Cana. The author of this fresco, who was well acquainted with the symbolism of the first centuries, evidently reproduced (1) the favourite symbol of the Eucharist, the miraculous multiplication of the loaves and fishes, and (2) the later symbol of the Eucharistic wine, inspired by the miracle at the wedding feast.

WILPERT, _Fractio Panis_ (Freiburt, 1895). _Idem_. _Le piture delle catacombe Romane_ (Milan, 1895, folio, replaces for completeness and trustworthy all previous similar works, e.g., D. Ross, _Garrecci_, etc.). _Willand, Mons_ and _Cons.,_ St. Alb., 1906; _Rait, in Real-Encykloep._, _etc._ (Freiburt, 1882). 333-51; _Marucchi, Elments d'archai._ (Paris, 1905), i, 291-307; _Cot and Browlow, Roman Nantories_ (London, 1878), passim; _Lowrie, Monuments of the Early Ch._ (New York, 1901), non-Catholic.

MAURICE M. HASSNET.

Eucharistic Congresses are gatherings of ecclesiastics and laymen for the purpose of commemorating and glorifying the Holy Eucharist and of seeking the best means to spread its knowledge and love throughout

chosen as the location for the fourteenth congress, and the fifteenth, 20–24 July, 1904, went to Angoulême, where the operations of French law forbade the usual procession of the Blessed Sacrament.

Pope Pius X having expressed a wish that the Eucharistic Congress should be held in Rome, the delegates met there, 1–6 June, 1905. Here, while the solemnity of the occasion by celebrating Mass, at the opening of the sessions, by giving a special audience to the delegates, and by being present at the procession that closed the proceedings. It was the dawn of the movement that led to his decree, “Tridentina Synodus”, 20 December, 1905, forbidding the procession of the Blessed Sacrament might be held. Each year the congress had become more and more definitely international, and at the invitation of Archbishop Bourne of Westminster it was decided to hold the nineteenth congress in London, the first under the archbishop, and among, English-speaking members of the Church.

In addition to these general congresses there had also grown up, in all countries where Catholics were numerous, local gatherings of the Eucharistic movement which were potent factors in the spread of the devotion. These were held in the form of meeting of those interested in a local area, and attended by the clergy of the several parishes, and often other religious. In the United States the first of these in the United States was at St. Louis, in September, 1901; the second in New York, in 1908; and the third at Pittsburg, in 1907. The presidents of the Permanent Commissions of the International Eucharistic Congresses, under whose direction all this progress was made were: Bishop Gaston de Ségur, of Lille; Archbishop de La Bouillerie, titular of Perga and coadjutor of Bordeaux; Archibishop Duquesnay of Cambrai; Cardinal Mercier, Bishop of Lausanne and Geneva; Bishop Doutreloux of Liège, and Bishop Thomas Heylen of Namur, Belgium. After each congress this committee prepared and published a volume giving a report of all the papers read and the discussions on them in the various sections of the meeting, the sermons preached, the addresses made at the public meetings, and the details of all that transpired.

As the most representative and important of all the congresses, the whole Catholic world was at once interested in the nineteenth, which was held in London, 9–13 September, 1908, and regarded as the greatest religious triumph of its generation. In an affectionate letter voicing anew his interest in these congresses, the pope once more designated Cardinal Vannutelli as his legate to attend the sessions. More than three hundred and fifty years had elapsed since a legate from the pope had been seen in England. With the words of “The Second Spring” one of them aptly said, awakened by the tears and blood of persecution, and strengthened by the prayers of the faithful in the dreary years of the penal laws, bore fruit and flower.

A distinguished escort met Cardinal Vannutelli when he landed at Dover, and an enormous crowd assembled to witness the arrival of a papal legate in London for the first time in more than three centuries. On the next day, 9 September, the congress was solemnly opened in the cathedral at Westminster, by the legate, supported by Cardinals (Bishops of Baltimore, Logue of Ireland, Sancha y Heriva of Toledo, Ferrari

Eucharistic Test. See ORDEAL.

Eucharist, Saint, first Bishop of Trier (Treves) in the second half of the third century. According to an ancient legend, he was one of the seventy-two disciples of Christ, and he succeeded Peter as bishop, together with the deacon Valerius and the subdeacon Maternus, to preach the Gospel. They came to the Rhine and to Elegia (Ehl) in Alsace, where Maternus died. His two companions hastened back to St. Peter and begged him to restore the dead to life. St. Peter granted his pastoral staff to Eucharist, and, upon being touched with the staff, Maternus, who had been in his grave for forty days, returned to life. The Gentiles were then converted in large numbers. After founding many churches the three companions went to Trier where the work of evangelization progressed so rapidly that Eucharist chose that city for his episcopal residence. Among other miracles related in the legend he raised a dead person to life. An angel announced to him his approaching death and pointed out Valerius as his successor. Eucharist died 8 Dec., having been bishop for twenty-five years and was interred in the church of St. John outside the city. Valerius was bishop for fifteen years and was succeeded by Maternus, who had in the meantime founded the dioceses of Cologne and Trier, being bishop altogether for forty years. The staff of St. Peter, with which he had been raised to life, was kept in the cathedral till the end of the 16th century when the upper half was presented to Trier, and was afterwards taken to Prague by Emperor Charles IV.

In the Middle Ages it was believed that the pope used no crozier, because St. Peter had sent his episcopal staff to St. Eucharist. Innocent III confirmed this opinion (De Sacris Mis. I, 62). The same instance, however, is related of several other alleged disciples of St. Peter, and more recent criticism interprets the staff as the distinctive mark of an envoy, especially of a missionary. Missionaries in subsequent centuries, e.g. St. Boniface, were occasionally called ambassadors of St. Peter, the pope who sent them being the successor of Peter. Moreover, in medieval times the foundation of a diocese was often referred to as early a date as possible, in order thereby to increase its reputation, perhaps also its rights. Thus Paris gloried in Dionysius Areopagita as its first bishop, similarly ancient origins were claimed by other Frankish dioceses. In time, especially through the ravages of the Normans, the more reliable earlier accounts were lost. When at a later period the lives of primitive holy founders, e.g. the saints of ancient Trier, came to be written anew, the gaps in tradition were filled out with various combinations and fanciful legends. In this way there originated in the monastery of St. Matthias near Trier the famous chronicle of Trier (Gesta Treverorum, ed. Waits in Mon. Germ. Hist.; script., VII, 111-174) in which there is a curious mixture of truth and error. It contains the account of the life of St. Eucharist given above. An amplification thereof, containing the lives of the three saints in question, is said to have been written by the monk Gobich or Golscher, who lived in that monastery in the year 1130. From the “Gesta”, the narrative passed unchallenged into numerous medieval works. More recent criticism has detected many contradictions and inaccuracies in these ancient records, and it is almost universally believed at present that, with a few exceptions, the first Christian missionaries came to Gaul, to which Trier then belonged, not earlier than the 26th century. Calmet and others, the Hollandists, with Marx, Lütolf, and other historians refer these holy bishops of Trier to a period following 250, though not all of them consider this as fully established. The feast of St. Eucharist is celebrated on 8 Dec.
EUCHERIUS

The lives of the three saints may be found in the Acta SS., Jan., ii, 917–22 (feast of St. Valerian); and in the Mon. Ger. vet., in the Scriptor. (Verona, 1866, VIII, 111–174), by P. Theissen. See also REYERBACH, Geschichte der Kirchen Deutschlands, i, 74–82; HAUKE, Kirchengeschichte Deutschlands, 2d ed., i, 4 sqq.; MARX, Geschichte des Erstamts Trier, Berlin, 1858, ii, 13–90; BRÜSSEL, Geschichte der Trierer Kirchen (Trier, 1888), i, 10 sqq.

GABRIEL MEIER.

Eucherius, Saint, Bishop of Lyons, theologian, i. in the latter half of the fourth century; d. about 410.

On the death of his wife he withdrew to the monastery of Lérins, where his sons, Veranius and Sulonius, lived, and soon afterward to the neighboring island of Lerona (now Saint-Marguerite), where he devoted himself to study and meditation. Desiring, however, to join the apostles in the deserts of the East, he consulted John Cassian, who, in reply, sent him some of his "Collations", describing the daily lives of the hermits of the Thebaid. It was at this time that Eucherius wrote his beautiful letter "De laude Eremit," to St. Hilary of Arles (c. 425). Though imitating the virtues of the Egyptian solitaries, he kept in touch with men renowned for learning and piety, e.g. Cassian, St. Hilary of Arles, St. Honoratus, later Bishop of Marseilles, and Valerian, to whom he wrote his "Epistola panemetica de contemplu mundi". The same period was one of great mission work, and Eucherius was soon chosen Bishop of Lyons. This was probably in 414; it is certain, at least, that he attended the First Council of Orange (411) as Metropolitan of Lyons, and that he retained this dignity (until his death. In addition to the above-mentioned letters, Eucherius wrote "Formularium spirituales intelligientia ad Veranum", and "Institutiones ad Sulonium", besides many homilies. His works have been published both separately and among the works of the Fathers. There is no critical edition but the text is most accessible in Migne, "Patrologia Latina", vol. I, 856–894. A short biography, p. 893–1214, is to be found in a long series of works attributed to Eucherius, some of doubtful authenticity, others certainly apocryphal.

All these works are published in Paris, M. A. M. (1862), VIII, 277–85, 459–58, 499–81; CONTINOLOU, "S. Eucher, Lrini, et l’église de Lyon au Ve siècle" (Lyons, 1881); MIZZIER, "De vita et scriptis S. Euchrii Lugudunensis episcopi" (Lyons, 1877); Remy, "Lumier de Lyon" (Lyons, 1868); C.VI, 422–46; BÄRENKREUZER, "Patrologia Latina", vol. I, 893–1214, is to be found in a long series of works attributed to Eucherius, some of doubtful authenticity, others certainly apocryphal.

Euchites. See MESSALIANS.

Euchologia (εὐχολόγιον), the name of one of the chief service-books of the Byzantine Church. It corresponds more or less to our Missal and Ritual. The Euchologia contains first, directions for the deacon at the Hesperonon, Vespers, Orthros, Lauds, and Liturgy. The priest’s prayers and the deacon’s litanies for those two hours follow. Then come the Liturgies; first, rubries for the holy Liturgy in general, and a long note about the arrangement of the offices of the Proskomide. The Liturgy of St. John Chrysostom is the frame into which the others are fitted. The Euchologia contains only the parts of priest and deacon at full length, first for the Chrysostom-Liturgy, then for those parts of St. Basil’s Liturgy that differ from it, then for the Presanctified-Liturgy, beginning with the Hesperon that always precedes it. After the Liturgies follow a collection of sacraments and sacramentals with various rules, canons, and blessings. First the rite of chanting the church the mother after child-birth (εὐχαίρει η γυναῖκα λατρεύει), adapted for various conditions, then certain canons of the Apostles and Fathers about baptism: the deacons to be said over catechumens, the rite of baptism, followed by the washing (άφωνας) of the child, the seven days later, certain exorcisms of St. Basil and St. John Chrysostom, and the rite of consecrating chrism (μηχέας) of Maundy Thursday. Then follow the ordination service for deacon, priest, and bishop (there is a second rite of ordaining bishops "according to the exposition of the most holy Lord Metropolitan, Metropolitan of Nysa"), the blessing of a hegumenos (abbot) and of other superiors of monasteries, a prayer for those who begin to serve in the Church, and the rites for minor orders (reader, singer, and subdeacon).
